Preface

The Health and Retirement Study (HRS) is a longitudinal household survey data set for the study of retirement and health among the elderly in the United States. It is extraordinarily rich, and in particular it asks respondents about their income and wealth in great detail. With the goal of making these data more accessible to researchers, the RAND Center for the Study of Aging, with support from the Social Security Administration (SSA) and the National Institute of Aging (NIA), has produced income and wealth imputations for all waves of the HRS, including the initially separate AHEAD study, and aggregates of the income and wealth variables. This document describes the full set of the RAND income and wealth variables.

Many of these variables are also included in the RAND HRS, which is a user-friendly version of a subset of the HRS. It contains cleaned and processed variables with consistent and intuitive naming conventions, model-based imputations and imputation flags, and spousal counterparts of most individual-level variables. All is elaborately documented, with special attention to comparability of variables across survey waves.

The income and wealth variables in this document follow the RAND HRS naming conventions and the current documentation is also structured after the RAND HRS documentation.

The RAND Center for the Study of Aging web site is <http://www.rand.org/labor/aging>. The RAND Income and Wealth Imputation File may be downloaded from the HRS website (<http://hrsonline.isr.umich.edu/data/index.html>) under “RAND Contributions.”

We are grateful for the continuing support of and funding from the SSA and the NIA. In gaining access to and interpreting the HRS, we greatly benefited from the help and insights of HRS staff members. In particular, we thank Tom Blackburn, Honggao Cao, Jack Chen, Gwenith Fisher, Dave Howell, Thomas Juster, Janet Keller, Cathy Liebowitz, Michael Nolte, Theresa Norgard, Dorothy Nordness, Mary Beth Ofstedal, Jody Schimmel, Marita Servais, David Weir, and Bob Willis.

WARNING to Users

We recently discovered a small bug in our imputations programs. Specifically, in the "tobit" imputations, we inadvertently use the square root of the estimated standard deviation instead of the standard deviation itself. This happens in many of our programs, including those used to produce this version, and probably all previous versions of the RAND HRS and RAND Income and Wealth Imputation files. Unfortunately, we discovered this issue too late to correct it in this version, so it will be corrected in the next version.

This affects imputations in the top bracket of each income and wealth component in all waves, and some imputations of medical expenditures and non-core household member income (which is used in constructing our poverty threshold measures) prior to HRS 2010 (Wave 10). We cannot oversee the precise consequences yet, but only a few percent of the observations in each wave and asset or income category include affected imputations. We believe that the effect is most likely to be a moderate downward bias in the imputations, so imputed top incomes and top wealth are moderately lower than they should be (on average). There are also a small number of other imputations that use similar procedures, and are similarly affected because of specific issues (e.g., if there are no donors within the reported bracket).

We advise users to exercise caution when interpreting results that are sensitive to a few large values (e.g. when studying inequality, or the top 1 percent). We expect that most ordinary analyses will not be appreciably affected, especially analyses that use robust methods (e.g., medians, quintiles, regressions on the log scale).

What's New in Version P?

The following is a list of changes made to the RAND Income and Wealth Imputation File between the previous (Version O) and the current version (Version P). See [Appendix A](#) for details on changes made in previous versions.

- For Version P, we ran the cross-sectional income and wealth imputations for HRS 2012 (Wave 11) and 2014 (Wave 12), and the cross-wave wealth imputations for HRS 2010 (Wave 10) forward (to pick up changes made to the 2012 cross-sectional imputations). During this process, we made some minor corrections to annuities (Wave 11), improved the method for imputing ownership of primary residences, including any associated mortgages or other home loans (Waves 11 and 12), updated our assumptions about the number of months food stamps were received in the last calendar year when limited information is available (Waves 11 and 12), adjusted the criteria in the cross-wave programs for selecting cases that should not undergo bracket imputation (Waves 10 and 11), and incorporated updates of the demographic and occupational data released by HRS.
- For Wave 10, re-running the cross-wave wealth imputations had a small impact overall. Most notably, compared to Version O, the average value of primary residences decreased by less than 0.4%, and the average value of mortgages on primary residences decreased by less than 1.1%. For Wave 11, the changes in imputed values were much larger, which is likely associated with some corrections we made to pension income. The corrections are described further below. Overall, average wealth changed by less than 1.0%, with the exception of the (cross-sectional) net value of non-housing financial wealth (H11WTOTF), which decreased by roughly 2.6%. Average income, on the other hand, increased by roughly 6.0%. Please note that imputed values for individual households or Respondents can be different from the Version O imputations.
- An examination of the pension income (RwIPEN) variables in Version O showed markedly lower average pension income in Wave 11 compared to Wave 10. After a thorough analysis, we have concluded that this is largely due to the introduction of a new Pension Section (J2) in the 2012 questionnaire, which precedes and therefore affects some answers in the Assets and Income Section (Q). Because the question about pension income in the Assets and Income Section uses the wording “Not including Social Security or other retirement income you’ve already told me about,” some Financial Respondents did not report pension income they had reported earlier in the Pension Section. This interaction between different sections of the surveys was not intended by the survey designers. To remedy this problem in the data, beginning in Version P, we incorporate logic in Waves 11 and 12 to pull information about pension income of Financial Respondents from both Section Q and Section J2. We did not change the derivation of pension income for earlier waves, because those did not yet have the Pension Section (J2) that caused the interaction with the pension income questions in Section Q. Pension income for earlier waves continues to be calculated using only information from Section Q. See [Appendix C](#): Combining Pension Income from Section Q (Assets & Income) and Section J2 (Pension) for a detailed description of the methodology that we developed for combining information from the Pension Section (J2) and the Income Section (Q). After implementing this change for Waves 11 and 12, Financial Respondents’ average pension

income is roughly \$3,200 higher in Version P compared to Version O, and the fraction reporting any pension income receipt is approximately 15.2% higher.

- Beginning in Wave 10, Respondents who report receiving income from an annuity, but say they received "0" dollars last month, are asked whether they received any income last year. Those who say "yes" are asked to provide the total amount received. No unfolding bracket questions are asked. For purposes of the imputation, we divide this amount by the number of months they report receiving it, and treat the resulting amount as the "amount received last month." In previous versions, we have left this amount in the "monthly" annuity amount variables we provide in the Income and Wealth Imputation File (i.e., RwMPEN1 – RwMPEN3 and SwMPEN1 – SwMPEN3). We now set these amounts back to "0" to reflect the original response to the "amount received last month" question.

1. Introduction and Overview

This document describes the variables on the RAND Income and Wealth Imputation File, Version P. This is a cleaned, processed, streamlined, and where necessary imputed, collection of income and wealth variables derived from the Health and Retirement Study (HRS). The HRS is a national panel survey of individuals over age 50 and their spouses. Its main goal is to provide reliable data on the decisions, choices, and behaviors of people as they age and respond to changes in public policy, the economy, and health. The survey elicits information about demographics, income, assets, health, cognition, family structure and connections, health care utilization and costs, housing, job status and history, expectations, and insurance. Over the years the HRS has expanded its multi-disciplinary approach to additional subject areas, including the collection of biomarkers, and added to the external data sources that can be linked to the HRS data.

The HRS is sponsored by the Social Security Administration and National Institute of Aging (NIA), and data collection is conducted by the Institute for Social Research (ISR) at the University of Michigan. It consists of six cohorts:

- Initial HRS cohort, born 1931 to 1941. This cohort was first interviewed in 1992 and subsequently every two years.
- AHEAD cohort, born before 1924, initially a separate study (The Study of Assets and Health Dynamics Among the Oldest Old or AHEAD). This cohort was first interviewed in 1993 and subsequently in 1995, 1998, and every two years thereafter.
- Children of the Depression Age (CODA) cohort, born 1924 to 1930. This cohort was first interviewed in 1998 and then subsequently every two years.
- War Baby (WB) cohort, born 1942 to 1947. This cohort was also first interviewed in 1998 and subsequently every two years.
- Early Baby Boomer (EBB) cohort, born 1948 to 1953. This cohort was first interviewed in 2004 and subsequently every two years.
- Middle Baby Boomer (MBB) cohort, born 1954 to 1959. This cohort was first interviewed in 2010.

In addition to respondents from eligible birth years, the survey interviewed the spouses of married respondents or the partner (if in the same household) of a respondent, regardless of age. Some spouses of the initial HRS entry cohort respondents were age 70 or older and were subsequently included in the AHEAD study instead. These so-called HRS/AHEAD overlap cases may thus have been interviewed in 1992, 1993, 1995, and from 1998 forward. From 1998 onward, households sampled for the new cohorts exclude households in which the spouse or partner would be age-eligible for an earlier cohort. For example, a couple in which one spouse was born in 1935 (HRS age cohort) and the other spouse was born in 1945 (WB age cohort) could have been sampled as part of the original HRS cohort sample but not as part of the WB cohort sample.

The RAND Income and Wealth Imputations are distributed as a companion file to the RAND Enhanced HRS Fat Files¹ and are incorporated into the RAND HRS Data File.² The RAND Income and Wealth Imputation File (Version P) contains all six cohorts. This document refers to the entire survey as the HRS and the 1931-1941 cohort that was first interviewed in 1992 is labeled the “initial” or “original” HRS entry cohort.

The method used to develop the imputations is described in [Chapter 2](#). Each original income and wealth component is imputed separately. Some original components lend themselves to combination, such as summing up to three IRAs to provide a total IRA value. Some original income components are combined into logical main components, such as summing income from wages, tips and bonuses, professional practice or trade, and a second job into an earned income component. In addition, total wealth and income variables are derived.

For income, the reference period for totals and main components is the last calendar year. When needed, another income measure is added to estimate income received in the last calendar year. For example, if a measure is given as income last month, we impute the monthly amount and examine other information, such as a start date, to determine how many months the income was received in the last calendar year to produce an estimate for that year.

If the original components are combined for any of these reasons, these original components are referred to as “partial components” in this document, while the combinations or uncombined original components are called “main components” of wealth and income. Analysts may wish to recombine components or to see the individual parts of a total amount. All individually imputed parts are provided in this file. It is important to understand how the parts and the combinations overlap, so that parts of income and wealth are not double-counted.

The HRS contains several auxiliary files. The RAND Income and Wealth Imputation File only incorporates the core interviews. It does **not** include exit interviews or any restricted data, but does use information from the current Tracker, Region and Mobility, and Master ID files.

The data include any individual interviewed at least once. This includes individuals who were age-eligible (born in eligible years) at the time of their first interview, spouses that were not age-eligible at baseline, and spouses who married an age-eligible respondent between survey waves.

The HRS over-samples Hispanics, Blacks, and residents of Florida, and provides weighting variables to make it representative of the community-based population.

The data described in this document are based on the final data releases of 1992, 1993, 1994, 1995, 1996, 1998, 2000, 2002, 2004, 2006, 2008, 2010, 2012 and the early data release of 2014.

¹ The RAND-enhanced Fat Files are interview year-specific files containing most raw HRS variables merged to the respondent level to facilitate merging longitudinally and with the RAND HRS Data file. These are available on the HRS web site <http://hrsonline.isr.umich.edu/>. Please see www.rand.org/labor/aging/dataproduct for more information.

² The RAND HRS Data file is a comprehensive but not complete collection of derived variables based on HRS public release data. It contains all waves of data, with consistent variable names across waves. It is available for download from the HRS web site. Please see www.rand.org/labor/aging/dataproduct for more information and sample programs for its use with the Fat Files.

The file is based on data from the latest release of each wave's HRS or AHEAD core data, and Version 1.0 of Tracker 2014.

1.1. Confidentiality and Access Restrictions

The data described in this document are based on HRS public release files. Before using the data, you must have obtained permission from HRS by registering with them for downloading the public release files. The HRS website contains information on the process to register for access to HRS public release data (<https://ssl.isr.umich.edu/hrs>).

By registering with HRS you agree to the "Conditions of Use" governing access to the data. There is NO RESTRICTED DATA on the RAND Income and Wealth Imputation File.

1.2. Data File Structure

The RAND Income and Wealth Imputation data are distributed in SAS, Stata, and SPSS formats, as a single file that includes all waves of the HRS. The data contain respondents within the HRS, AHEAD, CODA, WB, EBB, and MBB entry cohorts. [Table 1](#) lists the source year of data for each of the entry cohorts, by wave. The 1993 data are treated as Wave 2 data and the 1995 data are treated as Wave 3 data for the AHEAD entry cohort. The 1994 data are treated as Wave 2 data and the 1996 data are treated as Wave 3 data for the HRS entry cohort. The AHEAD and HRS survey instruments in these years differed significantly. This documentation distinguishes between the instruments by using Wave 2A and Wave 3A to refer to the 1993 and 1995 data for the AHEAD entry cohort, and Wave 2H and Wave 3H to refer to the 1994 and 1996 data for the HRS entry cohort.

Table 1. Source of Data for Entry Cohorts by Wave.

Wave	Entry Cohort					
	HRS HACOHORT=3	AHEAD HACOHORT=0,1	CODA HACOHORT=2	WB HACOHORT=4	EBB HACOHORT=5	MBB HACOHORT=6
1	1992	1992 (HRS/AHEAD overlaps only)	Not available			
2	1994 (Wave 2H)	1993 (Wave 2A)				
3	1996 (Wave 3H)	1995 (Wave 3A)				
4	1998	1998	1998	1998	Not available	
5	2000	2000	2000	2000		
6	2002	2002	2002	2002		
7	2004	2004	2004	2004	2004	Not available
8	2006	2006	2006	2006	2006	
9	2008	2008	2008	2008	2008	
10	2010	2010	2010	2010	2010	2010
11	2012	2012	2012	2012	2012	2012
12	2014	2014	2014	2014	2014	2014

The unit of observation is an individual. Each individual is uniquely identified by a household ID (HHID) and a person number (PN). We combined these variables into a single ID variable, HHIDPN (HHIDPN: HHold ID + Person Number/Num), where $HHIDPN = 1000 * HHID + PN$.³ This file may be merged with other HRS data by HHIDPN.

The file includes a flag (HwPICKHH where “w” is the corresponding Wave 1-12) to allow easy reduction to a household level file. A household level file may be extracted by selecting observations where the flag has a value of one (HwPICKHH=1). This will select all single-R households, and the record of the Financial Respondent in couple households where both individuals responded. Note that this only works on a per-wave basis, because household composition may change across waves through divorce and other reasons.

[Section A](#) of the data codebook describes identifiers and flags pertaining to the household, respondent, and spouse. [Section B](#) provides descriptive statistics and frequencies for the income variables, and [Sections C](#) and [D](#) provide the same for the cross-wave and cross-sectional wealth variables, respectively. [Appendix A](#) provides additional details for any changes made from Version M forward, [Appendix B](#) lists the primary residence/mobile home inconsistencies due to Asset Verification, and [Appendix C](#) describes methodology that we developed for combining information from the Pension Section (J2) and the Income Section (Q).

³ This HHIDPN variable is numeric. Also available is RAHHIDPN (RAHHIDPN: HHold ID + Person Num /9-Char), its 9-character string equivalent.

1.3. Variable Naming Conventions

With few exceptions, variable names in the RAND Income and Wealth data follow a consistent pattern. The first character indicates whether the variable refers to the reference person (“R”), spouse (“S”), or the household (“H”).⁴ The second character indicates the wave to which the variable pertains: “1”, “2”, “3”, “4”, “5”, “6”, “7”, “8”, “9”, “10”, “11”, “12”, or “A”. The “A” indicates “all,” i.e., the variable is not specific to any single wave. In the Income and Wealth file, this is only used for RAHHIDPN, the string version of the unique identifier of the respondent, but in the RAND HRS it is used for many more variables. The remaining characters describe the concept that the variable captures. For example:

Variable S2IEARN captures the earnings of the spouse. The “I” refers to income, more specifically, income received in the previous calendar year (“M” is used for income received in the previous month).

The name of the variable does not indicate who provided the information. For example, the spouse’s earnings may have been reported by the spouse himself or herself, or they may have been reported by a proxy. The HRS obtains many variables, particularly on financial and family matters, by proxy.

In the text below, we may refer to variables such as SwIEARN for example, without specifying the wave. This reference points at the group of variables S1IEARN, S2IEARN, S3IEARN, S4IEARN, S5IEARN, S6IEARN, S7IEARN, S8IEARN, S9IEARN, S10IEARN, S11IEARN and S12IEARN.

Variable labels also follow a consistent pattern. The first characters denote the name of the variable, followed by a colon. Then follows the wave to which the variable pertains (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11 or 12). The remainder of the label describes the concept that the variable captures. For example, the variable label of S2IEARN is:

S2IEARN:W2 Income:Sp Earnings

It may seem duplicative to include the name of the variable and the wave in the variable label. However, SAS and Stata often suppress the variable name and instead use its label in the presentation of results.

⁴ The reference person need not be the person who responded to the question. It is the person whose information is recorded in the variable.

In previous versions of the income and wealth data, the names of some detailed component variables followed a different convention. As of Version M, naming has been made consistent for all income and wealth variables. For a complete list of which variables have been renamed from previous versions to Version M of this codebook, see [Appendix A](#).

Wealth variables that use the cross-wave imputations (see [Chapter 2](#)) have an “A” after the wave number, whereas the corresponding wealth variables that use the cross-sectional imputations have a “W”. For example, H9ASTCK is the value of stocks and mutual funds of the household in Wave 9, using cross-wave imputations if imputation is necessary, and H9WSTCK is the value of stocks and mutual funds of the household in Wave 9, using cross-sectional imputations if imputation is necessary.

For both income and wealth variables, a subsequent “O” is used for variables that indicate ownership (i.e., whether the household owns the asset or the household or individual receives the type of income), whereas “F” is used for variables that indicate the type of imputation necessary (imputation flags; see [Chapter 3](#)).

These conventions are summarized in Tables [2](#) and [3](#) for the income and wealth variables, respectively. The remainder of the variable name, called the *stem*, indicates the type of income or asset. For example, “EARN” denotes earnings and “STCK” denotes stocks and mutual funds.

For example, for Wave 10, R10IFEARN indicates whether the respondent’s earned income is imputed. R10IOEARN indicates whether the respondent reports (or is imputed to) having any earned income. R10IEARN is the reported or imputed amount the respondent earned in the last calendar year, set to zero for those who do not receive any. For the spouse, SwIFEARN, SwIOFEARN, and SwIEARN are analogous to RwIFEARN, RwIOEARN, and RwieARN, respectively. If the respondent does not have a spouse, the value for the spousal variable is set to .U, and ownership for the spouse is also set to .U. The imputation flag for the spouse variable then has the special value 8 (see [Chapter 3](#)).

In previous versions of the RAND Income and Wealth Imputation File, partial component values were set to missing if the partial component was not owned. The current version harmonizes the definition of partial component variables with main component variables and totals, and thus sets the value to zero if the component is not owned.

Table 2. Variable Name Prefixes for Income Variables

Prefix	Description
	<i>Household Level</i>
HwIF	Household annual income imputation flag (previous calendar year)
HwIO	Whether household received income from this source in the previous calendar year
HwI	Household annual income value, set to zero for non-owners (previous calendar year)
HwM	Household partial income component value – monthly value, where original value was reported as a monthly amount. If total amount received last year is available and amount received last month is not, then total annual amount is used to estimate a monthly amount.
HwN	Household partial income component – number of months received in last calendar year, where the original value was reported as a monthly amount. This is computed from month and year began receiving income. If month began is unknown and year began is the last calendar year, then number of months received is assigned a value of 6 months. If year began is unknown, then number of months received is assigned a value of 12 months and a flag is set to 1.
HwNF	Household partial income component – flags cases where there is no information on the number of months received. When the year began receiving income is unknown, the number of months received in the last calendar year is assigned a value of 12 and the flag is set to 1.
	<i>Respondent Level</i>
RwIF	Respondent income imputation flag (previous calendar year)
RwIO	Whether respondent received any income from this source in the previous calendar year
RwI	Respondent income value, set to zero for non-owners (previous calendar year)
RwM	Respondent monthly income; apart from respondent vs. household, analogous to HwM
RwN	Respondent income – number of months received in last calendar year; apart from respondent vs. household, analogous to HwN
RwNF	Respondent income – flags cases where there is no information on the number of months received; apart from respondent vs. household analogous to HwNF
	<i>Spouse Level</i>
SwIF	Equivalent of RwIF for the spouse
SwIO	Equivalent of RwIO for the spouse
SwI	Equivalent of RwI for the spouse
SwM	Equivalent of RwM for the spouse
SwN	Equivalent of RwN for the spouse
SwNF	Equivalent of RwNF for the spouse

Table 3. Variable Name Prefixes for Wealth Variables

Prefix	Description
HwAF	Household asset cross-wave imputation flag for a single-component asset, e.g., HwAFIRA1 to summarize imputation status of HwAIRA1.
HwWF	Household asset cross-sectional imputation flag for a single-component asset, e.g., HwWFIRA1 to summarize imputation status of HwWIRA1. (These are equal to the corresponding HwAF variables and only included for convenience.)
HwAX	Household asset cross-wave imputation summary flag for a combined asset, e.g., HwAXIRA to summarize imputation status of HwAIRA, which is the sum of HwAIRA1, HwAIRA2, and HwAIRA3.
HwWX	Household asset cross-sectional imputation summary flag for a combined asset, e.g., HwWXIRA to summarize imputation status of HwWIRA. (These are again equal to the corresponding HwAX variables.)
HwAO	Whether household owns asset, using cross-wave imputations
HwWO	Whether household owns asset, using cross-sectional imputations
HwA	Household asset value, set to zero for non-owners, using cross-wave imputations
HwW	Household asset value, set to zero for non-owners, using cross-sectional imputations

1.4. Missing Values

Variables may contain missing values for several reasons. SAS and Stata offer the capability to distinguish multiple types of missing values, and we have attempted to record as much information as possible. Generally, the codes adhere to the classification in [Table 4](#).

Table 4. Missing Codes

Code	Reason for missing
.	Reference person did not respond to this wave
.D	Don't know
.R	Refused
.X	Does not apply (specifics depend on variable)
.Q	Data not available because of HRS and AHEAD survey instrument differences in Wave 2 or 3
.U	Reference person is not married (for spousal variables)
.V	Spouse did not respond this wave (for spousal variables)
.S	Information not available due to skip patterns, typically because the interview is by proxy respondent
.M	Other missing

The coding scheme varies across variables. Not all missing codes are used in the RAND Income and Wealth Imputation File. Consult the Data Codebook section of this document for details on individual variables. The RAND Income and Wealth Imputation File in Stata format is for use with Version 11 or later.

