*We greatly appreciate support from the National Institute on Aging
(R01 AG030153, RC2 AG036619, R03 AG043052)*

Preface

The Korean Longitudinal Study of Aging (KLoSA) is a longitudinal study of individuals over age 45 in South Korea. It was designed to better understand the socioeconomic determinants and consequences of aging. The survey includes a rich set of questions regarding economic standing, physical and psychological health, demographics and social networks of aged persons. The survey is designed to ensure comparability with the Health and Retirement Study (HRS) in the United States, the Survey of Health, Ageing and Retirement in Europe (SHARE) in continental Europe, and the English Longitudinal Study of Ageing (ELSA) in the United Kingdom. Part of the reason for the close connection is to allow cross-country comparisons using these data.

In order to make the data more accessible to researchers and to facilitate such comparisons, we, the USC Gateway to Global Aging Data team, created the Harmonized KLoSA, a user-friendly version of a subset of the KLoSA interviews. The Harmonized KLoSA initiative is part of a larger set of projects. With funding and support from the National Institute on Aging, we have also created Harmonized HRS (USA), Harmonized MHAS (Mexico), Harmonized ELSA (England), Harmonized SHARE (Europe and Israel), Harmonized CRELES (Costa Rica), Harmonized JSTAR (Japan), Harmonized TILDA (Ireland), Harmonized CHARLS (China), Harmonized LASI (India), and Harmonized MARS (Malaysia). Further information about these Harmonized data files with questionnaires and other metadata is available on our searchable website, <https://g2aging.org/>.

In creating the Harmonized data files, we have followed the RAND HRS and Harmonized HRS conventions of variable naming and data structure. The RAND HRS is a user-friendly version of a subset of the HRS that the RAND Center for the Study of Aging created to increase usability. The Harmonized HRS is a supplementary dataset to the RAND HRS, which also includes a subset of the HRS data, that the Gateway to Global Aging Data team has created to increase usability of a greater number of HRS variables. The Harmonized KLoSA includes variables with a similar naming convention that mimics the RAND HRS, Harmonized HRS and other Harmonized variables. This document describes these data.

Note, however, that KLoSA license agreements do not allow us to disseminate the data directly. Instead, we make available a Stata script (“do file”) that generates these derived variables from the data files that the user must obtain from the KLoSA website (<https://survey.keis.or.kr/eng/klosa/klosa01.jsp>). Data files and more information about KLoSA can be obtained at that website.

We are grateful for the continuing support of and funding from NIA. In working with the KLoSA data, we greatly benefited from discussions with and the suggestions from our colleagues, Sandy Chien, Ashley Lin, Joohong Min, Youngha Oh, Marieta Valev, Victoria Yonter, Chulhee Lee, Jeonghwan Yun, Hyewon Kim, Arie Kapteyn, Marco Angrisani, Erik Meijer, and Bas Weerman.

Requested Acknowledgment

We ask all users of the Harmonized KLoSA to please inform our team of any written analysis using data from the Harmonized KLoSA or information from the Harmonized KLoSA Codebook by sending an email to papers@g2aging.org. We also ask users to include the following acknowledgement in their written work: "This analysis uses data or information from the Harmonized KLoSA dataset and Codebook, Version E.3 as of February 2025 developed by the Gateway to Global Aging Data. The development of the Harmonized KLoSA was funded by the National Institute on Aging (R01 AG030153, RC2 AG036619, R03 AG043052). For more information, please refer to <https://g2aging.org/>."

KLoSA Version and Acknowledgment

This document uses the English version of the core data from KLoSA Waves 1 through 8, the English version of imputations from KLoSA Waves 1 through 7, and exit interview data from KLoSA Waves 1 through 8 as of February 2025. These are the most recently released files at this time. KLoSA is organized by the Korea Employment Information Service (KEIS).

What's New in Version E.3 of the Harmonized KLoSA?

Version E.3 incorporates the latest released version of KLoSA data, and adds variables for Wave 8. It does not currently contain imputed variables for Wave 8 because they have not yet been released. It contains 11,174 observations or rows. It is a Respondent-level file so each row represents a unique Respondent. It also adds new variables and makes adjustments and corrections.

We have added the following domains and variables to the file:

Demographics:

- We added **RwCONR** and **HHwANYCON** starting in Wave 2 to identify the consumption respondent and whether there was a consumption respondent for the household.

Health Care Utilization and Insurance:

- We added the following individual out-of-pocket expenditures in all available waves: **RwOOPHOS**, **RwOOPDEN**, **RwOOPTRDMD**, **RwOOPDOC**, **RwOOMHMCr**, and **RwOOPDRUG**. These take the value of the expenditures for hospital stays, dental care, oriental clinic visits, doctor visits, home care, and medications, respectively.

Cognition:

- We have reincorporated the cognition variables that had been temporarily removed from the public data. Cognition variables are now available in the imputed files, and so are only available for Waves 1-7 at present.

Financial and Housing Wealth:

- We added **RwHOWNRNT** which indicates whether the respondent owns or rents their home, or if they have another arrangement.

Income and Consumption:

- We added the following consumption variables: **HHwCFOODI1M**, **HHwCFOODO1M**, **HHwCFOOD1M**, **HHwCNF1M**, **HHwCTOT**, **HHwCPERC**, and **HHwCTOTR1M** starting in Wave 2. These variables indicate the monthly cost for food consumed in the house, food consumed out of the house, total food consumption, total non-food consumption; the annual calculated total consumption and per-capita consumption; and the monthly reported total consumption.

Family Structure:

- We added **HwHHRES** for all available waves. Previously, the data for the number of household respondents was only available in Wave 1 and for the new sample in Wave 5. This data is now available for all waves.

Employment History:

- We added respondent job industry and occupation code variables for all available waves: **RwJCIND_K** and **RwJCOCC_K**.

Retirement:

- We added **RwRETAGE** in all available waves, which indicates the respondent's age at retirement.

Psychosocial:

- We added variables indicating the respondent's satisfaction with their relationship with their spouse, their relationship with their children, their current financial status, their own health, and their life as a whole for all available waves: **RwSATSPS_K**, **RwSATCHD_K**, **RwSATFIN_K**, **RwSATHLT_K**, and **RwSATWLIFE_K**.

We have made the following adjustments, improvements, and corrections to the data and documentation:

Demographics:

- We made adjustments to **RADYEAR** and **RADMONT** to assign a special missing value .x if the respondent has not died rather than a more general missing code.

Health:

- We renamed all individual ADL variables, ADL summaries, IADL variables, and IADL summaries to end in "B" instead of ending in "A" because they refer to needing help with the activity rather than having difficulty with the activity. We made further adjustments to the naming of **RwBEDA** to **RwBEDB_K** because this activity includes needing help getting out of bed and crossing the room, whereas in other Harmonized datasets, **RwBEDA** indicates having difficulty getting in and out of bed only.
- We adjusted **R6URINPAD** to add a special missing value .s if the question was skipped rather than special missing value .m.

Cognition:

- We renamed **RwTASK** to **RwREAD**, and **RwWRITE** to **RwSENTEN** for comparability with other Harmonized datasets.

Family Structure:

- We adjusted **RwRFCNTX_K** and **RwSOCRELG_K** to be in frequency order (we switched the order for values 2 and 3, 4 and 5, and 6 and 8).

Employment History:

- We adjusted the special missing value .w definition to match the definition used in **RwWORK**, replacing the previous definition based on labor force participation, for the following variables: **RwSLFEMP**, **RwJHOURS**, **RwJHOUR2**, **RwWGIHR**, **RwWGIWK**, **RwJPHYSA**, **RwJLIFTA**, **RwJSTOOPA**, **RwJSIGHTA**, **RwJCONCNTRA**, **RwIDEALPPLA**, **RwJCOMPUTA**, **RwJPROSENA**, **RwJOLDRETA**, and **RwJMLDEMA**.
- We adjusted the following variables to assign a value of 0 instead of special missing value .j if the respondent was not looking for work: **R1LOOKWRK1W**, **R1LOOKWRK4W**, **R1ABLEWRK**, and **R1WILLWRK**.
- We renamed **RwWGIHR** and **RwWGIWK** to **RwTWGIHR** and **RwTWGIWK** to emphasize that it represents after-tax wages.

Retirement:

- We adjusted **RwRYRCMP** to use values of 1, 3, and 5 rather than 1, 2, and 3 for consistency with other Harmonized datasets.

Pension:

- We renamed RwPTYP to **RwPTYP1** and adjusted it so that it is coded as 1. Defined Benefit (DB), 2. Defined Contribution (DC), rather than 1.DC, 2.DB, for consistency with other Harmonized datasets.
- We added a special missing value .c for **RwPENIC** for those receiving a corporate pension, instead of being assigned .n for receiving no private pension.

Assistance and Caregiving:

- We renamed RwGKSIT1Y to **RwGKSIT** and assigned the former special missing .g, indicating that the respondent had no grandchildren, 0 values for comparability across Harmonized datasets.
- We adjusted the variables related to the respondent providing care to others. Rather than providing variables indicating whether the respondent provided help to family members with ADL difficulties or provided help to non-household family members with chores, we have separated these activities to provide **RwGaxCARE** (help provided for ADL difficulties) and **RwGxCHORE** (help provided for chores outside of the household). This was done to elucidate the type of care the respondent gives to others, particularly when comparing across Harmonized datasets.
- For all variables related to care received, we changed special missing value .x to special missing values .y to distinguish not having difficulty with the activities from not needing help with the activities.

Stress:

- We reversed the scales for **RwSATJOB** and **RwSALARY** so that a higher score indicates a higher associated level of stress, in line with other Harmonized datasets. This change does not impact the values of the job stress summary variables.

1. Introduction and Overview

This Codebook documents the Harmonized KLoSA data files, a streamlined collection of variables derived from the Korean Longitudinal Study of Ageing (KLoSA). KLoSA is a panel survey of people aged 45 and over and their partners, living in private households in Korea. Its main goal is to provide an interdisciplinary data resource on health, economic position and quality of life as people age. The survey elicits information about demographics, income, assets, health, cognition, family structure and connections, health care use and costs, housing, job status and history, expectations, and insurance.

KLoSA surveys respondents every two years. Funded by the Korean Ministry of Labor, the Korean Institute of Labor (KLI) collected the first two waves, and the Korea Employment Information Service (KEIS) collected Waves 3, 4, 5, 6, 7, and 8 of KLoSA. The first wave of the KLoSA survey was conducted in fall/winter of 2006. The sample population was selected as part of a stratified, multi-stage area probability design. The first component of this sampling framework is the probability proportional to size (PPS) systematic sampling of the 2005 (South Korean) Census enumeration districts after stratifying by the location (15 major metropolitan cities and provinces) and characteristic of the district (urban or rural, and apartment building or non-apartment dwelling). Households were selected within PSUs from a listing of households in the Census identified as age-eligible; that is, inhabited by at least one person 45 years of age and older. This initial sample included 10,254 respondents age 45 and over. The second wave was conducted in 2008 and had 8,688 respondents. The third wave was conducted in 2010 and had 7,920 respondents. The fourth wave was conducted in 2012 and had 7,486 respondents. There was no refresher sample in Waves two through four. In 2014, a refreshment sample of individuals born in 1962 or 1963 was drawn and it included 920 individuals, which were added to the 7,029 remaining core sample respondents for a total of 7,949 Wave 5 respondents. The sixth wave was conducted in 2016 and had 7,490 respondents. The seventh wave was conducted in 2018 and had 6,940 respondents. The eighth wave was conducted in 2020 and had 6,488 respondents.

The data include any individual interviewed at least once. This includes individuals who were age-eligible at the time of their first interview and spouses who were age-eligible at baseline. Unlike other HRS family studies, KLoSA does not interview new spouses who were not part of that household's baseline sample.

Currently, Waves 1 to 8 from the core study are available for study. The eight waves of KLoSA micro data are available at the Korea Employment Information Service (KEIS) website (<https://survey.keis.or.kr/eng/klosa/klosa01.jsp>). The Harmonized KLoSA data file incorporates all eight waves of core interview data.

1.1 Gateway to Global Aging Data

The Health and Retirement Study (HRS) has achieved remarkable scientific success, as demonstrated by an impressive number of users, research studies, and publications using it. Its success has generated substantial interest in collecting similar data as population aging has progressed in every region of the world.

The result has been a number of surveys designed to be comparable with the HRS: the Mexican Health & Aging Survey (MHAS), the English Longitudinal Study of Ageing (ELSA), the Survey of Health, Ageing and Retirement in Europe (SHARE), the Costa Rican Longevity and Healthy Aging Study (CRELES), the Korean Longitudinal Study of Aging (KLoSA), the Japanese Study on Aging and Retirement (JSTAR), the Irish Longitudinal Study on Ageing (TILDA), the China Health and Retirement Longitudinal Study (CHARLS), the Brazilian Longitudinal Study of Ageing (ELSI), the Northern Ireland Cohort Longitudinal Study of Ageing (NICOLA), the Chilean Social Protection Survey (SPS), the Malaysia Ageing and Retirement Survey (MARS), and the Longitudinal Aging Study in India (LASI). The overview of this family of surveys, including their research designs, samples, and key domains can be found in Lee, Phillips and Wilkens (2019).

As these surveys were designed with harmonization as a goal, they provide remarkable opportunities for cross-country studies. The value of comparative analyses, especially the opportunities they offer for learning lessons resulting from policies adopted elsewhere, is widely recognized. Yet there are only a limited number of empirical studies exploiting such opportunities. This is partly due to the difficulty associated with learning multiple surveys and the policies and institutions of each country.

Identifying comparable questions across surveys is the first step toward cross-country analyses. The Gateway to Global Aging Data (Gateway) helps users understand and use these large-scale population surveys on health and retirement. The Gateway includes several tools to facilitate cross-national health and retirement research. It includes a digital library of survey questions for all participating surveys. Its search engine enables users to find relevant survey questions. The Gateway also includes a concordance with information comparing measures within and across surveys over time. Using these tools, researchers can identify all questions related to particular key words or within a domain. The Gateway also includes population and sub-population estimates for key harmonized variables and present them in graphs and tables that can be downloaded.

The Gateway can be accessed at <https://g2aging.org/>. For more information about using the Gateway visit the Help page. For more information about obtaining the data files used to make the Harmonized KLoSA from the KEIS website or downloading the Stata file used to create the Harmonized KLoSA using the Gateway see “Chapter 4. Distribution and Technical Notes.”

1.2 Unit of Observation

We distinguish between three units of observation: individual, couple, and household. A "couple" in this sense means "single individual, or individual with his/her spouse, whatever applicable". In KLoSA, once it was determined that there was an age-eligible member of the household, all age-eligible household members were interviewed. As a result, there are households in the data in which more than one "couple" is interviewed, for example, a husband and wife who were older than 45 and the mother of one of them.

In the HRS, an age-eligible individual is sampled and then this individual and their spouse or partner regardless of age is interviewed, but no other household members, even if they are age-eligible. Thus, in the HRS, there is usually no distinction between a "couple" and a "household". More precisely, "household" variables in the HRS (and the RAND HRS and Harmonized HRS) are actually "couple" variables. However, as mentioned above, in KLoSA, a household may consist of more than one "couple".

The HRS interviews all age-eligible individual's spouse or partner, so, for most of the variables, spouse-level information is available. In contrast, KLoSA does not interview non age-eligible spouses or partners, and in such case, spouse-level information is missing.

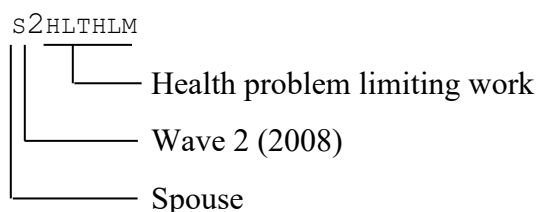

1.3 Data File Structure

The Harmonized KLoSA data are contained in a single file, which includes the first eight waves of KLoSA. The data are stored in a "fat format" where each observation represents one respondent. The unit of observation is the individual. Each individual is uniquely identified by the unique identifier *pid*. Households are identified by wave-specific *hhWhhid* where 'w' refers to the specific wave. Couples are identified by wave-specific *hWcoupid* where 'w' refers to the specific wave. It is important to note that unlike the RAND HRS and Harmonized HRS, households in the KLoSA can include multiple couples. This file may be merged with other KLoSA data using *pid*.

1.4 Variable Naming Convention

With few exceptions, variable names in the Harmonized KLoSA Data follow a consistent pattern. The first character indicates whether the variable refers to the reference person ("R"), spouse ("S"), the couple ("H"), or the full household ("HH").¹ The second character indicates the wave to which the variable pertains: "1", "2", "3", "4", "5", "6", "7", "8", or "A". The "A" indicates "all," i.e., the variable is not specific to any single wave. An example is RABYEAR, the birth year of the respondent. The remaining characters describe the concept that the variable captures. For example:

¹ The reference person need not be the person who responded to the question. It is the person whose information is central to the data file observation.

Variable `s2HLTHLM` captures whether the spouse of the reference person experiences an impairment or health problem that limits the kind or amount of paid work they can do. The name of the variable does not indicate who provided the information. For example, the spouse's health problem may have been reported by the spouse themselves, or it may have been reported for the reference person by a proxy.

In the text below, we may refer to variables such as `sWHLTHLM` for example, without specifying the wave. This reference points at the group of variables `s1HLTHLM`, `s2HLTHLM`, `s3HLTHLM`, `s4HLTHLM`, `s5HLTHLM`, `s6HLTHLM`, `s7HLTHLM`, and `s8HLTHLM`.

Variable labels also follow a consistent pattern. The first characters denote the name of the variable, followed by a colon. Then the wave to which the variable pertains (w1, w2, w3, w4, w5, w6, w7, or w8) follows. The remainder of the label describes the concept that the variable captures. For example, the variable label of `s2HLTHLM` is:

`s2HLTHLM:w2 S Hlth problems limit work`

It may seem duplicative to include the name of the variable and the wave in the variable label. However, statistical packages often suppress the variable name and instead use its label in the presentation of results.

Variable names in the Harmonized KLoSA are generally based on the variable name used in the RAND HRS or Harmonized HRS for the same measure. Measures which are exactly or near-exactly comparable between the Harmonized KLoSA and RAND HRS or Harmonized HRS use the exact same name. For instance, `RABYEAR` is the variable name for the respondent birth year in both the Harmonized KLoSA as well as the RAND HRS. If the Harmonized KLoSA measure is deemed only somewhat comparable with the RAND HRS or Harmonized HRS version of that measure, the variable name in the Harmonized KLoSA will often end in “_K.” This variable name suffix indicates some KLoSA-specific difference with the RAND HRS or Harmonized HRS version of this measure. For instance, the Harmonized KLoSA variable for CESD (summary depression measure) is named `RwCESD_K` while the RAND HRS variable is named `RwCESD`. The reason for this difference in variable name is that KLoSA used a different depression scale from HRS. Other reasons for Harmonized KLoSA-specific variable names include: differences in survey questions, differences in survey routing, and whether both sets of variables use imputed values. Harmonized KLoSA specific variable names are used to notify the user that there are substantial differences between the RAND HRS or Harmonized HRS and Harmonized KLoSA measures and comparability between these measures is not straight-forward.

The Harmonized KLoSA includes some variables without Harmonized KLoSA-specific variable names even though the Harmonized KLoSA measure is significantly different from the RAND HRS or Harmonized HRS measure of the same name. In particular, wealth and income measures in the Harmonized KLoSA do not use Harmonized KLoSA-specific variable names even though wealth and income measures in the Harmonized KLoSA are expressed in 10,000 Korean won, while income and wealth measures in the RAND HRS and Harmonized HRS are always expressed in nominal dollars. Users should always check the “Differences with RAND HRS/Harmonized HRS” section of each measure before comparing any Harmonized KLoSA measure to the RAND HRS or Harmonized HRS version of the same measure or any other Harmonized Dataset version of the same measure.

1.5 Missing Values, Nonresponse, and Imputations

Variables may contain missing values for several reasons. Stata, SAS, and SPSS offer the capability to distinguish multiple types of missing values, and we have attempted to record as much information as possible. Generally, the codes adhere to the classification in Table 1.

Table 1. Missing Codes

Code	Reason for missing
.	Reference person did not respond to this wave
.a	Age limit
.d	Don't know
.r	Refused
.s	Skipped due to routing
.u	Reference person is not married (for spouse variables)
.v	Spouse did not respond this wave (for spousal variables)
.m	Other missing

The coding scheme varies across variables. Consult the Data Codebook for details on individual variables.

1.6 Weighting and Accounting for Survey Design

The Harmonized KLoSA includes variables to allow users to produce weighted estimates with survey design adjusted standard errors where provided by KLoSA. KLoSA data can be analyzed cross-sectionally or longitudinally. Cross-sectional analysis uses one wave of data. Longitudinal analysis involves using multiple waves of data to analyze the change between those waves. In order to produce unbiased estimators, users should use weights, taking into account the selection probabilities and response rates of each sample.

KLoSA produces two types of respondent-level weights for the core survey: cross-sectional weights and longitudinal weights. Cross-sectional weights are available for all 8 waves of KLoSA. Starting in Wave 2, KLoSA produces respondent-level longitudinal weights for the core survey. A new cohort of respondents was added in Wave 5 and while the cross-sectional weight is included in `RwWTRESP` for this cohort along with the weights for the original cohort, the longitudinal person-level weight is available for this cohort in `RwWT5RESP` starting in Wave 6.

In addition to weights, KLoSA also provides stratification and cluster variables to account for KLoSA's complex survey design. The three region variables, 15 cities/provinces (`region1`), `dong/eup/myeon` (`region2`), and housing type (`enu_type`) were used for the stratification variable, and enumeration district (`enu`) was the cluster variable. For more detailed information about weight and survey design, please see the "KLoSA-2007_Wave1_userguide.pdf" at Korea Employment Information Service (KEIS) website (<https://survey.keis.or.kr/eng/klosa/klosa01.jsp>).

1.7 Availability of Stress Measures

In 2015, Drs. Elissa Epel and Wendy Mendes partnered with the Gateway to Global Aging Data team to form the Stress Measurement Network funded by the National Institute on Aging (NIA/NIH R24 AG048024). The goal of the Stress Network is to promote better theory and measurement of psychosocial stress in population-based studies. One of the specific aims is to facilitate the use of stress measures in population based studies, which was led by Drs. Tara Gruenewald, Alexandra Crosswell, and Jinkook Lee. It is hoped that identification of such measures will facilitate examination of the association of stressor conditions with cognitive-affective and physiological distress experience and poor psychological and physical health states hypothesized to follow from stressor exposure.

As a result of the work of the NIA Stress Measurement Network, the Harmonized KLoSA provides harmonized stress measures beginning in 2006, KLoSA Wave 1, and through 2020, KLoSA Wave 8. All available stress measures in KLoSA are related to the Karasek demand-control measure of job strain and come from the core KLoSA interview.

KLoSA included six measures of job strain/stress derived from the Karasek demand-control measure of job strain. Those include the respondent's satisfaction with their job, whether their job is physically demanding, whether the respondent feels like their salary is adequate, whether the respondent feels like their job security is poor, whether the job requires the respondent to do more challenging tasks than they are used to, and how much the respondent agrees that their job involves a lot of stress.

For more specific information about all stress measures included in the KLoSA, as well as comparable stress measures in HRS and HRS sister studies, please refer to the Measures of

Stress in the Health and Retirement Study (HRS) and the HRS Family of Studies (2020) user guide available from <https://g2aging.org/index.php?section=documentation>.

2. Wealth and Income Variables

2.1 Units of Observation and Financial Respondent

Unlike HRS, KLoSA asks financial questions at the individual level. All respondents and spouses answer about their own financial status, including the value of cash, saving accounts, stocks, mutual funds, government bonds, debt, all other savings, individual earnings (wage and bonus), pension income, government transfer income, other income and capital income. On the other hand, HRS asks financial income questions at the household level, and only the financial respondent, who is the most knowledgeable person about the financial assets of the family, will answer the questions.

Since the KLoSA financial values correspond to the individual level, the variable names begin with “R” for respondent or “S” for spouse. We do observe some cases in which the respondent and spouse report the same amount for their income or asset. To avoid the possibility of double counting, we did not create the couple level (“H”) variables.

Starting in Wave 2, a single consumption respondent is chosen to answer monthly expenditure questions on behalf of the entire household. Starting in Wave 2, the consumption respondent is asked about the costs associated with food consumed inside the house, food consumed outside the house, public education, private education, housing, medical expenditures, and clothing. Starting in Wave 5, the consumption respondent is also asked about the costs associated with insurance premiums, vehicle maintenance, telecommunication service, leisure activities, and family events/tributes.

Since the KLoSA consumption values correspond to the household level, the variable names begin with “HH” for household.

For harmonization purposes, it is preferable to use the same unit of observation in different harmonized data sets.

2.2 Currency

All KLoSA financial variables are expressed in 10,000 Korean won. For cross-country comparisons of financial variables, these values have to be converted to a single monetary unit. The Harmonized KLoSA dataset includes a consumer price index for this purpose, provided in CYYYCPINDEX. It is the users’ responsibility to check what period a variable refers to and accordingly use the appropriate index.

In KLoSA, asset questions ask about current asset values, while income questions ask about income in the last calendar year (2005, if the interview was conducted in 2006).

3. Structure of Codebook

The Data Codebook contains the codebook documenting all variables in the Harmonized KLoSA Data. This section explains how to interpret the codebook entries. The figure below shows a typical codebook page; the numbers in circles correspond to comments below.

Self-Report of Health ← 1				
Wave	Variable	Label		Type
2	1	R1SHLT	r1shlt:w1 R self-rated health	Categ
	2	R2SHLT	r2shlt:w2 R self-rated health	Categ
	3	R3SHLT	r3shlt:w3 R self-rated health	Categ
	4	R4SHLT	r4shlt:w4 R self-rated health	Categ
	5	R5SHLT	r5shlt:w5 R self-rated health	Categ
	6	R6SHLT	r6shlt:w6 R self-rated health	Categ
	7	R7SHLT	r7shlt:w7 R self-rated health	Categ
	8	R8SHLT	r8shlt:w8 R self-rated health	Categ
3	1	S1SHLT	s1shlt:w1 S self-rated health	Categ
	2	S2SHLT	s2shlt:w2 S self-rated health	Categ
	3	S3SHLT	s3shlt:w3 S self-rated health	Categ
	4	S4SHLT	s4shlt:w4 S self-rated health	Categ
	5	S5SHLT	s5shlt:w5 S self-rated health	Categ
	6	S6SHLT	s6shlt:w6 S self-rated health	Categ
	7	S7SHLT	s7shlt:w7 S self-rated health	Categ
	8	S8SHLT	s8shlt:w8 S self-rated health	Categ

5 → Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
R1SHLT	10254	3.64	1.04	1.00	5.00

7

How Constructed

KLoSA asks about self-reported health twice, once at the beginning of the health module and once again at the end, using two different scales of answer choices. KLoSA randomly selects which scale will appear at the beginning of the module and which will appear at the end of the module. Information about the position of RWSHLT and RWSHLTA is not available with the public use data set from KLoSA.

RWSHLT is the respondent's self-reported general health status using the US scale of self-reported health. Codes range from 1 for "Excellent" to 5 for "Poor." "Don't know" and "Refused" are recoded with special missing codes of .d and .r. Other missing responses are assigned special missing .m. RWSHLT is assigned blank missing (.) if the respondent did not participate in the current wave.

SWSHLT is the respondent's spouse's self-reported general health status taken directly from spouse's responses to RWSHLT. In addition to the special missing codes used in RWSHLT, SWSHLT employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

8

Cross-Wave Differences in KLoSA

No differences known.

9

Differences with the RAND HRS

In addition to the US scale of self-reported health used for RWSHLT, KLoSA also uses a second scale, the Korean or European scale, to measure self-reported health.