2. Imputation Methodology

2.1. Background

The RAND Income and Wealth Imputation data contain a number of wealth and income variables. Where missing, we imputed their values. In this chapter, we give an overview of the question sequences and imputation methods. A detailed technical description can be found in Hurd, Meijer, Moldoff, and Rohwedder (2016).⁵

Most HRS and AHEAD questions on wealth and income follow the same pattern. Consider holdings of stocks and mutual funds as an example. First, the interviewer asks whether the respondent (or his/her spouse or partner) owns any shares of stock or stock mutual funds. If affirmative, the interviewer asks the value of these stock holdings. If the respondent is unable or unwilling to provide an exact amount, the interviewer asks whether it is more than \$25,000. If the answer is “more than \$25,000,” the interviewer asks whether it is more than \$125,000, whereas if the answer is “less than \$25,000,” the interviewer asks whether it is more than \$2,500. Depending on the responses, the ranges are narrowed down to \$0-2,500; \$2,500-25,000; \$25,000-125,000; \$125,000-400,000; \$400,000 or more. These ranges are known as “brackets,” and the sequence of probes into increasingly narrow ranges are known as “unfolding brackets” questions. The brackets vary by asset and income category, and the cut-off values (also known as thresholds), though generally stable, can change between waves. For example, the cut-off values for dividend and interest income in HRS 1994 (Wave 2H) are \$200, \$500, \$2,500, and \$10,000, while in HRS 1996 (Wave 3H) they are \$1,000, \$5,000, and \$25,000.

The respondent may opt out of the question sequence at any time. As a result, the raw data contain valid zero-value responses, exact amounts, complete bracket responses, incomplete bracket responses, claim of ownership without any information about the value, and unknown ownership. (We also use the term “ownership” to indicate whether a household or individual receives a certain kind of income or holds a certain kind of debt.) An incomplete bracket results if the respondent provided some information about the value, but was unable or unwilling to respond through the last unfolding bracket probe. For example, if the respondent indicated that the stock holdings amount to more than \$25,000, but did not say whether they are worth more than \$125,000. In that case, the range is an open-ended \$25,000 or more. A claim of ownership without value results if the respondent indicated that stock is owned, but revealed neither the exact amount nor a range. A claim of ownership without value is a special case of an incomplete bracket, namely an open-ended bracket of greater than zero dollars.

As an illustration, [Table 5](#) shows the frequency distribution of response types on the ownership and value of stock holdings in HRS 1994 (Wave 2H). The stock holdings question is asked from the so-called “financial respondent” in the household, and the unit of observation in the table is a household. The majority of respondents, 68.1 percent, report not owning any stocks (other than

⁵ Hurd, M. D., E. Meijer, M. Moldoff, and S. Rohwedder (2016). *Improved wealth measures in the Health and Retirement Study: Asset reconciliation and cross-wave imputation*. Santa Monica, CA: RAND Corporation, Center for the Study of Aging (http://www.rand.org/pubs/working_papers/WR1150.html).

in retirement plans, which are not covered by this question). About one-fifth, 20.3 percent, own stocks and provide an exact value. All other categories require imputation.

Table 5. Distribution of Response Types on Stock Holdings (HRS 1994)

	Frequency	Percent
Continuous value	1,431	20.3
Complete bracket	487	6.9
Incomplete bracket	34	0.5
Owens, no value/bracket	111	1.6
No asset	4,803	68.1
Don't know ownership	66	0.9
No financial respondent	119	1.7
Total	7,051	100.0

Note the last category in [Table 5](#) “No financial respondent.” These are cases in which the HRS, for whatever reason, did not interview a financial respondent.⁶ For those cases, virtually nothing is known about financial issues. The RAND Income and Wealth Imputation data contain imputed values for these households, but the user should be aware that these imputations are subject to potentially large errors. They may be identified through flag variables. For example, [Table 5](#) is derived from variable H2AFSTCK (“H2AFSTCK:W2 Asst Flag:Stocks”).

In summary, the data contain continuous responses and several types of responses that require imputations. In decreasing order of informational content:

- Case 1: We may know a “complete” range of values;
- Case 2: We may know that the household owns the asset (or has the income type), but have no information on its value, or only coarse information in the form of incomplete brackets; or
- Case 3: We may not even know whether the household owns an asset, much less its value.

2.1.1. Alternative Question Sequences

While the majority of income and asset questions follow the pattern described above, there are deviations.

Some questions, particularly income questions in HRS 1992 (Wave 1), do not probe for brackets if the respondent is unable or unwilling to provide an exact amount. In the data, we classify missing responses in this case as if there were unfolding bracket questions, but the respondent refused to provide any range information, i.e., as Case 2 above.

⁶ In some households, a financial respondent was designated, but in fact provided no financial data, perhaps due to a partial interview that ended before the main financial section of the survey was conducted. For some of these cases, house and mortgage information may have been provided but no other wealth or income data was collected in the main income and wealth module which follows the housing module in the survey instrument. For imputation of income and non-housing wealth, cases missing the entire module of financial data are treated as though there is no financial respondent.

Some interviewers in Wave 1 used so-called “range cards” instead of the sequence of unfolding bracket questions. This was especially prevalent for questions on the value of primary residence, mortgages, home loans, equity lines of credit, and debt. The range cards contain a list of ranges. For example, a card may have shown \$0-100; \$100-500; \$500-1,000; \$1,000-5,000; \$5,000-10,000; \$10,000 or more. The cards were intended for other purposes, but were sometimes used inadvertently when respondents were unable or unwilling to provide an exact amount.⁷

Respondents who were presented a range card had instant knowledge of all cut-off values, as opposed to gradual access in unfolding bracket questions. The cut-off values on the range cards were typically different from those in the appropriate unfolding bracket sequence. We treat responses from range cards in the same way as complete brackets, i.e., Case 1 above. Naturally, we account for the cut-off values on the range cards, even if they are different from those in the unfolding bracket sequence.

Starting in HRS 1998 (Wave 4), the “entry point” of the unfolding bracket sequence was randomized in questions about assets. In other words, respondents who were unable or unwilling to provide an exact amount were asked whether the value was more than a certain value, where that value varied across respondents. The underlying idea was to reduce at the population level any response bias that might arise from the value of the entry point (“acquiescence bias”). The fact that the entry point varied across respondents does not enter our imputations, and we process the resulting information in the same way as in previous waves.

Also starting in Wave 4, interviewers were able to record a new response. For example, suppose the interviewer asked, “Is the amount greater than \$5,000, less than \$5,000, or what?” The potential answers now are “less than \$5,000,” “about \$5,000,” and “more than \$5,000.” In earlier waves, the second response was combined with the first or third response. The additional option is present at each subsequent branch. Where the respondent indicated that the amount was “about” equal to a certain value, we took that value as an exact response and did not impute anything. However, this is still classified as a complete bracket in the imputation flag variable and not as a continuous amount. We treated range responses in the same way as those in earlier waves.

Finally, some cut-off values of specific asset and income questions changed between waves, as did the entry point. In addition, the way unfolding bracket information is presented in the raw data changes over time, from variables representing the “yes/no” questions through Wave 5, to variables summarizing them as a “minimum/maximum” of the range in Wave 6 forward. This did not affect the resulting response types.

⁷ The Wave 1 interview was face-to-face; subsequent interviews were conducted mostly by telephone. For all subsequent waves, interviews with respondents 80 years of age or older, as well as initial interviews (for all cohorts and new cohorts), are also conducted face-to-face. Starting with the HRS 2006 wave, about half of the sample is interviewed face-to-face (to facilitate the collection of additional content), and half is interviewed by telephone.

2.2. Imputation Process

The HRS public release files provide imputations for many asset and income types in earlier waves, but the imputation method is not consistent across all waves, and there are no imputations in more recent waves. The RAND Income and Wealth Imputation data contain imputations of all asset and income types using a consistent method for all waves. Beginning with HRS 2006, RAND has provided the income and asset imputations for the HRS. The RAND HRS data file contains summary measures of income and assets. The RAND Income and Wealth Imputation File is a more complete and detailed file, containing all individual component imputations in addition to the summary measures.

As defined previously, there are three types of missing values that require separate types of imputation. Correspondingly, we developed three progressive imputation steps: to impute an exact amount, given that a range is known; to impute a range, given that ownership or only incomplete range is known; and to impute ownership, in case nothing is known. [Table 6](#) illustrates the type of imputation necessary for each type of missing value.

The imputation process is progressive in the sense that we first impute ownership for those for whom nothing is known. Given ownership, we impute brackets. Given brackets, we impute exact amounts. We always use all available information. In particular, where incomplete brackets are known, we impute complete brackets in the given range.

Table 6. Response Types and Required Imputations

Reported Information	Required Imputation
Continuous value	None
Complete bracket	Amount
Incomplete bracket	Bracket, Amount
Owens, no value/bracket	Bracket, Amount
No asset	None
Don't know ownership	Ownership, Bracket, Amount
No financial respondent	Ownership, Bracket, Amount

2.2.1. Ownership Imputation

To impute ownership, we first estimate a logistic regression model of ownership based on the sample of respondents with nonmissing ownership information for the asset or income type at issue. The covariates are discussed in [Section 2.2.4](#). Next, we calculate the predicted probability of ownership for households with missing ownership information. Finally, we draw a random number from a uniform distribution between zero and one. We impute ownership if the predicted probability exceeds the random number, and non-ownership otherwise.

The estimation sample varies by asset and income type. For example, a household that reports whether they own their primary residence but does not report whether they own stocks or mutual funds enters the estimation sample for ownership of the former, but not the estimation sample for ownership of the latter.

In some waves and for some asset and income types, ownership is rare, and the logistic regression model fits the data poorly. Instead of imputing on the basis of a logistic model, we randomly assign ownership with a probability of ownership found in the nonmissing sample. This is equivalent to fitting a logistic model without covariates. We apply this procedure for assets in waves with fewer than 50 households reporting ownership.

2.2.2. Bracket Imputation

We impute brackets for asset owners and income recipients (imputed and reported) who do not report a continuous value, and do not fully complete the questionnaire bracketing sequence on asset or income value. First, we estimate an ordered logit model based on the sample of households who do not report a continuous value but do complete the bracketing sequence. The covariates are discussed in [Section 2.2.4](#). Next, we calculate the predicted probabilities of being in each bracket for respondents with missing or incomplete bracket information. For those who partially complete the bracketing sequence, we calculate conditional probabilities based on the range of possible values from their answers. Finally, we draw a random number from a uniform distribution between zero and one, and assign a bracket based on a comparison of the random number with the cumulative distribution of range probabilities.

For some asset and income types, notably Wave 1 incomes, no bracket questions were asked. For these items, this step is skipped and we treat the strictly positive dollar range as a single large open-ended bracket.

Beginning in Wave 4, households that do not report a continuous value at the first opportunity but do give an “about” response during the unfolding bracket sequence of questions are included in the logit model. Probabilities are then estimated for being in each bracket as well as each cutpoint value. Households imputed to one of the cutpoint values need no amount imputation for that particular component.

For some asset and income types, fewer than 50 households completed the bracket sequence in a certain wave. If this is the case, we follow the same strategy as with ownership in such situations. That is, we impute the bracket using only the marginal probabilities and no covariates. In some rare cases, there is not even enough information in the marginal probabilities, and we skip the bracket imputation and impute amounts directly. This happens when only one complete bracket range is reported (so this would otherwise get probability 1), or when the incomplete bracket range reported is completely outside the range of the reported complete bracket ranges.

2.2.3. Amount Imputation

We impute exact amounts for all cases with (reported or imputed) bracket information. The procedure is different for cases in closed vs. open-ended brackets.⁸ For closed brackets, we use a “nearest neighbor” approach; for open-ended brackets, a tobit-based approach. The following discusses the two approaches in turn.

In the “nearest neighbor” approach for closed brackets, we first estimate a linear regression model based on the sample of households who report an exact continuous value. The covariates are discussed in [Section 2.2.4](#). The distribution of asset and income amounts tends to be roughly lognormal, so we would like to apply a logarithmic transformation to the outcome (asset, income) variable. However, some outcomes, such as business income, may be negative. The frequency with which this occurs is very low—too low to allow for a fully flexible model specification. Instead, we therefore apply the inverse hyperbolic sine transformation⁹ and use this as the dependent variable. Next, we compute predicted values for all cases, both with and without exact amounts. For each missing observation in a closed bracket, we find the household that is closest in *predicted value*, among the households that report an exact amount within that bracket. This is the nearest neighbor. We then impute the actual value reported by the nearest neighbor.

For some asset and income types, fewer than 50 households reported a continuous value in a given wave. In this case, instead of a nearest neighbor from a regression model, a donor household is found using a conditional hotdeck procedure. This can be viewed as a nearest neighbor method without covariates, but because there are multiple households that are equally near (i.e., they all gave continuous answers that fall in the given bracket), one is chosen at random.

Another exception is that sometimes there are not enough donors in the given bracket, where we define “not enough” as being less than two observations. In this case, a value within the bracket

⁸ A closed bracket has finite cut-off values; an open-ended bracket is, for example, \$500,000 or more, so the upper limit is infinite.

⁹ The inverse hyperbolic sine transformation is given by $y = \ln(Y + \sqrt{Y^2 + 1})$. For positive values of outcome Y , not close to zero, this transformation closely mimics the logarithmic transformation. Only for small amounts, on the order of between -\$10 and +\$10 is the transformation appreciably different from the logarithmic transformation. The transformation is point-symmetric around zero. It may be graphed as:

If the logarithmic transformation were added to this graph, it would be indistinguishably close on the north-east quadrant (up to a scale factor).

is imputed from a lognormal regression model. This is similar to the tobit procedure discussed below, but includes all positive values in the estimation.

In exploratory work, we applied the nearest neighbor method to missing amounts in both closed and open-ended brackets. However, we found that the resulting imputations generated implausible distributions at the top of the distribution. The data contain some outliers, which the nearest neighbor approach selects with too high a frequency to be plausible. We therefore developed an alternative approach for open-ended brackets.

For missing observations in open-ended brackets, we estimate a separate model. In essence, we estimate a lognormal regression model. However, as indicated above, the observed distributions differ from the lognormal distribution because there occasionally are negative values, and in general the smaller observed values do not fit the lognormal distribution as well. But we only use this model for imputing values in the upper bracket, so the goal is to approximate the right tail of the distribution closely. Therefore, we first censor observations in the bottom 25 percent of the outcome variable. That is, we keep the information that they are less than the 25th percentile, but not the actual values. This ensures that the values used in the estimation are all positive and that their distribution is close to (censored) lognormal. Based on this sample of nonmissing observations, we estimate a censored regression (tobit) model. The covariates are discussed in [Section 2.2.4](#). The dependent variable in this model is a logarithmic transformation of the actual amount, and the residuals on this scale are assumed to be normally distributed and homoskedastic. We then compute predicted values of the log-amount for missing observations. To preserve the spread of the distribution of outcomes in the imputations, we add a draw from the residual distribution to this log-amount, and then untransform (exponentiate) the result. The residual distribution is assumed to be normal (with a zero mean and a standard deviation equal to the estimated standard deviation of the residual in the tobit regression model), but truncated from the left to ensure the resulting value is in the top bracket. Note that this truncation point is higher than the censoring point used in the estimation.

For some asset and income types, fewer than 100¹⁰ households reported a continuous value in certain waves. If this is the case, we follow an analogous strategy as with ownership and bracket in such a situation. That is, we impute the value using only the marginal distribution and no covariates, where the marginal distribution is a truncated lognormal distribution. We implemented this by estimating the aforementioned tobit model, but omitting the covariates, and imputing the value accordingly.

2.2.4. Covariates

The number of model specifications in the imputations is large. There were four waves of data when these methods were initially developed, with well over a dozen asset and income types, and each requires four equations. We experimented extensively with model specifications. On the one hand, we would like to select covariates that predict the outcome variables best. On the other hand, we would like the specifications to be parsimonious and consistent across asset and

¹⁰ We use 100 here rather than the 50 used for the other models, because the estimates of the tobit models with covariates were still unstable with sample sizes between 50 and 100.

income types. Consistency across asset and income types caused problems with asset and income types where only small samples were available. In the end, we opted for the same set of covariates in all asset model specifications (ownership, bracket, and amount for all asset types), and another set in the income specifications. The sets are formed by principal components of approximately 30 underlying covariates. For income imputations, the underlying covariates include (transformations of) husband and wife's employment status, education, health status, age, race, marital status, occupation class¹¹, cognition, and bequest expectations. For wealth imputations, the same set applies; however, they exclude employment status and include a number of income amounts (imputed, when necessary) and indicators of pension or government benefit receipt. We found that the first ten principal components resulted in model fits that in most cases were very close to the fit from the larger set of covariates, with very few sample size issues. (The previous sections explained what we do in cases where there are sample size issues.) The set of regressors varies slightly across waves, and the principal component loadings are computed separately for each wave. For example, [Table 7](#) shows summary statistics and loadings of the covariates that make up the principal components of the Wave 2 income imputations.

When there is no financial respondent, the income variables are not available as covariates for the assets, and therefore a smaller set of underlying covariates is used. To impute these cases, we compute principal components from this more limited set of covariates, and estimate the corresponding imputation models. Thus, this doubles the number of imputation models used.

The imputations using this set of covariates should be satisfactory for many purposes. Comparisons of the resulting distributions of income and assets with distributions from external sources (e.g., asset distributions from the Survey of Consumer Finances) indicate that the income and asset distributions match well. If they differ substantially from distributions in other surveys, the distributions in the HRS often seem to be more plausible. However, the imputations are sometimes less satisfactory for analyses of longitudinal patterns, especially asset changes between waves. In particular, when a household reports a “no value/bracket” or “don't know

¹¹ Beginning in Wave 8 (2006), HRS changed the coding of occupation from the 1980 U.S. Census Occupation Codes to those for 2000 (a supplemental file has since been released for Wave 7 (2004) that uses the 2000 U.S. Census Occupation Codes as well). One of the covariates we use in the imputation process is an indicator for whether or not a person's occupation is defined as “professional” (See [Table 7](#), M_PROF and F_PROF). The 1980 codes were collapsed into 17 categories, and determining who was professional was relatively straightforward (See JMW201AM in the HRS 2004 codebook for a list of these categories). Specifically, we defined professionals as anyone in the first two categories (i.e., “Managerial specialty operation,” or “Professional specialty operation and technical support”).

The 2000 U.S. Census Occupation Codes were used for Wave 7 (2004) to Wave 10 (2010) (a supplemental file has since been released for Wave 10 that uses the 2010 Census Occupational Classification System as well). The 2000 codes were collapsed into 25 categories, which were quite different from the 17 categories produced using the 1980 codes. We determined that the first 11 categories could appropriately be considered professional occupations (see KMW201AM in the HRS 2006 codebook for a list of these categories).

The 2010 Census Occupational Classification System was used for Waves 10, 11 and 12 (2010, 2012 and 2014). The 2010 codes were collapsed into 23 categories, and are not that different from the 25 categories produced using the 2000 codes. Therefore, the first 10 categories were considered professional occupations (see NMW201AM in the HRS 2012 codebook for a list of these categories). In the end, we evaluate all of the information described above regarding occupation when deriving the “professional” covariate.

ownership,” this method may lead to large changes between waves, more than is to be expected in the population, because the method does not take the correlation (or persistence) across time into account. Therefore, starting with version M of the RAND Income and Wealth Imputation File, we provide *cross-wave* imputations of asset variables, which take information from adjacent waves into account. These cross-wave wealth imputations are in addition to the cross-sectional wealth imputations, which are computed without using adjacent wave information. The main RAND HRS file only includes the cross-wave imputed variables, but the RAND Income and Wealth Imputation File includes both the cross-wave and the cross-sectional imputations.

**Table 7. Loadings on the First Two Principal Components
(Wave 2 Income Imputations)**

The cross-wave imputations add a few covariates to the models: in addition to the 10 principal components, we include (the inverse hyperbolic sine of) the value of the asset in the previous wave and (the inverse hyperbolic sine of) the value of the asset in the next wave. If there is a strong persistence in asset values over time, including these past and future values, it should capture this and lead to imputations that show smoother patterns across time. If in the adjacent wave, the asset is not owned, we include zero as its value, and we include dummies for whether

the household owns the asset in the previous and next wave. Changes in marital status (where we treat cohabitation the same as marriage, as is usual in the HRS) have potentially large effects on wealth, and therefore, in this case, wealth changes should be less smooth. Therefore, we also include a set of dummies for such changes: divorce or separation, death of the spouse/partner, or remarriage/new partnership. There is one set for changes between the last wave and the current wave and one set for changes between the current wave and the next wave. See Hurd et al. (2016)¹² for details of the definitions.

If the household did not report a continuous value (or a no asset response) in an adjacent wave, we have a missing covariate, and thus we cannot impute the value for the current wave. To solve this problem, we first compute cross-sectional imputations (i.e., without the cross-wave information) for each household, and then use the cross-sectional imputation of the adjacent wave as the covariate in the current wave. However, for households for which we have no adjacent wave information, this still does not solve the issue. This happens when a household enters the sample (the first wave a cohort is entered); in the latest wave (in Wave 12); or when a household did not participate in a wave. For imputing these cases, we use imputation models that include the cross-wave information from only the previous wave or only the next wave, whichever is applicable. If neither previous nor next wave information is available for a household, we use the cross-sectional imputation.

In principle, all imputation models are wave-specific. That is, principal components are computed for each wave separately, and coefficients of the covariates in the imputation models are computed for each wave separately. However, the number of marital status changes is typically too small to estimate the coefficients of these dummies with enough precision in each wave separately. Therefore, we use all waves jointly to estimate these coefficients. That is, we estimate wave-specific coefficients for all covariates except the indicator variables for the change in marital status.

2.3. Asset Verification

After a successful experiment in 2001, described in Hill (2006),¹³ the HRS added the *asset verification* section (section U; also called *asset reconciliation* section) to the questionnaire in 2002. Whenever there is a large discrepancy, defined as more than \$50,000, between an asset value in the previous wave and the value of the same asset in the current interview, the respondent is asked to verify, or correct when necessary, the asset values in the previous and current wave. The idea behind this is that large changes in asset values are rare, and therefore, if we see them in the data, there may have been a reporting or data entry error, which we want to correct. The respondent is only asked these verification questions if the same (financial) respondent reported the asset in both waves and total wealth differs by more than \$150,000. The

¹³ Hill, D. H. (2006). Wealth dynamics: Reducing noise in panel data. *Journal of Applied Econometrics*, 21, 845-860.

former is for disclosure reasons and the latter is to avoid flagging portfolio rebalancing (e.g., selling stocks and buying bonds instead).

In HRS 2002 and HRS 2004 (Waves 6 and 7), respondents were asked at most about three assets in the asset verification section. From 2006 onward, respondents could potentially be asked about all assets that were checked in this section, although it does not happen often that a respondent is asked to verify more than a few assets. There are other changes between waves, for example in the preloaded information from the previous wave and how it is used. See Hurd et al. (2016)¹⁴ for the details.

Starting with version M, the RAND wealth measures take corrections from the asset verification section into account. These corrections precede the imputations. First, corrections for the current wave are implemented. Then, corrections of the previous wave's value are evaluated. If the asset was not asked about in the previous wave's asset verification section, then we implement the correction of the previous wave's value. If the asset was also asked about in the previous wave's asset verification section, we generally use the result from the previous wave's asset verification section (the contemporaneous one). However, we inspect all cases where the results from the previous wave's asset verification section and the current wave's asset verification section differ by more than a factor of 9 to catch gross errors, in particular accidental errors in the number of zeros.

The corrections from the asset verification section occasionally lead to some complications, such as inconsistent data that cannot occur in the main questionnaire because of the main questionnaire's skip patterns, and complications with the implementation of the imputation methods. An example of the former is where the main questionnaire has a branch of questions in case the primary residence is a mobile home, and another branch of questions if it is another type of dwelling. In some cases, the corrections from the asset verification section lead to the household having a number in both branches. We check all such cases and determine what is the most reasonable way to interpret the data and then make it consistent with the logic of the (main) questionnaire. A list of these primary residence/mobile home inconsistencies is provided in [Appendix B](#). An example of a complication with the imputations is where unfolding bracket thresholds are not always the same. See Hurd et al. (2016)¹⁵ for the details and how we dealt with these issues.

2.4. Substantive Differences Across Waves

In addition to survey-technical changes between waves, and the introduction of the asset verification section, there have been a few changes that may affect the comparability of asset values across waves. We discuss the most important changes here.

Notable Differences between Waves HRS 1992 (Wave 1) and HRS 1994 (Wave 2)

Net value of vehicles: Wave 1 includes a measure of the value of a recreational vehicle or motor home in the Housing Section, and a measure of the value of other vehicles in the Asset Section. We separately imputed these values and summed them. For Wave 2, the two components are incorporated into one measure of the net value of vehicles in the Asset Section.

Notable Differences between HRS 1994 (Wave 2) and HRS 1996 (Wave 3)

Asset income: In Waves 1 and 2, asset ownership and value were asked in the Asset Section, whereas income from assets was asked separately in the Income Section. Starting in Wave 3, income from asset questions were incorporated in the Asset Section. For example, if the respondent indicated owning stocks, the interviewer followed up with a question about dividends. This increased the response rate for asset income. Assuming that this increases the quality of responses, it also improves the accuracy of our asset imputations, because asset income is an explanatory covariate of our imputation model.

Net value of IRA/Keogh accounts: In Waves 1 and 2, respondents were asked to report the total value of all Individual Retirement Account (IRA) and Keogh accounts. In Wave 3, separate questions were asked about the largest, second largest, and all other accounts.

Notable Differences between HRS and AHEAD (Waves 2 & 3)

HRS 1994 and AHEAD 1993 (Wave 2)

AHEAD 1993 has a very different structure than HRS 1994. With the exception of Social Security benefits, SSI, and food stamps, respondents are expected to specify the types of income received. For example, they are asked if they have “any regular income,” and if so, they are asked to identify the source. So there are no specific questions such as, “Do you receive any income from pensions?” However, they can describe up to 4 regular incomes per partner, and up to 3 household investment incomes. The result is many separate components for those combined in other waves. For example, Wave 2 asks about several types of stock income, and later waves ask only about total stock income. Specific question wording differences are described in the “Cross Wave Differences in Original HRS Data” subsections in the codebook.

HRS 1996 and AHEAD 1995 (Wave 3)

The structures of HRS 1996 and AHEAD 1995 are very similar. However, there are several notable differences. These are outlined under the “Cross Wave Differences in Original HRS Data” subsections in the codebook.

Notable Differences between HRS 1998 (Wave 4), HRS 2000 (Wave 5), and HRS 2002 (Wave 6)

The structures of Waves 4, 5, and 6 are very similar. Any important differences are specified under “Cross Wave Differences in Original HRS Data” subsections in the codebook.

Notable Differences between HRS 1998 (Wave 4) through HRS 2002 (Wave 6) and HRS 2004 (Wave 7) and later

The structures of questions from Wave 7 forward are very similar to those in Waves 4 to 6. However, Waves 7 and later no longer ask for income from trusts and alimony specifically. One can assume that these types of income would now be reported with non-specific other income. We have looked at this for cases that previously did report alimony or trust income, and found that other income did not increase as one might expect.

Notable Differences between HRS 2000 (Wave 5) and HRS 2002 (Wave 6) and later

In Wave 5, respondents who are 65 years of age or older, and report not working for pay in the last calendar year, skip the questions about income from unemployment and worker’s compensation. Respondents who are younger than 65 years of age, on the other hand, are asked both sets of questions, even if they are not working. From Wave 6 onward, the same pattern is true for respondents who are 65 years of age or older. However, those who are younger than 65 years of age, and report not working for pay in the last calendar year, are asked the questions about income from unemployment, but skip those related to worker’s compensation.

Notable Differences between HRS 2006 (Wave 8) and HRS 2008 (Wave 9) and later

Business assets reported earlier in the interview: Beginning in Wave 6, after the value of business or farm assets is collected, a question (Q492) asks whether these assets were reported previously in the interview. Beginning in Wave 9, a follow-up question was added which asks respondents to indicate what percentage was previously reported (Q523). For example, in Wave 9, about 30% of business owners indicate that they had reported their business wealth as either primary residence (which could be a farm or ranch), secondary residence, or other real estate earlier in the interview (Q492 = yes), and of these, most say that all of the business asset was previously reported (Q523 = 100%). These two variables are available in the RAND Income and Wealth Imputation File for the convenience of the analyst, and can be used for adjusting total wealth to reflect the amount of wealth that is twice reported. We do not use these two variables in the imputations or derivations of any of the variations on total wealth.

Housing loan question wording: In the housing section, there is a series of questions about whether the respondent has “...a mortgage, land contract, second mortgage, or any other loan that uses the property as collateral.” In Wave 9, the qualifier “Do not include reverse mortgages” was added.

Notable Differences between HRS 2008 (Wave 9) and HRS 2010 (Wave 10) and later

Food stamps: The questions asking about number of months receiving food stamps changed in Wave 10. Specifically, questions are only asked for up to four “eligible years”. For example, a person interviewed in 2011 and 2008 is asked questions about food stamp receipt in 2008, 2009, 2010, and 2011. Prior to Wave 10, respondents can report on food stamp receipt for several years prior to the current interview year.

Income from annuities: Beginning in Wave 10, respondents who report receiving income from annuities, but a value of "0" is indicated for the amount received last month (which indicates that payments have not started yet, or the respondent did not receive a payment last month) are asked a new sequence of questions about any income they may have received from those annuities last year. Similar questions are asked of spouses/partners. No unfolding bracket questions are asked.

3. Imputation Flags and Codes

The imputation files include a flag for each component and partial component that indicates whether it is imputed or not. For income and wealth variables that combine two or more detailed components, the corresponding imputation flag is summarized according to the amount of imputation required for the partial components.

The codes used for imputation flags of non-aggregated components are:

Code	Description	Imputation Status
1	Continuous value given	No imputation
2	Complete bracket given	Value imputed within bracket
3	Incomplete bracket given	Complete bracket imputed within incomplete bracket, then value imputed
4	Range card bracket (applicable in HRS 1992 only)	Value imputed within range
5	No value or bracket given	Complete bracket imputed, then value imputed
6	Does not receive this type of income or does not own this asset	No imputation
7	Missing whether receives this type of income or owns this asset	Whether receives/owns imputed. If imputed to receive/own, complete brackets then value imputed.
8	No spouse or partner (for spouse/partner income components only)	No imputation
9	No Financial Respondent	Whether receives imputed. If imputed to receive, complete brackets then value imputed.

The values of the imputation flags for aggregate variables are:

Code	Description	Imputation Status
0	Does not receive this type of income or does not own this asset	No imputation
1	No imputation in any of the components combined in this type of income/asset	No imputation
2	At least one of the components combined in this type of income/asset is imputed	Some imputation
8	No spouse or partner (for spouse/partner income components only)	No imputation
9	No Financial Respondent	Completely imputed

4. Structure of Codebook

[Chapter 6](#) contains the codebook documenting all the variables in the RAND Income and Wealth Imputation File. This chapter explains how to interpret the codebook entries. The figure below shows a typical codebook page; the numbers in circles correspond to comments below.

Net value of real estate (not primary residence) ←						1
Wave	Variable	Label				Type
2	1 H1WRLES	H1WRLES:W1	Assets:Other	Real estate--Cross-section		Cont

7 → How Constructed:

The reported or imputed net value of real estate is assigned to HwWRLES.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

8 → Cross Wave Differences in Original HRS Data

The net value of real estate, excluding the primary residence, is asked at each wave. The question wording is the same at all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any real estate and if so, the value of it:

a) Do you [or your spouse/partner] have any real estate other than your main home (and your second home), such as land, rental real estate, a partnership, or money owed to you on a land contract or mortgage?

b) If you sold all that and paid off any debts on it, how much would you get?

If the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

1

Title: The variables are documented in groups according to the concept that they measure. For example, there are 30 variables related to net value of real estate, corresponding to 12 waves. The title is often followed by a short description of the concept that is captured.

2

Variable Names: This entry shows the names of variables in the group, and which wave they pertain to.

- ③ *Variable Labels*: This entry shows the SAS/Stata variable labels. As discussed above, the labels typically include the name of the variable, the wave in which it is present, and a description of its contents.
- ④ *Variable Type*: This entry indicates the type of variable. It may be continuous (Cont), categorical (Categ), or character (Char).
- ⑤ *Descriptive Statistics*: This entry shows descriptive statistics on each variable. They include the number of nonmissing values, the mean, standard deviation, minimum value, and maximum value.
- ⑥ *Categorical Variable Codes*: This entry shows the value label codes for categorical variables. The first character(s) of the value labels indicate the value to which each label has been assigned. For example, value “1” is mapped into “1. Continuous value” (not just “continuous value”). The entry also indicates which labels are assigned to which variables, and shows frequency tabulations for all categorical variables.
- ⑦ *How Constructed*: This entry provides background on the manner in which variables were constructed.
- ⑧ *Cross Wave Differences in Original HRS Data*: This entry briefly describes differences in question wording or contents between interview waves.
- ⑨ *HRS Variables Used*: This entry provides the names and labels of raw HRS variables that were used to construct the new variables.

5. Distribution and Technical Notes

The RAND Income and Wealth Imputation data are distributed with the following:

- Documentation: an electronic version of this documentation.
- SAS file: all waves of data in SAS format.
- Stata file: all waves of data in Stata format, compatible with Version 11 and up.
- SPSS file: all waves of data in SPSS for Windows format

This is Version P of the RAND Income and Wealth Imputation data.

The imputation programs are included in the RAND HRS zip file. Please contact RANDHRSHelp@rand.org with questions and to report problems with the RAND Income and Wealth Imputation File (or any other RAND file).

5.1. Distribution files for Web Download

The files can be downloaded from the HRS web site (<http://hrsonline.isr.umich.edu>), once you have registered to use HRS data. They are zipped for downloading; you must unzip them to make them usable. They are available for download as an entire package or documentation only. There are three different file formats included in the package: SAS, Stata 11 SE, and SPSS for Windows.

SAS and Stata files contain value labels and missing value codes. SPSS does not support multiple missing codes.

Each of the following files – SAS, STATA, or SPSS – contains all waves of data:

- SAS: incwlth_p.sas7bdat
- Stata: incwlth_p.dta
- SPSS: incwlth_p.sav

Table 8. RAND Income and Wealth Imputation Data Distribution Files

Distribution File Name	Included Files	Description
The complete package		
randIWPsas.zip	randiwp.pdf	Codebook
	incwlth_p.sas7bdat	Data (SAS): All waves merged
	sasfmts.sas7bdat	Formats (SAS)
	randiwpgmp.zip	Programs (SAS)
randIWPstataSE.zip	randiwp.pdf	Codebook
	incwlth_p.dta	Data (Stata 11 SE): All waves merged
	randiwpgmp.zip	Programs (SAS)
randIWPspss.zip	randiwp.pdf	Codebook
	incwlth_p.sav	Data (SPSS): All waves merged
	randiwpgmp.zip	Programs (SAS)
Documentation only		
randIWPdoc.zip	README_incwlth.pdf	Introduction to the income and wealth imputations
	randIWPreadme.pdf	Data description
	randiwp.pdf	Codebook

5.2. Using the SAS Formats

Many of the variables in this file have been assigned SAS formats, or value labels. We are no longer distributing SAS formats as a formats catalog (i.e., `formats.sas7bcat`). Instead, we are providing SAS code to allow the user to create their own formats catalog on any computing platform. To create the formats catalog, assuming `sasfmts.sas7bdat` is in `C:\incwlth\sasdata`, simply run the following code:

```
libname library "C:\incwlth\sasdata";

proc format library = library cntlin = sasfmts;
run;
```

This SAS code will create a file called `C:\incwlth\sasdata\formats.sas7bcat`. To use them from the SAS format library you must include a `LIBNAME LIBRARY` statement:

```
LIBNAME LIBRARY "your directory";
```

Where “your directory” is the name of the directory where the `formats.sas7bcat` file is stored. For example, if the `formats.sas7bcat` file is stored in `C:\incwlth\sasdata`, you would put the following statement in your SAS programs:

```
LIBNAME LIBRARY "C:\incwlth\sasdata";
```

If you do not have the `LIBNAME LIBRARY` statement in your program, SAS usually gives you an error message and stops processing, unless you specify `NOFMterr` on an `OPTIONS` statement.

If you prefer not to use the assigned SAS formats, you can use the following statement in SAS PROC steps or just after a `SET` or `MERGE` in a data step to un-assign all formats:

```
FORMAT _ALL_ ;
```

You can then assign formats as you wish. The format assignments we assigned to variables can be found by running a `PROC CONTENTS` on the data files.

5.3. Using the Data with Other HRS Files

To use these data with other HRS files, including the `RAND` HRS and the `RAND-enhanced` “Fat” data files, you should be able to simply merge by `HHIDPN`. All `RAND` files are already sorted by this ID so should not need to be resorted. For instance to merge additional data from all waves of the `RAND` HRS file and `RAND-enhanced` Fat Files with the `RAND` Income and Wealth Imputation data, you could use the following:

```
libname mylib "[name of folder to store your files]";

data mylib.newfile;

merge mylib.incwlth_p (keep=HHIDPN [list of other variables])
      mylib.rndhrs_p (keep=HHIDPN [list of other variables])
      hrs.hd92f1b (keep=HHIDPN [list of raw core variables])
      hrs.ad93f2a (keep=HHIDPN [list of raw core variables])
      hrs.h94f1a (keep=HHIDPN [list of raw core variables])
      hrs.ad95f2b (keep=HHIDPN [list of raw core variables])
      hrs.h96f4a (keep=HHIDPN [list of raw core variables])
      hrs.hd98f2c (keep=HHIDPN [list of raw core variables])
      hrs.h00f1c (keep=HHIDPN [list of raw core variables])
      hrs.h02f2d (keep=HHIDPN [list of raw core variables])
      hrs.h04f1b (keep=HHIDPN [list of raw core variables])
      hrs.h06f3a (keep=HHIDPN [list of raw core variables])
      hrs.h08f3a (keep=HHIDPN [list of raw core variables])
      hrs.hd10f5c (keep=HHIDPN [list of raw core variables])
      hrs.h12f1a (keep=HHIDPN [list of raw core variables])
      hrs.h14e1a (keep=HHIDPN [list of raw core variables]);

by HHIDPN;
```

where “[list of raw core variables]” would be replaced by a list of the SAS variables you want to include. You can omit the KEEP option to include all the variables from a given dataset, but in this example the output file would be extremely large if you did so for all the files listed. If you have HRS data files which use the character version of HHIDPN, the RAHHIDPN variable provides the 9-character equivalent of HHIDPN, filled with leading zeros, the format that corresponds to the concatenated HHID and PN character IDs provided in the raw HRS data. HHID and PN are also included as separate variables in the RAND Income and Wealth Imputation data, as well as the RAND HRS data and the Fat Files. Alternatively you can use these two variables to merge.

For Stata and SPSS users, you can find example programs on our web site at <http://www.rand.org/labor/aging/dataproduct/helphrs.html>

6. Data Codebook

SECTION A: IDENTIFIERS AND FLAGS	43

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are discussed in more detail in the "Wealth and Income Imputations" section earlier in this document.

Generally, Wave 1 questions ask about 1991 income, Wave 2H asks about 1993 income, and Wave 2A and from Wave 3 forward, about income last calendar year, based on the Financial Respondent's interview year. In Waves 2A, 3H, 4, and 5 forward not all interviews are completely conducted in the same year.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure a flag indicates whether any or all of its components were imputed. Also included are flags for each HRS and AHEAD income component that indicate the level of imputation used for the individual component.

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

This file is a respondent level file. For couple households where both individuals responded, each value appears on the file twice, once on each respondent's record. HwPICKHH can be used to extract a household level file, that is, one for each sub-household in the core data, by selecting records where HwPICKHH=1, i.e., using:

```
SAS: IF HwPICKHH=1;
```

```
Stata: KEEP if HwPICKHH==1
```

```
SPSS: SELECT IF HwPICKHH=1;
```

This will select all individuals in single-respondent households and just the financial respondent in couple households. In some analyses a different selection of which record in a couple household to keep may be more appropriate. The analyst will need to determine this within the context of each particular study.

The HwHHID identifiers combine HHID with sub-household ID for each wave. They uniquely identify a household in a given wave. Households that split are given different subHH ids by HRS. HwHHID is numeric (HHID*10+subHH). For example if HHID is 012345 and the Wave "w" subHH is 2 then HwHHID is 123452.

As stated in the "Household Identifier" section of the RAND HRS Data File Documentation, there are a few households in Wave 3H that appear to be reunited based on answers to questions in the CoverSheet section. They are reunited in Wave 4 in the public use HRS core data, but have different sub-household IDs in Wave 3. We reunite them in Wave 3 in the RAND HRS Data File. These households are: 17520 (PNs 010 and 040), 22999 (PNs 010 and 020), 40609 (PNs 010 and 020), 40441 (PNs 010 and 020), 50945 (PNs 010 and 040). These cases will have different sub-household IDs in H3HHID from the ESUBHH found in the Tracker and core 1996 files. The spouse PNs will also differ. For households 22999, 40441, and 50945, H3PICKHH will select both members from each household, since each member of the couple is flagged as the financial respondent. We did not select just one member from each household to go through the imputation process, but processed their responses as is. Therefore, they may each give different responses about their income and assets.

HwCPL indicates whether this household is treated as a couple household or not. Households in HRS can consist of a single respondent or a couple. HwCPL is set to one if the respondent is married (RwMSTAT or RwMSTATH is married or partnered), partnered (RwMPART=1), or if there are two respondents in the wave-specific household (HwHHRESP=2). Otherwise a single respondent is assumed, and HwCPL is set to zero. As with most other RAND HRS variables, HwCPL is missing in waves where R does not respond. Please refer to the RAND HRS Data File Documentation for more information about the variables mentioned here.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are discussed in more detail in the "Wealth and Income Imputations" section earlier in this document.

Generally, Wave 1 questions ask about 1991 income, Wave 2H asks about 1993 income, and Wave 2A and from Wave 3 forward, about income last calendar year, based on the Financial Respondent's interview year. In Waves 2A, 3H, 4, and 5 forward not all interviews are completely conducted in the same year.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure a flag indicates whether any or all of its components were imputed. Also included are flags for each HRS and AHEAD income component that indicate the level of imputation used for the individual component.

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

Household ID (HHID) and person number (PN) identify an individual. We combine these into one identifier called HHIDPN, which is a numeric variable set to 1000*HHID+PN. A character version of HHIDPN is provided as RAHHIDPN, which is set to HHID concatenated with PN. SwHHIDPN is the spouse's HHIDPN.

RwFINR indicates whether the respondent is the designated financial respondent. This is set to one if the designated respondent or zero if not.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

For the HRS sample, R2IEARN is the sum of respondent's wage/salary income, bonuses/overtime pay/commissions/tips, 2nd job or military reserve earnings, and professional practice or trade income. For the AHEAD sample, Wave 2A R2IEARN includes only the income from earnings as asked and does not include specifics regarding bonuses, professional practice income, or second jobs. In Wave 3A, the calculation of R3IEARN includes wages, bonuses, and professional practice income but does not include income from a 2nd job, as it was not asked in this wave.

For the HRS sample, SwIEARN is the sum of spouse's wage/salary income, bonuses/overtime pay/commissions/tips, 2nd job or military reserve earnings, and professional practice or trade income. For the AHEAD sample, Wave 2A S2IEARN includes only the income from earnings as asked and does not include specifics regarding bonuses, professional practice income, or second jobs. In Wave 3A, the calculation of S3IEARN includes wages, bonuses, and professional practice income but does not include income from a 2nd job, as it was not asked in this wave.

The individual components summed to produce Rwiearn are: RwiWAGE, RwiBON, Rwi2ND, and RwiTRAD.

Variables in the form RwiFvar/SwiFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form RwiOvar/SwiOvar indicate whether the respondent receives income from this type of income.

Cross Wave Differences in Original HRS Data

The components of earnings remain the same across all HRS waves. However, there are fewer specific questions for the AHEAD sample. In Wave 2A, respondents are only asked about last year's earnings from all jobs combined. The question was asked as follows: "About how much did you earn on all jobs in (1992/1993) before taxes?"

Wave 3A questions cover wages, bonuses, and professional practice income but did not ask about income from a second job. Therefore in waves 2A and 3A, income from a second job is not part of the earnings calculation.

From Wave 2H forward, if the respondent refuses or does not know the value of an income component, a series of unfolding bracket questions are asked. The bracket amounts and entry points for some components vary across waves. In Waves 1 and 2A, no unfolding bracket questions are asked.

Because of the differences in the way income information was collected for the HRS and AHEAD samples in waves 2 and 3, the income component imputation flags that apply vary, depending on the entry cohort of the respondent. For AHEAD entry cohort respondents, R2IFBON, S2IFBON, R2IFTRAD, S2IFTRAD, R2IFWAGE, S2IFWAGE, R2IF2ND, S2IF2ND, R3IF2ND, and S3IF2ND are set to .Q to indicate that the corresponding income components are not available in Waves 2A and 3A.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

HwICAP is the sum of household business or farm income, self-employment earnings, business income, gross rent, dividend and interest income, trust funds or royalties, and other asset income. In Waves 1 and 2H, gross rent is calculated from net rent plus rental expenses.