10

KLoSA Variables Used

Wave 1:	
W01C001	respondent's (principal) subjective health
Wave 2:	
W02C001	respondent's (principal) subjective health
Wave 3:	
W03C001	respondent's (principal) subjective health
Wave 4:	
W04C001	respondent's (principal) subjective health
Wave 5:	
W05C001	respondent's (principal) subjective health
Wave 5 Add:	
W05C001	respondent's (principal) subjective health
Wave 6:	
W06C001	respondent's (principal) subjective health
Wave 7:	
W07C001	respondent's (principal) subjective health
Wave 8:	

W08C001

respondent's (principal) subjective health

-
- 1 *Title*: The variables are documented in groups according to the concept that they measure. For example, there are sixteen variables related to self-reported health, corresponding to eight waves and respondent/spouse. The title is often followed by a short description of the concept that is captured.
 - 2 *Variable Names*: This entry shows the waves of variables in the group.
 - 3 *Variable Labels*: This entry shows the Stata variable labels. As discussed above, the labels typically include the name of the variable, the file on which it is present, and a description of its contents.
 - 4 *Variable Type*: This entry indicates the type of variable. It may be continuous (Cont), categorical (Categ), or character (Char).
 - 5 *Descriptive Statistics*: This entry shows descriptive statistics on each variable. They include the number of nonmissing values, the mean, standard deviation, minimum value, and maximum value.
 - 6 *Categorical Value Codes*: This entry shows the value label codes. These are only relevant for categorical variables. The first character(s) of the value labels indicate the value to which each label has been assigned. For example, value "1" is mapped into "1. Excellent" (not just "Excellent"). The entry also indicates which labels are assigned to which variables, and shows frequency tabulations for all categorical variables.
 - 7 *How Constructed*: This entry provides background on the manner in which variables were constructed.
 - 8 *Cross-Wave Differences in KLoSA*: This entry briefly describes differences in question wording or contents between interview waves.
 - 9 *Differences with the RAND HRS/Harmonized HRS*: This entry describes any differences between the RAND HRS or Harmonized HRS version of the variable and the Harmonized KLoSA version of the variable. It is imperative these differences are understood when using harmonized measures.
 - 10 *KLoSA Variables Used*: This entry provides the names and labels of raw KLoSA variables that were used to construct the new variables.

4. Distribution and Technical Notes

The Harmonized KLoSA Data file is created using the Gateway to Global Aging Data (<https://g2aging.org/>) and saved in a Stata format. To create and use the file one must have at least Stata/IC, version 12 or higher. To create the Harmonized KLoSA, visit the Download tab of the Gateway to Global Aging Data. Under the KLoSA column, click the link for the Harmonized KLoSA Stata Code. From this page you can download the Harmonized KLoSA Stata Creation Code and find further instructions on running the Creation Code in Stata. The original KLoSA data is distributed by the Korea Employment Information Service (KEIS). Once created, the Harmonized KLoSA Data file can be accessed anytime by the user. The original KLoSA data is made available free of charge but only to users who register with KEIS and agree to the standard conditions. For more information on obtaining access to the KLoSA data, visit: <https://survey.keis.or.kr/eng/klosa/klosa01.jsp>.

This is version **E.3** of the Harmonized KLoSA Data.

A copy of the Stata programs used to create the Harmonized KLoSA and a copy of this Harmonized KLoSA Codebook can be obtained on the Gateway to Global Aging Data (<https://g2aging.org/>) under the Download page.

5. Data Codebook

Section A: Demographics

Person Specific Identifier

Wave	Variable	Label	Type
1	PID	unique individual serial number	Cont
1	HHID	household ID	Cont
1	PN	pn: Person number within household (num)	Cont
1	PNC	pnc: Person number within household (char)	Char

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
PID	11174	33891.37	19372.51	11.00	68052.00
HHID	11174	3388.99	1937.25	1.00	6805.00
PN	11174	1.45	0.61	1.00	6.00

How Constructed:

KLoSA provides a unique identifier for each respondent, PID. It consists of two separate parts:

HHID is the numeric version of the household identifier. PN is the person identifier to identify each participant within each household. PNC is a character version of PN.

Cross Wave Differences in KLoSA

A new cohort of respondents was added in Wave 5. HHID for this cohort was derived using the unique household identifier from the Wave 5 add file.

Differences with the RAND HRS/Harmonized HRS

No differences known.

KLoSA Variables Used:

Wave 1:	
HHID	Household ID
PID	Personal ID
Wave 5 New:	
HHID	In 2014, Household ID
PID	Personal ID

Household Identifier

Wave	Variable	Label	Type
1	HH1HHID	hh1hhid: w1 full HHold ID /num	Cont
2	HH2HHID	hh2hhid: w2 full HHold ID /num	Cont
3	HH3HHID	hh3hhid: w3 full HHold ID /num	Cont

HH8HHID	6488	35890356871.6	19643573227.7	10000000.00	68050000000.0

How Constructed:

HHwHHID uniquely identifies households in the KLoSA in a given wave and is taken directly from the KLoSA wave-specific HHID (Wave 1 and Wave 5 new cohort), HHID08, HHID10, HHID12, HHID14, HHID16, HHID18 and HHID20 variables. HHwHHIDC are character versions of HHwHHID.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

No differences known.

KLoSA Variables Used:

Wave 1:	
HHID	Household ID
Wave 2:	
HHID08	In 2008, Household ID
Wave 3:	
HHID10	In 2010, Household ID

Wave 4:	
HHID12	In 2012, Household ID
Wave 5:	
HHID14	In 2014, Household ID
Wave 5 New:	
HHID	In 2014, Household ID
Wave 6:	
HHID16	In 2016, Household ID
Wave 7:	
HHID18	In 2018, Household ID
Wave 8:	
HHID20	In 2020, Household ID

Couple Identifier

Wave	Variable	Label	Type
1	H1COUPID	h1coupid:w1 couple linkage code /num	Cont
2	H2COUPID	h2coupid:w2 couple linkage code /num	Cont
3	H3COUPID	h3coupid:w3 couple linkage code /num	Cont
4	H4COUPID	h4coupid:w4 couple linkage code /num	Cont
5	H5COUPID	h5coupid:w5 couple linkage code /num	Cont
6	H6COUPID	h6coupid:w6 couple linkage code /num	Cont
7	H7COUPID	h7coupid:w7 couple linkage code /num	Cont
8	H8COUPID	h8coupid:w8 couple linkage code /num	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
H1COUPID	10254	31270.85	17883.84	11.00	61711.00
H2COUPID	8688	31931.83	17893.47	11.00	61711.00
H3COUPID	7920	32273.37	17903.97	11.00	61711.00
H4COUPID	7486	32208.51	17921.22	11.00	61711.00
H5COUPID	7949	35821.01	19709.18	11.00	68051.00
H6COUPID	7490	35991.85	19631.53	11.00	68051.00
H7COUPID	6940	35819.39	19691.52	11.00	68051.00
H8COUPID	6488	35891.44	19643.58	11.00	68051.00

How Constructed:

HwCOUPID is the couple identifier. It is taken directly from KLoSA's W0wCID. Similar to the way other identification variables were constructed in KLoSA, HwCOUPID consists of the HHID and the person number of the first person listed in a couple inside a household. HwCOUPID is the same for each person in the couple, allowing researchers to match spouses who are both in the data.

A respondent whose spouse or partner does not appear in the survey data (due to age ineligibility, institutionalization, etc.) or does not have a spouse or partner (unmarried, divorced, widowed, separated) are also assigned a HwCOUPID, such that HwCOUPID is not missing for any respondent in a given wave. HwCOUPID is equivalent to the respondent's PID for these uncoupled persons, hence it will not have a corresponding HwCOUPID in the data.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike the HRS, KLoSA was conducted on any eligible individual present at the household during the time of the interview. In this regard, there are households which contain a couple and another uncoupled individual or households with two or more uncoupled individuals. The use of couple ID is imperative for identifying sub-households and for comparison to the RAND HRS concept of household.

KLoSA Variables Used:

Wave 1:	
CID06	Couple ID
HHID	Household ID
Wave 2:	
CID08	Couple ID
HHID	Household ID

Wave 3:	
CID10	Couple ID
HHID	Household ID
Wave 4:	
CID12	Couple ID
HHID	Household ID
Wave 5:	
CID14	Couple ID
HHID	Household ID
Wave 5 New:	
CID	Couple ID
HHID	In 2014, Household ID
Wave 6:	
CID16	Couple ID
HHID	Household ID
Wave 7:	
CID18	Couple ID
HHID	Household ID
Wave 8:	
CID20	Couple ID
HHID	Household ID

Spouse Identifier

Wave	Variable	Label	Type
1	S1PID	s1pid:w1 spouse pid	Cont
2	S2PID	s2pid:w2 spouse pid	Cont
3	S3PID	s3pid:w3 spouse pid	Cont
4	S4PID	s4pid:w4 spouse pid	Cont
5	S5PID	s5pid:w5 spouse pid	Cont
6	S6PID	s6pid:w6 spouse pid	Cont
7	S7PID	s7pid:w7 spouse pid	Cont
8	S8PID	s8pid:w8 spouse pid	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
S1PID	10252	21622.49	20972.14	0.00	61712.00
S2PID	8688	22309.13	21114.28	0.00	61712.00
S3PID	7920	22280.26	21189.14	0.00	61712.00
S4PID	7486	22135.48	21164.59	0.00	61712.00
S5PID	7949	23810.80	23224.30	0.00	68052.00
S6PID	7490	23482.62	23315.90	0.00	68052.00
S7PID	6940	23435.33	23282.06	0.00	68052.00
S8PID	6488	23464.47	23348.19	0.00	68052.00

How Constructed:

SwPID is derived from the PID of persons with a matching couple id. If the respondent is not married or partnered or if the respondent is married but there is no other respondent in the data then SwPID is 0.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike the HRS, KLoSA does not interview any new spouses of an original respondent, so although the original spouse might or might not be interviewed in the future, the respondent will not be associated with any other respondent as a spouse.

KLoSA Variables Used:

Wave 1:	
CID06	Couple ID
HHID	Household ID
W01A006	Currently marital status
Wave 2:	
CID08	Couple ID
HHID	Household ID
W02MARITAL	In 2008, the current marital status

How Constructed:

RwIWSTAT indicates the response and mortality status of the respondent at each wave. Respondents are identified by a code of 1, while non-respondents are identified by codes 4-6, and 9.

Mortality status is derived from individual wave specific outcomes in the KLoSA Exit File. Similar to the RAND HRS, a non-response code of 4 means that the respondent is alive but did not respond. A code of 5 means that the respondent died between the last interview and the current one, and a code of 6 means that the respondent had died before a previous wave. A code of 9 means that we don't know if the individual is alive or not.

SwIWSTAT indicates the current wave's spouse's interview status. It is taken from the spouse's values to RwIWSTAT. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

No differences known.

Sampling Design

Wave	Variable	Label	Type
1	RAECLUST	raeclust: cluster variable	Cont
1	RAESTRAT	raestrat: stratification variable	Char

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
RAECLUST	11174	1.38	0.48	1.00	2.00

How Constructed:

RAECLUST is the clustering variable based off the primary sampling units in KLoSA (w01enu). These units correspond to the enumeration district included in the sample. An enumeration district is a unit defined by the National Statistics Office for the Korean Population and Housing Census. Of 261,237 enumeration districts in South Korea, 1,000 were selected for KLoSA sampling and are included in Wave 1. A new cohort of respondents was added in Wave 5. The clustering variable for those individuals is based on the Wave 5 sampling units (w05enu).

RAESTRAT is the stratification variable of the KLoSA data. It was created by concatenating variables w01region1, w01region2, and w01enu_type, which corresponded to a particular region or metropolitan city (Region 1), village or town status (Region 2), and whether or not the respondent lived in a house or apartment complex (W0wenu_type). The stratification variable for the new cohort of respondents added in Wave 5 is based on concatenating variables w05region1, w05region2, and w05enu_type.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

In the RAND HRS, the cluster variable is named RAEHSAMP. In the RAND HRS, the stratification variable is named RAESTRAT.

KLoSA Variables Used:

Wave 1:	
W01ENU_TYPE	A residential type
W01REGION1	Region1: a local variable
W01REGION2	Region2: village/town
Wave 5 New:	
W05ENU_TYPE	A residential type
W05REGION1	Region1: a local variable
W05REGION2	Region2: village/town

Sample Cohort

Wave	Variable	Label	Type
1	HACOHORT	hacohort:Sample cohort	Categ

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
HACOHORT	11174	1.08	0.27	1.00	2.00

Categorical Variable Codes

Value	HACOHORT
1.Original KLoSA cohort	10254
2.Wave 5 add cohort	920

How Constructed:

HACOHORT identifies the cohort in which the household was originally sampled. HACOHORT is assigned a 1 if the household was part of the original KLoSA sample interviewed starting in Wave 1. HACOHORT is assigned a 2 if the household was part of the Wave 5 add sample interviewed starting in Wave 5.

S8LWT5RESP	4055	2306.46	1393.79	28.02	18294.00

How Constructed:

RwWTRESP is the person-level cross-sectional weight as provided by KLoSA. The weight is provided to make the data a nationally representative sample. Starting in Wave 5, RwWTRESP takes the values of the cross-sectional weights constructed for the combined sample of the original cohort and the new Wave 5 cohort. RwlWTRESP is the person-level longitudinal weight using Wave 1 as the base and is only available for Waves 2 and forward. This weight is not available for the new cohort added in Wave 5 and therefore a special missing of .n is assigned to the weight value of those respondents. RwlWT5RESP is the person-level longitudinal weight using Wave 5 as the base and is only available for Wave 6 and forward. RwlWT5RESP takes the values of the longitudinal weights constructed for the combined sample of the original cohort and the new Wave 5 cohort.

SwWTRESP, SwLWTRESP, and SwLWT5RESP are the person-level cross-sectional and longitudinal weights of the respondent's spouse, and their values are taken from RwWTRESP, RwlWTRESP, and RwlWT5RESP. If the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married, a special missing value of .v is used.

Cross Wave Differences in KLoSA

Longitudinal weights are not available for some respondents in Waves 3, 4, 5, 6, 7 and 8.

A new cohort of respondents was added in Wave 5, and as a result, the cross-sectional weight designed for the combined original and new Wave 5 cohorts is assigned to RwWTRESP starting in Wave 5. Starting in Wave 5, the longitudinal weights using Wave 1 as the base are not available for the new Wave 5 cohort, and so are assigned special missing .n for RwlWTRESP in these waves. Starting in

Wave 6, RgLWT5RESP is added to provide the longitudinal weight for the combined original and new Wave 5 cohorts using Wave 5 as the base. Please note that KLoSA data also includes a cross-sectional weight that includes only the original cohort and not the new Wave 5 cohort starting in Wave 5, which has not been included in the Harmonized KLoSA.

Differences with the RAND HRS/Harmonized HRS

Unlike the HRS, KLoSA does not provide separate weights for households - only individual-level weights are available.

KLoSA Variables Used:

Wave 1:

HH8HHRESP	6488	1.73	0.54	1.00	4.00

How Constructed:

HHwHHRESP is the number of age-eligible household respondents who completed an interview in the current wave of data collection. It counts the number of respondents sharing the same household ID. HHwHHRESP is assigned blank missing (.) if the respondent did not participate in the current wave.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

While the HRS defines a household as only containing a respondent and spouse (if coupled), so that the number of household respondents is either 1 or 2, KLoSA households may contain more than a single age-eligible couple, including any combination of age-eligible couples and age-eligible single individuals.

0.not coupled	2645	2606	2396	2256
1.coupled	5304	4884	4544	4232

How Constructed:

HwCPL indicates whether the respondent is a member of a couple in which both members are respondents in the current wave of data. HwCPL is set to zero if the respondent is not coupled with any other respondent in the current wave, and is set to one if the respondent is coupled with another respondent. Respondents who are married or partnered and living with their spouse/partner are not counted as a couple if their spouse is ineligible to participate in KLoSA or does not participate for any other reason. HwCPL is assigned blank missing (.) if the respondent did not participate in the current wave.

How Constructed:

If two respondents are a couple, family and family transfer questions were only asked to one family representative on behalf of both members of the couple. If the respondent's spouse is not interviewed, the respondent is always the family representative. RwFAMR indicates whether the respondent is the designated family representative. It is coded as 0 if they are not the family representative, and 1 if they are the family representative. RwFAMR is assigned blank missing (.) if the respondent did not participate in the current wave.

SwFAMR indicates whether the current wave's spouse was the family representative. Its values are taken from RwFAMR of the respondent's spouse. If the respondent is not designated as coupled in the current wave and unmarried, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

There are instances where no member of the couple is identified as the family respondent. Although generally uncommon, there a number of couples at Wave 7 which do not have a family respondent. These households are identified at all waves by HwANYFAM. A code of 1 indicates that the couple did have a family respondent and a code of 0 indicates that the couple did not have a family respondent. There are also a few instances where both members of a couple are designated as family respondents and both answer the family respondent questions. In these cases, the couple-level variables based on family respondent questions might differ between spouses as they represent each spouse's report of the couple. These couples can be identified by comparing RwFAMR for each member of the couple. HwANYFAM is assigned blank missing (.) if the respondent did not participate in the current wave.

The identification of the family representative is also used in the KLoSA imputation process. If a value of a respondent is missing then KLoSA imputed a value using the answer given by the family representative. If the family representative's answer is missing, then the value of the respondent was imputed using the answer of another household member.

Cross Wave Differences in KLoSA

There are a number of couples at Wave 7 which did not have a family respondent.

Differences with the RAND HRS/Harmonized HRS

No differences known.

How Constructed:

If there are multiple respondents in a household, consumption questions were only asked to one consumption representative on behalf of the entire household. RwCONR indicates whether the respondent is the designated consumption representative. It is coded as 0 if they are not the consumption representative, and 1 if they are the consumption representative. RwCONR is assigned blank missing (.) if the respondent did not participate in the current wave.

In Wave 8 there are several hundred households in which the assigned consumption respondent did not answer consumption questions, but the questions were answered instead by another member of the household. In these cases, we have corrected RwCONR to take a value of 0 if they were the designated respondent but the questions were answered by another household member, and to take a value of 1 if they were not the designated respondent but answered the consumption questions.

SwCONR indicates whether the current wave's spouse was the consumption representative. Its values are taken from RwCONR of the respondent's spouse. If the respondent is not designated as coupled in the current wave and unmarried, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

It is possible that no member of the household is identified as the consumption respondent. These households are identified at all waves by HHwANYCON. A code of 1 indicates that the household did have a consumption respondent and a code of 0 indicates that the household did not have a consumption respondent. HHwANYCON is assigned blank missing (.) if the respondent did not participate in the current wave.

Cross Wave Differences in KLoSA

Consumption questions are asked starting in Wave 2.

In Wave 8, there are several hundred households in which the assigned consumption respondent was not the actual consumption respondent. We have taken steps to correct these cases so that the actual respondent is designated as the assigned respondent.

Differences with the RAND HRS/Harmonized HRS

No differences known.

How Constructed:

RwIWM and RwIWY indicate the individual interview month and year, respectively. RwIWM and RwIWY are set to special missing .m if the value is missing. RwIWM and RwIWY are set to plain missing (.) for respondents who did not respond to the current wave.

SwIWM and SwIWY indicate the current wave's spouse's individual interview month and year, respectively. They are taken from RwIWM and RwIWY of the respondent's spouse. If the respondent is not designated as coupled in the current wave and unmarried, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike the HRS, KLoSA does not mark interviews with beginning, middle, and end times and dates. Instead, KLoSA provides one interview date for each individual respondent, though typically all age-eligible members of the same household who participated in the first wave data collection were interviewed on the same day. KLoSA provides interview date information down to the year and month.

How Constructed:

RABYEAR and RABMONTH are the year and month of the respondent's self-reported birth date in Wave 1. A new cohort of respondents was added in Wave 5, so RABYEAR and RABMONTH for this cohort are based on data from Wave 5.

SwBYEAR and SwBMONTH indicate the spouse's birth year and birth month respectively. They are taken from RABYEAR and RABMONTH of the respondent's spouse. If the respondent is not designated as coupled in the current wave and not married, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave, but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

No differences known.

KLoSA Variables Used:

W01A001	The date when the respondent is born (unit: yyy
Wave 5 New:	
W05A001	The date when the respondent is born (unit: yyy

Death Date: Month and Year

Wave	Variable	Label	Type
1	RADYEAR	radyear: r death year	Cont
1	RADMONTH	radmonth: r death month	Cont

Descriptive Statistics

Variable	N	Mean	Std Dev	Minimum	Maximum
RADYEAR	2693	2014.11	3.84	2006.00	2020.00
RADMONTH	2631	6.68	3.66	1.00	12.00

How Constructed:

RADYEAR is the respondent's reported death year. RADMONTH is the respondent's reported month of death. RADYEAR and RADMONTH are based on questions asked as part of the exit interview asked at each wave starting with Wave 2. RADYEAR and RADMONTH are assigned special missing .x if the respondent has not passed away.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

No differences known.

KLoSA Variables Used:

Wave 2 Exit:	
W02XA010M	the date of his/her death (unit: mm)
W02XA010Y	the date of his/her death (unit: yyyy)

S7AGEY	4544	68.27	8.81	55.00	95.00
S8AGEY	4232	69.41	8.48	57.00	97.00

How Constructed:

RwAGEY is the respondent's age in years at the time of the current wave's interview. Respondent's age is provided directly by KLoSA. Age in Korea is not determined by the number of full years since birthdate but is derived by subtracting the year of birth from the current year, in this case the year the survey was administered. RwAGEY is set to missing ".m" if the birth year and/or the interview year are missing. RwAGEY is set to missing "." if the respondent did not respond to the current wave.

SwAGEY gives this information for the respondent's spouse or partner. SwAGEY employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike the HRS, KLoSA does not mark interviews with beginning and end dates. Instead, KLoSA provides one interview date for each individual.

Age in Korea is not determined by the number of full years since birthdate but is derived by subtracting the year of birth from the current year, so `RwAGEY` in the RAND HRS is a slightly different measure from `RwAGEY` in the Harmonized KLoSA.

KLoSA Variables Used:

1.man		2653	2443	2273	2117
2.woman		2651	2441	2271	2115

How Constructed:

RAGENDER was derived by using the first non-missing report of gender. RAGENDER is set to 1 for man and 2 for woman as self-reported by the respondent. Special missing (.m) is used if gender information is missing from the data. The plain missing code (.) is used if the respondent did not respond to the current wave.

SwGENDER indicates the current wave's spouse's gender. It is taken from the RAGENDER value of the respondent's spouse. If a spouse is not found in the current wave data and the respondent is unmarried, a special missing value of .u is used. If a spouse is not found in the current wave data and the respondent is married, a special missing value of .v is used.

8.Post college(Master)		42	39	40	38
9.Post college(PhD)		13	13	12	13

How Constructed:

KLoSA surveys respondents as to their highest educational level and whether they completed this level of education. RAEDUC_K identifies the highest level of education the respondent reported completing. KLoSA re-checks the education after the first wave. The first non-missing report of education was always used. RAEDUC_K is defined using the following codes: 1.No education (illiterate), 2.No education (reading), 3.Elementary school, 4.Middle school, 5.High school, 6.Two-year college, 7.College grad, 8.Post college (Master) and 9.Post college(PhD). When respondents don't know or refuse to answer, RAEDUC_K is assigned special missing values .d or .r, respectively.

SwEDUC_K indicates the current wave's spouse's category of education. It is taken from the spouse's value to RAEDUC_K. If a spouse is not found in the current wave data and the respondent is unmarried, a special missing value of .u is used. If a spouse is not found in the current wave data and the respondent is married, a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

A notable modification to the RAND HRS category schema here is the addition of two categories to capture lower levels of educational attainment - middle school and elementary school education.

KLoSA Variables Used:

Wave 1:	
W01A003	Educational background (a school)
Wave 2:	
W02A005	In the previous interview, educational backgrou
W02A009	Additional formal education (a school)
Wave 3:	
W03A005	In the previous interview, educational backgrou
W03A009	Additional formal education (a school)
Wave 4:

2.upper secondary and vocat	1927	1839	1748	1706
3.tertiary	671	635	589	584

How Constructed:

In KLoSA, respondents are asked to report their highest school degree and degrees of further education or vocational training and whether they completed this level of education. KLoSA re-checks the education after the first wave.

RAEDUCL identifies the level of education completed according to a three-tier harmonized scale which we developed to compare education levels across countries. This Harmonized education scale is a simplified version of 1997 International Standard Classification of Education (ISCED-97) codes. For more information on ISCED codes, see www.uis.unesco.org and the OECD document entitled "Classifying Educational Programmes: Manual for ISCED-97 Implementation in OECD Countries, 1999 Edition". RAEDUCL is coded as follows: 1.Less than lower secondary education, 2.Upper secondary & vocational training, and 3.Tertiary education. RAEDUCL is assigned a code of 1 if the respondent had no education (illiterate or reading), or finished elementary or middle school. RAEDUCL is assigned a code of 2 if the respondent finished high school or two-year college. RAEDUCL is assigned a code of 3 if the respondent finished college or post college (master or PhD). The first non-missing report of education was always used. RAEDUCL is derived using the most recent reported educational level. Don't know, refuse to answer, or other missing is assigned special missing values .d, .r, or .m, respectively.

SwEDUCL indicates the current wave's spouse's category of education. It is taken from the spouse's value to RAEDUCL. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used. SwEDUCL is set to plain missing (.) for respondents who did not respond to this wave.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

The RAND HRS does not include an International Standard Classification of Education categorization of education attainment, however there is a comparable variable in the Harmonized HRS.

How Constructed:

This variable is created using the current marital status reported in each wave and their implied partnership status. Partnership status is assigned to respondents who report being currently unmarried but who are coupled with another respondent through couple id.

RwMSTAT indicates a respondent's marital status in the current wave with implied partnership status. A code of 1 indicates the respondent is married or living with a partner. A code of 3 indicates that the respondent is partnered, through implied partnership. A code of 4 indicates the respondent is separated. A code of 5 indicates the respondent is divorced. A code of 7 indicates the respondent is widowed. A code of 8 indicates the respondent has never been married. Don't know, refused, or other missing values of RwMSTAT are assigned special missing codes .d, .r, .m, respectively. RwMSTAT is set to plain missing (.) for respondents who did not respond to the current wave.

SwMSTAT indicates the current wave's spouse's marital status. It is taken from the spouse's values to RwMSTAT. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

The KLoSA survey wording for being married is slightly different from the HRS survey. While the HRS asks respondents if they are married, KLoSA asks respondents if they are married or living with a partner.

4.separated	1			
5.divorced	2	2	3	5
7.widowed		1	1	1
8.never married		2	1	3

How Constructed:

This variable is created using the current marital status reported in each wave. While the RwmSTAT variables, described above, specifically code partnership, which override actual marital status, RwmSTATH ignores implied partnership status and indicates reported marital status in the current wave. A code of 1 indicates the respondent reports being married or living with a partner. A code of 4 indicates the respondent reports being separated. A code of 5 indicates the respondent reports being divorced. A code of 7 indicates the respondent reports being widowed. A code of 8 indicates the respondent reports they have never been married. Don't know, refused, or other missing values of RwmSTATH are assigned special missing codes .d, .r, .m, respectively. RwmSTATH is set to plain missing (.) for respondents who did not respond to the current wave.

SwmSTATH indicates the current wave's spouse's marital status without partnership. It is taken from the spouse's values to RwmSTATH. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

The KLoSA survey wording for being married is slightly different from the HRS survey. While the HRS asks respondents if they are married, KLoSA asks respondents if they are married or living with a partner.

0.no	5304	4882	4543	4229
1.yes		2	1	3

How Constructed:

RwMNEV indicates whether the respondent ever reported being married by the time of the current wave. A code of 0 indicates that the respondent was married at least once and a code of 1 indicates that the respondent has never been married. RwMNEV is set to special missing (.d) when marriage status is reported as "don't know." RwMNEV is set to special missing (.m) when marriage status is reported as "missing." RwMNEV is set to special missing (.r) when marriage status is reported as "refused." RwMNEV is set to plain missing (.) for respondents who did not respond to the current wave.