The components vary across waves because the survey questions ask about different components. From Wave 3-6, the components are the same, as is the case from Wave 7 forward. The components summed in each wave are:

H1ICAP sums income from business, rental, dividend and interest, and trust funds or royalties.

H2ICAP sums income from IRAs; stocks, bonds and other dividends; rental property; savings, cds and other interest income; investment trusts; and other investment income.

H3ICAP sums income from self-employment, business, rental, stocks and mutual funds, bonds, CDs and treasury bills, checking and savings accounts, other assets, and trust funds or royalties.

H7ICAP contains the same components as those described for H3ICAP, the only difference being that income from trust funds or royalties was not asked about from Wave 7 forward.

For income from business, there is a question beginning in Wave 3H that asks whether this income was reported earlier in the interview. If yes, the amount from business income is still imputed (or kept if an amount is present) but is NOT included in HwICAP, as it is assumed to be double-reported, usually as self-employment income. It is important to note that this improvement is currently available from Wave 7 forward, and will be applied in future data releases to Wave 3H - Wave 6, where roughly 3.6% - 4.4% of households already reported business income earlier in the interview, depending on the wave.

The individual components summed to generate HwICAP are: HwIBUSIN, HwIRNTIN, HwITRSIN, HwIDIVIN, HwIBNDIN, HwISTK, HwICHKIN, HwISAV, HwICDIN, RwiIRA, HwIOTHIX and RwiSEMP.

Variables in the form HwIFvar/RwIFvar/SwIFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwIOvar/RwIOvar/SwIOvar indicate whether income is received from this type of capital income.

Cross Wave Differences in Original HRS Data

The components of household capital income vary across waves.

Income from self-employment is not asked in Waves 1 and 2A but is added in Wave 2H. In Wave 2H, if the financial respondent reported they (respondent only) were self-employed in the last wave, then they are asked how much they received in 1993. Then the financial respondent is asked if they or their spouse has received any other income privately-held businesses, farms, professional practices, or partnerships owned or shared by the respondent and spouse. As a result, if the spouse was self-employed last wave or if the respondent is newly self-employed, they will skip the first question and so their self-employment income will be bundled with the business income.

From Wave 3 forward, self-employment income is reported for the respondent and spouse separately. In Waves 1 and 2H, one question asks about total interest and dividend income. Beginning in Wave 3, the survey adds separate questions about interest from bonds, CDs or treasury bills, and checking, savings, or money market accounts. Also added in Wave 3 are questions about income from other assets.

Most income from assets from Wave 3 forward ask for an amount, how often received, and whether it is the same amount each period. If the same amount is not received each period, then the total amount received last calendar year is asked. If the same amount is received each period, then the amount is multiplied appropriately for the period to arrive at total per year. Beginning in Wave 3, questions asking about the income from assets immediately follow questions on whether the asset is owned. If the household does not own an asset, then income from the asset is assumed to be zero. In Waves 1 and 2, income from assets questions are asked in a completely different section of the interview.

From Wave 2H forward, with the exception of trust fund income, if the respondent refuses or doesn't know the value of an income component, a series of unfolding bracket questions are asked. The bracket amounts for income from business, rent, and dividends or interest change from Wave 2H to 3. The entry points for some components vary across waves. In Waves 1 and 2A, no unfolding bracket questions are asked.

The income questions in Wave 2A are very different from other waves. Most distinctive are the "regular income" for respondent and spouse and "other household income". After standard questions about Social Security income, SSI and food stamps, other income is asked about in a general way. If other income is present, respondents are asked to specify the source of income. In other waves, most income types are asked specifically (e.g., Do you receive income from stocks?).

In Wave 2A, financial respondents are asked the following questions about their own income, then their spouse's:

a) Do you receive any (other) regular income payments; for example, from retirement pensions, Veterans Benefits, annuities, payments from an IRA account, or anything like that?

b) Please think about the largest (other) regular income you receive. What type of income is that?
[IWER: PROBE WITH CATEGORIES ONLY IF R NEEDS HELP]

1.VETERANS BENEFITS

2.RETIREMENT OR OTHER PENSIONS

3.ANNUITY

4.IRA DISTRIBUTION

5.STOCKS AND BONDS

7.OTHER

8.DK

9.RF

This set of questions is repeated twice so that respondents can report up to 3 current other regular incomes. Then they are asked:

a) Did you receive any other regular income in [last calendar year] that you no longer receive?

b) What type of income was that? (Same categories as above)

So there are a total of 4 other regular incomes that can be reported. Categories may be specified more than once, and there are up to 3 different instances of an income like pension or stocks. Besides pensions and annuities, other waves allow only one reported amount for most income categories, so that a respondent would give a total of all dividend income received.

Financial respondents are then asked the following questions about their household income:

a) (Aside from anything you have already told me about,) Do you (or your (husband/wife/partner)) receive any income from financial investments like savings accounts, CDs, stocks and bonds, rental property, or investment trusts?

b) What do you receive the largest income from?

[IWER: PROBE WITH CATEGORIES ONLY IF R NEEDS HELP]

1.SAVINGS ACCOUNTS/CDs/INTEREST

2.STOCKS OR BONDS/DIVIDENDS

3.RENTAL PROPERTY

4.INVESTMENT TRUSTS

5.RELATIVE

7.OTHER

8.DK

9.RF

This set of questions is repeated once so that respondents can report up to 2 current household investment incomes. Then they are asked:

a) Did you (or your (husband/wife/partner)) receive any income from savings or investments in [last calendar year] that you no longer receive?

b) What did you receive that income from?

So there are a total of 3 household investment incomes that can be reported. Categories may be specified more than once, and there are up to 2 different instances of an income like savings.

If income is received, subsequent questions serve to identify the date of receipt (was income received in last calendar year?) and amount received. There are no unfolding brackets for income in Wave 2A.

Resulting Wave 2A Household Capital Income components:

Respondent/Spouse or Partner (R/S)

IIRA1-2

ISTK1-3

Household (H)

ISAV1-2

ISTK1-2

IRNT1-2

ITRS1-2

IOTHI4-5

In Wave 6, the introductory question wording for real estate ownership differs from previous waves. Up until Wave 6, the question reads:

Do you (or your husband/or your wife/or your partner/...) have any real estate (other than your main home or second home), such as land, rental real estate, a partnership, or money owed to you on a land contract or mortgage?

The new question wording is as follows:

Do you and (your (husband/wife/partner)) have any real estate (other than your main home or second home,/other than your main home,/other than your second home,) such as land, rental real estate, or money owed to you on a land contract or mortgage? Please do not include business or farm real estate.

From Wave 7 forward, income from trust funds or royalties was not asked about. Therefore, this type of income is not included amongst the components that are used to derive household capital income.

Because of the differences in the way income information was collected for the HRS and Ahead samples in wave 2, the income component imputation flags that apply vary, depending on the entry cohort of the respondent. For Ahead entry cohort respondents, H2IFBUSIN, H2IFSFEEMP, H2IFRNTIN, H2IFRNTEX, H2IFDIVIN, and H2IFTRSIN are set to .Q to indicate that the corresponding income components are not available in Wave 2A. For HRS entry cohort respondents, R2IFIRA1, S2IFIRA1, R2IFIRA2, S2IFIRA2, R2IFSTK1, S2IFSTK1, R2IFSTK2, S2IFSTK2, R2IFSTK3, S2IFSTK3, H2IFSAV1, H2IFSAV2, H2IFSTK1, H2IFSTK2, H2IFRNT1, H2IFRNT2, H2IFTRS1, H2IFTRS2, H2IFOTHI4, and H2IFOTHI5 are set to .Q to indicate that the corresponding income components are not available in Wave 2H.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

RwIPENA is the sum of the respondent's income from all pensions and annuities. RwIPEN is the respondent's income from all pensions. RwIANN is the respondent's income from all annuities.

SwIPENA is the sum of the spouse's income from all pensions and annuities. SwIPEN is the spouse's income from all pensions. SwIANN is the spouse's income from all annuities.

Variables in the form RwIFvar/SwIFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form RwIOvar/SwIOvar indicate whether income is received from type of income.

Users should note a few outliers who required further examination:

1. HHIDPN: 10013010 reported receiving a (monthly) first pension (LQ220_1) of \$5,000,000 in Wave 9. Multiplying this amount by 12 months results in \$60,000,000 annually from this pension alone. The accuracy of this amount has been confirmed by HRS.
2. HHIDPN: 79230030 reported receiving a (monthly) first pension (LQ246_1) of \$600,000 in Wave 9. Multiplying this amount by 12 months results in \$7,200,000 annually from this pension alone. HRS has stated that the reported amount is a lump sum. However, examination of other questions suggest that this pension started in 2003 (LQ257_1). Therefore, we have decided to consider this a monthly amount, which again will result in the large annual total stated above.
3. HHIDPN: 33242020 reported a monthly first pension amount of \$450,000 in Wave 10. Since s/he was missing the beginning month and year, s/he was assumed to have received it for 12 months. This resulted in an annual first pension amount of \$5,400,000.
4. HHIDPN: 60278020 reported a total monthly amount of \$100,000 from a third or subsequent annuity in Wave 10. The beginning month and year were not collected, so it was assumed they were collected for 12 months. This resulted in an annual amount of \$1,200,000.
5. HHIDPN: 145489010 reported a monthly second annuity amount (OQ278_2) of \$48,492 in Wave 12. Since s/he reported receiving it for 12 months, this resulted in an annual amount of \$581,904.
6. HHIDPN: 501272010 reported receiving a second annuity in Wave 12, but no value was provided. An amount of \$9,272.79 was imputed. Since s/he reported receiving it for 12 months, this resulted in an annual amount of \$111,273.47.
7. HHIDPN: 500044010 reported a monthly third annuity amount (OQ290) of \$30,000 in Wave 12. Since s/he reported receiving it for 12 months, this resulted in an annual amount of \$360,000. HHIDPN = 86893010 also has an annual third annuity amount of \$360,000. This is the result of the "nearest neighbor" imputation, where a monthly amount of \$30,000 was taken from HHIDPN = 500044010.

Cross Wave Differences in Original HRS Data

In Wave 1, income is reported as the total amount received in 1991 from all pensions. Pension income is reported separately for respondent and spouse. From Wave 2 forward, monthly income from up to 2 pensions are asked about individually, and monthly income from any additional pensions are reported as a 3rd

amount. These three amounts are reported separately for respondent and spouse. Also, beginning in Wave 2, the month the respondent or spouse first received the pension is asked for the first two pensions. The same is true for annuities.

Beginning in Wave 2, the start month is checked for the first 2 pensions or annuities, and the appropriate number of months are used to calculate yearly income. For the third monthly amount reported, no start month is available beginning in Wave 2H, and the monthly amount is multiplied by 12 months.

Beginning in Wave 3H, if the respondent refuses or does not know the amount received last month from the first 2 pensions and annuities, a series of unfolding bracket questions are asked. The bracket amounts and entry points are the same across waves. In Waves 1, 2, and 3A, no unfolding bracket questions are asked. Beginning in Wave 6, bracket questions are asked for the third pension and annuity.

Beginning with Wave 10, those who report receiving \$0 in the last month for their first or second annuities are asked if they received any income in the last year, and the amount in total that they received.

The income questions in Wave 2A are very different from other waves. Most distinctive are the "regular income" for respondent and spouse and "other household income". After standard questions about Social Security income, SSI and food stamps, other income is asked about in a general way. If other income is present, respondents are asked to specify the source of income. In other waves, most income types are asked specifically (e.g., Do you receive pension income?).

In Wave 2A, financial respondents are asked the following questions about their own income then their spouse's:

a) Do you receive any (other) regular income payments; for example, from retirement pensions, Veterans Benefits, annuities, payments from an IRA account, or anything like that?

b) Please think about the largest (other) regular income you receive. What type of income is that?

[IWER: PROBE WITH CATEGORIES ONLY IF R NEEDS HELP]

1.VETERANS BENEFITS

2.RETIREMENT OR OTHER PENSIONS

3.ANNUITY

4.IRA DISTRIBUTION

5.STOCKS AND BONDS

7.OTHER

8.DK

9.RF

This set of questions is repeated twice so that respondents can report up to 3 current other regular incomes. Then they are asked:

a) Did you receive any other regular income in [last calendar year] that you no longer receive?

b) What type of income was that?

(Same categories as above)

So there are a total of 4 other regular incomes that can be reported. Categories may be specified more than once, and there are up to 3 different instances of pension income and up to 2 different reports of annuity income.

If income is received, financial respondents are then asked questions that serve to identify the frequency (was that paid to you monthly?), amount received (how much did you receive last [month/period/year] from that?), and when payments were stopped (what month did you stop receiving that?). There are no unfolding brackets for income in Wave 2A.

Because of the differences in the way income information was collected for the HRS and AHEAD samples in Wave 2, the income component imputation flags that apply vary, depending on the entry cohort of the respondent. For AHEAD entry cohort respondents, R2IFANN3 and S2IFANN3 are set to .Q to indicate that the corresponding income components are not available in Wave 2A.

Beginning in Wave 10, if a respondent states s/he is currently receiving an annuity and that the amount received last month was zero, he is asked if any income was received last year and the total amount received last year. If provided, we apply the total amount received last year as the annual amount from the LCY and also use it to estimate a monthly amount.

An examination of the pension income (RwIPEN) variables in Version O showed markedly lower average pension income in Wave 11 compared to Wave 10. After a thorough analysis, we have concluded that this is largely due to the introduction of a new Pension Section (J2) in the 2012 questionnaire, which precedes and therefore affects some answers in the Asset and Income Section (Q). Because the question about pension income in the Assets and Income Section uses the wording "Not including Social Security or other retirement income you've already told me about," some financial respondents did not report pension income they had reported earlier in the Pension Section. This interaction between different sections of the surveys was not intended by the survey designers.

To remedy this problem in the data, beginning in Version P, we incorporate logic in Waves 11 and 12 to pull information about pension income of financial respondents from both Section Q and Section J2. We did not change the derivation of pension income for earlier waves, because those did not yet have the Pension Section (J2) that caused the interaction with the pension income questions in Section Q. Pension income for earlier waves continues to be calculated using only information from Section Q. See [Appendix C: Combining Pension Income from Section Q \(Assets & Income\) and Section J2 \(Pension\) for a detailed description of the methodology that we developed for combining information from the Pension Section \(J2\) and the Income Section \(Q\).](#)

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

RwISSDI is the sum of the respondent's income from Social Security disability (SDI) and Supplemental Security income (SSI). SSI income is always included in the sum, but Social Security income is only included in the sum if it is received due to disability. Income from SDI and SSI are available separately in RwISDI and RwISSI.

SwISSDI is the sum of the spouse's income from SDI and SSI. SSI income is always included in the sum, but Social Security income is only included in the sum if it is received due to disability. Income from SDI and SSI are available separately in SwISDI and SwISSI.

RwISDI is the portion of RwISSDI that represents the respondent's Social Security disability income, and RwISSI is the portion that represents the respondent's income from SSI. Note that RwISDI and RwISSI are included in RwISSDI, i.e., RwISSDI is equal to the sum of RwISDI and RwISSI.

SwISDI is the portion of SwISSDI that represents the spouse's Social Security disability income, and SwISSI is the portion that represents the spouse's income from SSI. Note that SwISDI and SwISSI are included in SwISSDI, i.e., SwISSDI is equal to the sum of SwISDI and SwISSI.

SSI is reported as a household amount but allocated to respondent or spouse. In a single household, it is assigned to the respondent. In a couple household, it is allocated to the respondent and/or spouse using the HRS core variable indicating who received income from SSI. This variable indicating who received income from SSI provides the financial respondent's answer to this question; a variable based off of this information has been created that adjusts for the non-financial respondent so that 1 indicates self and 2

indicates spouse. If the HRS core variable indicating who received income from SSI is missing or indicates both received income from SSI, the household amount is split evenly between the respondent and spouse. RwiSSI and SwiSSI reflect the last calendar year amounts allocated to respondent and spouse, respectively.

Beginning in Version F, we have introduced logic that takes into account who reported receiving SSI income. Specifically, the income is split between the respondent and spouse if the respondent is married or partnered and the income is reported jointly. However, income from SSI is not split between the two members of the couple if only one reports receiving it, that is – it is assigned to the appropriate recipient. This logic does not apply to Waves 1 and 2H, since it is already reported individually, nor does it apply to Waves 2A and 3A, since there is no question about who received income from SSI. RwiSSI and SwiSSI reflect the last calendar year amounts allocated to respondent and spouse, respectively.

Beginning in Version F, we incorporated logic in Waves 1 and 2H and from Wave 3H forward that examines the ages of respondents and spouses. For those who are greater than 66 years of age at the time of the interview and receive Social Security disability income, we override the disability income and assign it instead retirement income. This is based on the notion that these individuals turned 65 or 66 (i.e., retirement age) during the last calendar year, at which point disability benefits automatically convert to retirement benefits.

Respondents are asked to report monthly amounts for both Social Security and SSI (RwMSDI, SwMSDI, HwMSSI), which are multiplied by the appropriate number of months (RwNSDI, SwNSDI, HwNSSI) to derive the amount received in the last calendar year (RwISDI, SwISDI, HwiSSI). If the start month is missing and the start year is within the last year, the number of months is set to six and a flag is set to one (RwNFSDI, SwNFSDI, HwNFSSI). If both the start month and the year are missing, the number of months is set to 12 and a flag is set to one (RwNFSDI, SwNFSDI, HwNFSSI).

Variables in the form HwIFvar/RwIFvar/SwIFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwIOvar/RwIOvar/SwIFvar indicate whether income is received from this type of income.

Cross Wave Differences in Original HRS Data

The way the Social Security and Supplemental Security Income questions are asked varies across waves.

In Wave 1, the questions asked the annual amount of Social Security and SSI received in 1991. In Wave 1 and Wave 2A, if the respondent and spouse received a joint check for Social Security, only one amount is asked; if they received separate checks, amounts were asked for each individual. From Wave 2 forward, a monthly amount is asked. For social security the first month received is also asked. Beginning in Wave 2H, the SSI questions ask which months since the last interview SSI was received. The variable derivation checks that the monthly income was received and multiplies the monthly amount appropriately to calculate a yearly amount.

In Waves 1, 2 and 3A, the type of Social Security income received is reported, with one exception. In Wave 1, if both respondent and spouse received Social Security income in a joint check, the type is not reported; in these cases, the income is treated as retirement (OAS), not disability, income. From Wave 3H forward, the type of Social Security income is not reported. Variables in the disability section indicating whether the respondent and spouse received Social Security disability are used to determine whether Social Security reported in the income section is disability income or not.

In Wave 3A, respondents and spouses who received income from Social Security are asked to indicate what the amount was for (i.e., retirement, disability, survivor benefits, dependent of disabled or retired, or other). People list up to two types of Social Security. However, the questions about how much they received do not make a distinction between amounts received from each type of Social Security, and simply lump them together. Therefore, we decided that if a person reports receiving disability income, even if they also report getting another type of income from Social Security, the amount they indicated would be considered disability income.

From Wave 3 forward, if the respondent refuses or does not know the value of monthly Social Security or Supplemental Security income, a series of unfolding bracket questions are asked. The bracket amounts for Social Security income change in Wave 5, but otherwise are the same across all waves. The exception to this is in Wave 3A, where the bracket amounts are based on the last year rather than the last month. In Waves 1 and 2, no unfolding bracket questions are asked.

In Wave 6, there are two possible sources of information about whether the spouse receives social security: (1) the financial respondent's report in the income section (Section Q); and (2) the spouse's self-report in the employment section (Section J). To determine whether the spouse has any social security income, we use the spouse's self-report. However, if the spouse did not respond, or the self-report is missing, we use the financial respondent's report. Our rationale for doing this is that the self-report is probably more accurate. It is also important to note that the self-report in the employment section is the only question about whether the financial respondent receives social security income.

From Wave 7 forward, an additional response option ("6. SSDI HAS CONVERTED TO SOCIAL SECURITY (VOL)") was added to the question below, which helped us determine whether the type of social security income being received was for retirement or disability:

According to our records, in [PREV WAVE FIRST R IW MONTH]/[Prev Wave Iw Mo] [Previous Wave First R Interview Year]/[Prev Wave Iw Yr] you were receiving benefits from the Social Security Disability program or the Supplemental Security Income program. Which program was this: the Social Security Disability or the Supplemental Security Income program, or both?

There were fewer than 50 individuals who selected this category. We added logic to check the ages of these individuals before designating them as receiving social security retirement income. Specifically, to make them have retirement income instead of disability income, we required that a person be greater than 66 years of age at the time of the interview or have an end year for their social security income before the last calendar year.

Because of the differences in the way income information was collected for the HRS and AHEAD samples in Wave 2, the income component imputation flags that apply vary, depending on the entry cohort of the respondent. For AHEAD entry cohort respondents, R2IFSSI and S2IFSSI are set to .Q to indicate that the corresponding income components are not available in Wave 2A. For HRS entry cohort respondents, H2IFSSI is set to .Q to indicate that the corresponding income components are not available in Wave 2H.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the

FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

RwISRET is the respondent's income from Social Security retirement, spouse or widow benefits.

SwISRET is the spouse's income from Social Security retirement, spouse or widow benefits.

The variable derivation checks the months in which income was received and multiplies the monthly amount appropriately to calculate a yearly amount.

In Wave 3A, respondents and spouses who received income from Social Security are asked to indicate what type of benefit (i.e., retirement, disability, survivor benefits, dependent of disabled or retired, or other). People list up to two types of Social Security benefits. However, the questions about how much they received do not make a distinction between amounts received from each type of benefit; they simply lump them together. Therefore, we decided that if a person reports receiving retirement income even if they also report getting another type of income from Social Security (EXCEPT disability), the amount they indicated would be considered retirement income.

Beginning in Version F, we incorporated logic in Waves 1 and 2H and from Wave 3H forward that examines the ages of respondents and spouses. For those who are greater than 66 years of age at the time of the interview and receive Social Security disability income, we override the disability income and assign the income to retirement instead. This is based on the notion that these individuals turned 65 or 66 (i.e., retirement age) during the last calendar year, at which point disability benefits automatically convert to retirement benefits.

RwISRET and SwISRET only include Social Security income if it is NOT received due to disability. These variables report annual income and are constructed by taking the monthly amount (RwMSS, SwMSS) and multiplying by the appropriate number of months (RwNSS, SwNSS) to derive the amount received in the last calendar year (RwISS, SwISS). If the start month is missing and the start year is within the past year, the number of months received is set to six and a flag is set to one (RwNFSS, SwNFSS). If both the start month and year are unknown, the number of months received is set to 12 and a flag is set to one (RwNFSS, SwNFSS).