SwMNEV indicates whether the current wave's spouse has ever been married. It is taken from the spouse's RwMNEV. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

How Constructed:

RwREGION_K is the region of the respondent's residence. These locations correspond to self-governing, large metropolitan centers, such as Seoul and Busan, and also provinces such as Gyeonggi and Jeonam. RwREGION_K is coded as follows: 11.Seoul, 21.Busan, 22.Daegu, 23.Incheon, 24.GwangJu, 25.Daejeon, 26.Ulsan, 27.Sejong, 31.Gyeonggi, 32.Gangwon, 33.Chungbuk, 34.Chungnam, 35.Jeonbuk, 36.Jeonam, 37.Gyeongbuk, 38.Gyeongnam. RwREGION_K is assigned blank missing (.) if the respondent did not participate in the current wave.

RwRURAL indicates whether the respondent lives in a rural or urban area. RwRURAL is coded as 0.urban and 1.rural. RwRURAL is assigned blank missing (.) if the respondent did not participate in the current wave.

RwMETROP_K indicates whether the respondent lives in a metropolitan area, city or town. RwMETROP_K is coded as 1.metropolitan, 2.city, 3.town. RwMETROP_K is assigned blank missing (.) if the respondent did not participate in the current wave.

SwREGION_K, SwRURAL and SwMETROP_K are the current wave's spouse's region of residence, indicator of whether the spouse lives in a rural or urban area, as well as whether they live in a metropolitan area, city or town, respectively. These are taken from the spouse's values to RwREGION_K, RwRURAL and RwMETROP_K. If a spouse is not found in the current wave data and the respondent is unmarried, a special missing value of .u is used. If a spouse is not found in the current wave data and the respondent is married, a special missing value of .v is used.

Cross Wave Differences in KLoSA

Participants from region 27, Sejong, were added in Wave 5 with the new cohort of respondents.

Differences with the RAND HRS/Harmonized HRS

Unlike the HRS, the regions that are measured in the KLoSA are not census regions but the names of metropolitan cities and provinces used in the sampling of KLoSA. There should be no assumption of code similarities between RwREGION_K in the Harmonized KLoSA and RwREGION in the RAND HRS.

How Constructed:

KLoSA asks about the religious preference of the respondent, which is captured in `RwRELIG_K`. Responses to `RwRELIG_K` are coded as follows: 1. Protestant, 2. Catholic, 3. Buddhist, 4. Won Buddhist, 5. Other religion, and 6. No religion or no preference. `RwRELIG_K` is set to special missing `.d` when religion is reported as "don't know." `RwRELIG_K` is set to special missing `.r` when religion is reported as "refused." Special missing `.m` is used if religion information is otherwise missing from the data. `RwRELIG_K` is set to plain missing `(.)` if the respondent did not respond to the current wave.

`SwRELIG_K` captures the religion of the respondent's spouse in the current wave. It is taken from the spouse's value to `RwRELIG_K`. If a spouse is not found in the current wave data and the respondent is unmarried, a special missing value of `.u` is used. If a spouse is not found in the current wave data and the respondent is married, a special missing value of `.v` is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

No differences known.

How Constructed:

KLoSA asks about self-reported health twice, once at the beginning of the health module and once again at the end, using two different scales of answer choices. KLoSA randomly selects which scale will appear at the beginning of the module and which will appear at the end of the module. Information about the position of RwsHLT and RwsHLTA is not available with the public use data set from KLoSA.

RwsHLT is the respondent's self-reported general health status using the US scale of self-reported health. Codes range from 1 for "Excellent" to 5 for "Poor." "Don't know" and "Refused" are recoded with special missing codes of .d and .r. Other missing responses are assigned special missing .m. RwsHLT is assigned blank missing (.) if the respondent did not participate in the current wave.

RwsHLTA is the respondent's self-reported general health status, using the European scale of self-reported health. Codes range from 1 for "Very Good" to 5 for "Very Poor." "Don't Know" and "Refused" are recoded with special missing codes of .d and .r, respectively. Other missing responses are assigned special missing .m. RwsHLT is assigned blank missing (.) if the respondent did not participate in the current wave.

SwSHLT and SwSHLTA are the respondent's spouse's self-reported general health status taken directly from spouse's responses to RwsHLT and RwsHLTA, respectively. In addition to the special missing codes used in RwsHLT and RwsHLTA, SwSHLT and SwSHLTA employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

In addition to the US scale of self-reported health used for RwsHLT, KLoSA also uses a second scale, the Korean or European scale, to measure self-reported health.

KLoSA Variables Used:

Wave 1:

How Constructed:

RwHLTHLM indicates whether the respondent's health limits their ability to work. RwHLTHLM is based on a single question in the Health module which asks all respondents, "Does your health condition hamper your doing work?" and respondents can answer 1)Yes, very much so, 2) Yes, to some degree, 3)No, not much, or 4)No, not at all. If a respondent indicates that health limits their ability to work very much or to some degree then a code of 1 is assigned. If a respondent indicates that health limits their ability to work not much or not at all then a code of 0 is assigned. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. RwHLTHLM is assigned blank missing (.) if the respondent did not participate in the current wave.

SwHLTHLM is the respondent's spouse's self-reported limitation in their ability to work because of health problems. It was taken directly from spouse's responses to RwHLTHLM. SwHLTHLM employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

HRS specifically asks respondents "Do you have any impairment or health problem that limits the kind or amount of paid work you can do?" Differently in KLoSA, respondents are asked "Does your health condition hamper you doing work?", without specifying whether the work in reference is paid or not. KLoSA respondents can also provide 2 levels of yes answers and 2 levels of no answers, which have been condensed in RwHLTHLM to be comparable to the single yes and no answers allowed in HRS.

How Constructed:

RwDRESSB, RwBATHB, RWEATB, RwTOILETB, RwbEDB_K, RwbRUSHB, and RwURINB are indicators that measure the respondent's need for help with a select number of activities of daily life (ADLs): dressing one's self, bathing one's self, eating, using a toilet including getting up and down, getting out of bed and walking across a room, washing face, hair and brushing teeth, and controlling urination and defecation.

These ADL variables are derived from specific questions in KLoSA which ask the respondent if they don't need any help, need help to some extent, or need help in every respect with the tasks listed. Respondents who indicated that they do not need any help are coded 0 for each of RwDRESSB, RwBATHB, RWEATB, RwTOILETB, RwbEDB_K, RwbRUSHB, and RwURINB, while respondents who respond that they need help to some extent or need help in every respect are coded as 1 for needing at least some help with the activities. Don't know, refused, or other missing responses are assigned special missing .d, .r, .m, respectively. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

SwDRESSB, SwBATHB, SwEATB, SwTOILETB, SwBEDB_K, SwBRUSHB, and SwURINB give this information for the respondent's spouse or partner. These variables are taken from the spouse's values to RwDRESSB, RwBATHB, RWEATB, RwTOILETB, RwbEDB_K, RwbRUSHB, and RwURINB. In addition to the special missings utilized by RwDRESSB, RwBATHB, RWEATB, RwTOILETB, RwbEDB_K, RwbRUSHB, and RwURINB, SwDRESSB, SwBATHB, SwEATB, SwTOILETB, SwBEDB_K, SwBRUSHB, and SwURINB employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, which asks whether the respondent has difficulty with the ADL activities, KLoSA asks whether the respondent needs help with the activities. In order to distinguish the differences, the relevant variables are constructed including "B" instead of "A" in their names (e.g., RwDRESSB instead of RwDRESSA).

In HRS, getting out of bed and walking across a room are counted as two separate ADLs (RwBEDA and RwWALKRA), but in KLoSA they are asked in a single question (RwBEDB_K). In addition to the ADL variables available in the RAND HRS, the Harmonized KLoSA includes two more activities of daily living: washing face, hair and brushing teeth, and controlling urination and defecation.

KLoSA Variables Used:

Wave 1:	
W01C201	Help required for activities of daily life(ADL)
W01C202	Help required for activities of daily life(ADL)
W01C203	Help required for activities of daily life(ADL)

How Constructed:

RwMEALSB, RwSHOPB, RwMEDSB, RwMONEYB, RwPHONEB, RwTRANSB, RwGOOUTB, RwLAUNDRYB, RwHOUSEWKB, and RwGROOMB are indicators that measure the respondent's need for help with a select number of instrumental activities of daily life (IADLs): preparing hot meals, shopping (deciding what to buy and paying for it), taking medication, managing money and finances, using the telephone, using transportation, going out a short distance without using transportation, doing laundry, doing housework, and personal grooming.

These ten IADL variables are derived from ten questions in KLoSA which asks the respondent if they don't need any help, need help to some extent, or need help in every respect when it comes to the ten tasks listed. Respondents who indicated that they do not need any help are coded 0 for each of RwMEALSB, RwSHOPB, RwMEDSB, RwMONEYB, RwPHONEB, RwTRANSB, RwGOOUTB, RwLAUNDRYB, RwHOUSEWKB, and RwGROOMB, while respondents who responded that they need help to some extent or need help in every respect are coded as 1 for needing at least some help with the activities. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwMEALSB, SwSHOPB, SwMEDSB, SwMONEYB, SwPHONEB, SwTRANSB, SwGOOUTB, SwLAUNDRYB, SwHOUSEWKB, and SwGROOMB give this information for the respondent's spouse or partner. These variables are taken from the spouse's values to RwMEALSB, RwSHOPB, RwMEDSB, RwMONEYB, RwPHONEB, RwTRANSB, RwGOOUTB, RwLAUNDRYB, RwHOUSEWKB, and RwGROOMB. In addition to the special missings utilized by RwMEALSB, RwSHOPB, RwMEDSB, RwMONEYB, RwPHONEB, RwTRANSB, RwGOOUTB, RwLAUNDRYB, RwHOUSEWKB, and RwGROOMB, SwMEALSB, SwSHOPB, SwMEDSB, SwMONEYB, SwPHONEB, SwTRANSB, SwGOOUTB, SwLAUNDRYB, SwHOUSEWKB, and SwGROOMB employ two more special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, which asks whether the respondent has difficulty with the IADL activities, KLoSA asks whether the respondent needs help with the activities. In order to distinguish the differences, the relevant variables are constructed including "B" instead of "A" in their names (e.g., RwMEALSB instead of RwMEALSA).

HRS specifies shopping for groceries, while KLoSA specifies shopping, meaning deciding what to buy and paying for it.

In addition to the IADL variables available in the RAND HRS, the Harmonized KLoSA includes five more instrumental activities of daily living: 1. using transportation, 2. going out a short distance, 3. doing laundry, 4. doing housework, and 5. personal grooming by one's self.

KLoSA Variables Used:

Wave 1:	
W01C208	Help required for activities of daily life(ADL)
W01C209	Help required for activities of daily life(ADL)

[illegible]

Wave 6:

W06C208	Help required for activities of daily life (ADL)
W06C209	Help required for activities of daily life (ADL)
W06C210	Help required for activities of daily life (ADL)
W06C211	Help required for activities of daily life (ADL)
W06C212	Help required for activities of daily life (ADL)
W06C213	Help required for activities of daily life (ADL)
W06C214	Help required for activities of daily life (ADL)
W06C215	Help required for activities of daily life (ADL)
W06C216	Help required for activities of daily life (ADL)
W06C217	Help required for activities of daily life (ADL)

Wave 7:

W07C208	Help required for activities of daily life (ADL)
W07C209	Help required for activities of daily life (ADL)
W07C210	Help required for activities of daily life (ADL)
W07C211	Help required for activities of daily life (ADL)
W07C212	Help required for activities of daily life (ADL)
W07C213	Help required for activities of daily life (ADL)
W07C214	Help required for activities of daily life (ADL)
W07C215	Help required for activities of daily life (ADL)
W07C216	Help required for activities of daily life (ADL)
W07C217	Help required for activities of daily life (ADL)

Wave 8:

W08C208	Help required for activities of daily life (ADL)
W08C209	Help required for activities of daily life (ADL)
W08C210	Help required for activities of daily life (ADL)
W08C211	Help required for activities of daily life (ADL)
W08C212	Help required for activities of daily life (ADL)
W08C213	Help required for activities of daily life (ADL)
W08C214	Help required for activities of daily life (ADL)
W08C215	Help required for activities of daily life (ADL)
W08C216	Help required for activities of daily life (ADL)
W08C217	Help required for activities of daily life (ADL)

ADL Summary: Sum ADLs Where Respondent Reports Need for Help

How Constructed:

Four activities of Daily Living (ADL) summaries are derived. One uses the ADLs proposed by Wallace and Herzog in the paper Wallace and Herzog, 1995 to define an ADL summary: RwADLWB: bathe, dress, and eat. The second, RwADLB_K, includes these and adds getting in and out of bed. The third, RwADLFIVEB, includes these and adds using the toilet. The fourth, RwADLTOTB_K, includes all available ADL activities: bathe, dress, eat, getting in and out of bed, using the toilet, washing face and brushing teeth, and controlling urination and defecation. The "needs help" versions of the individual measures are used to construct these measures, i.e., RwDRESSB, RwBATHB, RWEATB, RwTOILTB, RwbEDB_K, RwBRUSAB, and RwURINB variables are used. Each limitation adds one to the summary measure, that is:

RwADLWB = sum (RwBATHB, RwDRESSB, RWEATB). RwADLWB is the number of ADL components with missing values used to calculate RwADLWB. RwADLWB is calculated for all respondents who answered at least one of the ADL component questions. RwADLWBA is an indicator variable equal to one if the respondent needs help with at least one of the three ADLs, and equal to zero if the respondent does not need any help with any of the included ADLs. If all components are missing, then RwADLWB and RwADLWBA are assigned special missing .m. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

RwADLB_K = sum (RwBATHB, RwDRESSB, RWEATB, RwbEDB_K). RwADLB_K is the number of ADL components with missing values used to calculate RwADLB_K. RwADLB_K is calculated for all respondents who answered at least one of the ADL component questions. RwADLBA_K is an indicator variable equal to one if the respondent needs help with at least one of the four ADLs, and equal to zero if the respondent does not need any help with any of the included ADLs. If all components are missing, then RwADLB_K and RwADLBA_K are assigned special missing .m. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

RwADLFIVEB = sum (RwBATHB, RwdRESSB, RweATB, RwbEDB_K, RwtOILTB). RwADLFIVEBM is the number of ADL components with missing values used to calculate RwADLFIVEB. RwADLFIVEB is calculated for all respondents who answered at least one of the ADL component questions. RwADLFIVEBA is an indicator variable equal to one if the respondent needs help with at least one of the five ADLs, and equal to zero if the respondent does not need any help with any of the included ADLs. If all components are missing, then RwADLFIVEB and RwADLFIVEBA are assigned special missing .m. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

RwADLTOTB_K = sum(RwBATHB, RwdRESSB, RweATB, RwbEDB_K, RwtOILTB, RwbRUSAB, RwURINB). RwADLTOTB_K is the number of ADL components with missing values used to calculate RwADLTOTB_K. RwADLTOTB_K is calculated for all respondents who answered at least one of the ADL component questions. RwADLTOTBA_K is an indicator variable equal to one if the respondent needs help with at least one of the seven ADLs, and equal to zero if the respondent does not need any help with any of the included ADLs. If all components are missing, then RwADLTOTB_K and RwADLTOTBA_K are assigned special missing .m. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

SwADLWB, SwADLB_K, SwADLFIVEB, and SwADLTOTB_K are the respondent's spouse's four ADL summary measures, and are taken directly from the spouse's measures for RwADLWB, RwADLB_K, RwADLFIVEB, and RwADLTOTB_K, respectively. SwADLWBM, SwADLAM_K, SwADLFIVEBM, and SwADLTOTBM_K count the number of missing values used in the four ADL summary measures for the respondent's spouse, and are taken directly from the spouse's responses to RwADLWBM, RwADLAM_K, RwADLFIVEBM, and RwADLTOTBM_K, respectively. SwADLWBA, SwADLAA_K, SwADLFIVEBA, and SwADLTOTBA_K are indicator variables equal to one if the respondent's spouse needs help with at least one of the ADLs in the respective summary measures, and their values are taken directly from the spouse's responses to RwADLWBA, SwADLAA_K, RwADLFIVEBA, and RwADLTOTBA_K, respectively. In addition to the special missings utilized by the respondent variables, the spouse variables employ two special missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please see "Activities of Daily Living (ADLs): Needs Help" for a description of how the individual dummy variables (RwdRESSB, RwBATHB, RweATB, RwtOILETB, RwbEDB_K, RwbRUSAB, and RwURINB) are constructed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, which asks whether the respondent has difficulty with the ADL activities, KLoSA asks whether the respondent needs help with the activities. In order to distinguish the differences, the relevant variables are constructed including "B" instead of "A" in their names (e.g., RwADLWB instead of RwADLWA).

Unlike HRS, KLoSA does not ask walk across the room as a separate question in their ADL questions so it is not possible to create RwADLB like in the RAND HRS. Instead, the Harmonized KLoSA offers RwADLB_K, which includes bathing, dressing, eating, and getting in and out of bed (including crossing the room), but does not include a separate measure for walking across the room. Additionally, the Harmonized KLoSA offers two additional ADL summary measures, RwADLFIVEB, which is comparable to the variable of a similar name in the Harmonized HRS, and RwADLTOTB_K, which is a KLoSA specific summary that includes all ADL measures. Please see above for detail on those.

KLoSA Variables Used:

Wave 1:

W01C201	Help required for activities of daily life(ADL)
W01C202	Help required for activities of daily life(ADL)
W01C203	Help required for activities of daily life(ADL)
W01C204	Help required for activities of daily life(ADL)
W01C205	Help required for activities of daily life(ADL)
W01C206	Help required for activities of daily life(ADL)
W01C207	Help required for activities of daily life(ADL)

Wave 2:

W02C201	Help required for activities of daily life(ADL)
---------	---

[illegible]

How Constructed:

Four Instrumental Activities of Daily Living (IADL) summaries are derived. One (RwIADLB_K) summarizes the commonly used IADLs, using the phone, managing money, and taking medications. The second (RwIADLFOURB) summarizes managing money, taking medications, shopping, and preparing hot meals. The third (RwIADLZB) summarizes using the phone, managing money, taking medications, shopping, and preparing hot meals. The fourth one (RwIADLTOTB_K) summarizes all ten of the IADLs - using the phone, managing money, taking medications, shopping, preparing hot meals, doing housework, personal grooming, doing laundry, going out, and using transportation. All of these summary measures use the indicators of "needs help" described above. Each limitation adds one to the summary measure, that is:

RwIADLB = sum (RwPHONEB, RwMONEYB, RwMEDSB). RwIADLBM is the number of IADL components with missing values used in the calculation of RwIADLB. RwIADLB is calculated for all respondents who answered at least one IADL component question. RwIADLBA is an indicator variable equal to one if the respondent needs help with at least one of the three IADLs, and equal to zero if the respondent does not need help with any of the included IADLs. If all components are missing, then RwIADLB and RwIADLBA are assigned special missing .m. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

RwIADLFOURB = sum (RwMONEYB, RwMEDSB, RwSHOPB, RwMEALB). RwIADLFOURBM is the number of IADL components with missing values used in the calculation of RwIADLFOURB. RwIADLFOURB is calculated for all respondents who answered at least one IADL component question. RwIADLFOURBA is an indicator variable equal to one if the respondent needs help with at least one of the four IADLs, and equal to zero if the respondent does not need help with any of the included IADLs. If all components are missing, then RwIADLFOURB and RwIADLFOURBA are assigned special missing .m. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

RwIADLZB = sum (RwPHONEB, RwmONEYB, RwmEDSB, RwsHOPB, RwmEALB). RwIADLZBM is the number of IADL components with missing values used in the calculation of RwIADLZB. RwIADLZB is calculated for all respondents who answered at least one IADL component question. RwIADLZBA is an indicator variable equal to one if the respondent needs help with at least one of the five IADLs, and equal to zero if the respondent does not need help with any of the included IADLs. If all components are missing, then RwIADLZB and RwIADLZBA are assigned special missing .m. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

RwIADLTOTB_K = sum (RwPHONEB, RwmONEYB, RwmEDSB, RwsHOPB, RwmEALB, RwhOUSEWKB, RwgROOMB, RwLAUNDRYB, RwgOOUTB, RwTRANSB). RwIADLTOTBM_K is the number of IADL components with missing values used in the calculation of RwIADLTOTB_K. RwIADLTOTB_K is calculated for all respondents who answered at least one IADL component question. RwIADLTOTBA_K is an indicator variable equal to one if the respondent needs help with at least one of the ten IADLs, and equal to zero if the respondent does not need help with any of the included IADLs. If all components are missing, then RwIADLTOTB_K and RwIADLTOTBA_K are assigned special missing .m. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

SwIADLB, SwIADLFOURB, SwIADLZB, and SwIADLTOTB_K are the respondent's spouse's summaries and are taken directly from the spouse's RwIADLB, RwIADLFOURB, RwIADLZB, and RwIADLTOTB_K measures, respectively. SwIADLBM, SwIADLFOURBM, SwIADLZBM, and SwIADLTOTBM_K are the number of missing values in the respondent's spouse's summaries and are taken directly from the spouse's RwIADLBM, RwIADLFOURBM, RwIADLZBM, and RwIADLTOTBM_K, respectively. SwIADLBA, SwIADLFOURBA, SwIADLZBA, and SwIADLTOTBA_K are indicator variables equal to one if the respondent needs help with at least one of the IADLs in the respective summary measure for the respondent's spouse. In addition to the special missings utilized by the respondent variables, the spouse variables employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please see "Instrumental Activities of Daily Living (IADLs): Needs Help" for a description of how the individual 0/1 indicators (RwPHONEB, RwmONEYB, RwmEDSB, RwsHOPB, RwmEALSA, RwhOUSEWKB, RwgROOMB, RwLAUNDRYB, RwgOOUTB, and RwTRANSB) are constructed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, which asks whether the respondent has difficulty with the IADL activities, KLoSA asks whether the respondent needs help with the activities. In order to distinguish the differences, the relevant variables are constructed including "B" instead of "A" in their names (e.g., RwIADLB instead of RwIADLA).

The RAND HRS does not include RwIADLAA and RwIADLZAA, while these measures are included in the Harmonized KLoSA as RwIADLBA and RwIADLZBA. The Harmonized KLoSA offers two additional IADL summary measures, RwIADLFOURB, which is comparable to the variable of a similar name in the Harmonized HRS, and RwIADLB_K, which is a KLoSA specific summary that includes all available IADL measures. Please see above for detail on those.

KLoSA Variables Used:

Wave 1:

W01C208	Help required for activities of daily life(ADL)
W01C209	Help required for activities of daily life(ADL)
W01C210	Help required for activities of daily life(ADL)
W01C211	Help required for activities of daily life(ADL)
W01C212	Help required for activities of daily life(ADL)
W01C213	Help required for activities of daily life(ADL)
W01C214	Help required for activities of daily life(ADL)
W01C215	Help required for activities of daily life(ADL)
W01C216	Help required for activities of daily life(ADL)
W01C217	Help required for activities of daily life(ADL)

W06C215	Help required for activities of daily life (ADL)
W06C216	Help required for activities of daily life (ADL)
W06C217	Help required for activities of daily life (ADL)
Wave 7:	
W07C208	Help required for activities of daily life (ADL)
W07C209	Help required for activities of daily life (ADL)
W07C210	Help required for activities of daily life (ADL)
W07C211	Help required for activities of daily life (ADL)
W07C212	Help required for activities of daily life (ADL)
W07C213	Help required for activities of daily life (ADL)

How Constructed:

RwHIBPE, RwDIABE, RwcANCRE, RwlUNGE, RwhEARTE, RwsTROKE, RwpSYCHE, RwaRTHE, RwlIVERE, and RwdDIGESTE are dichotomous measures coded 1 if the respondent has ever been diagnosed by a doctor as having high blood pressure, diabetes or high blood sugar, cancer or malignant tumor (excluding minor skin cancer), lung disease (such as bronchitis or emphysema), heart problems (such as having had a heart attack, coronary heart disease, angina, congestive heart failure), stroke (including possible ischemic attack),

psychological problems (emotional, nervous problems included), arthritis or rheumatism, liver disease, or digestive system disorder, respectively. These variables are coded as 0 if the respondent has never been diagnosed by a doctor as having the condition. Questions about digestive system disorder were added to KLoSA starting in Wave 5. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Plain missing (.) is assigned for respondents who did not respond to the current wave.

Starting in Wave 2, these questions were skipped if the respondent has ever been diagnosed by a doctor as having these conditions in a previous wave. In these cases, RWHIBPE, RWDIABE, RWCANCRE, RWLUNGE, RWHEARTE, RWSTRROKE, RWPSYCHE, RWARTHE, RWLIVERE, and RWDIGESTE are coded to 1 as ever had the condition.

SWHIBPE, SWDIABE, SWCANCRE, SWLUNGE, SWHEARTE, SWSTROKE, SWPSYCHE, SWARTHE, SWLIVERE and SWDIGESTE give this information for the respondent's spouse or partner and are taken directly from respondent's spouse's values to RWHIBPE, RWDIABE, RWCANCRE, RWLUNGE, RWHEARTE, RWSTRROKE, RWPSYCHE, RWARTHE, RWLIVERE and RWDIGESTE. In addition to the special missing codes utilized by RWHIBPE, RWDIABE, RWCANCRE, RWLUNGE, RWHEARTE, RWSTRROKE, RWPSYCHE, RWARTHE, RWLIVERE and RWDIGESTE, SWHIBPE, SWDIABE, SWCANCRE, SWLUNGE, SWHEARTE, SWSTROKE, SWPSYCHE, SWARTHE, SWLIVERE and SWDIGESTE employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Starting in Wave 2, a doctor diagnosed question was skipped if the respondent had previously reported having that condition at a prior wave. In these cases, RWHIBPE, RWDIABE, RWCANCRE, RWLUNGE, RWHEARTE, RWSTRROKE, RWPSYCHE, RWARTHE, RWLIVERE and RWDIGESTE are coded to 1 as ever had the condition.

A question about whether the respondent has been diagnosed with a digestive system disorder was added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

Unlike KLoSA, HRS does not ask the respondents whether they have been diagnosed with liver disease or digestive system disease.

KLoSA Variables Used:

Wave 1:

W01C006	Whether or not high blood pressure or hypertens
W01C011	Whether or not diabetes or high blood sugar dia
W01C016	Whether or not cancer or malignant tumor diagno
W01C023	Whether or not chronic lung disease diagnostic
W01C028	Whether or not liver disease diagnostic
W01C033	Whether or not heart related disease diagnostic
W01C038	Whether or not cerebrovascular disease diagnost
W01C043	Whether or not any emotional, nervous, or psych
W01C048	Whether or not arthritis or rheumatism diagnost

Wave 2:

W02C006	Since the previous interview, whether or not hi
W02C011	Since the previous interview, whether or not di
W02C016	Since the previous interview, whether or not ca
W02C023	Since the previous interview, whether or not ch
W02C028	Since the previous interview, whether or not li
W02C033	Since the previous interview, whether or not he
W02C038	Since the previous interview, whether or not ce
W02C043	Since the previous interview, whether or not an
W02C048	Since the previous interview, whether or not ar

Wave 3:

W03C006	Since the previous interview, whether or not hi
W03C011	Since the previous interview, whether or not di
W03C016	Since the previous interview, whether or not ca
W03C023	Since the previous interview, whether or not ch

W03C028	Since the previous interview, whether or not li
W03C033	Since the previous interview, whether or not he
W03C038	Since the previous interview, whether or not ce
W03C043	Since the previous interview, whether or not an
W03C048	Since the previous interview, whether or not ar
Wave 4:	
W04C006	Since the previous interview, whether or not hi
W04C011	Since the previous interview, whether or not di
W04C016	Since the previous interview, whether or not ca
W04C023	Since the previous interview, whether or not ch
W04C028	Since the previous interview, whether or not li
W04C033	Since the previous interview, whether or not he
W04C038	Since the previous interview, whether or not ce
W04C043	Since the previous interview, whether or not an
W04C048	Since the previous interview, whether or not ar
Wave 5:	
W05C006	Since the previous interview, whether or not hi
W05C011	Since the previous interview, whether or not di
W05C016	Since the previous interview, whether or not ca
W05C023	Since the previous interview, whether or not ch
W05C028	Since the previous interview, whether or not li
W05C033	Since the previous interview, whether or not he
W05C038	Since the previous interview, whether or not ce
W05C043	Since the previous interview, whether or not an
W05C048	Since the previous interview, whether or not ar
W05C074N	Whether or not diagnostic for diseases of the d
Wave 5 New:	
W05C006	Whether or not high blood pressure or hypertens
W05C011	Whether or not diabetes or high blood sugar dia
W05C016	Whether or not cancer or malignant tumor diagno
W05C023	Whether or not chronic lung disease diagnostic
W05C028	Whether or not liver disease diagnostic
W05C033	Whether or not heart related disease diagnostic
W05C038	Whether or not cerebrovascular disease diagnost
W05C043	Whether or not any emotional, nervous, or psych
W05C048	Whether or not arthritis or rheumatism diagnost
W05C074N	Whether or not diagnostic for diseases of the d
Wave 6:	
W06C006	Since the previous interview, whether or not hi
W06C011	Since the previous interview, whether or not di
W06C016	Since the previous interview, whether or not ca
W06C023	Since the previous interview, whether or not ch
W06C028	Since the previous interview, whether or not li
W06C033	Since the previous interview, whether or not he
W06C038	Since the previous interview, whether or not ce
W06C043	Since the previous interview, whether or not an
W06C048	Since the previous interview, whether or not ar
W06C074N	Whether or not diagnostic for diseases of the d
Wave 7:	
W07C006	Since the previous interview, whether or not hi
W07C011	Since the previous interview, whether or not di
W07C016	Since the previous interview, whether or not ca
W07C023	Since the previous interview, whether or not ch
W07C028	Since the previous interview, whether or not li
W07C033	Since the previous interview, whether or not he
W07C038	Since the previous interview, whether or not ce
W07C043	Since the previous interview, whether or not an
W07C048	Since the previous interview, whether or not ar
W07C074N	Whether or not diagnostic for diseases of the d
Wave 8:	
W08C006	Since the previous interview, whether or not hi
W08C011	Since the previous interview, whether or not di
W08C016	Since the previous interview, whether or not ca

W08C023	Since the previous interview, whether or not ch
W08C028	Since the previous interview, whether or not li
W08C033	Since the previous interview, whether or not he
W08C038	Since the previous interview, whether or not ce
W08C043	Since the previous interview, whether or not an
W08C048	Since the previous interview, whether or not ar
W08C074N	Whether or not diagnostic for diseases of the d

How Constructed:

RADIAGHIBP indicates the age at which the respondent was first diagnosed with high blood pressure. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with high blood pressure are not asked this question and are assigned a special missing code .x. If the age first diagnosed with high blood pressure is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGHIBP are assigned special missing codes .d, .r, and .m, respectively. RADIAGHIBP is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGHIBP indicates the age at which the respondent's current wave's spouse was first diagnosed with high blood pressure, and is taken from RADIAGHIBP. In addition to the special missing codes employed by RADIAGHIBP, SwDIAGHIBP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGDIAB indicates the age at which the respondent was first diagnosed with diabetes. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with diabetes are not asked this question and are assigned a special missing code .x. If the age first diagnosed with diabetes is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGDIAB are assigned special missing codes .d, .r, and .m, respectively. RADIAGDIAB is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGDIAB indicates the age at which the respondent's current wave's spouse was first diagnosed with diabetes, and is taken from RADIAGDIAB. In addition to the special missing codes employed by RADIAGDIAB, SwDIAGDIAB employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGCANCER indicates the age at which the respondent was first diagnosed with cancer. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. If the age first diagnosed with cancer is provided in multiple waves, the first provided age is used. Respondents who have never been diagnosed with cancer are not asked this question and are assigned a special missing code .x. Don't know, refused, or other missing responses of RADIAGCANCER are assigned special missing codes .d, .r, and .m, respectively. RADIAGCANCER is set to plain missing (.) for respondents who did not participate in the current wave.

SwDIAGCANCER indicates the age at which the respondent's current wave's spouse was first diagnosed with cancer, and is taken from RADIAGCANCER. In addition to the special missing codes employed by RADIAGCANCER, SwDIAGCANCER employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGLUNG indicates the age at which the respondent was first diagnosed with lung disease. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with lung disease are not asked this question and are assigned a special missing code .x. If the age first diagnosed with lung disease is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGLUNG are assigned special missing codes .d, .r, and .m, respectively. RADIAGLUNG is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGLUNG indicates the age at which the respondent's current wave's spouse was first diagnosed with lung disease, and is taken from RADIAGLUNG. In addition to the special missing codes employed by RADIAGLUNG, SwDIAGLUNG employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGHEART indicates the age at which the respondent was first diagnosed with heart disease. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with heart disease are not asked this question and are assigned a special missing code .x. If the age first diagnosed with heart disease is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGHEART are assigned special missing codes .d, .r, and .m, respectively. RADIAGHEART is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGHEART indicates the age at which the respondent's current wave's spouse was first diagnosed with heart disease, and is taken from RADIAGHEART. In addition to the special missing codes employed by RADIAGHEART, SwDIAGHEART employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGSTROK indicates the age at which the respondent was first diagnosed with having a stroke. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with having a stroke are not asked this question and are assigned a special missing code .x. If the age first diagnosed

with a stroke is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGSTROK are assigned special missing codes .d, .r, and .m, respectively. RADIAGSTROK is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGSTROK indicates the age at which the respondent's current wave's spouse was first diagnosed with having a stroke, and is taken from RADIAGSTROK. In addition to the special missing codes employed by RADIAGSTROK, SwDIAGSTROK employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGPSYCH indicates the age at which the respondent was first diagnosed with emotional, nervous, or psychiatric problems. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with emotional, nervous, or psychiatric problems are not asked this question and are assigned a special missing code .x. If the age first diagnosed with emotional, nervous, or psychiatric problems is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGPSYCH are assigned special missing codes .d, .r, and .m, respectively. RADIAGPSYCH is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGPSYCH indicates the age at which the respondent's current wave's spouse was first diagnosed with emotional, nervous, or psychiatric problems, and is taken from RADIAGPSYCH. In addition to the special missing codes employed by RADIAGPSYCH, SwDIAGPSYCH employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGARTHR indicates the age at which the respondent was first diagnosed with arthritis. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with arthritis are not asked this question and are assigned a special missing code .x. If the age first diagnosed with arthritis is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGARTHR are assigned special missing codes .d, .r, and .m, respectively. RADIAGARTHR is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGARTHR indicates the age at which the respondent's current wave's spouse was first diagnosed with arthritis, and is taken from RADIAGARTHR. In addition to the special missing codes employed by RADIAGARTHR, SwDIAGARTHR employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGLIVER indicates the age at which the respondent was first diagnosed with liver disease. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with liver disease are not asked this question and are assigned a special missing code .x. If the age first diagnosed with liver disease is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGLIVER are assigned special missing codes .d, .r, and .m, respectively. RADIAGLIVER is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGLIVER indicates the age at which the respondent's current wave's spouse was first diagnosed with liver disease, and is taken from RADIAGLIVER. In addition to the special missing codes employed by RADIAGLIVER, SwDIAGLIVER employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RADIAGDIGEST indicates the age at which the respondent was first diagnosed with diseases of the digestive system. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with diseases of the digestive system are not asked this question and are assigned a special missing code .x. The questions about diseases of the digestive system become available in Wave 5 and as such RADIAGDIGEST

is based on information available from Wave 5 forward. For those who have only been interviewed in Waves 1 through 4 when this question was not asked, RADIAGDIGEST is assigned special missing .q. If the age first diagnosed with diseases of the digestive system is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of RADIAGDIGEST are assigned special missing codes .d, .r, and .m, respectively. RADIAGDIGEST is set to plain missing (.) for respondents who did not participate in any of the waves that asked this question.

SwDIAGDIGEST indicates the age at which the respondent's current wave's spouse was first diagnosed with diseases of the digestive system, and is taken from RADIAGDIGEST. In addition to the special missing codes employed by RADIAGDIGEST, SwDIAGDIGEST employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Respondents are first asked about diseases of the digestive system starting in Wave 5 and hence RADIAGDIGEST is based on information available in Wave 5 and forward.

Differences with the RAND HRS/Harmonized HRS

Respondents are asked separate questions about the occurrence of a heart attack, diagnosis of congestive heart failure, diagnosis of abnormal heart rhythm, and diagnosis of angina in later waves of the HRS. Differently from HRS, these questions are never asked separately in KLoSA, but rather in one question under "heart disease".

RwDIAGDIAB is included in the Harmonized HRS, all the rest, RwDIAGHIBP, RwDIAGCANCER, RwDIAGLUNG, RwDIAGHEART, RwDIAGSTROK, RwDIAGPSYCH, RwDIAGARTHR, RwDIAGLIVER, RwDIAGDIGEST are only available in Harmonized KLoSA. In the HRS questions about cancer, heart attack, and stroke pertain to the most current occurrence of the disease, rather than the first diagnosis of the disease and the Harmonized HRS reflects age at most current occurrence of the above conditions. Questions about when the respondent was diagnosed with high blood pressure, lung disease, psychological problems, and arthritis are not asked in HRS. The set of questions about liver disease and digestive system disease are not asked in HRS.

KLoSA Variables Used:

Wave 1:

W01C006	Whether or not high blood pressure or hypertens
W01C011	Whether or not diabetes or high blood sugar dia
W01C016	Whether or not cancer or malignant tumor diagno
W01C023	Whether or not chronic lung disease diagnostic
W01C028	Whether or not liver disease diagnostic
W01C033	Whether or not heart related disease diagnostic
W01C038	Whether or not cerebrovascular disease diagnost
W01C043	Whether or not any emotional, nervous, or psych
W01C048	Whether or not arthritis or rheumatism diagnost

Wave 2:

W02C006	Since the previous interview, whether or not hi
W02C007Y	Time that is diagnosed by first(unit : Year)
W02C011	Since the previous interview, whether or not di
W02C012Y	Time that is diagnosed by first(unit : Year)

How Constructed:

These variables indicate whether the respondent takes medication or receives treatment for a condition given that they report having that condition. These variables are coded as 0.no, and 1.yes. RWRXHIBP, RWRXDIAB, RWRXCANCER, RWRXLUNG, RWRXHEART, RWRXSTROK, RWRXPSYCH, RWRXARTHR, RWRXLIVER, and RWRXDIGEST are also assigned a value of 0 if the respondent does not have the condition in question. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RWRXHIBP indicates whether the respondent takes medication or is receiving treatment for high blood pressure, and is coded as 0 if the respondent did not report having high blood pressure or hypertension. The respondent is asked about taking medication for high blood pressure after reporting a high blood pressure diagnosis.

RWRXDIAB indicates whether the respondent takes medication or is receiving treatment for diabetes. RWRXDIAB is coded as 0 if the respondent did not report having diabetes. The respondent is asked about taking medication for diabetes after reporting a diabetes or high blood sugar diagnosis.

RWRXCANCER indicates whether the respondent takes medication or is receiving treatment for cancer. RWRXCANCER is coded as 0 if the respondent did not report having cancer. The respondent is asked about taking medication or being treated for cancer after reporting a cancer diagnosis.

RWRXLUNG indicates whether the respondent takes medication or is receiving treatment for lung disease. RWRXLUNG is coded as 0 if the respondent did not report having lung disease. The respondent is asked about taking medication for lung disease after reporting a lung disease diagnosis.

RWRXHEART indicates whether the respondent takes medication or is receiving treatment for heart problems, including heart attack, angina pectoris, myocardial infarction, congestive heart failure, or other heart disease, and is coded as 0 if the respondent did not report having a heart problem. The respondent is asked about taking medication for heart problems after reporting a diagnosis of a heart problem.

RWRXSTROK indicates whether the respondent takes medication or is receiving treatment for stroke, and is coded as 0 if the respondent did not report having a stroke. The respondent is asked about taking medication for stroke after reporting a stroke. Starting in Wave 5, if the respondent reported not having a stroke since the previous interview but reported having a stroke in an earlier wave, then this question is not asked and RWRXSTROK is assigned special missing .s.

RWRXPSYCH indicates whether the respondent takes tranquilizers, antidepressants, sedatives, or sleeping pills or is receiving psychiatric or psychological treatment for emotional (depression, anxiety disorder, etc.), nervous (insomnia, too much stress, etc.), or psychiatric (mental disorder, difficulties in maintaining personal relationships, etc.) conditions, and is coded as 0 if the respondent did not report having an emotional, nervous or psychiatric problem. The respondent is asked about taking medication for psychiatric conditions after reporting a diagnosis of a psychiatric condition.

RWRXARTHR indicates whether the respondent takes medication or is receiving treatment for arthritis or rheumatism, and is coded as 0 if the respondent did not report having arthritis or rheumatism (bursitis/tendinitis included). The respondent is asked about taking medication for arthritis after reporting a diagnosis of arthritis.

RWRXLIVER indicates whether the respondent takes medication or is receiving treatment for liver disease. RWRXLIVER is coded as 0 if the respondent did not report having liver disease. The respondent is asked about taking medication for liver disease after reporting a liver disease diagnosis.

RwRXDIGEST indicates whether the respondent takes medication or is receiving treatment for diseases of the digestive system. RwRXDIGEST is coded as 0 if the respondent did not report having diseases of the digestive system. The respondent is asked about taking medication for diseases of the digestive system after reporting a disease of the digestive system diagnosis. RwRXDIGEST is available starting in Wave 5. Starting in Wave 6, if the respondent reported not having a diseases of the digestive system since the previous interview but reported having a diseases of the digestive system in an earlier wave, then this question is not asked and RwRXDIGEST is assigned special missing .s.

SwRXHIBP, SwRXDIAB, SwRXCANCER, SwRXLUNG, SwRXHEART, SwRXSTROK, SwRXPSYCH, SwRXARTHR, SwRXLIVER, and SwRXDIGEST indicate whether the respondent's current wave's spouse takes medication or receives treatment for the specified condition, and are taken from corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Starting in Wave 5, if the respondent reported not having a stroke since the previous interview but reported having a stroke in an earlier wave, then whether the respondent takes medication or is receiving treatment for stroke is not asked.

Respondents are first asked about diseases of the digestive system starting in Wave 5 and hence RwRXDIGEST is based on information available in Wave 5 and forward.

Differences with the RAND HRS/Harmonized HRS

In HRS, respondents are generally asked whether they take medication for a condition, whereas in KLoSA, respondents are generally asked whether they are taking medication or receiving treatment for a condition in the same question.

Unlike in HRS, KLoSA respondents are not asked about insulin and diabetes medications separately if they report a diabetes diagnosis. Instead they answer one question of whether they receive a treatment or medications for the condition. Their response is recorded in the RwRXDIAB variable in the Harmonized KLoSA.

Unlike in HRS, KLoSA respondents are not asked about chemotherapy or medications, surgery or biopsy, radiation or x-ray, and another unspecified type of treatment for cancer separately if they report a cancer diagnosis. Instead they answer one question of whether they receive a treatment or medications for the condition. Their response is recorded in the RwRXCANCER variable in the Harmonized KLoSA.

Unlike in HRS, KLoSA does not ask whether the respondent receives medications or treatment for symptoms (pain, nausea, rashes) for the treatment of cancer, takes medication for heart attack, or takes medication for a memory-related disease. Unlike in KLoSA, HRS does not ask whether the respondent receives medications or treatment for liver disease or diseases of the digestive system.

KLoSA Variables Used:

Wave 1:

W01C006	Whether or not high blood pressure or hypertens
W01C009	Whether or not taking medicine and treatment ab
W01C011	Whether or not diabetes or high blood sugar dia
W01C014	Whether or not taking medicine and treatment ab
W01C016	Whether or not cancer or malignant tumor diagno
W01C021	Whether or not taking medicine and treatment ab
W01C023	Whether or not chronic lung disease diagnostic
W01C026	Whether or not taking medicine and treatment ab
W01C028	Whether or not liver disease diagnostic
W01C031	Whether or not taking medicine and treatment ab
W01C033	Whether or not heart related disease diagnostic
W01C036	Whether or not taking medicine and treatment ab

W01C038	Whether or not cerebrovascular disease diagnost
W01C041	Whether or not taking medicine and treatment ab
W01C043	Whether or not any emotional, nervous, or psych
W01C046	Whether or not taking medicine and treatment ab
W01C048	Whether or not arthritis or rheumatism diagnost
W01C051	Whether or not taking medicine and treatment ab

Wave 2:

How Constructed:

RwHIBPLMT, RwDIABLM, RwCANCRLMT, RwLUNGLMT, RwHEARTLMT, RwSTROKLMT, RwPSYCHLMT, RwARTHLMT, RwLIVERLMT and RwDIGESTLMT indicate whether a specified health condition limits the daily activity of the respondent. These dichotomous measures are coded as 1 if the respondent has ever been diagnosed by a doctor as having one of the following conditions: high blood pressure, diabetes or high blood sugar, cancer or malignant tumor (excluding minor skin cancer), lung disease (such as bronchitis or emphysema), heart problems (such as having had a heart attack, coronary heart disease, angina, congestive heart failure), stroke (including possible ischemic attack), psychological problems (emotional, nervous problems included), arthritis or rheumatism, liver disease, or digestive system disorder, and report that the health condition is limiting their daily activities. If the respondent reports that the given health condition does not limit their daily activity, then the indicator variable is set to 0. Special missing .x is assigned to respondents who do not report having the health condition in question. Starting in Wave 5, if the respondent reported not being diagnosed with a stroke since the previous interview but reported having a stroke in an earlier wave, then this question is not asked and RwSTROKLMT is assigned special missing .s. RwDIGESTLMT becomes available in Wave 5. Starting in Wave 6, if the respondent reported not being diagnosed with a digestive system disorder since the previous interview but reported having a

digestive system disorder in an earlier wave, then this question is not asked and RWDIGESTLMT is assigned special missing .s. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwHIBPLMT, SwDIABLMT, SwCANCRLMT, SwLUNGLMT, SwHEARTLMT, SwSTROKLMT, SwPSYCHLMT, SwARTHLMT, SwLIVERLMT and SwDIGESTLMT give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RWHIBPLMT, RWDIABLMT, RWCANCRLMT, RWLUNGLMT, RWHARTLMT, RWSTROKLMT, RWPSYCHLMT, RWARTHLMT, RWLIVERLMT and RWDIGESTLMT. In addition to the special missing codes utilized by RWHIBPLMT, RWDIABLMT, RWCANCRLMT, RWLUNGLMT, RWHARTLMT, RWSTROKLMT, RWPSYCHLMT, RWARTHLMT, RWLIVERLMT and RWDIGESTLMT, SwHIBPLMT, SwDIABLMT, SwCANCRLMT, SwLUNGLMT, SwHEARTLMT, SwSTROKLMT, SwPSYCHLMT, SwARTHLMT, SwLIVERLMT, and SwDIGESTLMT employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Starting in Wave 5, if the respondent reported not having a stroke since the previous interview but reported having a stroke in an earlier wave, then whether stroke limits the daily activity of the respondent is not asked.

Respondents are first asked about diseases of the digestive system starting in Wave 5 and hence RWDIGESTLMT is based on information available in Wave 5 and forward. Starting in Wave 6, if the respondent reported not being diagnosed with a digestive system disorder since the previous interview but reported having a digestive system disorder in an earlier wave, then whether a digestive system disorder limits the daily activity of the respondent is not asked.

Differences with the RAND HRS/Harmonized HRS

The Harmonized HRS dataset has the following three variables available: RWLUNGLMT, RWANGLMT, and RWARTHLMT. The Harmonized KLoSA does not offer RWANGLMT, but adds RWHIBPLMT, RWDIABLMT, RWCANCRLMT, RWHARTLMT, RWSTROKLMT, RWPSYCHLMT, RWLIVERLMT and RWDIGESTLMT to RWLUNGLMT and RWARTHLMT.

KLoSA Variables Used:

Wave 1:

W01C006	Whether or not high blood pressure or hypertens
W01C010	Daily activity difficulty by high blood pressur
W01C011	Whether or not diabetes or high blood sugar dia
W01C015	Daily activity difficulty by diabetes or high b
W01C016	Whether or not cancer or malignant tumor diagno
W01C022	Daily activity difficulty by cancer or malignan
W01C023	Whether or not chronic lung disease diagnostic
W01C027	Daily activity difficulty by chronic lung disea
W01C028	Whether or not liver disease diagnostic
W01C032	Daily activity difficulty by liver disease
W01C033	Whether or not heart related disease diagnostic
W01C037	Daily activity difficulty by heart related dise
W01C038	Whether or not cerebrovascular disease diagnost
W01C042	Daily activity difficulty by cerebrovascular di
W01C043	Whether or not any emotional, nervous, or psych
W01C047	Daily activity difficulty by any emotional, ner
W01C048	Whether or not arthritis or rheumatism diagnost
W01C052	Daily activity difficulty by arthritis or rheum

Wave 2:

W02C006	Since the previous interview, whether or not hi
W02C010	Daily activity difficulty by high blood pressur
W02C011	Since the previous interview, whether or not di
W02C015	Daily activity difficulty by diabetes or high b

How Constructed:

RwBMI is the respondent's body mass index, which is calculated from RwHEIGHT and RwWEIGHT, the respondent's self-reported height (in meters) and weight in (kilograms) respectively. RwBMI is derived by dividing the weight by the square of the height (meters). RwBMICAT is the respondent's BMI categorization, and is coded as follows: 1.underweight, less than 18.5, 2.normal weight, 18.5-22.9, 3.pre-obesity, 23-24.9, 4.obesity class 1, 25-29.9, 5.obesity class 2, 30-34.9, 6.obesity class 3, 35 or greater. RWOBESE is coded as 0 if the respondent has a BMI of less than 25, and is coded as 1 if the respondent has a BMI of 25 or greater. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwBMI, RwHEIGHT, RwWEIGHT, RwBMICAT, and RWOBESE are assigned blank missing (.) if the respondent did not participate in the current wave.

SwHEIGHT, SwWEIGHT, SwBMI, SwBMICAT, and SwOBESE give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwHEIGHT, RwWEIGHT, RwBMI, RwBMICAT, and RWOBESE. In addition to the special missing codes used in RwBMI, RwHEIGHT, RwWEIGHT, RwBMICAT, and RWOBESE, SwHEIGHT, SwWEIGHT, SwBMI, SwBMICAT, and SwOBESE employ two additional special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwBMICAT in the Harmonized HRS has different cut-off points than RwBMICAT in the Harmonized KLoSA based on the BMI categorizations set for the US and Korea, respectively. As such, RWOBESE also uses a different cut-off point in the two datasets, based on the BMI categorizations in place.

KLoSA Variables Used:

Wave 1:	
W01C105	Weight (unit : Kilogram)
W01C107	Height (unit : Centimeter)
Wave 2:	
W02C105	Weight (unit : Kilogram)
W02C107	Height (unit : Centimeter)
Wave 3:	
W03C105	Weight (unit : Kilogram)
W03C107	Height (unit : Centimeter)
Wave 4:	
W04C105	Weight (unit : Kilogram)
W04C107	Height (unit : Centimeter)
Wave 5:	
W05C105	Weight (unit : Kilogram)

W05C107	Height (unit : Centimeter)
Wave 5 New:	
W05C105	Weight (unit : Kilogram)
W05C107	Height (unit : Centimeter)
Wave 6:

How Constructed:

RwSIGHTA indicates the respondent's self-rated eyesight while wearing glasses or corrective lenses as usual. Respondents are also asked to rate their distance vision, and near vision while wearing glasses or corrective lenses as usual, these responses are coded in RwDSIGHTA and RwNSIGHTA, respectively. RwSIGHTA, RwDSIGHTA, and RwNSIGHTA are coded as follows: 1.very good, 2.good, 3.fair, 4.poor, 5.very poor, 6.blind. If the respondent reports blindness in a previously asked question then RwSIGHTA, RwDSIGHTA and RwNSIGHTA are coded with a value of 6. Don't know, refused, or other missing responses of RwSIGHTA, RwDSIGHTA, and RwNSIGHTA are assigned special missing codes .d, .r, and .m, respectively. RwSIGHTA, RwDSIGHTA, and RwNSIGHTA are set to plain missing (.) for respondents who did not participate in the current wave.

SwSIGHTA, SwDSIGHTA, and SwNSIGHTA indicate the self-rated eyesight, distance vision, and near vision of the respondent's current wave's spouse, and are taken from RwSIGHTA, RwDSIGHTA, and RwNSIGHTA. In addition to the special missing codes employed by RwSIGHTA, RwDSIGHTA, and RwNSIGHTA, SwSIGHTA, SwDSIGHTA, and SwNSIGHTA employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwCATRCTE indicates whether the respondent has ever reported having cataract surgery. RwCATRCT indicates whether the respondent reported having cataract surgery in the last two years and is available starting in Wave 2. RwCATRCT and RwCATRCTE are coded as 0.no, and 1.yes. Additionally, RwCATRCTE carries forward positive responses from previous waves. RwCATRCT and RwCATRCTE are assigned a special missing code .b if the respondent reports being blind and these questions were not asked. RwCATRCT is assigned special missing .c for the new cohort of respondents added in Wave 5 as they were only asked if they ever had cataract surgery and not if they have had cataract surgery in the last two years. Don't know, refused, or other missing responses of RwCATRCT and RwCATRCTE are assigned special missing codes .d, .r, and .m, respectively. RwCATRCT and RwCATRCTE are set to plain missing (.) for respondents who did not participate in the current wave.

SwCATRCTE and SwCATRCT indicate whether the respondent's current wave's spouse reported ever having cataract surgery or having cataract surgery in the last two years, and are taken from RwCATRCTE and RwCATRCT. In addition to the special missing codes employed by RwCATRCTE and RwCATRCT, SwCATRCTE and SwCATRCT employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwNCATRCT indicates the number of eyes the respondent has had cataract surgery on in the last two years and is available starting in Wave 2. RwNCATRCT is coded as follows: 1.one eye only, 2.both eyes. RwNCATRCT is coded as .x if the respondent has not reported any cataract surgery since the last wave. RwNCATRCT is assigned a special missing code .b if the respondent reports being blind and this question

was not asked. RwnCATRCT is assigned special missing .c for the new cohort of respondents added in Wave 5 as they were only asked if they ever had cataract surgery and not if they have had cataract surgery in the last two years. Don't know, refused, or other missing responses of RwnCATRCT are assigned special missing codes .d, .r, and .m, respectively. RwnCATRCT is set to plain missing (.) for respondents who did not participate in the current wave.

SwNCATRCT indicates the number of eyes the respondent's current wave's spouse has had cataract surgery on in the past two years, and is taken from RwnCATRCT. In addition to the special missing codes employed by RwnCATRCT, SwNCATRCT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwGLAUCOMA indicates whether the respondent has ever been treated for glaucoma. RwGLAUCOMA is coded as 1 if the respondent has ever been treated for glaucoma and is coded as 0 if the respondent has never been treated for glaucoma. RwGLAUCOMA also carries forward positive responses from previous waves. RwGLAUCOMA is assigned a special missing code .b if the respondent reports being blind and this question was not asked. Don't know, refused, or other missing responses of RwGLAUCOMA are assigned special missing codes .d, .r, and .m, respectively. RwGLAUCOMA is set to plain missing (.) for respondents who did not participate in the current wave.

SwGLAUCOMA indicates whether the respondent's current wave's spouse has ever been treated for glaucoma, and is taken from RwGLAUCOMA. In addition to the special missing codes employed by RwGLAUCOMA, SwGLAUCOMA employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSIGHTLMT indicates whether eyesight limits the daily activity of the respondent. This dichotomous measure is coded 1 if the respondent reports that eyesight does limit their daily activity, and as 0 if it does not limit their daily activity. Special missing .b is used for respondents who said they are blind and were not asked this question. Don't know, refused, or other missing responses of RwSIGHTLMT are assigned special missing codes .d, .r, and .m, respectively. RwSIGHTLMT is set to plain missing (.) for respondents who did not participate in the current wave.

SwSIGHTLMT indicates whether the respondent's current wave's spouse's sight limits their daily activity, and is taken from RwSIGHTLMT. In addition to the special missing codes employed by RwSIGHTLMT, SwSIGHTLMT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1 and Wave 5 Add, KLoSA asks about whether the respondent has ever had cataract surgery or glaucoma. Starting in Wave 2 and in Wave 6 for new respondents to Wave 5, questions about cataract surgery and glaucoma are asked for the period since the previous interview.