Variables in the form HwIFvar/RwIFvar/SwIFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwIOvar/RwIFvar/SwIFvar indicate whether income is received from this type of income.

Cross Wave Differences in Original HRS Data

The way the Social Security income questions are asked varies across waves.

In Waves 1 and 2A, Social Security income could be reported individually or, if the respondent is married, jointly. If the income is reported jointly, the income is split between the respondent and spouse.

In Waves 1, 2, and 3A, the type of Social Security income received is reported. From Wave 3H forward, variables in the disability section indicating whether the respondent and spouse receive Social Security disability are used to determine whether Social Security reported in the income section is disability income or not.

In Wave 1, the questions ask the annual amount of social security received in 1991. In Wave 1 and Wave 2A, if the respondent and spouse received a joint check only, one amount is asked; if they received separate checks, amounts are asked for each individual. From Wave 2 forward, a monthly amount is asked. The first month Social Security was received is also asked.

In Waves 1, 2, and 3A, the type of Social Security income received is asked. The type can be retirement, disability, survivor benefits, dependent of retired, dependent of disabled or other. In Wave 1, if a joint check is received, the type is not asked. From Wave 3H forward, the type of Social Security income is not asked.

From Wave 3 forward, if the respondent refuses or does not know the value of monthly Social Security income, a series of unfolding bracket questions are asked. The bracket amounts for Social Security income changed in Wave 5, but otherwise are the same across all waves. The exception to this is in Wave 3A, where the bracket amounts are based on the last year rather than the last month. In Waves 1 and 2, no unfolding bracket questions are asked.

Beginning in Wave 6, there are two possible sources of information about whether the spouse receives social security: (1) the financial respondent's report in the income section (Section Q); and (2) the spouse's self-report in the employment section (Section J). To determine whether the spouse has any social security income, we use the spouse's self-report. However, if the spouse did not respond, or the self-report is missing, we use the financial respondent's report. Our rationale for doing this is that the self-report is probably more accurate. It is also important to note that the self-report in the employment section is the only question about whether the financial respondent receives social security income.

From Wave 7 forward, an additional response option ("6. SSDI HAS CONVERTED TO SOCIAL SECURITY (VOL)") was added to the question below, which helped us determine whether the type of social security income being received was for retirement or disability:

According to our records, in [PREV WAVE FIRST R IW MONTH]/[Prev Wave Iw Mo] [Previous Wave First R Interview Year]/[Prev Wave Iw Yr] you were receiving benefits from the Social Security Disability program or the Supplemental Security Income program. Which program was this: the Social Security Disability or the Supplemental Security Income program, or both?

There were fewer than 50 individuals who selected this category. We added logic to check the ages of these individuals before designating them as receiving social security retirement income. Specifically, to make them have retirement income instead of disability income, we required that a person be greater than 66 years of age at the time of the interview or have an end year for their social security income before the last calendar year.

Because of the differences in the way income information was collected for the HRS and AHEAD samples in wave 2, the income component imputation flags that apply vary depending on the entry cohort of the respondent. For HRS entry cohort respondents, H2IFSSJ is set to .Q to indicate that the corresponding income components are not available in Wave 2.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income

questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

RwIUNWC sums the respondent's income from unemployment and worker's compensation. Income from unemployment and worker's compensation are available separately in RwIUNEM and RwIWCMP.

SwIUNWC sums the spouse's income from unemployment and worker's compensation. Income from unemployment and worker's compensation are available separately in SwIUNEM and SwIWCMP.

Variables in the form RwIFvar/SwIFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form RwIOvar/SwIFvar indicate whether income is received from this type of income.

Cross Wave Differences in Original HRS Data

The unemployment and worker's compensation questions are asked in all HRS waves for respondent and spouse. The question wording varies slightly. In AHEAD (Waves 2A and 3A), there are no questions about unemployment and worker's compensation.

In Wave 1, the questions ask for income received in 1991. In Wave 2H, the questions ask for income received in 1993. Beginning in Wave 3H, the questions ask for income received in the last calendar year. The last calendar year was the year before the year of the interview.

The question about the amount received is:

How much did you receive in [year]?

Beginning in Wave 4, the question changed slightly to:

How much did you receive in [year] (before taxes and other deductions)?

In Wave 5, respondents who are 65 years of age or older and report not working for pay in the last calendar year skip the questions about income from unemployment and worker's compensation. Respondents who are under 65 years of age, on the other hand, are asked both sets of questions, even if they are not working. From Wave 6 forward, the same pattern is true for respondents who are 65 years of age or older. However, those who are under 65 years of age and report not working for pay in the last calendar year are asked the questions about income from unemployment but skip those related to worker's compensation.

Beginning in Wave 6, unfolding bracket questions are asked for unemployment and worker's compensation.

Unemployment and worker's compensation are not available for AHEAD respondents in Waves 2A and 3A. RwiUNWC and SwiUNWC are set to zero for all AHEAD respondents in these waves. The same applies for RwiUNEM, RwiWCMP, SwiUNEM and SwiWCMP. Additionally, RwiFUNWC and SwiFUNWC are set to .Q to flag the cases where this is done, as well as for RwiFUNEM, SwiFUNEM, RwiFwCMP and SwiFwCMP.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

RwIGXFR sums the respondent's income from veteran's benefits, welfare, and food stamps.

SwIGXFR sums the spouse's income from veteran's benefits, welfare, and food stamps.

Veterans' benefits and food stamps are given as monthly amounts (RwMVET, SwMVET, HwMFOOD), which are multiplied by the appropriate number of months (RwNVET, SwNVET, HwNFOOD) to derive the amount received in the last calendar year (RwIVET, SwIVET, HwIFOOD). For veterans' benefits, when we know the income was first received last calendar year, but no month information is available, we assume 6 months. Prior to Wave 10, we assumed 12 months. When neither the year of first receipt nor the months are known, we use 12 months, and a flag is set to "1" (RwNFVET, SwNFVET). For food stamps, when we know the income was received last calendar year, but no month information is available, we assume 6 months, accounting for the fact that this benefit is not necessarily received for an entire year and that households may get off food stamps when their economic circumstances change. Prior to Wave 10, we assumed 12 months, and in Wave 10, we inadvertently used 0 months. When the respondent reports receiving food stamps sometime since the last interview or in the last two years, but we know neither the year nor the month of receipt, we assume 6 months as well, and a flag is set to "1" (HwNFFOOD). Prior to Wave 11, we assumed 12 months. The assumptions that were used prior to Wave 11 will be updated as necessary in a future data release.

Beginning in Version F, we introduced logic that takes into account who reported receiving welfare income. Specifically, the income is split between the respondent and spouse if the respondent is married or partnered and the income is reported jointly. However, income from welfare is not split between the two members of the couple if only one reports receiving it, that is - it is assigned to the appropriate recipient. This logic does not apply for Wave 2H, since income from welfare is already reported individually. Nor does it pertain to Wave 2A, since there is no direct question about income from welfare. Income from food stamps is always divided equally between the respondent and spouse.

The individual components summed to produce RwIGXFR are: RwIVET, R2IVETn, HwIFOOD, R2IWELF, and HwiWELF.

Variables in the form HwIFvar/RwIFvar/SwIFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwIOvar/RwIOvar/SwIOvar indicate whether income is received from this type of income.

Cross Wave Differences in Original HRS Data

The way the income component questions are asked varies across waves.

In all waves, veteran's benefits are reported for respondent and spouse individually, and food stamps are reported for the household. In Wave 1, and from Wave 3 forward, welfare is reported for the household, but in Wave 2H it can be reported individually or, if both the respondent and spouse receive it, jointly. In Wave 2A, it is not reported at all.

In Wave 1, the questions ask for the annual amount of veteran's benefits and food stamps received in 1991. From Wave 2 forward, the amount of veteran's benefits received last month and the amount of food stamps in the latest month received are asked. For veteran's benefits the first month received is also asked. The variable derivation checks the months in which income was received and multiplies the monthly amount appropriately to calculate a yearly amount. Beginning in Wave 2H, the questions about food stamps ask which months since the last interview they were received. For welfare, the question asks for the annual amount in all waves. Beginning in Wave 6, bracket amounts are asked for welfare, food stamps, and transfer income.

From Wave 3 forward, if the respondent refuses or does not know the value of monthly veteran's benefits, a series of unfolding bracket questions are asked. The bracket amounts are the same across all waves. The exception to this is in Wave 3A, where the bracket amounts are based on the last year, rather than the last month. In Waves 1 and 2, no unfolding bracket questions are asked.

The income questions in the Wave 2A are very different from other waves. Most distinctive are the "regular income" for respondent and spouse and "other household income". After standard questions about Social Security income, SSI and food stamps, other income is asked about in a general way. If other income is present, respondents are asked to specify the source of income. In other waves, most income types are asked specifically (i.e., Do you receive veteran's benefits?).

In Wave 2A, financial respondents are asked the following questions about their own income, then about their spouse's:

a) Do you receive any (other) regular income payments; for example, from retirement pensions, Veterans Benefits, annuities, payments from an IRA account, or anything like that?

b) Please think about the largest (other) regular income you receive. What type of income is that?

[IWER: PROBE WITH CATEGORIES ONLY IF R NEEDS HELP]

1.VETERANS BENEFITS

2.RETIREMENT OR OTHER PENSIONS

3.ANNUITY

4.IRA DISTRIBUTION

5.STOCKS AND BONDS

7.OTHER

8.DK

9.RF

This set of questions is repeated twice so that respondents can report up to 3 current other regular incomes. Then they are asked:

a) Did you receive any other regular income in [last calendar year] that you no longer receive?

b) What type of income was that?

(Same categories as above)

So there are a total of 4 other regular incomes that can be reported. Categories may be specified more than once, and there are up to 2 different instances of veterans' benefits. Besides pensions and annuities, other waves allow only one reported amount for most income categories, so that a respondent would give a total of all veterans' benefits income received.

If income is received, subsequent questions serve to identify the date of receipt (was income received in the last calendar year?) and amount received. There are no unfolding brackets for income in Wave 2A.

In Wave 12, there are 64 respondents who report receiving food stamps (OQ400 = 1), have missing (.) values for the "year received food stamps" questions (OQW776_1, OQW776_2, OQW776_3, OQW776_4), but do answer the "amount received" questions (OQ406 or OQ410). According to HRS, this is due to a programming oversight, resulting in the OQW776 questions being skipped for respondents who completed the survey in 2015. We assume that these respondents received food stamps for 6 months in the last calendar year.

Because of the differences in the way income information was collected for the HRS and AHEAD samples in wave 2, the income component imputation flags that apply vary, depending on the entry cohort of the respondent. For AHEAD entry cohort respondents, R2IFVET, S2IFVET, R2IFWELF, and S2IFWELF are set to .Q to indicate that the corresponding income components are not available in Wave 2A. For HRS entry cohort respondents, R2IFVET1, S2IFVET1, R2IFVET2, and S2IFVET2 are set to .Q to indicate that the corresponding income components are not available in Wave 2H.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

HwIOTHR is based on income from alimony (HwIALMNY) and lump sums (HwILUYR).

Alimony is reported until Wave 6. After Wave 6, it is bundled into the questions that asks about other sources of income.

Lump sum amounts received since the last interview or for the past two years (HwILUMP1 to HwILUMP3) are reported, and the year received is collected. The year is used to identify lump sums received in the last calendar year. If the lump sum amount is missing, it is imputed separately (HwILUYR1 to HwILUYR3). If the year is missing, then ownership of the lump sum in the last calendar year is imputed.

Variables in the form HwIFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwIOvar indicate whether the household receives income from this type of income.

Cross Wave Differences in Original HRS Data

The way some income component questions are asked may vary across waves. The questions about lump sum income and other household income change across waves, while the questions on alimony remain the same across waves through Wave 6. Beginning in Wave 7 forward, the question about alimony is not asked.

In Wave 1, the income section asked three separate questions, one for each type of lump sum:

Did you [or your (husband/wife/partner)] receive a lump sum of money in 1991 from [pensions, insurance, inheritance]?

In Wave 2, the lump sum income questions are asked in the assets section of the questionnaire:

People sometimes receive property or lump sum payments of money from such things as pension settlements, insurance settlements, cashing in annuities, or inheritances. In the past two years did you [or your (husband/wife/partner)] receive a lump sum of money or property worth \$500 or more that you have not already told me about? Do not include loans or gifts.

The Wave 3 question wording is similar to that in Wave 2H. Instead of "the past two years", the wording is "since [previous interview month]" if the respondent has a previous interview. Also the words "worth \$500" are dropped.

Beginning in Wave 4, the question wording is:

People sometimes receive large amounts of property or money in the form of an inheritance, a trust fund, an insurance settlement, and so on. Have you [or your spouse/partner] [ever/since last interview] received money or property in the form of an inheritance, a trust fund, or an insurance settlement?

Note that the word "large" is included and the reference period is "ever" if this is the respondent's first interview. A note to the interviewer indicates that "large" means \$10,000 or more.

From Wave 2 forward, the type of payment and month received are asked and questions about any other lump sum, one or two more times. The amount question asks about the largest or next largest lump sum. Thus the amounts of the three largest lump sums are available.

Other household income is derived from questions about any other income not asked about specifically. In Waves 1 and 2A, there is also a question about income from friends and family. In later waves, income from friends and family is specifically excluded in question wording about other income.

The question wording for other income varies across waves. In Wave 1, the question asks:

Any other income from sources other than Social Security, which I'll ask about next?

In Wave 2H, two questions ask about other income:

1.(Other than income you have already told me about, did you [and your (husband/wife/partner)] receive any other income in 1993, for example, from private disability insurance payments, consulting fees, odd jobs, and so forth? [DO NOT INCLUDE FINANCIAL SUPPORT FROM RELATIVES OR FRIENDS.]

2.Are there any others?

In Wave 3H forward, only one question about other income is asked and the wording is similar to that in the first question in Wave 2H, except that "rent from your home or second home" is added to the list of examples. In Wave 3A, the question wording is also similar to that in the first question in Wave 2H, except that "consulting fees" is removed from the list of examples. Beginning in Wave 4, the question that actually asks for the amount received adds the words "before taxes and other deductions".

No unfolding bracket questions are asked for alimony and other income in any wave, except for Wave 6. From Wave 2 forward, if the respondent refuses or does not know the value of a lump sum, a follow-up question asks if the amount is more than \$50,000 (\$30,000 in Wave 2A). In Wave 1, no follow-up question is asked.

The income questions in Wave 2A are very different from other waves. Most distinctive are the "regular income" for respondent and spouse and "other household income". After standard questions about Social Security income, SSI and food stamps, other income is asked about in a general way. If other income is present, respondents are asked to specify the source of income. In other waves, most income types are asked specifically (i.e., Do you receive any other income?).

In Wave 2A, financial respondents are asked the following questions about their own income and then their spouse's:

a) Do you receive any (other) regular income payments; for example, from retirement pensions, Veterans Benefits, annuities, payments from an IRA account, or anything like that?

b) Please think about the largest (other) regular income you receive. What type of income is that?

[IWER: PROBE WITH CATEGORIES ONLY IF R NEEDS HELP]

1.VETERANS BENEFITS

2.RETIREMENT OR OTHER PENSIONS

3.ANNUITY

4.IRA DISTRIBUTION

5.STOCKS AND BONDS

7.OTHER

8.DK

9.RF

This set of questions is repeated twice so that respondents can report up to 3 current other regular incomes. Then they are asked:

a) Did you receive any other regular income in [last calendar year] that you no longer receive?

b) What type of income was that?

(Same categories as above)

So there are a total of 4 other regular incomes that can be reported. Categories may be specified more than once, and there are up to 3 different instances of "other" income.

If income is received, subsequent questions serve to identify the date of receipt (was income received in the last calendar year?) and the amount received. There are no unfolding brackets for income in Wave 2A.

From Wave 7 forward, income from alimony (or child support payments) was not asked about. Therefore, any components related to this type of income are not available.

Because of the differences in the way income information was collected for the HRS and AHEAD samples in wave 2, the income component imputation flags that apply vary, depending on the entry cohort of the

respondent. For AHEAD entry cohort respondents, H2IFOTH1 and H2IFOTH2 are set to .Q to indicate that the corresponding income components are not available in Wave 2A. For HRS entry cohort respondents, R2IFOTH1, R2IFOTH2, R2IFOTH3, S2IFOTH1, S2IFOTH2, and S2IFOTH3 are set to .Q to indicate that the corresponding income components are not available in Wave 2H.

General Comments:

Income measures are reported in nominal dollars. When an HRS or AHEAD income component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in whether unfolding brackets are used to determine a range of income when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. The order in which income questions are asked also changes across waves. These differences are also discussed in more detail in the "Wealth and Income Imputations" section.

Generally, Wave 1 questions ask about 1991 income, and Wave 2H asks about 1993 income. Wave 2A and from Wave 3 forward ask about income last calendar year. All questions are based on the Financial Respondent's interview year. Not all interviews are completely conducted in the same year for waves 2A, 3H, 4, and from 5 forward.

The HRS and AHEAD income components are summed to create the income measures requested for these files. For each derived income measure, a flag indicates whether any or all of its components were imputed. Individual income components and imputation flags are available in the "RAND Income and Wealth Imputation File".

HRS and AHEAD income measures are reported at the household level. The Financial Respondent (FinR) reports income for both him/herself and his/her spouse or partner. The respondent income measures on this file are those of the FinR, if they are the same individual, and the spouse income measures are those of the FinR's spouse. If the respondent is the spouse of the FinR, then the FinR-reported respondent and spouse measures are swapped. That is, if the respondent is the FinR's spouse then the FinR-reported spouse income is assigned as the respondent income and the FinR-reported respondent income is assigned as the spouse income.

How Constructed:

HwITOT reflects total income for the last calendar year. HwITOT is set to the sum of respondent and spouse earnings (RwIEARN, SwIEARN), pensions and annuities (RwIPENA, SwIPENA), SSI and Social Security Disability (RwISSDI, SwISSDI), Social Security retirement (RwISRET, SwISRET), unemployment and workers compensation (RwIUNWC, SwIUNWC), other government transfers (RwIGXFR, SwIGXFR), household capital income (HwICAP), and other income (HwIOTHR).

H2ITOT2 is derived from the Wave 2A question which asks how much total income a household received in the last calendar year.

Variables in the form HwIFvar/RwIFvar/SwIFvar indicate whether the component is imputed, and if so, how much information is available for imputation.

See also the explanations of the individual variables used to calculate HwITOT for possible differences between the HRS and AHEAD samples.

It is important to note that total household income does not include income from other household members, only the respondent and spouse.

Cross Wave Differences in Original HRS Data

For HRS respondents in Wave 2H, H2ITOT2 and H2IFTOT2 are set to .Q to indicate that the corresponding income information is not available because there was no question asking for total household income.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of real estate is assigned to HwARLES.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of real estate, excluding the primary residence, is asked at each wave. The question wording is the same at all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any real estate and if so, the value of it:

a) Do you [or your spouse/partner] have any real estate other than your main home (and your second home), such as land, rental real estate, a partnership, or money owed to you on a land contract or mortgage?

b) If you sold all that and paid off any debts on it, how much would you get?

If the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of vehicles is assigned to HwATRAN.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

In Waves 1 and 2, ownership is based solely upon whether a value is provided (either as a continuous report or bracketed information), as there is no direct question about ownership. HwAFTRAN is set to "DK ownership" if no value and no bracket information is provided.

Cross Wave Differences in Original HRS Data

The net value of vehicles in Wave 1 for the cross-wave imputations is solely the value of vehicles other than recreational vehicles. To include the value of recreational vehicles, please use H1WTRN2 of the cross-section imputations.

For more information on the differences in the transportation asset for Wave 1, see the transportation asset description in the cross-section wealth imputation section of this RAND Income and Wealth Codebook.

From Wave 2 forward, the recreational vehicle question is dropped from the Housing section and instead included in the Net Worth section question. Only the value of vehicles from the Net Worth section question is used to create HwATRAN. The question appears as the following:

a) Do you (or your [husband/wife/partner]) own anything for transportation, like cars, trucks, a trailer, a motor home, a boat, or an airplane?

b) What are they worth altogether, minus anything you still owe on them?

In all waves if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, range card brackets may be coded instead of unfolding brackets.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of businesses is assigned to HwABSNS.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of businesses is asked at each wave. The question wording is similar in all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any businesses and if so, the value of them.

In Waves 1 and 2A, the questions ask:

- a) Do you [or your (husband/wife/partner)] own part or all of a business?
- b) If you sold (all of) the business(es) and paid off any debts on (it/them), how much would you get?

In Wave 2H the wording of the first question changes slightly to include "farm":

- a) Do you [or your (husband/wife/partner)] own part or all of a farm or business?

Beginning in Wave 3, the first question is almost identical to the Wave 2H version, and the second question adds the word "about":

- a) Do you (or your (husband/wife/partner)) own part or all of a business or farm?
- b) If you sold all that and then paid off any debts on it, about how much would you get?

Beginning in Wave 6, after the value of business or farm assets are collected, a question asks whether these assets were reported previously in the interview (e.g., HQ492). Beginning in Wave 9, a follow-up question was added which asks respondents to indicate what percentage was previously reported (LQ523). For example, in Wave 9, about 30% of business owners indicate that they had reported their business wealth as one of the following: primary residence (which could be a farm or ranch), secondary residence, or other real estate earlier in the interview (LQ492 = yes). Of these business owners, most say that all of their business assets were previously reported (LQ523 = 100%).

The raw variables for these two questions are included in the RAND Income and Wealth Imputations file for the convenience of the analyst, and can be used for adjusting total wealth to reflect the amount of wealth that is twice reported. The variables are as follows:

Wave 6: HQ492

Wave 7: JQ492

Wave 8: KQ492

Wave 9: LQ492, LQ523

Wave 10: MQ492, MQ523

Wave 11: NQ492, NQ523

Wave 12: OQ492, OQ523

For the Q523 variables that are included in the RAND Income and Wealth Imputations file, we have recoded values of 998 and 999 to .D (Don't Know) and .R (Refuse), respectively. Since the answers to Q523 reflect percentages, using special missing codes in place of 998 and 999 will allow users to generate more accurate descriptive statistics, based on a maximum value of 100.

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and

possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwAIRA is the sum of HwAIRA1, HwAIRA2, and HwAIRA3, which are each imputed separately.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

In waves where questions ask about multiple IRA accounts, HwAIRA represents the sum of the values of all of them.

Users should note the following outliers:

1. HHIDPN: 12596010 reported a first IRA amount (OQ166_1) of \$16,000,000 in Wave 12. Their spouse (HHIDPN: 12596040) will, therefore, also have this value recorded for the first IRA (H12AIRA1).
2. HHIDPN: 42050020 reported receiving three IRAs in Wave 12, but no value was provided for any of them. An amount of \$2,750,764.67 was imputed for the second pension (H12AIRA2).
3. HHIDPN: 502208020 reported a third IRA amount (OQ166_3) of \$1,011,000 in Wave 12. Their spouse (HHIDPN: 502208010) will, therefore, also have this value recorded for the third IRA (H12AIRA3).

Cross Wave Differences in Original HRS Data

The net value of IRA and Keogh accounts is asked at each wave. Two questions reveal whether the respondent owns any IRA or Keogh accounts and if so, the value of them.

In Waves 1 and 2, the total of all IRA accounts is requested in one question:

- a) Do you [or your (husband/wife/partner)] have any Individual Retirement Accounts, that is, IRA or Keogh accounts?
- b) How much in total is in all of those accounts?

Beginning in Wave 3, the questions ask about the two largest IRAs individually and then about all other IRAs collectively:

- a) Do you (or your (husband/wife/partner)) currently have any money or assets that are held in an Individual Retirement Account, that is, in an IRA or KEOGH account?
- b) Let's talk about the (NEXT) largest IRA or KEOGH account/other IRA or KEOGH account/next largest IRA or KEOGH account/third IRA or KEOGH account/all the other IRA or KEOGH accounts. About how much is in this account at the present time?

The second question is asked up to three times, depending on how many IRAs the respondent reports. For each IRA, respondents are also asked who the account belongs to, except in Wave 3, where this question is asked only for the first two IRAs. We do not use this information when creating the ownership variables (HwWOvar). Rather, if the financial respondent reports receiving an IRA, and that IRA does not belong to their spouse, both members of the couple will be flagged as owning the IRA.

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of stocks and mutual funds is assigned to HwASTCK.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of stocks and mutual funds is asked at each wave. The question wording changes some after Wave 1, and the unfolding bracket questions vary. Two questions reveal whether the respondent owns any stocks or mutual funds and if so, the value of them.

In Wave 1, the questions ask:

- a) For the next few questions, please exclude any assets held in the form of IRA and Keogh accounts. Do you [or your (husband/wife/partner)] have any shares of stock in publicly held corporations, mutual funds, or investment trusts?
- b) If you sold all that and paid off anything you owed on it, how much would you have?

Beginning in Wave 2, the first question changes to:

- a) (Aside from anything you have already told me about...) Do you [or your (husband/wife/partner)] have any shares of stock or stock mutual funds?

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of checking, savings, and money market accounts is assigned to HwACHCK.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of checking, savings, and money market accounts is asked at each wave. The question wording is similar at all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any checking, savings, or money market accounts and if so, the value of them.

In Wave 1, these questions ask:

a) Do you [or your (husband/wife/partner)] have any money in checking or savings accounts, or money market funds?

b) If you added up all such accounts [for you and your (husband/wife/partner)], about how much would they amount to right now?

Beginning in Wave 2, initial wording is added to the first question:

a) (Aside from anything you have already told me about...) do you [or your (husband/wife/partner)] have any money in checking or savings accounts, or money market funds?

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of CDs, government savings bonds, and treasury bills is assigned to HwACD.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The value of CDs, government savings bonds, and treasury bills is asked at each wave. The question wording is similar at all waves but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any CDs, government savings bonds, or T-bills and if so, the value of them.

In Wave 1, the questions ask:

a) Do you [or your (husband/wife/partner)] have any money in certificates of deposit, government savings bonds, or Treasury bills?

b) If you added up all such accounts [for you and your (husband/wife/partner)], about how much would they amount to right now?

Beginning in Wave 2, initial wording is added to the first question:

a) (Aside from anything you have already told me about...) do you [or your (husband/wife/partner)] have any money in certificates of deposit, government savings bonds, or Treasury bills?

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of bonds or bond funds is assigned to HwABOND.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of bonds or bond funds is asked at each wave. The question wording is similar at all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any bonds or bond funds and if so, the value of them.

In Wave 1, the questions ask:

a) Do you [or your (husband/wife/partner)] have any corporate, municipal, government, or foreign bonds, or any bond funds?

b) If you sold all those bonds or bond funds and paid off anything you owed on them, how much would you have?

Beginning in Wave 2, initial wording is added to the first question:

a) (Aside from anything you have already told me about...) do you [or your (husband/wife/partner)] have any corporate, municipal, government, or foreign bonds, or any bond funds?

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of all other savings is assigned to HwA0THR.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Users should note that there are two respondents in Wave 6 who reported large values in Section U, much higher than their reported amounts in Section Q.

1. HHIDPN: 10893010 reported no ownership for the asset "other personal items of value" in Section Q and a value of \$90,000,000 in Section U for the same asset.

2. HHIDPN: 131812010 reported a complete bracket of \$100,001+ in Section Q for the same asset type. However, in Section U a value of \$30,000,000 was reported.

Since the RAND HRS wealth imputation process uses the corrected Section U values when available, the final values for these 2 cases are 90 and 30 million dollars, respectively. Therefore, please use caution when drawing inferences about total wealth from Wave 6, as these 2 cases largely influence the total wealth values.

Cross Wave Differences in Original HRS Data

The net value of all other savings is asked at each wave. The question wording is slightly different across waves and the unfolding bracket questions vary. Two questions reveal whether the respondent owns any other savings funds and if so, the value of them:

In Wave 1, the questions ask:

a) Do you [or your (husband/wife/partner)] have any other savings or assets, such as money owed to you by others, a valuable collection for investment purposes, an annuity, or rights in a trust or estate that you haven't already told me about?

b) If you sold all that and then paid off any debts on it, about how much would you have?

In Wave 2, the wording to the initial question changes slightly:

a) Do you [or your (husband/wife/partner)] have any other savings or assets, such as jewelry, money owed to you by others, a collection for investment purposes, or an annuity that you haven't already told me about?

Beginning in Wave 3, the initial question combines the wording found in Waves 1 and 2:

a) Do you [or your (husband/wife/partner)] have any other savings or assets, such as jewelry, money owed to you by others, a collection for investment purposes, rights in a trust or estate where you are the beneficiary, or an annuity that you haven't already told me about? [EXCLUDE THE CASH VALUE OF ANY LIFE INSURANCE POLICIES.]

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of debt is assigned to HwADEBT.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household holds this type of debt.

Cross Wave Differences in Original HRS Data

The value of other debt is asked at each wave. The question wording is the same in all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent has any other debt and if so, the value of it:

a) And do you [or your (husband/wife/partner)] have any debts that we haven't asked about, such as credit card balances, medical debts, life insurance policy loans, loans from relatives, and so forth?

b) About how much would that amount to?

From Wave 2 forward, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket ranges and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

The bracket breakpoints are different in Waves 8 and 9. In these waves, respondents who answer “Don’t Know” or “Refuse” to the question about debt amount enter into a sequence of bracket questions to determine a possible range of values. In Wave 8, the breakpoints for these ranges were \$500, \$5,000, and \$50,000. However, in Wave 9, these breakpoints changed to \$1,000, \$5,000, \$15,000, and \$50,000.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwATRST is the value of assets in a trust that have not been reported elsewhere. Note that this is not included in any of the asset totals.

In Wave 1, information about trusts was not collected, therefore we do not provide trust variables for this wave.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

In Wave 2, trusts are not mentioned in the question about “other assets.”

The “other assets” question states:

Do you [or your (husband/wife/partner)] have any other savings or assets, such as jewelry, money owed to you by others, a collection for investment purposes, or an annuity that you haven't already told me about? [EXCLUDE THE CASH VALUE OF ANY LIFE INSURANCE POLICIES]

Beginning in Wave 3, the question about “other assets” includes among the cues “rights in a [...] trust that you haven't already told me about.” This refers to trusts created by others who may have named the respondent (and/or spouse) as a beneficiary. The full question for “other assets” states:

Do you (or your [husband/wife/partner]) have any other savings or assets, such as jewelry, money owed to you by others, a collection for investment purposes, rights in a trust or estate where you are the beneficiary, or an annuity that you haven't already told us about?

Beginning in Wave 2, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves.

HRS Variables Used

AHEAD 1993:

B1775	K19. TRUST: ANY
B1780	K20b. TRUST: TOT \$, PART NOT MENTIONED

HRS 1994:

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwAHOUS is assigned from either HwAMOBL if the primary residence is a mobile home or HwAHOUL if not. HwAMOBL and HwAHOUL are imputed separately.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

From Wave 3 forward to determine ownership of a primary residence, we look at responses to questions about whether the person is in a nursing home and if so, whether they own a home outside of the nursing home. In Waves 5-10, we found a discrepancy between what was reported on these questions and what was listed on the Tracker file, that is - some individuals said that they were in a nursing home (and did not own a home outside of the nursing home), but the Tracker file said they were not in a nursing home. We considered the information from Tracker to be most accurate.

Cross Wave Differences in Original HRS Data

The value of the primary residence is asked at each wave. Questions reveal whether the respondent owns his/her primary residence and if so, the value of it.

In all waves, there are several questions which ask the respondent about ownership of the residence and its value, depending on the type of home, e.g., a farm or ranch, mobile home, condominium, etc.

In Wave 1, the questions are asked in several places which differ slightly:

1a) Do you [or your (husband/wife/partner)] own this (farm/ranch), do you own part of it, do you rent it, is it owned by a business, or what?

1b) Could you tell me the present value of this house and the immediately surrounding land? I mean, about what would it bring if it were sold today?

2a) Do you [or your (husband/wife/partner)] own both this mobile home and site or lot, do you own only the mobile home, do you own only the site, do you rent both the home and site, or what?

2b) Could you tell me the present value of this mobile home (and site)? I mean, about what would it bring if it were sold today?

3a) Do you [and your (husband/wife/partner)] own this (house and lot/apartment), do you rent, or what?

3b) What is the present value of this (home and land/apartment/property)? I mean, about what would it bring if it were sold today?

In Waves 2 and 3, the ownership questions are slightly different and all branch to one value question:

1a) Do you [and your (husband/wife/partner)] own your home, rent it, or what?

2a) Do you [or your (husband/wife/partner)] own this (farm/ranch), do you own part of it, do you rent it, or what?

3a) Do you [or your (husband/wife/partner)] own both the mobile home and site, do you own only the home, do you rent both the home and site, or what?

b) What is its present value? I mean, about what would it bring if it were sold today?

Beginning in Wave 4, the question wordings are the same but the question on mobile home value is a separate one from the value of a house or farm, and the unfolding brackets differ for the two types of property.

From Wave 2 forward, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

In Waves 6 forward, some mobile home owners who did not report values were directed to the house value and subsequent bracket questions (if needed), which are different from those for mobile homes. Here, we imputed missing values using whichever series of brackets they were given. There were also some cases in Waves 6 and 11 where values were given for both the mobile home and house questions. After examining the quality of the data in these cases, we decided that using the highest value was most appropriate.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and

possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwAMORT is the sum of first and second mortgages (HwAMRT1, HwAMRT2), which are each imputed separately.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The values of first and second mortgages are asked at each wave. Questions reveal whether the respondent has a first and second mortgage and if so, the value of them.

In Wave 1, the questions ask:

- a) Is there a mortgage or land contract on this (home and land/apartment/ property)? [NOTE: If R asks, do not include home equity loans or lines of credit.]
- b) How much is still owed on this loan?
- c) In addition to your (mortgage/land contract), do you have a second mortgage or a land contract on this property? (Please do not include any home equity lines of credit.)
- d) How much is still owed on this loan?

In Wave 2A, the questions ask:

- a) Are you paying anything on a mortgage or other loan on [this property]?
- b) About how much do you still owe on this mortgage or loan?
- c) In addition to your mortgage or loan, do you have a second mortgage or a land contract on this property?
- d) About how much do you still owe on that loan?

Beginning in Wave 2H, the ownership questions cover 1st mortgage, 2nd mortgage and other loans. Up to 3 loans may be specified:

- a) Do you have a mortgage, land contract, second mortgage or any other loan that uses the property as collateral? Please do not include any home equity lines of credit.

Beginning in Wave 9, a qualifying statement was added to this question, which says "Do not include reverse mortgages."

- b) [If 1st mortgage] About how much do you still owe on that mortgage or land contract?
- c) [If 2nd mortgage] About how much do you still owe on that second mortgage?

From Wave 2H forward, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket entry points vary across waves. In Wave 1, no unfolding bracket questions are asked, but some interviewers used range cards instead (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this

document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwAHMLN is the sum of home equity line of credit balance (HwAEQCD) and home equity loans (HwAEQLN), which are each imputed separately.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The values of home loans other than first and second mortgages are asked at each wave. Questions reveal whether the respondent has any other home loans and if so, the value of them.

In Wave 1, questions ask about home equity loans and lines of credit, separately:

1a) Do you have any (other) loans that use this property as collateral? (Please do not include any home equity lines of credit.)

1b) How much is still owed on this loan?

2a) Do you currently have a loan against this line of credit?

2b) How much is currently owed?

In Wave 2A, one question is asked about other loans:

1a) Do you have any (other) loans that use this property as collateral?

1b) About how much is still owed on this loan?

Beginning in Wave 2H, the ownership questions cover 1st mortgage, 2nd mortgage and other loans. Up to 3 loans may be specified:

1a) Do you have a mortgage, land contract, second mortgage or any other loan that uses the property as collateral? Please do not include any home equity lines of credit.

1b) About how much do you still owe on that loan?

As in Wave 1, the respondent is asked about a home equity line of credit separately:

2a) Do you currently have a loan against this line of credit?

2b) About how much is currently owed?

From Wave 3 forward, if the respondent refuses or does not know the value of the home equity loans, a series of unfolding bracket questions are asked. The bracket ranges and entry points are the same across waves. From Wave 6 forward, unfolding bracket questions are asked for the value of a home equity line of credit. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwATOTH is the net value of housing and is calculated as the value of the primary residence less mortgages and home loans:

(HwAHOUS) less Sum (HwAMORT, HwAHMLN).

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwAHOUS = value of primary residence

HwAMORT = value of all mortgages/land contracts (primary residence)

HwAHMLN = value of other home loans (primary residence)

Value of secondary residence

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of the respondent's secondary residence is assigned to HwAHOUB.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

From Wave 4 forward to determine ownership of a secondary residence, we look at responses to questions about whether the person is in a nursing home and if so, whether they own a home outside of the nursing home. In Waves 5-10, we found a discrepancy between what was reported on these questions and what was listed on the Tracker file, that is – some individuals said that they were in a nursing home (and did not own a home outside of the nursing home), but the Tracker file said they were not in a nursing home. We considered the information from Tracker to be the most accurate.

Due to problems with the way information about second residences was collected in Waves 2A and 3, we do not provide these variables for these waves.

Users should note the following outliers:

1. HHIDPN: 47514010 was imputed to have a value of more than \$21,000,000 for H9AH0UB. Their spouse (HHIDPN: 47514020) will, therefore, also have this value recorded for H9AH0UB.
2. HHIDPN: 529220010 reported having a second home (OH166) worth \$65,000,000 in Wave 12. They also reported having a loan on this second home (OH171) of \$3,200,000. Therefore, the net value of their second home is \$61,800,000.

Cross Wave Differences in Original HRS Data

The value of the secondary residence is asked at each wave, though in some waves it is problematic. Questions reveal whether the respondent owns his/her secondary residence and if so, the value of it.

In Wave 1, the questions about second home ask:

1a) Do you (or your husband/or your wife/or your partner/...) own a second home or condo? [NOTE: Time-share weeks should be included.]

1b) Could you tell me the present value of (your part of) that property -- I mean, about how much would it bring if it were sold today?

In Wave 2A, ownership of a secondary residence is asked about within the context of real estate investments, which presents problems not only for determining ownership, but consequently the value of a second residence.

In Wave 3, there was a skip pattern error, such that certain households with second homes were not asked the subsequent questions pertaining to these types of residences. Specifically, anyone who reported not living in their second home for at least two months during the year would not have been asked further questions about their second residence.

In Wave 2H and from Wave 4 forward, the questions are consistent and the wordings are also the same:

1a) Not including investment property, do you (or your husband/or your wife/or your partner/...) own a second home or condo?

1b) What is its present value? (What is the present value of your part of it?) I mean, about what would it bring if it were sold today?

From Wave 2 forward, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of all mortgages is assigned to HwAMRTB.

Variables in the form HwAFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwAOvar indicate whether the household owns the asset.

Due to problems with the way information about second residences was collected in Wave 2A and in Wave 3, we do not provide these variables for these waves.

Users should note the following outliers:

- 1. HHIDPN: 529220010 reported having a second home (OH166) worth \$65,000,000 in Wave 12. They also reported having a loan on this second home (OH171) of \$3,200,000. Therefore, the net value of their second home is \$61,800,000.

Cross Wave Differences in Original HRS Data

The value of a second home mortgage is asked at each wave, with the exception of Wave 2A. The manner in which the questions are asked varies across waves.

In Waves 1 and 2H, the questions about second home mortgage ask:

- a) Do you owe any money on this property?
- b) About how much do you owe?

In Wave 2A, ownership of a secondary residence is asked within the context of real estate investments, which presents problems not only for determining ownership but, consequently, the values of any mortgages.

In Wave 3, there was a skip pattern error such that certain households with second homes were not asked the subsequent questions pertaining to these types of residences. Specifically, anyone who reported not living in their second home for at least two months during the year would not have been asked further questions about their second residence.

Beginning in Wave 4, the questions are consistent. They are also similar to those in Wave 3 with the only difference being that all branch to one value question:

- a) (Taking all mortgages and loans together,) about how much do you owe on your second home?

From Wave 2H forward if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1AFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwANETHB is the net value of a second home and is calculated as house value less mortgages:

HwAHoub less HwAMRTB.

Due to problems with the way information about second residences was collected in Wave 2A and in Wave 3, we do not provide these variables for these waves.

Users should note the following outliers:

1. HHIDPN: 529220010 reported having a second home (OH166) worth \$65,000,000 in Wave 12. They also reported having a loan on this second home (OH171) of \$3,200,000. Therefore, the net value of their second home is \$61,800,000.

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwAHOUB = value of secondary residence

HwAMRTB = value of all mortgages/land contracts (secondary residence)

Net value of non-housing financial wealth

These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwATOTF is the net value of non-housing financial wealth and is calculated as the sum of the appropriate wealth components less debt:

Sum (HwASTCK, HwACHCK, HwACD, HwABOND, HwAOTHR) less HwADEBT.

This total does NOT include the value of IRAs and Keogh plans nor does it include the value of any real estate, vehicles, or businesses.

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwASTCK = net value of stocks, mutual funds, and investment trusts

HwACHCK = value of checking, savings, or money market accounts

HwACD = value of CD, government savings bonds, and T-bills

HwABOND = net value of bonds and bond funds

HwAOTHR = net value of all other savings

HwADEBT = value of other debt

Total Wealth (Excluding secondary residence)

How Constructed:

HwATOTB is the net value of total wealth (including second home) and is calculated as the sum of all wealth components less all debt:

Sum (HwAHOUS, HwAHOUB, HwARLES, HwATRAN, HwABSNS, HwAIRA, HwASTCK, HwACHCK, HwACD, HwABOND, HwAOTHR) less Sum (HwAMORT, HwAHMLN, HwADEBT, HwAMRTB).

In Wave 2, H2ATOTB is only calculated for 1994 because no questions are asked about a second home in 1993. Total wealth (including secondary residence) cannot be calculated in Wave 3 because no questions were asked about a second home in either 1995 or 1996.

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwAHOUS = value of primary residence

HwAHOUB = value of secondary residence

HwARLES = net value of real estate (not primary residence)

HwATRAN = net value of vehicles

HwABSNS = net value of businesses

HwAIRA = net value of IRA, Keogh accounts

HwASTCK = net value of stocks, mutual funds, and investment trusts

HwACHCK = value of checking, savings, or money market accounts

HwACD = value of CD, government savings bonds, and T-bills

HwABOND = net value of bonds and bond funds

HwAOTHR = net value of all other savings

HwAMORT = value of all mortgages/land contracts (primary residence)

HwAHMLN = value of other home loans (primary residence)

HwADEBT = value of other debt

HwAMRTB = value of all mortgages/land contracts (secondary residence)

Total Wealth (Excluding IRAs)

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwATOTW is the net value of total wealth less IRA and is calculated as the sum of all wealth components except the value of IRAs and Keogh plans less all debt:

Sum (HwAHOUS, HwARLES, HwATRAN, HwABSNS, HwASTCK, HwACHCK, HwACD, HwABOND, HwAOTHR) less Sum (HwAMORT, HwAHMLN, HwADEBT).

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwAHOUS = value of primary residence

HwARLES = net value of real estate (not primary residence)

HwATRAN = net value of vehicles

HwABSNS = net value of businesses

HwASTCK = net value of stocks, mutual funds, and investment trusts

HwACHCK = value of checking, savings, or money market accounts

HwACD = value of CD, government savings bonds, and T-bills

HwABOND = net value of bonds and bond funds

HwAOTHR = net value of all other savings

HwAMORT = value of all mortgages/land contracts (primary residence)

HwAHMLN = value of other home loans (primary residence)

HwADEBT = value of other debt

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwATOTN is the net value of all non-housing wealth and is calculated as the sum of the appropriate wealth components less debt:

Sum (HwARLES, HwATRAN, HwABSNS, HwAIRA, HwASTCK, HwACHCK, HwACD, HwABOND, HwAOTHR) less HwADEBT.

Note that the value of the primary and second residences, mortgages, and home loans are NOT included.

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwARLES = net value of real estate (not primary residence)

HwATRAN = net value of vehicles

HwABSNS = net value of businesses

HwAIRA = net value of IRA, Keogh accounts

HwASTCK = net value of stocks, mutual funds, and investment trusts

HwACHCK = value of checking, savings, or money market accounts

HwACD = value of CD, government savings bonds, and T-bills

HwABOND = net value of bonds and bond funds

HwAOTHR = net value of all other savings

HwADEBT = value of other debt

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of real estate is assigned to HwWRLES.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of real estate, excluding the primary residence, is asked at each wave. The question wording is the same at all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any real estate and if so, the value of it:

a) Do you [or your spouse/partner] have any real estate other than your main home (and your second home), such as land, rental real estate, a partnership, or money owed to you on a land contract or mortgage?

b) If you sold all that and paid off any debts on it, how much would you get?