Differences with the RAND HRS/Harmonized HRS

RwSIGHT, RwDSIGHT, and RwNSIGHT in the Harmonized HRS employ a different scale than RwsigHta, RwsigHta, RwnsigHta in the Harmonized KLoSA. The Harmonized HRS variables use the following scale: 1.excellent, 2.very good, 3.good, 4.fair, 5.poor, 6.blind. The Harmonized KLoSA variables use the following scale: 1.very good, 2.good, 3.fair, 4.poor, 5.very poor, 6.blind.

Whether eyesight limits the daily activities of the respondent is not asked in the HRS.

Respondents in HRS who are younger than age 65 are not asked about cataract surgery or glaucoma treatment unlike KLoSA which asks all respondents about cataract surgery and whether they have been treated for glaucoma.

KLoSA Variables Used:

Wave 1:
W01C074 Usual usage of glasses and contact lenses

W01C075	Eyesight
W01C076	Eyesight for far away object
W01C077	Eyesight for near object
W01C078	Whether or not cataract operation experience
W01C079	Cataract operation part
W01C080	Whether or not glaucoma treatment experience
W01C081	Daily activity difficulty by eyesight
Wave 2:	
W02C074	Usual usage of glasses and contact lenses
W02C075	Eyesight
W02C076	Eyesight for far away object
W02C077	Eyesight for near object
W02C078	Since the previous interview, whether or not ca
W02C079	Since the previous interview, cataract operatio
W02C080	Since the previous interview, whether or not gl
W02C081	Daily activity difficulty by eyesight
Wave 3:	
W03C074	Usual usage of glasses and contact lenses
W03C075	Eyesight
W03C076	Eyesight for far away object
W03C077	Eyesight for near object
W03C078	Since the previous interview, whether or not ca
W03C079	Since the previous interview, cataract operatio
W03C080	Since the previous interview, whether or not gl
W03C081	Daily activity difficulty by eyesight
Wave 4:	
W04C074	Usual usage of glasses and contact lenses
W04C075	Eyesight
W04C076	Eyesight for far away object
W04C077	Eyesight for near object
W04C078	Since the previous interview, whether or not ca
W04C079	Since the previous interview, cataract operatio
W04C080	Since the previous interview, whether or not gl
W04C081	Daily activity difficulty by eyesight
Wave 5:	
W05C074	Usual usage of glasses and contact lenses
W05C075	Eyesight
W05C076	Eyesight for far away object
W05C077	Eyesight for near object
W05C078	Since the previous interview, whether or not ca
W05C079	Since the previous interview, cataract operatio
W05C080	Since the previous interview, whether or not gl
W05C081	Daily activity difficulty by eyesight
Wave 5 New:	
W05C074	Usual usage of glasses and contact lenses
W05C075	Eyesight
W05C076	Eyesight for far away object
W05C077	Eyesight for near object
W05C078	Whether or not cataract operation experience
W05C079	Cataract operation part
W05C080	Whether or not glaucoma treatment experience
W05C081	Daily activity difficulty by eyesight
Wave 6:	
W06C074	Usual usage of glasses and contact lenses
W06C075	Eyesight
W06C076	Eyesight for far away object
W06C077	Eyesight for near object
W06C078	Since the previous interview, whether or not ca
W06C079	Since the previous interview, cataract operatio
W06C080	Since the previous interview, whether or not gl
W06C081	Daily activity difficulty by eyesight
Wave 7:	
W07C074	Usual usage of glasses and contact lenses

W07C075	Eyesight
W07C076	Eyesight for far away object
W07C077	Eyesight for near object
W07C078	Since the previous interview, whether or not ca
W07C079	Since the previous interview, cataract operatio
W07C080	Since the previous interview, whether or not gl
W07C081	Daily activity difficulty by eyesight
Wave 8:	
W08C074	Usual usage of glasses and contact lenses
W08C075	Eyesight
W08C076	Eyesight for far away object
W08C077	Eyesight for near object
W08C078	Since the previous interview, whether or not ca
W08C079	Since the previous interview, cataract operatio
W08C080	Since the previous interview, whether or not gl
W08C081	Daily activity difficulty by eyesight

How Constructed:

RwHEARINGA indicates the respondent's self-rated hearing. Respondents who have a hearing aid are asked to rate their hearing when using their hearing aid as usual. RwHEARINGA is coded as follows: 1.very good, 2.good, 3.fair, 4.poor, 5.very poor. RwHEARINGA is taken from a single question asking the respondent to rate their hearing while wearing a hearing aid or as usual. Don't know, refused, or other missing responses of RwHEARINGA are assigned special missing codes .d, .r, and .m, respectively. RwHEARINGA is set to plain missing (.) for respondents who did not participate in the current wave.

SwHEARINGA indicates the self-rated hearing of the respondent's current wave's spouse, and is taken from RwHEARINGA. In addition to the special missing codes employed by RwHEARINGA, SwHEARINGA employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHEARAID indicates whether the respondent ever wears a hearing aid. RwHEARAID is coded as follows: 0.no, 1.yes. If the respondent reports wearing a hearing aid, this answer is carried forward in future waves. Don't know, refused, or other missing responses of RwHEARAID are assigned special missing codes .d, .r, and .m, respectively. RwHEARAID is set to plain missing (.) for respondents who did not participate in the current wave.

SwHEARAID indicates whether the respondent's current wave's spouse ever wears a hearing aid, and is taken from RwHEARAID. In addition to the special missing codes employed by RwHEARAID, SwHEARAID employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHEARLMT indicates whether hearing limits the daily activity of the respondent. This dichotomous measure is coded 1 if the respondent reports that hearing does limit their daily activity, and as 0 if it does not limit their daily activity. Don't know, refused, or other missing responses of RwHEARLMT are assigned special missing codes .d, .r, and .m, respectively. RwHEARLMT is set to plain missing (.) for respondents who did not participate in the current wave.

SwHEARLMT indicates whether the respondent's current wave's spouse's hearing limits their daily activity, and is taken from RwHEARLMT. In addition to the special missing codes employed by RwHEARLMT, SwHEARLMT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwHEARING in the Harmonized HRS employs a different scale than RwHEARINGA in the Harmonized KLoSA. The Harmonized HRS variable uses the following scale: 1.excellent, 2.very good, 3.good, 4.fair, 5.poor. The Harmonized KLoSA variable uses the following scale: 1.very good, 2.good, 3.fair, 4.poor, 5.very poor.

Whether hearing limits the daily activities of the respondent is not asked in the HRS.

KLoSA Variables Used:

Wave 1:	
W01C082	Usual usage of hearing aid use
W01C083	Hearing
W01C084	Daily activity difficulty by hearing
Wave 2:	
W02C082	Usual usage of hearing aid use
W02C083	Hearing
W02C084	Daily activity difficulty by hearing
Wave 3:	
W03C082	Usual usage of hearing aid use
W03C083	Hearing
W03C084	Daily activity difficulty by hearing
Wave 4:	
W04C082	Usual usage of hearing aid use
W04C083	Hearing
W04C084	Daily activity difficulty by hearing
Wave 5:	
W05C082	Usual usage of hearing aid use
W05C083	Hearing
W05C084	Daily activity difficulty by hearing
Wave 5 New:	
W05C082	Usual usage of hearing aid use
W05C083	Hearing
W05C084	Daily activity difficulty by hearing
Wave 6:	
W06C082	Usual usage of hearing aid use
W06C083	Hearing
W06C084	Daily activity difficulty by hearing
Wave 7:	
W07C082	Usual usage of hearing aid use
W07C083	Hearing
W07C084	Daily activity difficulty by hearing
Wave 8:	
W08C082	Usual usage of hearing aid use
W08C083	Hearing
W08C084	Daily activity difficulty by hearing

How Constructed:

RwFALL indicates whether the respondent has fallen in the last 2 years. RwFALL is coded as 0.no and 1.yes. Don't know, refused, or other missing responses of RwFALL are assigned special missing codes .d, .r, and .m, respectively. RwFALL is set to plain missing (.) for respondents who did not participate in the current wave.

SwFALL indicates whether the respondent's current wave's spouse has fallen in the last 2 years, and is taken from RwFALL. In addition to the special missing codes employed by RwFALL, SwFALL employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFALLNUM indicates the number of times the respondent has fallen in the last 2 years. If the respondent reports no falls then 0 is assigned. Don't know, refused, or other missing responses of RwFALLNUM are assigned special missing codes .d, .r, and .m, respectively. RwFALLNUM is set to plain missing (.) for respondents who did not participate in the current wave.

SwFALLNUM indicates the number of times the respondent's current wave's spouse has fallen in the last 2 years, and is taken from RwFALLNUM. In addition to the special missing codes employed by RwFALLNUM, SwFALLNUM employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwFALLINJ indicates whether the respondent was injured seriously enough in a fall to require medical treatment. RwFALLINJ is assigned a 0 if the fall was not serious, and is assigned a 1 if the fall required medical treatment. RwFALLINJ is assigned special missing .f if the respondent did not fall in the last 2 years. Don't know, refused, or other missing responses of RwFALLINJ are assigned special

missing codes .d, .r, and .m, respectively. RwfALLINJ is set to plain missing (.) for respondents who did not participate in the current wave.

SwFALLINJ indicates whether the respondent's current wave's spouse was injured seriously enough in a fall to require medical treatment, and is taken from RwfALLINJ. In addition to the special missing codes employed by RwfALLINJ, SwFALLINJ employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHIPE_K indicates whether the respondent has ever had a hip fracture due to a fall. This question is only asked to respondents who report having fallen down in the last two years. RwHIPE_K is coded as 0.no and 1.yes. Positive reports of hip fractures from previous waves have been carried forward. Special missing .f is assigned if the respondent reports not having had a fall in the last two years. Don't know, refused, or other missing responses of RwHIPE_K are assigned special missing codes .d, .r, and .m, respectively. RwHIPE_K is set to plain missing (.) for respondents who did not participate in the current wave.

SwHIPE_K indicates whether the respondent's current wave's spouse has ever had a hip fracture due to a fall, and is taken from RwHIPE_K. In addition to the special missing codes employed by RwHIPE_K, SwHIPE_K employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwINJLMT indicates whether the respondent's injury or fracture due to a fall limits the daily activity of the respondent. This dichotomous measure is coded as 1 if the respondent reports that a fall accident does limit their daily activity, and as 0 if it does not limit their daily activity. RwINJLMT is assigned special missing .x if the respondent reports no injuries from a fall. Don't know, refused, or other missing responses of RwINJLMT are assigned special missing codes .d, .r, and .m, respectively. RwINJLMT is set to plain missing (.) for respondents who did not participate in the current wave.

SwINJLMT indicates whether the respondent's current wave's spouse's fall injury limits their daily activity, and is taken from RwINJLMT. In addition to the special missing codes employed by RwINJLMT, SwINJLMT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwHIPE in the Harmonized HRS indicates whether the respondent has ever broken a hip, which is asked whether the respondent has fallen in the last 2 years or not. RwHIPE_K in the Harmonized KLoSA indicates whether the respondent has ever broken a hip due to a fall, which is asked only if the respondent has fallen in the last 2 years.

KLoSA Variables Used:

Wave 1:

W01C056	Hurt from a fall experience during the latest 2
W01C057	Hurt from a fall number of times during the lat
W01C058	Treatment is whether or not necessary serious h
W01C059	On a hip fracture injuries from a fall
W01C060	Daily activity difficulty by a hip fracture inj

Wave 2:

W02C056	Since the previous interview, hurt from a fall
W02C057	Since the previous interview, hurt from a fall
W02C058	Treatment is whether or not necessary serious h
W02C059	On a hip fracture injuries from a fall
W02C060	Daily activity difficulty by a hip fracture inj

Wave 3:
W03C056 Since the previous interview, hurt from a fall
W03C057 Since the previous interview, hurt from a fall
W03C058 Treatment is whether or not necessary serious h
W03C059 On a hip fracture injuries from a fall
W03C060 Daily activity difficulty by a hip fracture inj

Wave 4:
W04C056 Since the previous interview, hurt from a fall
W04C057 Since the previous interview, hurt from a fall
W04C058 Treatment is whether or not necessary serious h
W04C059 On a hip fracture injuries from a fall
W04C060 Daily activity difficulty by a hip fracture inj

Wave 5:
W05C056 Since the previous interview, hurt from a fall
W05C057 Since the previous interview, hurt from a fall
W05C058 Treatment is whether or not necessary serious h
W05C059 On a hip fracture injuries from a fall
W05C060 Daily activity difficulty by a hip fracture inj

Wave 5 New:
W05C056 Hurt from a fall experience during the latest 2
W05C057 Hurt from a fall number of times during the lat
W05C058 Treatment is whether or not necessary serious h
W05C059 On a hip fracture injuries from a fall
W05C060 Daily activity difficulty by a hip fracture inj

Wave 6:
W06C056 Since the previous interview, hurt from a fall
W06C057 Since the previous interview, hurt from a fall
W06C058 Treatment is whether or not necessary serious h
W06C059 On a hip fracture injuries from a fall
W06C060 Daily activity difficulty by a hip fracture inj

Wave 7:
W07C056 Since the previous interview, hurt from a fall
W07C057 Since the previous interview, hurt from a fall
W07C058 Treatment is whether or not necessary serious h
W07C059 On a hip fracture injuries from a fall
W07C060 Daily activity difficulty by a hip fracture inj

Wave 8:
W08C056 Since the previous interview, hurt from a fall
W08C057 Since the previous interview, hurt from a fall
W08C058 Treatment is whether or not necessary serious h
W08C059 On a hip fracture injuries from a fall
W08C060 Daily activity difficulty by a hip fracture inj

How Constructed:

RwURINA indicates whether the respondent has experienced any urinary incontinence in the past 12 months and is only asked of respondents who are women. RwURINA is coded as 0.no, and 1.yes. Women who reported incontinence in the previous wave were asked "How have your symptoms of leaking urine changed since the previous interview?" If the respondent said that they recovered completely a code of 0 was assigned, responses of improved, same, worsened, and greatly worsened to this question were coded as 1 in RwURINA. Respondents who are men are not asked this question and are assigned a special missing .g. In Wave 6 this question was not asked to women from the original cohort who reported at the previous wave that they did not have any urinary incontinence and in these cases RwURINA is set to special missing .s. Don't know, refused, or other missing responses of RwURINA are assigned special missing codes .d, .r, and .m, respectively. RwURINA is set to plain missing (.) for respondents who did not participate in the current wave.

SwURINA indicates whether the respondent's current wave's spouse has experienced any incontinence, if that spouse is a woman, and is taken from RwURINA. In addition to the special missing codes employed by RwURINA, SwURINA employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwURINAF indicates the number of days the respondent experienced urinary incontinence in the last month and is only asked of respondents who are women. RwURINAF takes values from 0 to 31, with 31 indicating the presence of urinary incontinence every day. If the respondent does not experience any urinary incontinence, RwURINAF is set to 0. Respondents who are men are not asked this question and are assigned a special missing .g. In Wave 6 this question was not asked to women from the original cohort who reported at the previous wave that they did not have any urinary incontinence and in these cases RwURINAF is set to special missing .s. Don't know, refused, or other missing responses of RwURINAF are assigned special missing codes .d, .r, and .m, respectively. RwURINAF is set to plain missing (.) for respondents who did not participate in the current wave.

SwURINAF indicates the number of days the respondent's current wave's spouse experienced incontinence, if that spouse is a woman, and is taken from RwURINAF. In addition to the special missing codes employed by RwURINAF, SwURINAF employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwURINPAD indicates whether the respondent ever uses any absorbent products such as pads, special garments, sanitary napkins, or toilet paper for urinary incontinence and is only asked of respondents who are women. RwURINPAD is coded as 0.no, and 1.yes. If the respondent does not experience any urinary incontinence, RwURINPAD is set to 0. Respondents who are men are not asked this question and are assigned a special missing .g. In Wave 6 this question was not asked to women from the original cohort who reported at the previous wave that they did not have any urinary incontinence and in these cases RwURINPAD is set to special missing .s. Don't know, refused, or other missing responses of RwURINPAD are assigned special missing codes .d, .r, and .m, respectively. RwURINPAD is set to plain missing (.) for respondents who did not participate in the current wave.

SwURINPAD indicates whether the respondent's current wave's spouse, if that spouse is a woman, ever uses absorbent products for incontinence, and is taken from RwURINPAD. In addition to the special missing codes employed by RwURINPAD, SwURINPAD employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 6 questions about urinary incontinence in the past 12 months were not asked to women from the original cohort who reported at Wave 5 that they did not have any urinary incontinence.

Differences with the RAND HRS/Harmonized HRS

In the KLoSA questions about urinary incontinence are asked of respondents who are women only, whereas in the HRS urinary incontinence questions are asked of all respondents regardless of gender.

KLoSA Variables Used:

Wave 1:	
W01C068	Whether or not urinary incontinence experience

How Constructed:

RwPAINFR indicates whether the respondent currently experiences pain. KLoSA asks respondents to identify any body parts in which they are currently feeling pain from a list of 13 body parts or to answer that they do not have any pain. RwPAINFR is coded as 0.no if the respondent does not report that they have pain in any of the 13 body parts or instead says they have no pain. RwPAINFR is coded as 1.yes if the respondent reports having pain in any of the 13 body parts. The 13 body parts listed are head, shoulder, arm, wrist, fingers, chest, stomach, back, buttocks, leg, knee, ankle, and toes. Don't know, refused, or other missing responses of RwPAINFR are assigned special missing codes .d, .r, and .m, respectively. RwPAINFR is set to plain missing (.) for respondents who did not participate in the current wave.

RwPAINHLV indicates the respondent's highest level of pain. KLoSA asks respondents to identify how bad the pain for each body part they identify as currently feeling pain in. RwPAINHLV is constructed by taking the highest level of pain that the respondent has indicated for any of the 13 body parts asked about. RwPAINHLV is coded as 0.no pain, 1.mild, 2.moderate, 3.severe. If the respondent does not experience pain in any body part, then RwPAINHLV is assigned a value of 0. Don't know, refused, or other missing responses of RwPAINHLV are assigned special missing codes .d, .r, and .m, respectively. RwPAINHLV is set to plain missing (.) for respondents who did not participate in the current wave.

RwPAINA indicates whether the respondent's pain interferes with normal activities. RwPAINA is coded as 0.no, and 1.yes. If the respondent does not experience frequent pain, then RwPAINA are assigned special missing .x. Don't know, refused, or other missing responses of these variables are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwPAINFR, SwPAINHLV, and SwPAINA indicate the respondent's current wave's spouse's experience with pain, and are taken from RwPAINFR, RwPAINHLV, and RwPAINA. In addition to the special missing codes employed by RwPAINFR, RwPAINHLV, and RwPAINA, SwPAINFR, SwPAINHLV, and SwPAINA employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

HRS respondents are asked a single question, "Are you often troubled with pain?" whereas KLoSA respondents are asked whether they currently have any pain in 13 different body parts. Notably different, the HRS asks about being "often troubled with pain" while the KLoSA asks about any pain being currently felt. Due to these differences it can be expected that the RwPAINFR is not perfectly comparable between the Harmonized HRS and the Harmonized KLoSA.

HRS asks respondents to rate the severity of their pain in a single question, reported in RwPAINLV in the Harmonized HRS, whereas KLoSA asks the respondent to rate their pain for 13 different body parts. The RwPAINHLV variable in the Harmonized KLoSA reflects the highest level of pain for any of the above mentioned conditions.

The question about how the respondent's pain interferes with normal work is not asked in KLoSA, whereas it is asked in Waves 1 and 2 of HRS, and so RwPAINW is not available in the Harmonized KLoSA at all and is only available in Waves 1 and 2 of the Harmonized HRS. In all waves of KLoSA the respondent is asked how pain interferes with normal daily activities.

Questions about whether the respondent takes medication for pain is not asked in KLoSA, so RwrXPAIN is not available in the Harmonized KLoSA.

How Constructed:

RwVIGACT and RwVIGACTF_K measure whether or not respondents exercise and how often they do so, respectively. RwVIGACT is dichotomous indicator for whether or not the respondent “works out” or “exercises” more than once a week. If the respondent answers “yes”, they are then asked how many times per week they exercise. The number of times per week is recorded in RwVIGACTF_K as a continuous value. RwVIGACTF_K is set to 0 for respondents who do not exercise more than once per week. Special missing codes of .d and .r are used if the respondent does not know if they exercise or how often they exercise, or refuses to answer. RwVIGACT and RwVIGACTF_K are assigned blank missing (.) for respondents who did not participate in the current wave.

SwVIGACT and SwVIGACTF_K give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwVIGACT and RwVIGACTF_K. In addition to the special missing codes employed by RwVIGACT and RwVIGACTF_K, SwVIGACT and SwVIGACTF_K employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, KLoSA does not distinguish between light or vigorous physical activity. Instead KLoSA only asks respondents whether or not they “works out” or “exercise”. HRS uses several different definitions of vigorous physical exercise for different waves of the HRS which include exercise, gym workout, aerobics, running, swimming, bicycling, sports, heavy housework, or a job that involves physical labor.

In addition to different definitions of physical activity, HRS and KLoSA use different reference points for frequency of the activity. HRS asks whether on average over the last 12 months respondents have participated in vigorous physical activity three times a week or more. KLoSA asks respondents whether they work out regularly with no specific reference time period.

Unlike the RAND HRS variable, RwVIGACTF_K is a count indicating the number of times the respondent reported exercising in a week. In the RAND HRS RwVIGACTF is a categorical variable with a scale of 1 to 5 that indicates different frequencies of vigorous physical activity ranging from 3+ times a week to never.

KLoSA Variables Used:

Wave 1:	
W01C108	Whether or not regular exercise (more than once
W01C111	Number of times that exercise per a week
Wave 2:	
W02C108	Whether or not regular exercise (more than once
W02C111	Number of times that exercise per a week
Wave 3:	
W03C108	Whether or not regular exercise (more than once
W03C111	Number of times that exercise per a week
Wave 4:	
W04C108	Whether or not regular exercise (more than once
W04C111	Number of times that exercise per a week
Wave 5:	
W05C108	Whether or not regular exercise (more than once
W05C111	Number of times that exercise per a week
Wave 5 New:	
W05C108	Whether or not regular exercise (more than once
W05C111	Number of times that exercise per a week
Wave 6:	
W06C108	Whether or not regular exercise (more than once
W06C111	Number of times that exercise per a week
Wave 7:	
W07C108	Whether or not regular exercise (more than once
W07C111	Number of times that exercise per a week
Wave 8:	
W08C108	Whether or not regular exercise (more than once
W08C111	Number of times that exercise per a week

How Constructed:

RwDRINKEV is a dichotomous indicator for whether or not the respondent has ever drank alcoholic beverages. RwDRINK is a dichotomous indicator for whether or not the respondent reports that they currently drink alcoholic beverages. RwDRINKEV is coded as 0 if the respondent has never had an alcoholic drink, and coded as 1 if they have had an alcoholic drink. Reports of never having consumed an alcoholic beverage are carried forward from previous waves if the respondent reports not drinking in the current wave. RwDRINK is coded as 0 if the respondent does not currently drink alcoholic beverages, and is coded as 1 if they do currently drink alcoholic beverages. Don't know, refused, and other missing responses are assigned special missing .d, .r, .m, respectively. RwDRINKEV and RwDRINK are assigned blank missing (.) for respondents who did not participate in the current wave.

RwDRINKX indicates the frequency of drinking that the respondent usually drinks and RwDRINKN_K is the number of drinks that the respondent usually has on a day when they drink. Respondents who don't drink are coded as 0 for both RwDRINKX and RwDRINKN_K. Don't know, refused, and other missing responses are assigned special missing .d, .r, .m, respectively. RwDRINKX and RwDRINKN_K are assigned blank missing (.) for respondents who did not participate in the current wave.

Drinking frequency questions in the KLoSA are surveyed by asking the respondent about their use of five different types of alcohol separately. Those five types of alcohol are soju, beer, rice wine (makgeolli), wine, and "whisky and other liquors." For each type of alcohol the respondent is asked how often they drank the particular alcohol during the past year and how many glasses they drink of the particular alcohol at a time.

RwDRINKX is the highest frequency of drinking during the last year the respondent reports for any one of the five types of alcohol surveyed. Drinking frequency during the last year is surveyed by the categories: "none or less than once a month", "one to several times a month", "one to several times a week", "most days of the week" and "every day of the week".

RwDRINKN_K is the maximum number of drinks the respondent reported drinking at a time for any one of the five types of alcohol surveyed. RwDRINKN_K is rounded to the nearest whole number.

SwDRINK, SwDRINKX, SwDRINKN_K give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwDRINK_K, RwDRINKX, and RwDRINKN_K. In addition to the special missing codes employed by RwDRINK_K, RwDRINKX, and RwDRINKN_K, SwDRINK, SwDRINKX, and SwDRINKN_K employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwDRINKCUT, RwDRINKCR, RwDRINKBD, and RwDRINKNR indicate the respondent's feelings about their drinking habits. RwDRINKCUT indicates whether the respondent has ever felt that they should quit drinking. RwDRINKCR indicates whether people have ever made the respondent angry by criticizing their drinking. RwDRINKBD indicates whether the respondent has ever felt bad or guilty about drinking. RwDRINKNR indicates whether the respondent has ever taken a drink first thing in the morning to steady their nerves or get rid of a hangover. These variables are coded as 0.no, and 1.yes. If the respondent reports not drinking, then RwDRINKCUT, RwDRINKCR, RwDRINKBD, and RwDRINKNR are assigned special missing .n.

RwCAGE is a summary variable for the respondent's feelings about their drinking habits. RwCAGE is equal to RwDRINKCUT + RwDRINKCR + RwDRINKBD + RwDRINKNR. RwCAGEM indicates the number of variables missing in the calculation of RwCAGE. RwCAGE is calculated as long as at least one of the component variables is not missing.

Don't know, refused, or other missing responses of RwDRINKCUT, RwDRINKCR, RwDRINKBD, RwDRINKNR, and RwCAGE are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

SwDRINKCUT, SwDRINKCR, SwDRINKBD, SwDRINKNR, and SwCAGE indicate the respondent's current wave's spouse's feelings about their drinking habits, and are taken from RwDRINKCUT, RwDRINKCR, RwDRINKBD, RwDRINKNR, and RwCAGE. In addition to the special missing codes employed by RwDRINKCUT, RwDRINKCR, RwDRINKBD, RwDRINKNR, and RwCAGE, SwDRINKCUT, SwDRINKCR, SwDRINKBD, SwDRINKNR, and SwCAGE employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

There are many differences between the RAND HRS variables RwDRINKD and RwDRINKN and the KLoSA counterparts, RwDRINKX and RwDRINKN_K.

HRS surveys respondents' use of alcohol in reference to drinking any alcoholic beverage. Unlike HRS, KLoSA surveys respondents' use of alcohol in reference to five different types of alcohol separately. RwDRINKX and RwDRINKN_K always reflect the maximum value the respondent reported for any one of the five different types of alcohol surveyed.

In addition, HRS and KLoSA use different reference points for alcohol use. HRS surveys alcohol use on average over the last 3 months, whereas KLoSA surveys alcohol use on average over the last year.

KLoSA also uses a different scale for drinking frequency, which includes: "none or less than once a month", "one to several times a month", "one to several times a week", "most days of the week" and "every day of the week."

The RAND HRS variable RwdRINKN is based on how many drinks the respondent reports drinking "on a day when they drink". Unlike HRS, KLoSA asks respondents how many bottles they drink (of a particular alcohol) "at a time" so RwdRINKN_K in the Harmonized KLoSA is a different measure in this way also.

Respondents in HRS are asked whether they feel they should cut down on their drinking, whereas respondents in KLoSA are asked whether they feel they should quit drinking, though they both use the same variable name in the Harmonized HRS and the Harmonized KLoSA.

Respondents are not asked whether they binge drink and how many days they binge drank in KLoSA.

KLoSA Variables Used:

Wave 1:

W01C122	Usually, whether or not drinking
W01C126	Drinking frequency per month (soju)
W01C127	Average drinking capacity at a time (soju)
W01C128	Drinking frequency per month (beer)
W01C129	Average drinking capacity at a time (beer)
W01C130	Drinking frequency per month (unstrained rice w
W01C131	Average drinking capacity at a time (unstrained
W01C132	Drinking frequency per month (whisky or liquor)
W01C133	Average drinking capacity at a time (whisky or
W01C134	Drinking frequency per month (wine)
W01C135	Average drinking capacity at a time (wine)
W01C136	Experience that feel that will should quit drin
W01C137	Experience blamed about drinking habit
W01C138	Experience that get angry because of criticism
W01C139	Guilt experience about drinking
W01C140	Experience drinking in the morning

Wave 2:

W02C122	Usually, whether or not drinking
W02C126	Drinking frequency per month (soju)
W02C127	Average drinking capacity at a time (soju)
W02C128	Drinking frequency per month (beer)
W02C129	Average drinking capacity at a time (beer)
W02C130	Drinking frequency per month (unstrained rice w
W02C131	Average drinking capacity at a time (unstrained
W02C132	Drinking frequency per month (whisky or liquor)
W02C133	Average drinking capacity at a time (whisky or
W02C134	Drinking frequency per month (wine)
W02C135	Average drinking capacity at a time (wine)
W02C136	Experience that feel that will should quit drin
W02C137	Experience blamed about drinking habit
W02C138	Experience that get angry because of criticism
W02C139	Guilt experience about drinking
W02C140	Experience drinking in the morning

Wave 3:

W03C122	Usually, whether or not drinking
W03C126	Drinking frequency per month (soju)
W03C127	Average drinking capacity at a time (soju)
W03C128	Drinking frequency per month (beer)
W03C129	Average drinking capacity at a time (beer)
W03C130	Drinking frequency per month (unstrained rice w
W03C131	Average drinking capacity at a time (unstrained
W03C132	Drinking frequency per month (whisky or liquor)
W03C133	Average drinking capacity at a time (whisky or
W03C134	Drinking frequency per month (wine)
W03C135	Average drinking capacity at a time (wine)

W03C136	Experience that feel that will should quit drin
W03C137	Experience blamed about drinking habit
W03C138	Experience that get angry because of criticism
W03C139	Guilt experience about drinking
W03C140	Experience drinking in the morning
Wave 4:	
W04C122	Usually, whether or not drinking
W04C126	Drinking frequency per month (soju)
W04C127	Average drinking capacity at a time (soju)
W04C128	Drinking frequency per month (beer)
W04C129	Average drinking capacity at a time (beer)
W04C130	Drinking frequency per month (unstrained rice w
W04C131	Average drinking capacity at a time (unstrained
W04C132	Drinking frequency per month (whisky or liquor)
W04C133	Average drinking capacity at a time (whisky or
W04C134	Drinking frequency per month (wine)
W04C135	Average drinking capacity at a time (wine)
W04C136	Experience that feel that will should quit drin
W04C137	Experience blamed about drinking habit
W04C138	Experience that get angry because of criticism
W04C139	Guilt experience about drinking
W04C140	Experience drinking in the morning
Wave 5:	
W05C122	Usually, whether or not drinking
W05C126	Drinking frequency per month (soju)
W05C127	Average drinking capacity at a time (soju)
W05C128	Drinking frequency per month (beer)
W05C129	Average drinking capacity at a time (beer)
W05C130	Drinking frequency per month (unstrained rice w
W05C131	Average drinking capacity at a time (unstrained
W05C132	Drinking frequency per month (whisky or liquor)
W05C133	Average drinking capacity at a time (whisky or
W05C134	Drinking frequency per month (wine)
W05C135	Average drinking capacity at a time (wine)
W05C136	Experience that feel that will should quit drin
W05C137	Experience blamed about drinking habit
W05C138	Experience that get angry because of criticism
W05C139	Guilt experience about drinking
W05C140	Experience drinking in the morning
Wave 5 New:	
W05C122	Usually, whether or not drinking
W05C126	Drinking frequency per month (soju)
W05C127	Average drinking capacity at a time (soju)
W05C128	Drinking frequency per month (beer)
W05C129	Average drinking capacity at a time (beer)
W05C130	Drinking frequency per month (unstrained rice w
W05C131	Average drinking capacity at a time (unstrained
W05C132	Drinking frequency per month (whisky or liquor)
W05C133	Average drinking capacity at a time (whisky or
W05C134	Drinking frequency per month (wine)
W05C135	Average drinking capacity at a time (wine)
W05C136	Experience that feel that will should quit drin
W05C137	Experience blamed about drinking habit
W05C138	Experience that get angry because of criticism
W05C139	Guilt experience about drinking
W05C140	Experience drinking in the morning
Wave 6:	
W06C122	Usually, whether or not drinking
W06C126	Drinking frequency per month (soju)
W06C127	Average drinking capacity at a time (soju)
W06C128	Drinking frequency per month (beer)
W06C129	Average drinking capacity at a time (beer)
W06C130	Drinking frequency per month (unstrained rice w

W06C131	Average drinking capacity at a time (unstrained
W06C132	Drinking frequency per month (whisky or liquor)
W06C133	Average drinking capacity at a time (whisky or
W06C134	Drinking frequency per month (wine)
W06C135	Average drinking capacity at a time (wine)
W06C136	Experience that feel that will should quit drin
W06C137	Experience blamed about drinking habit
W06C138	Experience that get angry because of criticism
W06C139	Guilt experience about drinking
W06C140	Experience drinking in the morning

Wave 7:

W07C122	Usually, whether or not drinking
W07C126	Drinking frequency per month (soju)
W07C127	Average drinking capacity at a time (soju)
W07C128	Drinking frequency per month (beer)
W07C129	Average drinking capacity at a time (beer)
W07C130	Drinking frequency per month (unstrained rice w
W07C131	Average drinking capacity at a time (unstrained
W07C132	Drinking frequency per month (whisky or liquor)
W07C133	Average drinking capacity at a time (whisky or
W07C134	Drinking frequency per month (wine)
W07C135	Average drinking capacity at a time (wine)
W07C136	Experience that feel that will should quit drin
W07C137	Experience blamed about drinking habit
W07C138	Experience that get angry because of criticism
W07C139	Guilt experience about drinking
W07C140	Experience drinking in the morning

Wave 8:

W08C122	Usually, whether or not drinking
W08C126	Drinking frequency per month (soju)
W08C127	Average drinking capacity at a time (soju)
W08C128	Drinking frequency per month (beer)
W08C129	Average drinking capacity at a time (beer)
W08C130	Drinking frequency per month (unstrained rice w
W08C131	Average drinking capacity at a time (unstrained
W08C132	Drinking frequency per month (whisky or liquor)
W08C133	Average drinking capacity at a time (whisky or
W08C134	Drinking frequency per month (wine)
W08C135	Average drinking capacity at a time (wine)
W08C136	Experience that feel that will should quit drin
W08C137	Experience blamed about drinking habit
W08C138	Experience that get angry because of criticism
W08C139	Guilt experience about drinking
W08C140	Experience drinking in the morning

How Constructed:

RwSMOKEV is dichotomous for whether or not the respondent has ever smoked cigarettes. When the KLoSA asks this question, they ask specifically if the respondent has ever smoked more than 5 packs of cigarettes (or 100 individual) in their lifetime. RwsMOKEN indicates whether or not the respondent currently smokes. RwsMOKEN and RwsMOKEN are coded as 0 for no and 1 for yes. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwsMOKEN and RwsMOKEN are assigned blank missing (.) for respondents who did not participate in the current wave.

SwSMOKEV and SwSMOKEN give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwsMOKEV and RwsSMOKEN. In addition to the special missing codes employed by RwsMOKEV and RwsSMOKEN, SwSMOKEV and SwSMOKEN employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwsSMOKEF indicates how many cigarettes are smoked on average per day. This question is only asked if the respondent reports having ever smoked daily. If the respondent reports they have never smoked, RwsSMOKEF is assigned a value of 0. When respondents don't know, are missing, or refuse to answer, RwsSMOKEF is assigned special missing values .d, .m, or .r, respectively. RwsSMOKEF is set to plain missing (.) for respondents who did not respond to the current wave.

SwSMOKEF records how many cigarettes the respondent's spouse smokes on average per day and is taken directly from RwsSMOKEF. In addition to the special missing codes used in RwsSMOKEF, SwSMOKEF employs the special missing value .u, when the respondent does not report being coupled in the current wave, and the special missing value .v, when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSTRSMOK indicates the age at which the respondent started smoking. Respondents report the year in which they started smoking, so the respondent's birth year is subtracted from this value to obtain the age at which the respondent started smoking. If the calculated age started smoking takes a value of less than 1, then RwSTRSMOK is assigned special missing value .i. If the respondent reports multiple ages that they started smoking across waves, the value from the first wave is used. RwSTRSMOK is assigned special missing .n if the respondent reports never smoking. Don't know, refused, or other missing responses of RwSTRSMOK are assigned special missing codes .d, .r, and .m, respectively. RwSTRSMOK is set to plain missing (.) for respondents who did not participate in the current wave.

SwSTRSMOK indicates the age at which the respondent's current wave's spouse started smoking, and is taken from RwSTRSMOK. In addition to the special missing codes employed by RwSTRSMOK, SwSTRSMOK employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

If a respondent identified themselves as a smoker in a previous interview, but reports not smoking currently, they are asked when they stopped smoking. RwQUITSMOK indicates the age at which the respondent quit smoking. Respondents report the year in which they quit smoking, so the respondent's birth year is subtracted from this value to obtain the age at which the respondent quit smoking. RwQUITSMOK takes the most recent value reported. If the calculated age quit smoking takes a value of less than 1, then RwQUITSMOK is assigned special missing value .i. RwQUITSMOK is assigned special missing .n if the respondent reports never smoking. RwQUITSMOK is assigned special missing .c if the respondent reports currently smoking. Don't know, refused, or other missing responses of RwQUITSMOK are assigned special missing codes .d, .r, and .m, respectively. RwQUITSMOK is set to plain missing (.) for respondents who did not participate in the current wave.

SwQUITSMOK indicates the age at which the respondent's current wave's spouse quit smoking, and is taken from RwQUITSMOK. In addition to the special missing codes employed by RwQUITSMOK, SwQUITSMOK employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

In HRS, whether the respondent has ever smoked or not is determined by the following question "Have you ever smoked cigarettes?" However, in KLoSA, whether the respondent has ever smoked or not is determined by the following question "Have you ever smoked more than 5 packs of cigarettes (100 cigarettes)?"

KLoSA Variables Used:

Wave 1:

W01C116	Smoking experience more than 5 packs (100 cigar
W01C117	Currently, whether or not smoking
W01C119	Currently, smoking amount (unit : piece of spli

Wave 2:

W02C116	Smoking experience more than 5 packs (100 cigar
W02C117	Currently, whether or not smoking
W02C119	Currently, smoking amount (unit : piece of spli

Wave 3:

W03C116	Smoking experience more than 5 packs (100 cigar
W03C117	Currently, whether or not smoking
W03C119	Currently, smoking amount (unit : piece of spli

Wave 4:

W04C116	Smoking experience more than 5 packs (100 cigar
W04C117	Currently, whether or not smoking
W04C119	Currently, smoking amount (unit : piece of spli

Wave 5:

W05C116	Smoking experience more than 5 packs (100 cigar
W05C117	Currently, whether or not smoking
W05C119	Currently, smoking amount (unit : piece of spli

Wave 5 New:

W05C116	Smoking experience more than 5 packs (100 cigar
W05C117	Currently, whether or not smoking
W05C119	Currently, smoking amount (unit : piece of spli

Wave 6:

W06C116	Smoking experience more than 5 packs (100 cigar
W06C117	Currently, whether or not smoking
W06C118Y	Smoking beginning time (unit : Year)
W06C119	Currently, smoking amount (unit : piece of spli
W06C121Y	Time for stopping smoking (unit : Year)

Wave 7:

W07C116	Smoking experience more than 5 packs (100 cigar
W07C117	Currently, whether or not smoking
W07C118Y	Smoking beginning time (unit : Year)
W07C119	Currently, smoking amount (unit : piece of spli
W07C121Y	Time for stopping smoking (unit : Year)

Wave 8:

W08C116	Smoking experience more than 5 packs (100 cigar
W08C117	Currently, whether or not smoking
W08C118Y	Smoking beginning time (unit : Year)
W08C119	Currently, smoking amount (unit : piece of spli
W08C121Y	Time for stopping smoking (unit : Year)

Section C: Health Care Utilization and Insurance

Health Care Utilization: Hospitalizations

How Constructed:

RwHCFCL1Y indicates whether the respondent has been hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility in the last 12 months and is only available at Waves 1 and 5. Respondents who report not being hospitalized at any of the above facilities are coded as 0; respondents who have been hospitalized at any of the facilities at least once are coded as 1. RwHCFTIM1Y records the number of times that the respondent has been hospitalized at the hospital, nursing home, convalescent home or other long-term health care facility in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about hospitalizations since the last interview rather than in the past 12 months, so these respondents are assigned a special missing value .q in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes .r and .d, respectively, for both RwHCFCL1Y and RwHCFTIM1Y. Plain missing (.) codes are used in RwHCFCL1Y and RwHCFTIM1Y for respondents who did not respond to the current wave.

RwHCFNITE records the number of days that the respondent was hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility during the last such episode and is only available at Wave 1. RwHCFNITE is set to 0 for respondents who reported no hospitalization in the last year. Special missing codes .r and .d are used for RwHCFNITE for respondents who refuse to answer or do not know the number of days they stayed during their last hospitalization. Plain missing (.) codes are used in RwHCFNITE for respondents who did not respond to the current wave.

RwHCFNIT1Y records the number of days that the respondent was hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility in the previous year and is only available at Wave 5. RwHCFNIT1Y is set to 0 for respondents who reported no hospitalization in the past year. Previously interviewed respondents in Wave 5 were asked about the number of days hospitalized since the last interview and not in the past 12 months, so these respondents are assigned a special missing value .q, not asked. Special missing codes .r and .d are used for RwHCFNIT1Y for respondents who refuse to answer or do not know the number of days they stayed during their last hospitalization. Plain missing (.) codes are used in RwHCFNIT1Y for respondents who did not respond to the current wave.

SwHCFCL1Y, SwHCFTIM1Y, SwHCFNITE, and SwHCFNIT1Y give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwHCFCL1Y, RwHCFTIM1Y, RwHCFNITE, and RwHCFNIT1Y. In addition to the special missing codes used in RwHCFCL1Y, RwHCFTIM1Y, RwHCFNITE, and RwHCFNIT1Y, SwHCFCL1Y, SwHCFTIM1Y, SwHCFNITE, and SwHCFNIT1Y employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHCFCL2Y indicates whether the respondent has been hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility since the last interview (usually 2 years ago) and is available starting in Wave 2. Respondents who report not being hospitalized at any of the above facilities are coded as 0; respondents who have been hospitalized at any of the facilities at least once are coded as 1. RwHCFTIM2Y records the number of times that the respondent has been hospitalized at the hospital, nursing home, convalescent home or other long-term health care facility since the last interview (usually 2 years ago) and is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about hospitalizations during the previous year and not in the previous 2 years, so

these respondents are assigned a special missing value .q in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes .r and .d, respectively, for both RWHCFCL2Y and RWHCFTIM2Y. Plain missing (.) codes are used in RWHCFCL2Y and RWHCFTIM2Y for respondents who did not respond to the current wave.

RWHCFNIT2Y records the number of days the respondent was hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility since the last interview (usually 2 years ago) and is available starting in Wave 2. RWHCFNIT2Y is set to 0 for respondents who reported no hospitalization in the past 2 years. New respondents first interviewed in Wave 5 were asked the number of days any hospitalizations during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value .q in this wave. Special missing codes .r and .d are used for RWHCFNIT2Y for respondents who refuse to answer or do not know the number of days they stayed during their last hospitalization. Plain missing (.) codes are used in RWHCFNIT2Y for respondents who did not respond to the current wave.

SWHCFCL2Y, SWHCFNIT2Y, and SWHCFNIT2Y give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RWHCFCL2Y, RWHCFTIM2Y, and RWHCFNIT2Y. In addition to the special missing codes used in RWHCFCL2Y, RWHCFTIM2Y, and RWHCFNIT2Y, SWHCFCL2Y, SWHCFNIT2Y, and SWHCFNIT2Y employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, the question asks about hospitalizations at a hospital, nursing home, convalescent home or other long-term health care facility in the previous year. However, starting in Wave 2, KLoSA asks about hospitalizations at a hospital, nursing home, convalescent home or other long-term health care facility since the last interview (usually 2 years ago). As a result, RWHCFCL1Y, RWHCFTIM1Y, and RWHCFNIT1Y are only available in Wave 1 and for the new respondents in Wave 5. RWHCFCL2Y, RWHCFTIM2Y, and RWHCFNIT2Y are available starting in Wave 2.

Furthermore, in Wave 1, KLoSA asks about the days hospitalized during the last hospitalization, but starting in Wave 2, KLoSA asks returning respondents about the total days spent in hospitalization since the last interview. KLoSA asks the new respondents first interviewed in Wave 5 about the total days spent in hospitalization in the past year, so RWHCFNIT1Y is only available for the new respondents in Wave 5.

Differences with the RAND HRS/Harmonized HRS

HRS respondents are asked whether they have been a patient in a hospital overnight and if so, the number of times they were an overnight patient and the number of nights total they were a patient. Later in the HRS, respondents are also asked whether they have been a patient overnight in a nursing home, convalescent home, or other long-term health care facility and if so, the number of times they were a patient and the number of nights total they were a patient. Unlike HRS, KLoSA asks hospitalizations at a hospital, nursing home, convalescent home or other long-term health care facility in a single set of questions so it is not possible to distinguish between hospitalizations at hospitals and hospitalizations at nursing home, convalescent home, and long-term health care facilities. To construct an HRS measure which is comparable to these variables in the Harmonized KLoSA would require aggregating the RAND HRS variables about hospitals stays with the RAND HRS variables about nursing home stays.

KLoSA Variables Used:

Wave 1:	
W01C318	Frequency of hospitalization during the past 12
W01CC19	Days of hospitalization
Wave 2:	
W02C318	Frequency of hospitalization since the previous
W02C320_01	Days of 1st hospitalization (unit: a day)
W02C320_02	Days of 2nd hospitalization (unit: a day)
W02C320_03	Days of 3rd hospitalization (unit: a day)
W02C320_04	Days of 4th hospitalization (unit: a day)

W02C320_05	Days of 5th hospitalization (unit: a day)
W02C320_06	Days of 6th hospitalization (unit: a day)
W02C320_07	Days of 7th hospitalization (unit: a day)
W02C320_08	Days of 8th hospitalization (unit: a day)
W02C320_09	Days of 9th hospitalization (unit: a day)
W02C320_10	Days of 10th hospitalization (unit: a day)
W02C320_11	Days of 11th hospitalization (unit: a day)
W02C320_12	Days of 12th hospitalization (unit: a day)
Wave 3:	
W03C318	Frequency of hospitalization since the previous
W03C320_01	Days of 1st hospitalization (unit: a day)
W03C320_02	Days of 2nd hospitalization (unit: a day)
W03C320_03	Days of 3rd hospitalization (unit: a day)
W03C320_04	Days of 4th hospitalization (unit: a day)
W03C320_05	Days of 5th hospitalization (unit: a day)
W03C320_06	Days of 6th hospitalization (unit: a day)
Wave 4:	
W04C318	Frequency of hospitalization since the previous
W04C320_01	Days of 1st hospitalization (unit: a day)
W04C320_01	Days of 1st hospitalization (unit: a day)
W04C320_02	Days of 2nd hospitalization (unit: a day)
W04C320_03	Days of 3rd hospitalization (unit: a day)
W04C320_04	Days of 4th hospitalization (unit: a day)
W04C320_05	Days of 5th hospitalization (unit: a day)
W04C320_06	Days of 6th hospitalization (unit: a day)
Wave 5:	
W05C318	Frequency of hospitalization since the previous
W05C320_01	Days of 1st hospitalization (unit: a day)
W05C320_02	Days of 2nd hospitalization (unit: a day)
W05C320_03	Days of 3rd hospitalization (unit: a day)
W05C320_04	Days of 4th hospitalization (unit: a day)
W05C320_05	Days of 5th hospitalization (unit: a day)
W05C320_06	Days of 6th hospitalization (unit: a day)
W05C320_07	Days of 7th hospitalization (unit: a day)
W05C320_08	Days of 8th hospitalization (unit: a day)
W05C320_09	Days of 9th hospitalization (unit: a day)
W05C320_10	Days of 10th hospitalization (unit: a day)
Wave 5 New:	
W05C318	Frequency of hospitalization since the previous
W05C320_01	Days of 1st hospitalization (unit: a day)
W05C320_02	Days of 2nd hospitalization (unit: a day)

How Constructed:

RwDOCTOR1Y indicates whether the respondent has visited a public health clinic or seen or talked to a medical doctor in the past 12 months and is only available at Waves 1 and 5. RwDOCTOR1Y is derived by using two different sections of questions in KLoSA. KLoSA first asks, "Have you ever visited a public health clinic in the past 12 months?", and if so, asks "how many times did you go to a public health clinic?" KLoSA later asks "Aside from any visits to oriental medicine clinic, public health clinics, dental clinics and hospital stays, how many times have you seen or talked to a medical doctor about your health, including internal, ENT (ear-nose-and throat), surgery or hospital as an outpatient or to an emergency room in the past 12 months?", and if so, "how many times did you go there?" Respondents who have not visited a public health clinic nor have seen a doctor in the past 12 months are coded as 0; respondents who have visited a public health clinic or have seen a doctor in the past 12 months are coded as 1. RwDOCTIM1Y records the number of times that the respondent has visited a public health clinic or has seen a doctor in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about visiting public health clinics and seeing doctors since the last interview and not in the past 12 months, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwDOCTOR1Y and RwDOCTIM1Y are set to plain missing (.) for respondents who did not respond to the current wave.

RwDOCTOR indicates whether the respondent has visited a public health clinic or seen or talked to a medical doctor since the last interview (usually 2 years ago) and is available starting in Wave 2. RwDOCTOR is derived by using two different sections of questions in KLoSA. KLoSA first asks, "Have you ever visited a public health clinic since the previous interview?", and if so, asks "how many times did you go to a public health clinic?" KLoSA later asks "Aside from any visits to oriental medicine clinic, public health clinics, dental clinics and hospital stays, how many times have you seen or talked to a medical doctor about your health, including internal, ENT (ear-nose-and throat), surgery or hospital as an outpatient or to an emergency room since the previous interview?", and if so, "how many times did you go there?" Respondents who have not visited a public health clinic nor have seen a doctor since the last interview are coded as 0; respondents who have visited a public health clinic or have seen a doctor since the last interview are coded as 1. RwDOCTIM records the number of times that the respondent has visited a public health clinic or has seen a doctor since the last interview and is available starting in Wave 2. RwDOCTIM takes the sum of the number of visits to a public health clinic and doctor. New respondents first interviewed in Wave 5 were asked about visits to clinics and hospitals during the previous year and

not in the previous 2 years, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwDOCTOR and RwDOCTIM are set to plain missing (.) for respondents who did not respond to the current wave.

SwDOCTOR1Y, SwDOCTIM1Y, SwDOCTOR and SwDOCTIM give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwDOCTOR1Y, RwDOCTIM1Y, RwDOCTOR and RwDOCTIM. In addition to the special missing codes used in RwDOCTOR1Y, RwDOCTIM1Y, RwDOCTOR and RwDOCTIM, SwDOCTOR1Y, SwDOCTIM1Y, SwDOCTOR and SwDOCTIM employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, the question asks about visiting a public health clinic or seeing a medical doctor in the previous year. However, starting in Wave 2, KLoSA asks about visiting a public health clinic or seeing a medical doctor since the last interview (usually 2 years ago). As a result, RwDOCTOR1Y and RwDOCTIM1Y are only available in Wave 1 and for the new respondents in Wave 5. RwDOCTOR and RwDOCTIM are available starting in Wave 2.

Differences with the RAND HRS/Harmonized HRS

HRS respondents are asked how many times they have seen or talked to a medical doctor about their health, including emergency room, clinic visits, or house calls and excluding any hospital stays or outpatient surgery. Differently, KLoSA respondents are first asked whether they have ever visited a public health clinic and if so, how many times. Slightly later in the survey, KLoSA respondents are asked how many times they have seen or talked to a medical doctor about their health, including internal, ENT (ear-nose-and throat), surgery or hospital as an outpatient or to an emergency room and excluding visits to oriental medicine clinic, public health clinics, dental clinics and hospital stays. Due to these differences RwDOCTOR and RwDOCTIM in the RAND HRS are not exactly comparable to RwDOCTOR and RwDOCTIM in the Harmonized KLoSA. Specifically, RwDOCTOR and RwDOCTIM in the Harmonized KLoSA would include outpatient surgeries and outpatient hospitalizations which are not visits to the emergency room but these are excluded in RwDOCTOR and RwDOCTIM in the RAND HRS. Also different, KLoSA asks about visiting public health clinics while the HRS asks about seeing or talking to a medical doctor during a clinic visit.

KLoSA Variables Used:

Wave 1:	
W01C333	In the last one year, the number of visit to pu
W01C337	In the last one year, the number of other outpa

How Constructed:

RwTRDMED1Y indicates whether the respondent has visited an oriental medicine clinic in the last 12 months and is only available at Waves 1 and 5. Respondents who report not having visited an oriental medicine clinic in the last 12 months are coded as 0; respondents who report having visited an oriental medicine clinic at least once in the last 12 months are coded as 1. RwTRDMEDTIM1Y records the number of times that the respondent has visited an oriental medicine clinic in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about visits since the last interview rather than in the past 12 months, so these respondents are assigned a special missing value .q in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes .r and .d, respectively, for both RwTRDMED1Y and RwTRDMEDTIM1Y. Plain missing (.) codes are used in RwTRDMED1Y and RwTRDMEDTIM1Y for respondents who did not respond to the current wave.

SwTRDMED1Y and SwTRDMEDTIM1Y give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwTRDMED1Y and RwTRDMEDTIM1Y. In addition to the special missing codes used in RwTRDMED1Y and RwTRDMEDTIM1Y, SwTRDMED1Y and SwTRDMEDTIM1Y employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwTRDMED2Y indicates whether the respondent has visited an oriental medicine clinic since the last interview (usually 2 years ago) and is available starting in Wave 2. Respondents who report not having visited an oriental medicine clinic since the last interview are coded as 0; respondents who report having visited an oriental medicine clinic at least once since the last interview are coded as 1. RwTRDMEDTIM2Y records the number of times that the respondent has visited an oriental medicine clinic since the last interview and is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about whether they had visited an oriental medicine clinic during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value .q in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes .r and .d, respectively, for both RwTRDMED2Y and RwTRDMEDTIM2Y. Plain missing (.) codes are used in RwTRDMED2Y and RwTRDMEDTIM2Y for respondents who did not respond to the current wave.

SwTRDMED2Y and SwTRDMDTIM2Y give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwTRDMED2Y and RwTRDMDTIM2Y. In addition to the special missing codes used in RwTRDMED2Y and RwTRDMDTIM2Y, SwTRDMED2Y and SwTRDMDTIM2Y employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, the question asks about visiting an oriental medicine clinic in the previous year. However, starting in Wave 2, KLoSA asks about visiting an oriental medicine clinic since the last interview (usually 2 years ago). As a result, RwTRDMED1Y and RwTRDMDTIM1Y are only available in Wave 1 and for the new respondents in Wave 5. RwTRDMED2Y and RwTRDMDTIM2Y are available starting in Wave 2.

Differences with the RAND HRS/Harmonized HRS

Visits to a traditional medicine facility are not surveyed in HRS so there is no corresponding variable in RAND HRS or Harmonized HRS.