If the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of vehicles is assigned to HwWTRAN.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

In Waves 1 and 2, ownership is based solely upon whether a value is provided (either as a continuous report or bracketed information), as there is no direct question about ownership. HwWFTRAN is set to "DK ownership" if no value and no bracket information is provided.

Cross Wave Differences in Original HRS Data

The net value of vehicles in Wave 1 is the sum of the value of a recreational vehicle, H1WTRN1, (from Section D: Housing) and the value of other vehicles, H1WTRN2, (from Section M: Net Worth other than Housing). For only Wave 1, H1WTRN1 and H1WTRN2 are included on the RAND Income and Wealth Imputation file so one can see the breakdown of H1WTRAN by its components, H1WTRN1 and H1WTRN2. The questions for Wave 1 appear as follows:

From Section D:

- a) Do you own a recreational vehicle or motor home?
- b) About how much is it worth, subtracting any money owed on it?

From Section M:

What about the value of what you [or your (husband/wife/partner)] own

wheels (other than the motor home we've already talked about), like cars,

trucks, a trailer, a boat, or an airplane--what are they worth altogether, minus anything you still owe on them?

From Wave 2 forward, the recreational vehicle question is dropped from the Housing section and instead included in the Net Worth section question. Only the value of vehicles from Net Worth section question is used to create HwWTRAN. The question appears as the following:

- a) Do you (or your [husband/wife/partner]) own anything for transportation, like cars, trucks, a trailer, a motor home, a boat, or an airplane?
- b) What are they worth altogether, minus anything you still owe on them?

In all waves if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, range card brackets may be coded instead of unfolding brackets.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of businesses is assigned to HwWBSNS.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Users should note the following outliers:

1. HHIDPN: 52281010 reported having business or farm assets, but no value was provided. An amount of \$33,702,535.41 was imputed for net value of businesses (H12WBSNS).

Cross Wave Differences in Original HRS Data

The net value of businesses is asked at each wave. The question wording is similar in all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any businesses and if so, the value of them.

In Waves 1 and 2A, the questions ask:

- a) Do you [or your (husband/wife/partner)] own part or all of a business?
- b) If you sold (all of) the business(es) and paid off any debts on (it/them), how much would you get?

In Wave 2H the wording of the first question changes slightly to include "farm":

- a) Do you [or your (husband/wife/partner)] own part or all of a farm or business?

Beginning in Wave 3, the first question is almost identical to the Wave 2H version, and the second question adds the word "about":

- a) Do you (or your (husband/wife/partner)) own part or all of a business or farm?
- b) If you sold all that and then paid off any debts on it, about how much would you get?

Beginning in Wave 6, after the value of business or farm assets are collected, a question asks whether these assets were reported previously in the interview (e.g., HQ492). Beginning in Wave 9, a follow-up question was added which asks respondents to indicate what percentage was previously reported (LQ523). For example, in Wave 9, about 30% of business owners indicate that they had reported their business wealth as one of the following: primary residence (which could be a farm or ranch), secondary residence, or other real estate earlier in the interview (LQ492 = yes). Of these business owners, most say that all of their business assets were previously reported (LQ523 = 100%).

The raw variables for these two questions are included in the RAND Income and Wealth Imputations file for the convenience of the analyst, and can be used for adjusting total wealth to reflect the amount of wealth that is twice reported. The variables are as follows:

Wave 6: HQ492

Wave 7: JQ492

Wave 8: KQ492

Wave 9: LQ492, LQ523

Wave 10: MQ492, MQ523

Wave 11: NQ492, NQ523

Wave 12: OQ492, OQ523

For the Q523 variables that are included in the RAND Income and Wealth Imputations file, we have recoded values of 998 and 999 to .D (Don't Know) and .R (Refuse), respectively. Since the answers to Q523 reflect percentages, using special missing codes in place of 998 and 999 will allow users to generate more accurate descriptive statistics, based on a maximum value of 100.

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and

possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWIRA is the sum of HwWIRA1, HwWIRA2, and HwWIRA3, which are each imputed separately.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

In waves where questions ask about multiple IRA accounts, HwWIRA represents the sum of the values of all of them.

Users should note the following outliers:

1. HHIDPN: 12596010 reported a first IRA amount (OQ166_1) of \$16,000,000 in Wave 12. Their spouse (HHIDPN: 12596040) will, therefore, also have this value recorded for the first IRA (H12WIRA1).
2. HHIDPN: 502208020 reported a third IRA amount (OQ166_3) of \$1,011,000 in Wave 12. Their spouse (HHIDPN: 502208010) will, therefore, also have this value recorded for the third IRA (H12WIRA3).

Cross Wave Differences in Original HRS Data

The net value of IRA and Keogh accounts is asked at each wave. Two questions reveal whether the respondent owns any IRA or Keogh accounts and if so, the value of them.

In Waves 1 and 2, the total of all IRA accounts is requested in one question:

- a) Do you [or your (husband/wife/partner)] have any Individual Retirement Accounts, that is, IRA or Keogh accounts?
- b) How much in total is in all of those accounts?

Beginning in Wave 3, the questions ask about the two largest IRAs individually and then about all other IRAs collectively:

- a) Do you (or your (husband/wife/partner)) currently have any money or assets that are held in an Individual Retirement Account, that is, in an IRA or KEOGH account?
- b) Let's talk about the (NEXT) largest IRA or KEOGH account/other IRA or KEOGH account/next largest IRA or KEOGH account/third IRA or KEOGH account/all the other IRA or KEOGH accounts. About how much is in this account at the present time?

The second question is asked up to three times, depending on how many IRAs the respondent reports. For each IRA, respondents are also asked who the account belongs to, except in Wave 3, where this question is asked only for the first two IRAs. We do not use this information when creating the ownership variables (HwWOvar). Rather, if the financial respondent reports receiving an IRA, and that IRA does not belong to their spouse, both members of the couple will be flagged as owning the IRA.

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of stocks and mutual funds is assigned to HwWSTCK.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of stocks and mutual funds is asked at each wave. The question wording changes some after Wave 1, and the unfolding bracket questions vary. Two questions reveal whether the respondent owns any stocks or mutual funds and if so, the value of them.

In Wave 1, the questions ask:

a) For the next few questions, please exclude any assets held in the form of IRA and Keogh accounts. Do you [or your (husband/wife/partner)] have any shares of stock in publicly held corporations, mutual funds, or investment trusts?

b) If you sold all that and paid off anything you owed on it, how much would you have?

Beginning in Wave 2, the first question changes to:

a) (Aside from anything you have already told me about...) Do you [or your (husband/wife/partner)] have any shares of stock or stock mutual funds?

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of checking, savings, and money market accounts is assigned to HwWCHCK.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of checking, savings, and money market accounts is asked at each wave. The question wording is similar at all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any checking, savings, or money market accounts and if so, the value of them.

In Wave 1, these questions ask:

- a) Do you [or your (husband/wife/partner)] have any money in checking or savings accounts, or money market funds?
- b) If you added up all such accounts [for you and your (husband/wife/partner)], about how much would they amount to right now?

Beginning in Wave 2, initial wording is added to the first question:

- a) (Aside from anything you have already told me about...) do you [or your (husband/wife/partner)] have any money in checking or savings accounts, or money market funds?

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of CDs, government savings bonds, and treasury bills is assigned to HwWCD.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The value of CDs, government savings bonds, and treasury bills is asked at each wave. The question wording is similar at all waves but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any CDs, government savings bonds, or T-bills and if so, the value of them.

In Wave 1, the questions ask:

a) Do you [or your (husband/wife/partner)] have any money in certificates of deposit, government savings bonds, or Treasury bills?

b) If you added up all such accounts [for you and your (husband/wife/partner)], about how much would they amount to right now?

Beginning in Wave 2, initial wording is added to the first question:

a) (Aside from anything you have already told me about...) do you [or your (husband/wife/partner)] have any money in certificates of deposit, government savings bonds, or Treasury bills?

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of bonds or bond funds is assigned to HwWBOND.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of bonds or bond funds is asked at each wave. The question wording is similar at all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent owns any bonds or bond funds and if so, the value of them.

In Wave 1, the questions ask:

a) Do you [or your (husband/wife/partner)] have any corporate, municipal, government, or foreign bonds, or any bond funds?

b) If you sold all those bonds or bond funds and paid off anything you owed on them, how much would you have?

Beginning in Wave 2, initial wording is added to the first question:

a) (Aside from anything you have already told me about...) do you [or your (husband/wife/partner)] have any corporate, municipal, government, or foreign bonds, or any bond funds?

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed net value of all other savings is assigned to HwWOTHR.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The net value of all other savings is asked at each wave. The question wording is slightly different across waves and the unfolding bracket questions vary. Two questions reveal whether the respondent owns any other savings funds and if so, the value of them:

In Wave 1, the questions ask:

- a) Do you [or your (husband/wife/partner)] have any other savings or assets, such as money owed to you by others, a valuable collection for investment purposes, an annuity, or rights in a trust or estate that you haven't already told me about?
- b) If you sold all that and then paid off any debts on it, about how much would you have?

In Wave 2, the wording to the initial question changes slightly:

- a) Do you [or your (husband/wife/partner)] have any other savings or assets, such as jewelry, money owed to you by others, a collection for investment purposes, or an annuity that you haven't already told me about?

Beginning in Wave 3, the initial question combines the wording found in Waves 1 and 2:

- a) Do you [or your (husband/wife/partner)] have any other savings or assets, such as jewelry, money owed to you by others, a collection for investment purposes, rights in a trust or estate where you are the beneficiary, or an annuity that you haven't already told me about? [EXCLUDE THE CASH VALUE OF ANY LIFE INSURANCE POLICIES.]

In all waves, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of debt is assigned to HwWDEBT.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household holds this type of debt.

Cross Wave Differences in Original HRS Data

The value of other debt is asked at each wave. The question wording is the same in all waves, but the unfolding bracket questions vary. Two questions reveal whether the respondent has any other debt and if so, the value of it:

a) And do you [or your (husband/wife/partner)] have any debts that we haven't asked about, such as credit card balances, medical debts, life insurance policy loans, loans from relatives, and so forth?

b) About how much would that amount to?

From Wave 2 forward, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket ranges and entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

The bracket breakpoints are different in Waves 8 and 9. In these waves, respondents who answer “Don’t Know” or “Refuse” to the question about debt amount enter into a sequence of bracket questions to determine a possible range of values. In Wave 8, the breakpoints for these ranges were \$500, \$5,000, and \$50,000. However, in Wave 9, these breakpoints changed to \$1,000, \$5,000, \$15,000, and \$50,000.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWTRST is the value of assets in a trust that have not been reported elsewhere. Note that this is not included in any of the asset totals.

In Wave 1, information about trusts was not collected, therefore we do not provide trust variables for this wave.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

In Wave 2, trusts are not mentioned in the question about “other assets.”

The “other assets” question states:

Do you [or your (husband/wife/partner)] have any other savings or assets, such as jewelry, money owed to you by others, a collection for investment purposes, or an annuity that you haven't already told me about? [EXCLUDE THE CASH VALUE OF ANY LIFE INSURANCE POLICIES]

Beginning in Wave 3, the question about “other assets” includes among the cues “rights in a [...] trust that you haven't already told me about.” This refers to trusts created by others who may have named the respondent (and/or spouse) as a beneficiary. The full question for “other assets” states:

Do you (or your [husband/wife/partner]) have any other savings or assets, such as jewelry, money owed to you by others, a collection for investment purposes, rights in a trust or estate where you are the beneficiary, or an annuity that you haven't already told us about?

Beginning in Wave 2, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket amounts and entry points vary across waves.

HRS Variables Used

AHEAD 1993:

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWHOUS is assigned from either HwWMOBL if the primary residence is a mobile home or HwWHOU1 if not. HwWMOBL and HwWHOU1 are imputed separately.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

From Wave 3 forward to determine ownership of a primary residence, we look at responses to questions about whether the person is in a nursing home and if so, whether they own a home outside of the nursing home. In Waves 5-10, we found a discrepancy between what was reported on these questions and what was listed on the Tracker file, that is - some individuals said that they were in a nursing home (and did not own a home outside of the nursing home), but the Tracker file said they were not in a nursing home. We considered the information from Tracker to be most accurate.

Cross Wave Differences in Original HRS Data

The value of the primary residence is asked at each wave. Questions reveal whether the respondent owns his/her primary residence and if so, the value of it.

In all waves, there are several questions which ask the respondent about ownership of the residence and its value, depending on the type of home, e.g., a farm or ranch, mobile home, condominium, etc.

In Wave 1, the questions are asked in several places which differ slightly:

1a) Do you [or your (husband/wife/partner)] own this (farm/ranch), do you own part of it, do you rent it, is it owned by a business, or what?

1b) Could you tell me the present value of this house and the immediately surrounding land? I mean, about what would it bring if it were sold today?

2a) Do you [or your (husband/wife/partner)] own both this mobile home and site or lot, do you own only the mobile home, do you own only the site, do you rent both the home and site, or what?

2b) Could you tell me the present value of this mobile home (and site)? I mean, about what would it bring if it were sold today?

3a) Do you [and your (husband/wife/partner)] own this (house and lot/apartment), do you rent, or what?

3b) What is the present value of this (home and land/apartment/property)? I mean, about what would it bring if it were sold today?

In Waves 2 and 3, the ownership questions are slightly different and all branch to one value question:

1a) Do you [and your (husband/wife/partner)] own your home, rent it, or what?

2a) Do you [or your (husband/wife/partner)] own this (farm/ranch), do you own part of it, do you rent it, or what?

3a) Do you [or your (husband/wife/partner)] own both the mobile home and site, do you own only the home, do you rent both the home and site, or what?

b) What is its present value? I mean, about what would it bring if it were sold today?

Beginning in Wave 4, the question wordings are the same but the question on mobile home value is a separate one from the value of a house or farm, and the unfolding brackets differ for the two types of property.

From Wave 2 forward, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

In Waves 6 forward, some mobile home owners who did not report values were directed to the house value and subsequent bracket questions (if needed), which are different from those for mobile homes. Here, we imputed missing values using whichever series of brackets they were given. There were also some cases in Waves 6 and 11 where values were given for both the mobile home and house questions. After examining the quality of the data in these cases, we decided that using the highest value was most appropriate.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and

possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWMORT is the sum of first and second mortgages (HwWMRT1, HwWMRT2), which are each imputed separately.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Users should note the following outliers:

1. HHIDPN: 47387010 reported having a second mortgage on their home in Wave 12, but no value was provided. An amount of \$532,434.74 was imputed for the second mortgage (H12WMRT2).

Cross Wave Differences in Original HRS Data

The values of first and second mortgages are asked at each wave. Questions reveal whether the respondent has a first and second mortgage and if so, the value of them.

In Wave 1, the questions ask:

- a) Is there a mortgage or land contract on this (home and land/apartment/ property)? [NOTE: If R asks, do not include home equity loans or lines of credit.]
- b) How much is still owed on this loan?
- c) In addition to your (mortgage/land contract), do you have a second mortgage or a land contract on this property? (Please do not include any home equity lines of credit.)
- d) How much is still owed on this loan?

In Wave 2A, the questions ask:

- a) Are you paying anything on a mortgage or other loan on [this property]?
- b) About how much do you still owe on this mortgage or loan?
- c) In addition to your mortgage or loan, do you have a second mortgage or a land contract on this property?
- d) About how much do you still owe on that loan?

Beginning in Wave 2H, the ownership questions cover 1st mortgage, 2nd mortgage and other loans. Up to 3 loans may be specified:

- a) Do you have a mortgage, land contract, second mortgage or any other loan that uses the property as collateral? Please do not include any home equity lines of credit.

Beginning in Wave 9, a qualifying statement was added to this question, which says "Do not include reverse mortgages."

- b) [If 1st mortgage] About how much do you still owe on that mortgage or land contract?
- c) [If 2nd mortgage] About how much do you still owe on that second mortgage?

From Wave 2H forward, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket entry points vary across waves. In Wave 1, no unfolding bracket questions are asked, but some interviewers used range cards instead (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this

document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWHMLN is the sum of home equity line of credit balance (HwWEQCD) and home equity loans (HwWEQLN), which are each imputed separately.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Cross Wave Differences in Original HRS Data

The values of home loans other than first and second mortgages are asked at each wave. Questions reveal whether the respondent has any other home loans and if so, the value of them.

In Wave 1, questions ask about home equity loans and lines of credit, separately:

1a) Do you have any (other) loans that use this property as collateral? (Please do not include any home equity lines of credit.)

1b) How much is still owed on this loan?

2a) Do you currently have a loan against this line of credit?

2b) How much is currently owed?

In Wave 2A, one question is asked about other loans:

1a) Do you have any (other) loans that use this property as collateral?

1b) About how much is still owed on this loan?

Beginning in Wave 2H, the ownership questions cover 1st mortgage, 2nd mortgage and other loans. Up to 3 loans may be specified:

1a) Do you have a mortgage, land contract, second mortgage or any other loan that uses the property as collateral? Please do not include any home equity lines of credit.

1b) About how much do you still owe on that loan?

As in Wave 1, the respondent is asked about a home equity line of credit separately:

2a) Do you currently have a loan against this line of credit?

2b) About how much is currently owed?

From Wave 3 forward, if the respondent refuses or does not know the value of the home equity loans, a series of unfolding bracket questions are asked. The bracket ranges and entry points are the same across waves. From Wave 6 forward, unfolding bracket questions are asked for the value of a home equity line of credit. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWTOTH is the net value of housing and is calculated as the value of the primary residence less mortgages and home loans:

(HwWHOUS) less Sum (HwWMORT, HwWHMLN).

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwWHOUS = value of primary residence

HwWMORT = value of all mortgages/land contracts (primary residence)

HwWHMLN = value of other home loans (primary residence)

Value of secondary residence

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of the respondent's secondary residence is assigned to HwWHOUB.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

From Wave 4 forward to determine ownership of a secondary residence, we look at responses to questions about whether the person is in a nursing home and if so, whether they own a home outside of the nursing home. In Waves 5-10, we found a discrepancy between what was reported on these questions and what was listed on the Tracker file, that is – some individuals said that they were in a nursing home (and did not own a home outside of the nursing home), but the Tracker file said they were not in a nursing home. We considered the information from Tracker to be the most accurate.

Due to problems with the way information about second residences was collected in Waves 2A and 3, we do not provide these variables for these waves.

Users should note the following outliers:

1. HHIDPN: 529220010 reported having a second home (OH166) worth \$65,000,000 in Wave 12. They also reported having a loan on this second home (OH171) of \$3,200,000. Therefore, the net value of their second home is \$61,800,000.

Cross Wave Differences in Original HRS Data

The value of the secondary residence is asked at each wave, though in some waves it is problematic. Questions reveal whether the respondent owns his/her secondary residence and if so, the value of it.

In Wave 1, the questions about second home ask:

- 1a) Do you (or your husband/or your wife/or your partner/...) own a second home or condo? [NOTE: Time-share weeks should be included.]
- 1b) Could you tell me the present value of (your part of) that property -- I mean, about how much would it bring if it were sold today?

In Wave 2A, ownership of a secondary residence is asked about within the context of real estate investments, which presents problems not only for determining ownership, but consequently the value of a second residence.

In Wave 3, there was a skip pattern error, such that certain households with second homes were not asked the subsequent questions pertaining to these types of residences. Specifically, anyone who reported not living in their second home for at least two months during the year would not have been asked further questions about their second residence.

In Wave 2H and from Wave 4 forward, the questions are consistent and the wordings are also the same:

- 1a) Not including investment property, do you (or your husband/or your wife/or your partner/...) own a second home or condo?
- 1b) What is its present value? (What is the present value of your part of it?) I mean, about what would it bring if it were sold today?

From Wave 2 forward, if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

The reported or imputed value of all mortgages is assigned to HwWMRTB.

Variables in the form HwWFvar indicate whether the component is imputed, and if so, how much information is available for imputation. Similarly, variables in the form HwWOvar indicate whether the household owns the asset.

Due to problems with the way information about second residences was collected in Wave 2A and in Wave 3, we do not provide these variables for these waves.

Users should note the following outliers:

- 1. HHIDPN: 529220010 reported having a second home (OH166) worth \$65,000,000 in Wave 12. They also reported having a loan on this second home (OH171) of \$3,200,000. Therefore, the net value of their second home is \$61,800,000.

Cross Wave Differences in Original HRS Data

The value of a second home mortgage is asked at each wave, with the exception of Wave 2A. The manner in which the questions are asked varies across waves.

In Waves 1 and 2H, the questions about second home mortgage ask:

- a) Do you owe any money on this property?
- b) About how much do you owe?

In Wave 2A, ownership of a secondary residence is asked within the context of real estate investments, which presents problems not only for determining ownership but, consequently, the values of any mortgages.

In Wave 3, there was a skip pattern error such that certain households with second homes were not asked the subsequent questions pertaining to these types of residences. Specifically, anyone who reported not living in their second home for at least two months during the year would not have been asked further questions about their second residence.

Beginning in Wave 4, the questions are consistent. They are also similar to those in Wave 3 with the only difference being that all branch to one value question:

- a) (Taking all mortgages and loans together,) about how much do you owe on your second home?

From Wave 2H forward if the respondent refuses or does not know the value, a series of unfolding bracket questions are asked. The bracket entry points vary across waves. In Wave 1, some interviewers used range cards instead of unfolding brackets (identified by H1WFvar = 4. Range card bracket). We used the information provided in the imputations.

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWNETHB is the net value of a second home and is calculated as house value less mortgages:

HwWHOUB less HwWMRTB.

Due to problems with the way information about second residences was collected in Wave 2A and in Wave 3, we do not provide these variables for these waves.

Users should note the following outliers:

1. HHIDPN: 529220010 reported having a second home (OH166) worth \$65,000,000 in Wave 12. They also reported having a loan on this second home (OH171) of \$3,200,000. Therefore, the net value of their second home is \$61,800,000.

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwWHOUB = value of secondary residence

HwWMRTB = value of all mortgages/land contracts (secondary residence)

There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWTOTF is the net value of non-housing financial wealth and is calculated as the sum of the appropriate wealth components less debt:

Sum (HwWSTCK, HwWCHCK, HwWCD, HwWBOND, HwWOTHR) less HwWDEBT.

This total does NOT include the value of IRAs and Keogh plans nor does it include the value of any real estate, vehicles, or businesses.