KLoSA Variables Used:

Wave 1:	
W01C334	In the last one year, the number of visit to or
Wave 2:	
W02C334	Since the previous interview, the number of vis
Wave 3:	
W03C334	Since the previous interview, the number of vis
Wave 4:	
W04C334	Since the previous interview, the number of vis
Wave 5:	
W05C334	Since the previous interview, the number of vis
Wave 5 New:	
W05C334	In the last one year, the number of visit to or
Wave 6:	
W06C334	Since the previous interview, the number of vis
Wave 7:	
W07C334	Since the previous interview, the number of vis
Wave 8:	
W08C334	Since the previous interview, the number of vis

How Constructed:

RwHOMCAR1Y indicates whether the respondent received any in-home health care in the last 12 months and is only available at Waves 1 and 5. KLoSA respondents are asked "Has any medically-trained person come to your home to help you, yourself in the past 12 months?" and if so, "How many times did they visit you?" The interviewer is instructed that medically-trained person refers to nurses, nurse assistants, physical therapists, chemical therapists and oxygen therapists, who are professionally trained for medical treatment purposes and does not include caregivers who just take care of patients. Respondents who report not receiving any in-home health care in the last 12 months are coded as 0; respondents who report having received in-home health care at least once in the last 12 months are coded as 1. Rwhctim1y records the number of times that the respondent has received in-home health care in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about in-home health care since the last interview rather than in the past 12 months, so these respondents are assigned a special missing value .q in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes .r and .d, respectively, for both Rwhomcar1y and Rwhctim1y. Plain missing (.) codes are used in Rwhomcar1y and Rwhctim1y for respondents who did not respond to the current wave.

SwHOMCAR1Y and SwHCTIM1Y give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to Rwhomcar1y and Rwhctim1y. In addition to the special missing codes used in Rwhomcar1y and Rwhctim1y, SwHOMCAR1Y and SwHCTIM1Y employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHOMCAR indicates whether the respondent received any in-home health care since the last interview (usually 2 years ago) and is available starting in Wave 2. KLoSA respondents are asked "Has any medically-trained person come to your home to help you, yourself since the previous interview?" and if so, "How many times did they visit you?" The interviewer is instructed that medically-trained person refers to nurses, nurse assistants, physical therapists, chemical therapists and oxygen therapists, who are professionally trained for medical treatment purposes and does not include caregivers who just take care of patients. Respondents who report not receiving any in-home health care since the last interview are coded as 0; respondents who report having received in-home health care at least once since the last interview are coded as 1. Rwhctim records the number of times that the respondent has received in-home health care since the last interview (usually 2 years ago) and is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about in-home health care during the previous year and

not in the previous 2 years, so these respondents are assigned a special missing value .q in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes .r and .d, respectively, for both RwhOMCAR and RwhCTIM. Plain missing (.) codes are used in RwhOMCAR and RwhCTIM for respondents who did not respond to the current wave.

SwHOMCAR and SwHCTIM give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwhOMCAR and RwhCTIM. In addition to the special missing codes used in RwhOMCAR and RwhCTIM, SwHOMCAR and SwHCTIM employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, the question asks in-home health care received in the previous year. However, starting in Wave 2, KLoSA asks about in-home health care received since the last interview (usually 2 years ago). As a result, RwhOMCAR1Y and RwhCTIM1Y are only available in Wave 1 and for the new respondents in Wave 5. RwhOMCAR and RwhCTIM are available starting in Wave 2.

Differences with the RAND HRS/Harmonized HRS

Both HRS and KLoSA ask the respondent whether they have received home health care since the last interview. Unlike HRS, KLoSA also asks the number of home health care visits.

KLoSA Variables Used:

Wave 1:	
W01C340	In the last one year, the number of visit for i
Wave 2:

How Constructed:

RwDENTST1Y indicates whether or not the respondent has received dental care (including denture care) in the last 12 months and is only available at Waves 1 and 5. Respondents who report not having received dental care in the past 12 months are coded as 0; respondents who have received dental care at least once in the past 12 months are coded as 1. RwDENTIM1Y indicates how many times the respondent received dental care in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about receiving dental care since the last interview and not in the past 12 months, so these respondents are assigned a special missing value .q in this wave. Those respondents who indicate they do not know or refuse to answer are coded .d and .r, respectively. RwDENTST1Y and RwDENTIM1Y are set to plain missing (.) for respondents who did not respond to the current wave.

RwDENTST indicates whether or not the respondent has received dental care (including denture care) since the last interview (usually 2 years ago) and is available starting in Wave 2. Respondents who report not having received dental care since the last interview are coded as 0; respondents who have received dental care at least once since the last interview are coded as 1. RwDENTIM indicates how many times the respondent has received dental care since the last interview. New respondents first interviewed in Wave 5 were asked about receiving dental care during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value .q in this wave. Those respondents who indicate they do not know or refuse to answer are coded .d and .r, respectively. RwDENTST and RwDENTIM are set to plain missing (.) for respondents who did not respond to the current wave.

SwDENTST1Y, SwDENTIM1Y, SwDENTST, and SwDENTIM provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwDENTST1Y, RwDENTIM1Y, RwDENTST, and RwDENTIM. In addition to the special missing codes used in RwDENTST1Y, RwDENTIM1Y, RwDENTST, and RwDENTIM, SwDENTST1Y, SwDENTIM1Y, SwDENTST, and SwDENTIM employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwDRUGS1Y indicates whether the respondent has regularly taken prescription medication in the last 12 months and is only available at Waves 1 and 5. Respondents who report not regularly taking prescription medication are coded as 0; respondents who have regularly taken prescription medication are coded as 1. Previously interviewed respondents in Wave 5 were asked about taking prescription medication since the last interview and not in the past 12 months, so these respondents are assigned a special missing value .q in this wave. Respondents who do not know or refuse to answer the question are coded as .d and .r, respectively. RwDRUGS1Y is set to plain missing (.) for respondents who did not respond to the current wave.

RwDRUGS indicates whether the respondent has regularly taken prescription medication since the last interview (usually 2 years ago) and is available starting in Wave 2. Respondents who report not regularly taking a prescription medication are coded as 0; respondents who have regularly taken a prescription medication are coded as 1. New respondents first interviewed in Wave 5 were asked about taking prescription medication during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value .q in this wave. Respondents who do not know or refuse to answer the question are coded as .d and .r, respectively. RwDRUGS is set to plain missing (.) for respondents who did not respond to the current wave.

SwDRUGS1Y and SwDRUGS provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwDRUGS1Y and RwDRUGS. In addition to the special missing values used in RwDRUGS1Y and RwDRUGS, SwDRUGS1Y and SwDRUGS employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, KLoSA asks about dental care and taking prescription medicine in the previous year. However, starting in Wave 2, KLoSA asks about dental care and taking prescription medicine since the last interview (usually 2 years ago). As a result, RwDENTST1Y, RwDENTIM1Y, and RwDRUGS1Y are only available in Wave 1 and for the new respondents in Wave 5. RwDENTST, RwDENTIM and RwDRUGS are available starting in Wave 2.

Differences with the RAND HRS/Harmonized HRS

Both HRS and KLoSA ask the respondent whether they have visited a dentist since the last interview. Unlike HRS, KLoSA also asks for the number of dentist visits.

KLoSA Variables Used:

Wave 1:

W01C330

In the last one year, the number of dental trea

W01C343	In the last one year, whether or not take regul
Wave 2:	
W02C330	Since the previous interview, the number of den
W02C343	Since previous interview, whether or not take r
Wave 3:	
W03C330	Since the previous interview, the number of den
W03C343	Since previous interview, whether or not take r
Wave 4:	
W04C330	Since the previous interview, the number of den
W04C343	Since previous interview, whether or not take r
Wave 5:	
W05C330	Since the previous interview, the number of den
W05C343	Since previous interview, whether or not take r
Wave 5 New:	
W05C330	In the last one year, the number of dental trea
W05C343	In the last one year, whether or not take regul
Wave 6:	
W06C330	Since the previous interview, the number of den
W06C343	Since previous interview, whether or not take r
Wave 7:	
W07C330	Since the previous interview, the number of den
W07C343	Since previous interview, whether or not take r
Wave 8:	
W08C330	Since the previous interview, the number of den
W08C343	Since previous interview, whether or not take r

How Constructed:

RwOOPHOS1Y is the sum of out of pocket expenditures for hospitalization (medical treatment) and hospital caregiver services costs in the previous year. If the respondent was not hospitalized in the previous year, RwOOPHOS1Y is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RwOOPHOS1Y is assigned plain missing (.) if the respondent did not participate in the current wave.

RwOOPHOS is the sum of out of pocket expenditures for hospitalization (medical treatment) and hospital caregiver services costs since the last interview. If the respondent was not hospitalized since the last interview, RwOOPHOS is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RwOOPHOS is assigned plain missing (.) if the respondent did not participate in the current wave.

RwOOPDEN1Y is out of pocket expenditures for dental care costs in the previous year. If the respondent did not receive any dental care in the previous year, RwOOPDEN1Y is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RwOOPDEN1Y is assigned plain missing (.) if the respondent did not participate in the current wave.

RwOOPDEN is out of pocket expenditures for dental care costs since the last interview. If the respondent did not receive any dental care since the last interview, RwOOPDEN is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RwOOPDEN is assigned plain missing (.) if the respondent did not participate in the current wave.

RwOOPTRDMD1Y is out of pocket expenditures for oriental clinic costs in the previous year. If the respondent did not receive any care at an oriental clinic in the previous year, RwOOPTRDMD1Y is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m,

respectively. RWOOPTRDMD1Y is assigned plain missing (.) if the respondent did not participate in the current wave.

RWOOPTRDMD is out of pocket expenditures for oriental clinic costs since the last interview. If the respondent did not receive any care at an oriental clinic since the last interview, RWOOPTRDMD is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RWOOPTRDMD is assigned plain missing (.) if the respondent did not participate in the current wave.

RWOOPDOC1Y is out of pocket expenditures for visits to the doctor and ER in the previous year. If the respondent did not have any visits to the doctor and ER in the previous year, RWOOPDOC1Y is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RWOOPDOC1Y is assigned plain missing (.) if the respondent did not participate in the current wave.

RWOOPDOC is out of pocket expenditures for visits to the doctor and ER since the last interview. If the respondent did not have any visits to the doctor and ER since the last interview, RWOOPDOC is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RWOOPDOC is assigned plain missing (.) if the respondent did not participate in the current wave.

RWOOPHMC1Y is out of pocket expenditures for in-home care in the previous year. If the respondent did not receive any in-home care in the previous year, RWOOPHMC1Y is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RWOOPHMC1Y is assigned plain missing (.) if the respondent did not participate in the current wave.

RWOOPHMCR is out of pocket expenditures for in-home care since the last interview. If the respondent did not receive any in-home care since the last interview, RWOOPHMCR is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RWOOPHMCR is assigned plain missing (.) if the respondent did not participate in the current wave.

RWOOPDRUG1Y is out of pocket expenditures for prescription drugs costs in the previous year. If the respondent did not take any prescription drugs in the previous year, RWOOPDRUG1Y is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RWOOPDRUG1Y is assigned plain missing (.) if the respondent did not participate in the current wave.

RWOOPDRUG is out of pocket expenditures for prescription drugs costs since the last interview. If the respondent did not take any prescription drugs since the last interview, RWOOPDRUG is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values .d, .r, .m, respectively. RWOOPDRUG is assigned plain missing (.) if the respondent did not participate in the current wave.

SWOOPHOS, SWOOPDEN, SWOOPTRDMD, SWOOPDOC, SWOOPHMCr, SWOOPDRUG, SWOOPHOS1Y, SWOOPDEN1Y, SWOOPTRDMD1Y, SWOOPDOC1Y, SWOOPHMCr1Y, and SWOOPDRUG1Y provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RWOOPHOS, RWOOPDEN, RWOOPTRDMD, RWOOPDOC, RWOOPHMCr, RWOOPDRUG, RWOOPHOS1Y, RWOOPDEN1Y, RWOOPTRDMD1Y, RWOOPDOC1Y, RWOOPHMCr1Y, and RWOOPDRUG1Y. In addition to the special missing codes used in the respondents' variables, SWOOPHOS, SWOOPDEN, SWOOPTRDMD, SWOOPDOC, SWOOPHMCr, SWOOPDRUG, SWOOPHOS1Y, SWOOPDEN1Y, SWOOPTRDMD1Y, SWOOPDOC1Y, SWOOPHMCr1Y, and SWOOPDRUG1Y employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RWOOPMD1Y is the sum of out of pocket expenditures for hospitalization (medical treatment), hospital caregiver services, dentists, oriental clinics, visits to the doctor and ER, in-home care, and prescription drugs costs in the previous year. If the respondent did not receive any of these services in the previous year, RWOOPMD1Y is assigned a 0 value. This is available only in Waves 1 and 5. RWOOPMD1Y does not count expenditures on medical devices or monthly premiums paid for the National Health Insurance or Medical Aid program. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditure are assigned special missing values .d, .r, .m, respectively. RWOOPMD1Y is set to plain missing (.) for respondents who did not respond to the current wave.s

RWOOPMD is the sum of out of pocket expenditures for hospitalization (medical treatment), hospital caregiver services, dentists, oriental clinics, visits to the doctor and ER, in-home care, and prescription drug costs since the last interview. If the respondent did not receive any of these services since the last interview, RWOOPMD is assigned a 0 value. This is available starting in Wave 2. RWOOPMD does not count expenditures on medical devices or monthly premiums paid for the National Health Insurance or Medical Aid program. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value .q in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditure are assigned special missing values .d, .r, .m, respectively. RWOOPMD is set to plain missing (.) for respondents who did not respond to the current wave.

SWOOPMD1Y and SWOOPMD provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RWOOPMD1Y and RWOOPMD. In addition to the special missing codes used in RWOOPMD1Y and RWOOPMD1Y, SWOOPMD1Y and SWOOPMD employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, KLoSA only asked about the amount of out of pocket hospital and hospital caretaker expenses for the last hospitalization episode. However, starting in Wave 2, KLoSA asked about the expenses for all visits since the last interview. KLoSA asks the new respondents first interviewed in Wave 5 about the expenses for all visits in the past year. Due to the difference in the questions, RWOOPHOS is available starting in Wave 2, and RWOOPHOS1Y is available in Wave 1 and for new respondents in Wave 5. Because over 97% of respondents in Wave 1 had no or 1 hospitalizations, we equate the expense for the last hospitalization to the expense for the last year, but it will be an underestimate for the small percentage with more than one hospitalization.

Generally, respondents are asked about the use of and expenses related to healthcare services in the last year in Wave 1, and in the last two years starting in Wave 2. In Wave 5, new respondents are also asked in terms of the last year. The harmonized variables are built accordingly.

Differences with the RAND HRS/Harmonized HRS

Medical expenditures in KLoSA are measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Furthermore, the components included in the RAND HRS are slightly different from those included in Harmonized KLoSA. In the RAND HRS variable, RWOOPMD includes: (1) hospital costs, (2) nursing home costs,

(3) doctor visits costs, (4) dentist costs, (5) outpatient surgery costs, (6) average monthly prescription drug costs, (7) home health care, and (8) special facilities cost. Whereas the variable RwoOPMD in the Harmonized KLoSA includes: (1) hospitalization cost, (2) hospital care taker cost, (3) dental cost, (4) oriental clinic cost, (5) doctor visit cost, including ER, (6) home health care cost, and (7) prescription medication cost.

KLoSA Variables Used:

Wave 1:

W01332A	
W01C318	Frequency of hospitalization during the past 12
W01C330	In the last one year, the number of dental trea

How Constructed:

Healthcare is socialized in South Korea; as such citizens are enrolled in the National Health Insurance (NHI) plan. Persons that cannot afford the NHI plan are afforded Medical Aid; Medical Aid eliminates the

premium for NHI. However, those covered by Medical Aid often still pay co-pays at doctor offices. Additionally, South Koreans can also enroll in private insurance.

RwPRMM is the total amount of monthly insurance premiums the respondent reports paying. RwPRMM is the sum of the monthly insurance premiums paid into the National Health Insurance System and monthly insurance premiums paid for any private health insurances. KLoSA asks respondents who are currently paying their NHI premiums and allows respondents to report that either themselves or their spouse, son/daughter, son/daughter-in-law, or other relatives are currently paying these premiums. RwPRMM includes the amount paid either by the respondent or their spouse. Respondents who are covered by the Medical Aid Program (who do not have to pay NHI premiums) and are not covered under any private health insurance are assigned a 0 value for RwPRMM. Respondents who have their NHI premiums paid by someone other than their spouse are also assigned a 0, unless they pay for private insurance, in which case RwPRMM is assigned the private insurance amount. Don't know, refused, or missing responses to either insurance premium paid are assigned special missing values .d, .r, .m, respectively. RwPRMM is set to plain missing (.) for respondents who did not respond to the current wave.

RwPRMMF is a flag variable which indicates who paid for the respondent's National Health Insurance System premiums. A code of 1 indicates that the respondent paid for their own premiums. A code of 2 indicates that the respondent's spouse paid for the respondent's premium. A code of 3 indicates that other people (not the respondent or their spouse) paid for the respondent's premium. The amount paid by other people is available in the raw data, but not in the Harmonized KLoSA dataset. Respondents covered by Medical Aid are coded as special missing value .n. Don't know, refused, or missing responses to who paid the respondent's NHI premiums are assigned special missing values .d, .r, .m, respectively. RwPRMMF is set to plain missing (.) for respondents who did not respond to the current wave.

SwPRMM and SwPRMMF provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwPRMM and RwPRMMF. In addition to the special missing codes used in RwPRMM and RwPRMMF, SwPRMM and SwPRMMF employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Medical expenditures in KLoSA are measured in Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The RAND HRS provides the monthly insurance premium for Medicare and Medicaid in RwMRPREM, for Medicare Part D in RwRXPREM, and for private health insurance in RwPRPRM1, RwPRPRM2, and RwPRPRM3. Whereas the total monthly insurance premium for public or private health insurance is provided in RwPRMM in the Harmonized KLoSA.

How Constructed:

Healthcare is socialized in South Korea; as such citizens are enrolled in the National Health Insurance (NHI) plan. Persons that cannot afford the NHI plan are afforded Medical Aid; Medical Aid eliminates the premium for NHI.

RwHIGOV_T_K indicates the type of government health insurance program the respondent is covered by. A code of 1 indicates that the respondent is covered by the National Health Insurance System. A code of 2 indicates that the respondent is covered by the Medical Aid System. Don't know and refused responses are assigned special missing values .d and .r, respectively. RwHIGOV_T_K is set to plain missing (.) for respondents who did not respond to the current wave.

SwHIGOV_T_K provides the information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to RwHIGOV_T_K. In addition to the special missing codes used in RwHIGOV_T_K, SwHIGOV_T_K employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

In the RAND HRS, RwHIGOV indicates whether the respondent is covered under any one of several different types of government insurance programs. As healthcare is socialized in South Korea, RwHIGOV_T_K indicates which government plan the respondent is covered under.

How Constructed:

RwHIPRIV indicates whether the respondent is covered by any private health insurance to compensate for hospital expenses. Respondents who indicate that they are not covered by a private health insurance program are coded as 0; respondents who indicate that they are covered by a private health insurance program are coded as 1. Don’t know and refused responses are assigned special missing values .d and .r, respectively. RwHIPRIV is set to plain missing (.) for respondents who did not respond to the current wave.

SwHIPRIV gives this information for the respondent's spouse or partner and is taken directly from RwHIPRIV. In addition to the special missing codes used in RwHIPRIV, SwHIPRIV employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

The RAND HRS includes the number of private insurance plans in RwPRPCNT, whereas the Harmonized KLoSA includes a binary indicator of whether the respondent has any private insurance plans in RwHIPRIV.

S8HENUM	4216	0.82	1.24	0.00	22.00

How Constructed:

RwHENUM indicates the number of private health insurance plans that the respondent has. Respondents who indicate that they are not covered by a private health insurance program are coded as 0. Don't know, refused, and otherwise missing responses are assigned special missing values .d, .r, and .m, respectively. RwHENUM is set to plain missing (.) for respondents who did not respond to the current wave.

SwHENUM gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to RwHENUM. In addition to the special missing values in RwHENUM, SwHENUM employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

The RAND HRS includes RwPRPCNT, the number of all private health insurance plans, and RWHENUM, which is the count of employer-provided health insurance plans in Waves 1 through 5 and the number of all private health insurance plans in Wave 6 and forward. RWHENUM is the number of all private health insurance plans in the Harmonized KLoSA.

How Constructed:

In Korea, long-term care insurance is a social insurance system that provides long term care benefits for movement support or household activities support to the elderly who can not hold a regular living due to old age or geriatric disease, thus improving old age health and stable living, decreasing the burden on family and making quality of life higher. Individuals must apply for long-term care benefits, undergo an examination by the National Health Insurance, are assigned a rating based on the level of nursing care needed, and must be approved before they can access the care.

RwHILTCA_K indicates whether the respondent has applied for long-term care insurance. RwHILTCA_K is assigned a value of 0 if the respondent is not aware of the long-term care insurance or if they have not applied for the long-term care insurance, and is assigned a value of 1 if the respondent has applied for the long-term care insurance. Don't know and refused responses are assigned special missing values .d and .r, respectively. RwHILTCA_K is set to plain missing (.) for respondents who did not respond to the current wave.

RwHILTC_K indicates whether the respondent is currently using long-term care insurance. RwHILTC_K is assigned a value of 0 if the respondent is not aware of the long-term care insurance, has not applied for the long-term care insurance, or is not currently using the long-term care insurance, and is assigned a value of 1 if the respondent has applied for and is using long-term care insurance. Don't know and refused responses are assigned special missing values .d and .r, respectively. RwHILTCA_K is set to plain missing (.) for respondents who did not respond to the current wave.

SwHILTCA_K and SwHILTC_K indicate whether the respondent's current wave's spouse has applied for or is using long-term care insurance, and their values are taken from RwHILTCA_K and RwHILTC_K. In addition to the special missing values in RwHILTCA_K and RwHILTC_K, SwHILTCA_K and SwHILTC_K employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Respondents start being asked about long-term care insurance in Korea starting in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS asks whether the respondent has long-term care insurance which specifically covers nursing home care for a year or more or any part of personal or medical care in the respondent's home. This information is made available in RwHILTC in the RAND HRS. KLoSA asks whether the respondent is aware of the long-term care insurance system in Korea, whether they have applied for it, and whether they are currently using it. The long-term care insurance system in Korea is not at all like the insurance coverage in the United States. As such, RwHILTCA_K and RwHILTC_K in the Harmonized KLoSA should not be directly compared to RwHILTC in the RAND HRS.

S6IMRC3	4679	2.67	0.67	0.00	3.00
S7IMRC3	4305	2.58	0.75	0.00	3.00

How Constructed:

KLoSA included a three word recall list which was read to the respondent and then the respondent was asked to recall them immediately and then again, later in the survey. Respondents were randomly assigned to one of five non-overlapping lists and the interviewer read the three words from the randomly assigned word list.

RwIMRC3 is the cognition measure for immediate word recall. RwIMRC3 counts how many words the respondent can recall correctly from a three-word list. Don't know, refused, or other missing responses of RwIMRC3 are assigned special missing codes .d, .r, .m respectively. RwIMRC3 is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwIMRC3 is set to plain missing (.) for respondents who did not respond to the current wave.

SwIMRC3 is the current wave's spouse's immediate word recall score. It is taken directly from the spouse's values to RwIMRC3. In addition to the special missing codes used in RwIMRC3, SwIMRC3 employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, KLoSA only has three words in a word list. HRS has ten words in a word list. The words in the word list in KLoSA are different from those in HRS. Furthermore, if a KLoSA respondent is unable to recall any words or can recall only a few words, the interviewer would repeat the words up to 5 times, including the first try, until the respondent can recall all of them.

How Constructed:

RwDLRC3 is the cognition measure for delayed word recall. RwDLRC3 counts how many words the respondent can recall correctly from a three-word list after a delay spent answering other survey questions. Respondents were randomly assigned to one of five non-overlapping lists. Don't know, refused, or other missing responses of RwDLRC3 are assigned special missing codes .d, .r, .m respectively. RwDLRC3 is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwDLRC3 is set to plain missing (.) for respondents who did not respond to the current wave.

SwDLRC3 is the current wave's spouse's delayed word recall score. It is taken directly from the spouse's values to RwDLRC3. In addition to the special missing codes used in RwDLRC3, SwDLRC3 employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. S7TR6	4305	4.63	1.54	0.00	6.00

How Constructed:

RwTR6 is the summary score for total word recall. RwTR6 sums the immediate and delayed word recall scores. It is calculated as RwIMRC3 (range 0-3) + RwDLRC3 (range 0-3). RwTR6 is only calculated as long as both components have values. Don't know, refused, or other missing responses of RwTR6 are assigned special missing codes .d, .r, .m respectively. RwTR6 is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwTR6 is set to plain missing (.) for respondents who did not respond to the current wave.

SwTR6 is the current wave's spouse's total word recall score. It is taken directly from the spouse's value to RwTR6. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

Differences with the RAND HRS/Harmonized HRS

Unlike the HRS, KLoSA only has three words in its word list. As a result, the highest total recall summary score is six in the Harmonized KLoSA. The highest total recall summary score in the HRS would be twenty.

KLoSA Variables Used:

Wave 1 Imputations:

How Constructed:

RwSER7 provides the number of correct subtractions in the serial 7's test. This test asks the individual to subtract 7 from the prior number, beginning with 100 for five trials. Correct subtractions are based on the prior number given, so that even if one subtraction is incorrect subsequent trials are evaluated on the given (perhaps wrong) answer. Respondents score 1 point for every correct answer. Valid scores are 0-5. Don't know, refused, or other missing values for RwSER7 are assigned special missing codes .d, .r, .m, respectively. RwSER7 is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwSER7 is set to plain missing (.) for respondents who did not respond to the current wave.

SwSER7 provides the respondent's current wave's spouse's serial 7's score, and its values are taken from RwSER7. In addition to the special missing codes used in RwSER7, SwSER7 employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the

current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

Differences with the RAND HRS/Harmonized HRS

No differences known.

How Constructed:

RwDAT indicates whether the respondent was able to report today's date correctly. RwDAT indicates whether the respondent was able to correctly report the combination of month, day and year. A code of 0 indicates that the respondent incorrectly reported all three components of month, date, and year. A code of 1 indicates that the respondent correctly reported one component of month, date, and year, and incorrectly reported the other two components. A code of 2 indicates that the respondent correctly reported two components of month, date, and year, and incorrectly reported one other component. A code of 3 indicates that the respondent correctly reported all three components of month, date, and year. Don't know, refused, or other missing responses of RwDAT are assigned special missing codes .d, .r, .m respectively. RwDAT is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwDAT is set to plain missing (.) for respondents who did not respond to the current wave.

RwDW indicates whether the respondent was able to correctly report the day of the week. A code of 1 indicates that the respondent gave a correct answer, a code of 0 indicates an incorrect answer. Don't know, refused, or other missing responses of RwDW are assigned special missing codes .d, .r, .m respectively. RwDW is set to special missing .p if the cognition question was skipped because the interview was by proxy. RwDW is set to plain missing (.) for respondents who did not respond to the current wave.

SwDAT and SwDW indicate whether the current wave's spouse was able to correctly report the day of month, date, and year, and the day of the week, respectively. They are taken directly from the spouse's values to RwDAT and RwDW, respectively. In addition to the special missing codes used in RwDAT and RwDW, SwDAT and SwDW employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwORIENT indicates the respondent's orientation to month, date, year and day of the week. It is the summary measure for RwDAT and RwDW, ranging from 0 to 4, the higher score the better oriented, and is calculated as long as both responses have values. Don't know, refused, or other missing responses of RwORIENT are assigned special missing codes .d, .r, .m respectively. RwORIENT is set to special missing .p if the cognition question was skipped because the interview was by proxy. RwORIENT is set to plain missing (.) for respondents who did not respond to the current wave.

SwORIENT is the current wave's spouse's date orientation score. It is taken directly from the spouse's value to RwORIENT. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwSSN indicates whether the respondent was able to correctly report the current season (spring, summer, fall, or winter). A code of 0 indicates that the respondent was not able to correctly report the current season, and a code of 1 indicates that the respondent was able to correctly report the current season. Don't know, refused, or other missing responses of RwSSN are assigned special missing codes .d, .r, .m respectively. RwSSN is set to special missing .p if the cognition question was skipped because the interview was by proxy. RwSSN is set to plain missing (.) for respondents who did not respond to the current wave.