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwWSTCK = net value of stocks, mutual funds, and investment trusts

HwWCHCK = value of checking, savings, or money market accounts

HwWCD = value of CD, government savings bonds, and T-bills

HwWBOND = net value of bonds and bond funds

HwWOTHR = net value of all other savings

HwWDEBT = value of other debt

Total Wealth (Excluding secondary residence)

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWTOTB is the net value of total wealth (including second home) and is calculated as the sum of all wealth components less all debt:

Sum (HwWHOUS, HwWHOUB, HwWRLES, HwWTRAN, HwWBSNS, HwWIRA, HwWSTCK, HwWCHCK, HwWCD, HwWBOND, HwWOTHR) less Sum (HwWMORT, HwWHMLN, HwWDEBT, HwWMRTB).

In Wave 2, H2WTOTB is only calculated for 1994 because no questions are asked about a second home in 1993. Total wealth (including secondary residence) cannot be calculated in Wave 3 because no questions were asked about a second home in either 1995 or 1996.

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwWHOUS = value of primary residence

HwWHOUB = value of secondary residence

HwWRLES = net value of real estate (not primary residence)

HwWTRAN = net value of vehicles

HwWBSNS = net value of businesses

HwWIRA = net value of IRA, Keogh accounts

HwWSTCK = net value of stocks, mutual funds, and investment trusts

HwWCHCK = value of checking, savings, or money market accounts

HwWCD = value of CD, government savings bonds, and T-bills

HwWBOND = net value of bonds and bond funds

HwWOTHR = net value of all other savings

HwWMORT = value of all mortgages/land contracts (primary residence)

HwWHMLN = value of other home loans (primary residence)

HwWDEBT = value of other debt

HwWMRTB = value of all mortgages/land contracts (secondary residence)

Total Wealth (Excluding IRAs)

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWTOTW is the net value of total wealth less IRA and is calculated as the sum of all wealth components except the value of IRAs and Keogh plans less all debt:

Sum (HwWHOUS, HwWRLES, HwWTRAN, HwWBSNS, HwWSTCK, HwWCHCK, HwWCD, HwWBOND, HwWOTHR) less Sum (HwWMORT, HwWHMLN, HwWDEBT).

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwWHOUS = value of primary residence

HwWRLES = net value of real estate (not primary residence)

HwWTRAN = net value of vehicles

HwWBSNS = net value of businesses

HwWSTCK = net value of stocks, mutual funds, and investment trusts

HwWCHCK = value of checking, savings, or money market accounts

HwWCD = value of CD, government savings bonds, and T-bills

HwWBOND = net value of bonds and bond funds

HwWOTHR = net value of all other savings

HwWMORT = value of all mortgages/land contracts (primary residence)

HwWHMLN = value of other home loans (primary residence)

HwWDEBT = value of other debt

General Comments:

Wealth measures are reported in nominal dollars. When an HRS or AHEAD wealth component is missing, it is imputed using the method described in the section titled "Wealth and Income Imputations" earlier in this document. There are differences across waves in the unfolding brackets used to determine a range of wealth when a continuous amount is not given. In addition, the bracket amounts, entry points, and possible responses to the unfolding bracket questions differ across waves. These differences are also discussed in more detail above in the "Wealth and Income Imputations" section.

How Constructed:

HwWTOTN is the net value of all non-housing wealth and is calculated as the sum of the appropriate wealth components less debt:

Sum (HwWRLES, HwWTRAN, HwWBSNS, HwWIRA, HwWSTCK, HwWCHCK, HwWCD, HwWBOND, HwWOTHR) less HwWDEBT.

Note that the value of the primary and second residences, mortgages, and home loans are NOT included.

Cross Wave Differences in Original HRS Data

See cross-wave differences for the components:

HwWRLES = net value of real estate (not primary residence)

HwWTRAN = net value of vehicles

HwWBSNS = net value of businesses

HwWIRA = net value of IRA, Keogh accounts

HwWSTCK = net value of stocks, mutual funds, and investment trusts

HwWCHCK = value of checking, savings, or money market accounts

HwWCD = value of CD, government savings bonds, and T-bills

HwWBOND = net value of bonds and bond funds

HwWOTHR = net value of all other savings

HwWDEBT = value of other debt

Appendix A: Detailed List of Changes (Version M Forward)

VERSION M

Version M constitutes a major update of the RAND Income and Wealth Imputation File. The main text gave a brief overview and mentioned some further aspects in places. Here, we give a more detailed account of the changes since previous versions.

Wealth corrections from the asset verification section

As discussed in [Section 2.3](#), the wealth variables now incorporate the corrections from the asset verification section. This section was added in 2002 to catch reporting errors or data entry errors and asks the respondent to verify or correct the asset value if the report of the current wave's asset value differs more than \$50,000 from the previous wave's reported value, provided the financial respondent is the same and total wealth also changes by more than \$150,000. Thus, these corrections should reduce measurement error in assets, and in particular reduce outliers, as well as reduce the variance of wave-to-wave changes in assets. This affects variables from 2000 onward.

Two sets of wealth imputation variables

As discussed in [Chapter 2](#), we now provide cross-wave wealth imputations in addition to imputations that use only cross-sectional information. For the income variables, only cross-sectional imputations are available.

The cross-wave wealth imputations should better represent the correlation between asset values in different waves than the cross-sectional imputations (although the latter are still correlated due to correlation in the covariates from different waves); therefore, the cross-wave imputations are preferable, and the cross-wave imputations of main components and aggregates are included in the main RAND HRS file. These variables contain the letter “A” in their prefix. However, users who prefer to use imputations that use the traditional cross-sectional methodology can do so with the cross-sectionally imputed variables in the RAND Income and Wealth Imputation File. These variables contain the letter “W” in their prefix.

For example, H9ASTCK represents the Wave 9 value of stocks and mutual funds from the cross-wave wealth imputations and H9WSTCK is the Wave 9 value of stocks and mutual funds from the cross-sectional wealth imputations.

Note, however, that both cross-wave and cross-sectional wealth variables underwent corrections from the asset verification section and an updated Tracker file, so neither are the same as the wealth variables from previous versions of the RAND Income and Wealth Imputation File.

Data from all waves now included

The RAND Income and Wealth Imputation File is now a longitudinal file that contains data from all HRS and AHEAD waves. This was done to be consistent with the RAND HRS, which is a longitudinal file that contains cleaned and processed variables with consistent and intuitive naming conventions, model-based imputations, and spousal counterparts of most individual-level variables. Having one Income and Wealth Imputation File that includes the imputation data from all waves eliminates the need to use more than one imputation file when researching data from multiple waves.

Income and wealth variable name changes

Previous versions of the RAND Income and Wealth Imputation File contained some income and wealth variables that followed a different naming convention, specifically variables whose names started with the letter “I” instead of “H” (household level), “R” (reference person), or “S” (spouse of reference person). The “I” variables were detailed component variables that were not included in the main RAND HRS. Additionally, some of the other variables did not follow the same naming conventions as in the RAND HRS, so in order to simplify the naming structure of the income and wealth variables, we implemented changes to these particular variables.

The income variables that were named IRwOxxxx, ISwOxxxx, and IHwOxxxx have been renamed to RwIOxxxx, SwIOxxxx, and HwIOxxxx, where “xxxx” stands for the stem of a particular income variable. Analogously, variables RwOxxxx, SwOxxxx, and HwOxxxx are now RwIOxxxx, SwIOxxxx, and HwIOxxxx, and RwFxxxx, SwFxxxx, and HwFxxxx are now RwIFxxxx, SwIFxxxx, and HwIFxxxx. Table A.1 identifies the variable name changes made to the income variables.

Table A.1 Renamed Income Variables

For similar reasons, wealth component variables that were named IwAxxxx have been renamed to HwAxxxx. Table A.2 lists all wealth variable name changes.

The “A” in each variable’s prefix after the wave number indicates that a variable is from the cross-wave imputation dataset. There is an analogous set of variables that use the cross-sectional imputations. These have an uppercase “W” instead of an “A,” but are otherwise named identically to the cross-wave imputation variables.

Wealth Imputation flag changes

As seen in [Chapter 3](#), imputation flags of aggregated and non-aggregated income and wealth variables have a different set of possible values. In previous versions of the RAND Income and Wealth Imputation File, main wealth components that are created from more than one partial component, such as IRA, could receive an imputation flag value of two or three digits. For example, HwAIRA, which is created from the values of partial components IRA1, IRA2, and IRA3, would get a three-digit imputation flag value if the IRA1-3 imputation flag values differed, e.g. if the values were 1, 5, and 7 respectively. To be consistent with other main component imputation flags, and to increase understanding for the data user, these multi-digit flags have been simplified to one digit. The values are now consistent with the main component values for other income and wealth variables.

In addition to HwAIRA, there are two other sets of aggregated wealth variables where the main component imputation flag was simplified. One is HwAHMLN (other home loans), which is comprised of the partial components HwAEQLN (equity loans), and HwAEQCD (equity line of credit). The other is HwAMORT (primary residence mortgages), which is comprised of the components HwAMRT1 (first mortgage), and HwAMRT2 (second mortgage).

Non-owned partial component value changes

In previous versions of the Income and Wealth Imputation dataset, some partial component variables were set to missing if the asset was not owned or the household or individual did not receive this type of income. In these cases, the main components, and specifically all variables that were included in the RAND HRS, were set to zero. To achieve consistency across all income and wealth variables, they are now all set to zero if not owned/received. However, spousal income variables (SwIxxxx) are still missing if the reference person does not have a spouse or partner.

VERSION N

Version N of the RAND Income and Wealth Imputation File includes all of the changes listed above, as well as a few additional improvements.

Inclusion of 2012 Asset Verification Data

The new 2012 data from the asset verification section (section U) include corrections to the 2010 wealth amounts, which we have incorporated in our 2010 wealth measures.

Top Open Bracket Corrections

We corrected a small mistake in the imputations of values in the top open bracket, which caused a few large imputed wealth outliers in AHEAD 1993. This appears to have otherwise little impact on the distributions of the imputed variables.

Other Corrections

We corrected a few other minor imperfections in the implementation of the imputation methods. Detailed information about the changes in the imputations will be supplied upon request.

Summary of Changes

About 35 to 40 percent of cases in all waves have changed in version N compared to version M due to the effect of all revisions to the wealth measures. As a result, total wealth in version N is about \$2000-\$10,000 per household higher on average, depending on the wave. Changes for individual households tend to be larger than the aggregate changes, due to the random component of the imputations. Among the cases with a change in total wealth, the median absolute change varies between about \$12,000 and \$22,000, depending on the wave, except for 2010, where the median absolute change was \$34,000. Overall, the larger changes in any one wave tend to come from revisions for cases in the top open-ended brackets. In the case of the 2010 wave, the section U revisions (based on respondents' self-reports) cause additional asset revisions, some of which also involve large changes.

VERSION O

Version O of the RAND Income and Wealth Imputation File includes all of the changes listed above, as well as a few additional improvements.

Business Income Ownership

In HRS 2004 (Wave 7), we now treat those who responded “yes” to question JQ161 (i.e., “Did you tell me about this (business) income earlier in the interview?”) as owners of business income (H7IBUSIN). Therefore, we keep (or impute) the amount as business income, and exclude it from the household capital income calculation (H7ICAP). Roughly 500 cases are affected by this change, which, in turn, is largely responsible for the observed increase in business income of about \$2,300 on average between Versions N and O. For more information, please see the codebook section entitled, “Household Capital Income.”

H8PICKHH Corrections

In Version N of the Income and Wealth Imputation File, both members of a particular household (HHIDPN = 22388020 and 22388030) were flagged as the financial respondent. The H8PICKHH variable, which allows users to extract a household-level file for HRS 2006 (Wave 8), was thus set to “1” for both respondents. We have confirmed, however, that due to both the timing of when these two respondents reunited, as well as when their interviews occurred, HHIDPN = 22388030 should *not* be treated as a financial respondent in HRS 2006. The R8FINR and H8PICKHH variables have been updated accordingly in Version O.

Marital Status and ID Corrections (Wave 10)

We issued a data alert (<http://www.rand.org/labor/aging/dataproduct/datafixN.html>) for Version N regarding two couples who were mistakenly classified as married in HRS 2010 (Wave 10). This has been corrected in Version O. Specifically, they are now treated as individuals in Wave 10, rather than combined into two households.

Imputed Values Out of Reported Bracket

We corrected a minor error in the bracket imputation algorithm that was causing a handful of respondents to have imputed values that were outside of their bracket. This affected one case (respondent’s second annuity) in HRS 2006 (Wave 8), and two cases (spouse/partner’s second pension, and respondent’s third annuity) in HRS 2012 (Wave 11).

Variable Format Corrections

In the codebook section entitled, “Individual Income from Employer Pension or Annuity”, we corrected the formats (i.e., value labels) associated with variables RwIFANN, SwIFANN, RwIFPEN, and SwIFPEN. The actual values themselves did not change, only the formats associated with them.

Discontinuing Formats Catalog

We are no longer distributing SAS formats as a formats catalog (i.e., `formats.sas7bcat`). Instead, we are providing SAS code to allow the user to create their own formats catalog on any computing platform. For more information, please see the codebook section entitled, “Using the SAS Formats.”

Other Corrections

We have made a number of small improvements in the imputations: we have incorporated updates of the demographic and occupational data released by HRS, made corrections in the coding of demographic variables and financial respondent status (as used in the imputations), and updated the random seeds, which were inadvertently not changed between waves. These changes mostly affect HRS 2004–2012 (Waves 7–11), especially 2004. The total effect of all these changes is very small, though: average wealth or income changed less than about 1% in each wave. Imputations for individual households or respondents, however, can be different from the Version N imputations.

Appendix B: Mobile Home/House Inconsistencies

As stated in [Section 2.3](#), the corrections from the asset verification section occasionally lead to inconsistent data that cannot occur in the main questionnaire because of the main questionnaire's skip patterns. The main questionnaire has a branch of questions in case the primary residence is a mobile home, and another branch of questions if it is another type of dwelling, but in some cases, the corrections from the asset verification section lead to the household having a number in both branches. We checked all such cases and determined the most reasonable way to interpret the data. Table A.3 lists these occurrences, and what we decided is the most logical conclusion.

Table A.3. Mobile home/primary residence inconsistency decisions

Appendix C: Combining Pension Income from Section Q (Assets & Income) and Section J2 (Pension)

An examination of the RwiPEN variables in the “Individual Income from Employer Pension or Annuity” sections in both the RAND HRS, and the Income and Wealth Imputation File codebooks (Version O), showed much lower average pension income in Wave 11 compared to Wave 10 and preceding waves. Below are the descriptive statistics for these two variables:

Variable	N	Mean	Std Dev	Minimum	Maximum
R10IPEN	22034	3317.46	37903.02	0.0	5401560.0
R11IPEN	20554	1831.19	9111.84	0.0	434077.7

We have conducted a number of analyses to examine this issue, and have determined that this anomaly is likely driven by a drop in reported pension income in Section Q. Our analyses suggest that this may be due to an interaction of the following two factors:

- 1). the introduction of Section J2, a detailed section asking all Respondents about any pension plan that s/he has ever reported, beginning with the HRS 2012 survey
- 2). the wording of question Q215 in Section Q

The questions in Section J2 come first, and all Respondents are asked whether they are receiving benefits from any pension plan that they have previously reported in an earlier HRS wave, along with any new pension plans entered since the previous wave’s interview. Later, in Section Q, only the Financial Respondent is asked about the household’s pension income (i.e., income paid to the Respondent and Spouse). Specifically, the question (Q215) asks, “*Not including Social Security or other retirement income you’ve already told me about*, are you (or your [husband/wife/partner]) currently receiving any other income from retirement pensions?” The italicized text is especially important, because by the time this question is asked, Financial Respondents will have already reported on the income s/he received from his/her pensions in Section J2, but will not have reported income received by his/her Spouse. As such, our hypothesis is that pension income would likely be lower in Section Q for Financial Respondents, but not for Non-Financial Respondents. Our analyses indicate that although there is a small decrease in amounts of reported pension income for Non-Financial Respondents, the greatest differences in reported pension income occur for Financial Respondents.

Beginning in Version P, we therefore incorporate logic in Waves 11 and 12 to pull information about pension income from both Section Q and Section J2 for deriving pension income of the Financial Respondent, whereas in previous versions of the RAND HRS, pension income has been calculated using only information from Section Q. Table A.4 contains a detailed summary of the kinds of information available in both sections of the survey, and our rules for determining the source section for pension information for individual Financial Respondents. It is important to note that not all – only some fraction of – Financial Respondents took the wording “not counting ... what you have already told me about” to mean that the pension income reported earlier should not be repeated in the Asset and Income Section. This complicates the effort of integrating

information from the two sections. Simply adding the reported pension income from both sections would lead to double counting. We developed an algorithm that aims to address this challenge, and appears to remedy the data problem for most cases. The basic overarching principle of our algorithm is to presume that a Financial Respondent who reports pension income in the Asset and Income Section appears not to have applied the language “not counting ... what you have already told me about” to previously reported pension income. In this case, deriving pension income based only on Section Q is sufficient, and maintains longitudinal consistency. However, if a Financial Respondent does not report any pension income in Section Q, this may indicate that the Financial Respondent took the language “not counting ... what you have already told me about” into account. In this case, we check whether the Financial Respondent reported any current receipt of pension income in the Pension Section (J2). If so, we use those reports in deriving the Financial Respondent’s pension income.

Table A.4. Decision Matrix for Combining Information from Section Q and Section J2 for Financial Respondents

Assets and Income (Q)						Pension (J2)						Combined Source
Own	Who	# Plans	Amt 1	Amt 2	Amt 3	Own	Who	# Plans	Amt 1	Amt 2	Amt 3	
1	1,3	1	Amt, X, Y	Z	Z	Any value						Q

1	3	0, ., X, Y	.	.	.	1	3	2	Amt, X, Y	Any	Z	J2
1	3	0, ., X, Y	.	.	.	1	3	3+	Amt, X, Y	Any	Any	J2

***Key: General:** Amt=>\$0, X=DK, Y=RF, Z=NA, .=Missing; **Own:** 1=Yes, 0=No, X=DK, Y=RF; **Who:** 1=R only, 2=S only, 3=R & S

There are several key points to consider here:

- 1). As in previous versions of the RAND HRS, all information about pension income for Non-Financial Respondents has been pulled from Section Q.
- 2). With the exception of a few special cases, our guiding principle is to first take information that is reported in Section Q. This is true even in cases where, for example, a continuous amount is given in Section J2, and unfolding brackets are provided in Section Q.

- 3). The information collected in Section J2 is structured quite differently than that in Section Q. Rather than extensively rewriting our income and wealth imputation programs to accommodate the information in Section J2, we instead use information from Section J2 to create variables mimicking those found in Section Q. In the end, both sources of information are combined using the rules outlined in Table A.4. There are a few things to note in terms of how we process some of the information from Section J2:

- a). The key variables from Section J2 are listed below, where “x” refers to the wave-specific variable prefix (HRS 2012=N, HRS 2014=O), and “n” refers to the plan number.

Variable	Label
xJ2W014_n	AGE WHEN BENEFITS STARTED -1_n
xJ2W015_n	AMOUNT OF BENEFITS -1_n
xJ2W016_n	AMOUNT OF BENEFITS PER -1_n
xJ2W086_n	AGE WHEN BENEFITS STARTED MONTHS -1_n
xJ2W108_n	STARTED RECEIVING ANNUITY -1_n
xJ2W426_n	RECEIVING BENEFITS -1_n
xJ2W434_n	PLAN STATUS-RECEIVING REGULAR BENEFITS -1_n
xJ2W440_n	PLAN STATUS-CONVERTED TO ANNUITY -1_n

- b). Each Respondent is asked to report benefit information for up to 10 pension plans that have either been reported in a previous wave, or are reported for the first time in the current interview. Respondents are considered to “own” a pension if they are currently receiving benefits or other regular payments from it (xJ2W426_n=1).
- c). Unlike in Section Q, there is no question in Section J2 about “who receives” income from pensions. However, since all members of the household are asked whether they receive income from any reported pension plans, creating an equivalent measure is relatively straightforward.
- d). As far as the number of pension plans is concerned, again, Respondents are considered to “own” a pension if they are currently receiving benefits or other regular payments from it (xJ2W426_n=1). In some cases, however, Respondents either don’t know or refuse to report whether they are receiving income from a given pension. We do not include these plans when calculating the total number of pensions. A handful of Respondents in Waves 11 and 12 provide some information about more than five plans, but no one actually receives benefits or other regular payments from more than five.
- e). In Section Q, Financial Respondents with at least two pensions are asked to report how much they received last month from their largest pension payment, followed by their second largest pension payment. In cases where income from more than two pensions is received, Respondents are asked to report how much in total they received last month from all of their remaining pension plans. We impute monthly amounts for all pensions, and multiply those amounts by the number of months they reported receiving each pension in the last calendar year. If the number of months is unknown (as is always the case for “other pensions,” since there is no question in the survey that asks when they

started receiving these), we multiply the monthly amount by 12, that is – we assume the income was received for the whole year.

In Section J2, determining the number of months received last calendar year, and the amount of income received last month from the largest and second largest pensions, requires us to evaluate information from several different variables, including the RAND HRS variable `RwAGEM_E` (age in months at the end of the interview), and the variables `xJ2W014_n`, `xJ2W015_n`, `xJ2W016_n`, and `xJ2W086_n` from Section J2. Specifically:

- To calculate the age (in months) when benefits began for a particular pension, we use `xJ2W014_n` and `xJ2W086_n`. The result is then compared to `RwAGEM_E` to determine the number of months the income was collected in the last calendar year.
- For the amount of income received (`xJ2W015_n`), Respondents can either report the amount per month (`xJ2W016_n=4`) or per year (`xJ2W016_n=6`).

The table below provides an example of how all of this information is evaluated in order to determine the number of months received last calendar year, and the amount of income received last month from the largest and second largest pension payment:

Receiving Benefits	Amount	Amount Per	When Received	# Months Collected (LCY)	Amount (Last Month)
Yes	\$10	Month	Before LCY	12	10
Yes	\$10	Year	Before LCY	12	10 / 12
Yes	\$10	Month	During LCY	1 – 12	10
Yes	\$10	Year	During LCY	1 – 12	10 / 12
Yes	\$10	Month	After LCY	0	10
Yes	\$10	Year	After LCY	0	10 / 12

- f). Since there is no question in Section Q that asks Respondents when they started receiving all other pensions, we assume that all other pensions in Section J2 were received for 12 months in the last calendar year. In a practical sense, making this assumption poses few, if any, issues, since most Respondents in Waves 11 and 12 with three or more pension plans have been collecting on them for over 12 months.
- g). Unlike in Section Q, there are no unfolding bracket questions in Section J2. Therefore, Respondents who don't know or refuse to provide the benefit amount are treated as having "no value/bracket" in the imputation process. See [Chapter 2](#) for a detailed description of the imputation methodology.