SwSSN indicates whether the current wave's spouse was able to correctly report the current season. It is taken directly from the spouse's values to RwSSN. In addition to the special missing codes used in RwSSN, SwSSN employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

Differences with the RAND HRS/Harmonized HRS

In HRS, date naming is separated into three questions, one for each: month, day and year. On the other hand, in KLoSA, month, day and year are combined into a single question.

The HRS does not ask respondents to name the current season.

KLoSA Variables Used:

Wave 1 Imputations:

W01C401	Cognition ability regarding time (date - year/m
W01C402	Cognition ability regarding time (a day of week
W01C403	Cognition ability regarding time (a season)
W01CD51	Response by proxy is prohibited for Cd.cognitio

Wave 2 Imputations:

W02C346	Since previous interview, whether or not purcha
W02C401	Cognition ability regarding time (date - year/m
W02C402	Cognition ability regarding time (a day of week
W02C403	Cognition ability regarding time (a season)
W02D001	Currently work

Wave 3 Imputations:

W03C346	Since previous interview, whether or not purcha
W03C401	Cognition ability regarding time (date - year/m
W03C402	Cognition ability regarding time (a day of week
W03C403	Cognition ability regarding time (a season)
W03D001	Currently work

Wave 4 Imputations:

W04C346	Since previous interview, whether or not purcha
W04C401	Cognition ability regarding time (date - year/m
W04C402	Cognition ability regarding time (a day)
W04C403	Cognition ability regarding time (an account)
W04D001	Currently work
Wave 5 Imputations:	
W05C346	Since previous interview, whether or not purcha
W05C401	Cognition ability regarding time (date - year/m
W05C402	Cognition ability regarding time (a day)
W05C403	Cognition ability regarding time (an account)
W05D001	Currently work
Wave 5 New Imputations:	
W05C346	In the last one year, whether or not purchase o
W05C401	Cognition ability regarding time (date - year/m
W05C402	Cognition ability regarding time (a day of week
W05C403	Cognition ability regarding time (an account)
W05D001	Currently work
Wave 6 Imputations:	
W06C349	C3 Degree of assistance by a proxy
W06C401	Cognition ability regarding time (date - year/m
W06C402	Cognition ability regarding time (a day)
W06C403	Cognition ability regarding time (an account)
W06D001	Currently work
Wave 7 Imputations:	
W07C349	C3 Degree of assistance by a proxy
W07C401	Cognition ability regarding time (date - year/m
W07C402	Cognition ability regarding time (a day)
W07C403	Cognition ability regarding time (an account)
W07D001	Currently work

How Constructed:

RwPLACE and RwCGDADDR indicate whether the respondent was able to report their location correctly. RwPLACE indicates whether the respondent was able to correctly report how the interview place was normally used. Plausible answers are specific answers, such as hospital, market, living room, house, apartment, nursing home, etc. A code of 0 indicates that the respondent gave an incorrect answer, while a code of 1 indicates that the respondent gave a correct answer. Don't know, refused, or other missing responses of RwPLACE are assigned special missing codes .d, .r, .m respectively. RwPLACE is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwPLACE is set to plain missing (.) for respondents who did not respond to the current wave.

RwCGDADDR indicates whether the respondent was able to correctly report their city, Gun, Dong, and street address. A code of 0 indicates that the respondent incorrectly reported all four components of city, Gun, Dong, and street address. A code of 1 indicates that the respondent correctly reported one component of city, Gun, Dong, and street address, and incorrectly reported the other three components. A code of 2 indicates that the respondent correctly reported two components of city, Gun, Dong, and street address,

and incorrectly reported the two other components. A code of 3 indicates that the respondent correctly reported three components of city, Gun, Dong, and street address, and incorrectly reported the one other component. A code of 4 indicates that the respondent correctly reported all four components of city, Gun, Dong, and street address. Don't know, refused, or other missing responses of RwcGDADDR are assigned special missing codes .d, .r, .m respectively. RwcGDADDR is set to special missing .p if the cognition question was skipped because the interview was by proxy. RwcGDADDR is set to plain missing (.) for respondents who did not respond to the current wave.

SwPLACE and SwCGDADDR indicate whether the current wave's spouse was able to correctly report how the interview place was normally used, and their city, Gun, Dong, and street address, respectively. They are taken directly from the spouse's values to RwPLACE and RwcGDADDR, respectively. In addition to the special missing codes used in RwPLACE and RwcGDADDR, SwPLACE and SwCGDADDR employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwORIENTP_K indicates the respondent's orientation to location, specifically how the interview place was normally used, and their city, Gun, Dong, and street address. It is the summary measure for RwPLACE and RwcGDADDR, ranging from 0 to 5, the higher score the better oriented, and is calculated as long as both responses have values. Don't know, refused, or other missing responses of RwORIENTP_K are assigned special missing codes .d, .r, .m respectively. RwORIENTP_K is set to special missing .p if the cognition question was skipped because the interview was by proxy. RwORIENTP_K is set to plain missing (.) for respondents who did not respond to the current wave.

SwORIENTP_K is the current wave's spouse's location orientation score. It is taken directly from the spouse's value to RwORIENTP_K. In addition to the special missing codes used in RwORIENTP_K, SwORIENTP_K employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

Differences with the RAND HRS/Harmonized HRS

The HRS does not ask respondents to name how the interview location is normally used, or their complete address.

KLoSA Variables Used:

Wave 1 Imputations:

W01C404	Cognition ability regarding a place (the current)
W01C405	Cognition ability regarding a place (city,gun,d
W01CD51	Response by proxy is prohibited for Cd.cognitio

How Constructed:

RwOBJECT1 and RwOBJECT2 indicate whether the respondent can properly identify the two random objects that the interviewer points to. These variables are coded as 0 if the respondent does not properly identify the object, and are coded as 1 if the respondent does properly identify the object. Don't know, refused, or other missing values for RwOBJECT1 and RwOBJECT2 are assigned special missing codes .d, .r, .m, respectively. RwOBJECT1 and RwOBJECT2 are set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwOBJECT1 and RwOBJECT2 are set to plain missing (.) for respondents who did not respond to the current wave.

SwOBJECT1 and SwOBJECT2 indicate whether the respondent's spouse can properly identify two random objects which the interviewer points to. SwOBJECT1 and SwOBJECT2 are taken from the Wave w spouse's value for RwOBJECT1 and RwOBJECT2, respectively. In addition to the special missing codes used in RwOBJECT1 and RwOBJECT2, SwOBJECT1 and SwOBJECT2 employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

Differences with the RAND HRS/Harmonized HRS

In HRS, the respondent is asked to identify two specific objects (scissors and cactus). Differently, KLoSA asks the respondent to name two random objects that the interviewer points to.

KLoSA Variables Used:

Wave 1 Imputations:

W01C413	Use of belongings (belongings 1)

How Constructed:

RwDRAW is the cognition measure indicating whether the respondent is able to draw the assigned picture (picture of two pentagons overlapped). RwDRAW is assigned a 0 if the respondent is not able to draw the picture, and is assigned a 1 if the respondent is able to draw the picture. Don't know, refused, or other missing responses of RwDRAW are assigned special missing codes .d, .r, .m respectively. RwDRAW is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwDRAW is set to plain missing (.) for respondents who did not respond to this wave.

SwDRAW indicates whether the current wave's spouse is able to draw the assigned picture correctly and is taken directly from the spouse's value to RwDRAW. In addition to the special missing codes used in RwDRAW, SwDRAW employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

1.yes		4933	4578	4190

How Constructed:

RwRPSNT indicates whether the respondent can exactly repeat the sentence that the interviewer said. The sentences that the interviewer would read to the respondent are randomly selected. The possible sentences are:

- 1.To see is to believe.
- 2.Check the dead fire again.
- 3.The Great Mountain is high but under the sky.
- 4.God watch over our land forever.
- 5.Thousand miles of range and river land.

A code of 1 indicates that the respondent can repeat the exact sentence. A code of 0 indicates that the respondent can not repeat the exact sentence. Don't know, refused, or other missing values for RwRPSNT are assigned special missing codes .d, .r, .m, respectively. RwRPSNT is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwRPSNT is set to plain missing (.) for respondents who did not respond to the current wave.

SwRPSNT indicates whether the respondent's spouse can exactly repeat the sentence that the interviewer said. SwRPSNT is taken from the spouse's value for RwRPSNT. In addition to the special missing codes used in RwRPSNT, SwRPSNT employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

2.Two of the actions		1206	1082	1007
3.All of the actions		3174	2897	2590

How Constructed:

RwEXECU indicates whether the respondent can follow the directions to fold a piece of paper. The respondent is asked to do the following three actions:

- 1.Turn over the paper,
- 2.Fold the paper in half,
- 3.Give the paper back to the interviewer.

A code of 1 indicates that the respondent completed one of the actions. A code of 2 indicates that the respondent completed two of the actions. A code of 3 indicates that the respondent completed all the actions successfully. A code of 0 indicates that the respondent did not complete any of the actions successfully. Don't know, refused, or other missing values for RwEXECU are assigned special missing codes .d, .r, .m, respectively. RwEXECU is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwEXECU is set to plain missing (.) for respondents who did not respond to the current wave.

SwEXECU indicates whether the respondent's spouse can follow the directions to fold a piece of paper. SwEXECU is taken from the spouse's value for RwEXECU. In addition to the special missing codes used in RwEXECU, SwEXECU employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

Differences with the RAND HRS/Harmonized HRS

This question is not asked in HRS.

KLoSA Variables Used:

Wave 1 Imputations:

How Constructed:

RwREAD indicates whether the respondent can read the sentence on the test paper and perform the stated action. The respondent is asked to read the sentence "Close your eyes" and act it out. A code of 1 indicates that the respondent completed only one action. A code of 2 indicates that the respondent completed both actions. A code of 0 indicates that the respondent did not complete any task. Don't know, refused, or other missing values for RwREAD are assigned special missing codes .d, .r, .m, respectively. RwREAD is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwREAD is set to plain missing (.) for respondents who did not respond to the current wave.

SwREAD indicates whether the respondent's spouse can read the sentence on the test paper and act the action out. SwREAD is taken from the spouse's value for RwREAD. In addition to the special missing codes used in RwREAD, SwREAD employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

How Constructed:

RwSENTEN indicates whether the respondent could write one sentence about how they are feeling today or today's weather. A code of 1 indicates that the respondent could write an understandable sentence. A code of 0 indicates that the respondent could not write a sentence. Don't know, refused, or other missing values for RwSENTEN are assigned special missing codes .d, .r, .m, respectively. RwSENTEN is set to special missing .p if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. RwSENTEN is set to plain missing (.) for respondents who did not respond to the current wave.

SwSENTEN indicates whether the respondent's spouse could write one sentence about how they are feeling today or today's weather. SwSENTEN is taken from the spouse's value for RwSENTEN. In addition to the special missing codes used in RwSENTEN, SwSENTEN employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Wave 8.

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

CyyyyCPINDEX is the annual consumer price index for the year of the survey. CyyyyCPINDEX uses 2010 as its base year so the consumer price index for a survey conducted in 2010 would be 100. This consumer price index can be used as an inflation multiplier when comparing financial values between different survey years.

CyyyyCPINDEX values were provided by the OECD as part of the Consumer Price (MEI) dataset. The index measures monthly changes in the general level of prices of goods and services that households acquire for consumption. For more information on the calculation of the consumer price index please visit: <http://stats.oecd.org>

Cross Wave Differences in KLoSA

Consumer price index values are not based on KLoSA survey items.

Differences with the RAND HRS/Harmonized HRS

Consumer price index values are not included in the RAND HRS or Harmonized HRS.

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwARLES is the value of other real estate (not including current residence) and includes imputed values in Waves 1-7. All respondents who reported having real estate such as land, rental real estate, a partnership, or money owed on a land contract or mortgage other than current residence were asked how much they would expect to receive if they sold it all and then paid off any debt. RwARLES is the reported net value of other real estate. If the respondent reported not having other real estate, RwARLES is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwaFRLES is a flag variable which indicates whether any components of RwARLES are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwARLES is the respondent's spouse's value of other real estate (not including current residence) that is taken directly from the spouse's values of RwARLES. SwaFRLES is the respondent's spouse's imputation flag for value of other real estate taken directly from the spouse's values of RwaFRLES. Aside from the special missing values utilized by RwARLES and RwaFRLES, SwARLES and SwaFRLES employ two additional special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwAOSDR is the amount received in safety deposits for other real estate and includes imputed values in Waves 1-7. If respondents reported having other real estate, they are then asked if they are currently leasing a house, building, field, or land other than the current residence. If a respondent answers yes, they are then asked how much in total they received as safety deposits. RwAOSDR is the reported amount received in safety deposits. If the respondent reported they did not have any other real estate or that they were not leasing any other real estate, RwAOSDR is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwaFOSDR is a flag variable which indicates whether any components of RwAOSDR are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwAOSDR is the respondent's spouse's amount received in safety deposits for other real estate that is taken directly from the spouse's values of RwAOSDR. SwaFOSDR is the respondent's spouse's imputation flag for amount received in safety deposits for other real estate taken directly from spouse's values of

RwAFOSDR. Aside from the special missing values utilized by RwaOSDR and RwaFOSDR, SwaOSDR and SwaFOSDR employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwaOSDP is the amount paid in safety deposits for other real estate and includes imputed values in Waves 2-6. If respondents reported not having other real estate, they are then asked if they are currently renting a house, building, field, or land other than the current residence. If the respondent answers yes, they are then asked how much in total they paid as safety deposits. RwaOSDP is the reported amount paid in safety deposits. If the respondent reported they did not have any other real estate or that they were not renting any other real estate, RwaOSDP is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwaFOSDP is a flag variable which indicates whether any components of RwaOSDP are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwaOSDP is the respondent's spouse's amount paid in safety deposits for other real estate that is taken directly from the spouse's value of RwaOSDP. SwaFOSDP is the respondent's spouse's imputation flag for amount paid in safety deposits for other real estate taken directly from spouse's value of RwaFOSDP. Aside from the special missing values utilized by RwaOSDP and RwaFOSDP, SwaOSDP and SwaFOSDP employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA only imputes components of RwaOSDP for Waves 2-6. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Net value of other real estate in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

HRS separately surveys the value of a respondent's main home, second home, and other real estate. Unlike HRS, KLoSA does not distinguish between the value of a second home and other real estate. RwaARLES and SwaARLES in the Harmonized KLoSA are therefore most analogous to the combined RAND HRS variables: net value of real estate (not current residence), value of secondary residence, and value of all mortgages (secondary residence).

HRS does not survey the value of safety deposit received or paid for other real estate so there are no equivalent variables to RwaOSDR, RwaOSDP, RwaFOSDR, and RwaFOSDP in the RAND HRS.

KLoSA Variables Used:

Wave 1:	
W01F057	Whether or not the ownership of other real esta
W01F058CT	Unfolding Bracket value of w01F058
W01F064	Leasing or not the real estate
W01F065CT	Unfolding Bracket value of w01F065

W01F078	Renting or not the real estate
W01F079	Any security deposit from renting the real esta
Wave 1 Imputations:	
W01F058	The total amount of real estate
W01F058_I	W01F058 Alternative instruction variable
W01F065	Any security deposit from leasing the real esta
W01F065_I	W01F065 Alternative instruction variable
Wave 2:	
W02F057	Whether or not the ownership of other real esta
W02F058CT	Unfolding Bracket value of w02F058
W02F064	Leasing or not the real estate
W02F065CT	Unfolding Bracket value of w02F065
W02F079CT	Unfolding Bracket value of w02F079
Wave 2 Imputations:	
W02F058	The total amount of real estate
W02F058_I	W02F058 Alternative instruction variable
W02F065	Any security deposit from leasing the real esta
W02F065_I	W02F065 Alternative instruction variable
W02F078	Renting or not the real estate
W02F078_I	W02F078 Alternative instruction variable
W02F079	Any security deposit from renting the real esta
W02F079_I	W02F079 Alternative instruction variable
Wave 3:	
W03F057	Whether or not the ownership of other real esta
W03F058CT	Unfolding Bracket value of w03F058
W03F064	Leasing or not the real estate
W03F065CT	Unfolding Bracket value of w03F065
W03F079CT	Unfolding Bracket value of w03F079
Wave 3 Imputations:	
W03F058	The total amount of real estate
W03F058_I	W03F058 Alternative instruction variable
W03F065	Any security deposit from leasing the real esta
W03F065_I	W03F065 Alternative instruction variable
W03F078	Renting or not the real estate
W03F078_I	W03F078 Alternative instruction variable
W03F079	Any security deposit from renting the real esta
W03F079_I	W03F079 Alternative instruction variable
Wave 4:	
W04F057	Whether or not the ownership of other real esta
W04F058CT	Unfolding Bracket value of w04F058
W04F064	Leasing or not the real estate
W04F065	Any security deposit from leasing the real esta

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwATRAN is the value of vehicles and includes imputed values in Waves 1-7. All respondents who reported owning any vehicles, such as cars, trucks, trailers, boats, or any other mean of transportation were asked how much they would expect to receive if they sold all vehicles. If the respondent reported not owning any vehicles, RwATRAN is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwaFTRAN is a flag variable which indicates whether any components of RwATRAN are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwATRAN is the respondent's spouse's value of vehicles that is taken directly from the spouse's values of RwATRAN. SwAFTRAN is the respondent's spouse's imputation flag for value of vehicles taken directly from the spouse's value of RwaFTRAN. Aside from the special missing values utilized by RwATRAN and RwaFTRAN, SwATRAN and SwAFTRAN employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

The value of vehicles in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

Unlike HRS, KLoSA does not ask respondents the value of transportation minus any debt owed on it, therefore the RAND HRS variable RwATRAN and SwATRAN are a net value, assets minus liabilities, while the Harmonized KLoSA variable is just the value of assets.

KLoSA Variables Used:

Wave 1:	
W01F175CT	Unfolding Bracket value of w01F175
Wave 1 Imputations:	
W01F174	The ownership of other financial asset_vehicles

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwABSNS is the net value of businesses and includes imputed values in Waves 1, 2, and 4-7. All respondents who reported owning part or all of a business or farm were asked how much they would expect

to receive if they sold it all and paid off any debts. Due to a problem in the Wave 1 interviewing routing only Wave 1 respondents who reported owning real estate were allowed to report whether they owned part or all of business or farm and the corresponding value. These respondents who did not report owning part or all of a business or farm in Wave 1 are assigned a 0 value for R1ABSNS. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwfABSNS is a flag variable which indicates whether any components of RwfABSNS are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwABSNS is the respondent's spouse's net value of businesses taken directly from the spouse's value of RwfABSNS. SwAFBSNS is the respondent's spouse's imputation flag for net value of businesses taken directly from the spouse's value of RwfABSNS. Aside from the special missing values utilized by RwfABSNS and RwfAFBSNS, SwABSNS and SwAFBSNS employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1 only respondents who reported owning real estate were allowed to report whether they owned part or all of a business or farm and the corresponding value. This routing error was corrected in later waves.

KLoSA does not impute components of RwfABSNS for Wave 3. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Net value of businesses in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

KLoSA Variables Used:

Wave 1:	
W01F057	Whether or not the ownership of other real esta
W01F085	Any investment on farm or other business

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwASTCK is the value of stocks, mutual funds, and investment trusts and includes imputed values in Waves 1-5. All respondents who reported having any shares of stocks or mutual funds were asked how much they would expect to receive if they sold it all today. If the respondent reported not owning any stocks, mutual funds, or investment trusts, RwASTCK is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwAFSTCK is a flag variable which indicates whether any components of RwASTCK are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that

the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwASTCK is the respondent’s spouse’s value of stocks, mutual funds, and investment trusts that is taken directly from the spouse’s value of RwASTCK. SwAFSTCK is the respondent’s spouse’s imputation flag for value of stocks, mutual funds, and investment trusts taken directly from the spouse's value of RwAFSTCK. Aside from the special missing values utilized by RwASTCK and RwAFSTCK, SwASTCK and SwAFSTCK employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA only imputes components of RwASTCK for Waves 1-5. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Value of stocks, mutual funds, and investment trusts in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

HRS asks respondents about the value of shares of stocks or mutual funds aside from anything they had already listed. Unlike HRS, KLoSA does not specifically ask respondents to exclude previously mentioned assets from this value. HRS also asks respondents the value of stocks and mutual funds if sold off and paid off anything owed on those. Unlike HRS, KLoSA does not ask respondents the value of stocks and mutual funds minus any debt owed on those, therefore the RAND HRS variable RwASTCK and SwASTCK are a net value, assets minus liabilities, while the Harmonized KLoSA variables are just the value of assets.

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwACHCK is the value of cash, checking accounts, and savings deposits and includes imputed values in Waves 1-7. All respondents who reported having over 500,000 Korean won cash in hand or in checking accounts that yield low interests while being highly convertible to cash were asked the value if all cash and checking accounts were added up. All respondents who reported having any money in installments deposits, certificates of deposits, and other savings accounts that yield interests with less liquidity compared to checking accounts were asked if all such accounts were added up, how much they would amount to. RwACHCK is the sum of both the value of all cash and checking accounts and the value of all savings accounts. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwaFCHCK is a flag variable which indicates whether any components of RwACHCK are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwACHCK is the respondent's spouse's value of cash, checking accounts, and savings deposits that is taken directly from the spouse's value of RwACHCK. SwaFCHCK is the respondent's spouse's imputation flag for value of cash, checking accounts, and savings deposits taken directly from the spouse's value of RwaFCHCK. Aside from the special missing values utilized by RwACHCK and RwaFCHCK, SwACHCK and SwaFCHCK employ two additional special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Value of cash, checking accounts, and savings deposits in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS variable HwACHCK is different in several ways from the Harmonized KLoSA variable of the same name. Unlike HRS which asks respondents once about a total value for all checking, savings, or money market accounts, KLoSA surveys respondents with two different measures. The first measure includes cash which is not mentioned in HRS and does not mention money market accounts which is specifically mentioned in HRS. The second measure includes installment deposits and certificates of deposits, which are not mentioned in HRS. Also unlike HRS, KLoSA only surveys the value of cash and checking accounts if the respondent reports having over a specific monetary threshold. HRS does not include any minimum threshold of value, instead asking about 'any' money in this asset class. HRS asks respondents about the value of checking and savings accounts aside from anything they had already listed. Unlike HRS, KLoSA does not specifically ask respondents to exclude previously mentioned assets from this value. The RAND HRS variables RwACHCK and SwACHCK should only be considered somewhat analogous to the Harmonized KLoSA variables of the same name due to the above mentioned differences.

KLoSA Variables Used:

Wave 1:
 W01F095CT Unfolding Bracket value of w01F095
 W01F102CT Unfolding Bracket value of w01F102
 Wave 1 Imputations:

W01F094	The ownership of cash

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwABOND is the value of bonds and includes imputed values in Waves 1, 3, and 4. All respondents who reported having any corporate, municipal, government, or foreign bonds were asked how much they would expect to receive if they sold it all. If the respondent reported not owning any bonds, RwABOND is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwAFBOND is a flag variable which indicates whether any components of RwABOND are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket

information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwABOND is the respondent’s spouse’s value of bonds that is taken directly from the spouse’s value of RwABOND. SwAFBOND is the respondent’s spouse’s imputation flag for value of bonds taken directly from the spouse's value of RwAFBOND. Aside from the special missing values utilized by RwABOND and RwAFBOND, SwABOND and SwAFBOND employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA only imputes components of RwABOND for Waves 1, 3, and 4. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Value of bonds in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

HRS asks respondents about money in corporate, municipal, government, or foreign bonds, or any bond funds. Unlike KLoSA, HRS specially includes the value of bond funds, which is not mentioned in KLoSA. HRS asks respondents about the value of bonds and bond funds aside from anything they had already listed. Unlike HRS, KLoSA does not specifically ask respondents to exclude previously mentioned assets from this value.

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwAOTHR is the value of all other savings and financial assets and includes imputed values in Waves 1, 3, 4, 5, and 7. All respondents who reported currently being a member of any private savings club (Gye) were asked how much money they had saved through the savings club, excluding the amount they had already taken out. All respondents who reported lending anyone any money from personal loans, including family members, were asked how much the loans would amount to if they added all of it up right now. All respondents who reported having any other insurance than health insurance were asked how many annuity insurance policies they had, with a range of 0 to 5. For each annuity policy listed respondents were asked at what age they expected to start receiving the policy and the average monthly annuity payment they expected to receive from the policy. Respondents were also asked the average monthly annuity payment they expected to receive in total from all annuity policies. All respondents who reported having any other financial assets, aside from those already mentioned were asked how much they would expect to receive if they sold all those other financial assets. RwAOTHR is the sum of 1) savings through savings club, (Gye) 2) money loaned to others, 3) the present value of annuity assets, and 4) all other financial assets. If the respondent reported not owning/having any of the 4 components, RwAOTHR is assigned a value of 0. RwAOTHR does not include the value of life insurance policies. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwfAOTHR is a flag variable which indicates whether any components of RwAOTHR are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Present value of annuity assets was derived using the following formula:

$$P = A * ((1 - (1 / (1 + r / 12)^n)) / (r / 12))$$

where P is the present value of the annuity asset, A is expected monthly income from annuity, r is the discount rate, set to 0.03, and n is the number of months the annuity will be received. The number of months the annuity will be received is defined as the expected life expectancy minus age starting to receive the annuity for respondents who had not started to receive the annuity yet and life expectancy minus current age for respondents who had already started to receive the annuity. Life expectancy was defined using the life tables published by the Korea Statistical Information Service.

SwAOTHR is the respondent's spouse's value of all other savings and financial assets taken directly from the spouse's value of RwAOTHR. SwAFOTHR is the respondent's spouse's imputation flag for value of all other savings and financial assets taken directly from the spouse's value of RwfAFOTHR. Aside from the special missing values utilized by RwAOTHR and RwfAFOTHR, SwAOTHR and SwAFOTHR employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA only imputes components of RwAOTHR for Waves 1, 3, 4, 5, and 7. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Value of all other savings in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS variable HwAOTHR is different in significant ways from the Harmonized KLoSA variable of the same name. HRS asks respondents about any other savings or assets, such as jewelry, money owed to the respondent by others, a collection for investment purposes, right in a trust or estate where the respondent is the beneficiary, or an annuity. Unlike HRS, KLoSA does not ask one question covering all other asset types. The Harmonized KLoSA variable RWAOTHR and SwAOTHR are the sum of three separately reported asset measures and calculations of net present value of an annuity set. The Harmonized KLoSA measure includes the value saved through a Gye which is a form of savings specific to Korea. KLoSA asks separately about other assets (aside from vehicles), such as valuables, paintings, antiques, golf membership, or any assets not already mentioned. These responses are recorded in RWAOTHR in the Harmonized KLoSA.

Unlike KLoSA, HRS asks respondents the value of other assets minus any debt owed on those, therefore the RAND HRS variable HwAOTHR is a net value, assets minus liabilities, while the Harmonized KLoSA variable is just the value of assets. The RAND HRS variable should only be considered mildly analogous to the Harmonized KLoSA variable of the same name due to the above mentioned differences.

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwADEBT is the value of all debt and includes imputed values in Waves 1-7. All respondents who reported currently being a member of any private savings club (Gye) were asked if they had taken money out from the savings club and still owe money to it. All respondents who reported having loans from financial institutions, such as banks, insurance companies, securities, or credit card companies were then asked about how much the loans amounted to. All respondents who reported having any personal loans from relatives, friends or other were then asked about how much the loans amounted to. All respondents who reported having any other debt were then asked about how much the debt amounted to. RwADEBT is the sum of 1) any money owed to the savings club (Gye), 2) loans from financial institutions, 3) loans from relatives or friends, and 4) other debt. If the respondent reported not owning/having any of the 4 components, RwADEBT is assigned a value of 0. RwADEBT does not include the value of loans of other people where the respondent stands surety. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwAFDEBT is a flag variable which indicates whether any components of RwADEBT are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwADEBT is the respondent's spouse's value of all debts that is taken directly from the spouse's value of RwADEBT. SwAFDEBT is the respondent's spouse's imputation flag for value of all debt taken directly from the spouse's value of RwAFDEBT. Aside from the special missing values utilized by RwADEBT and RwAFDEBT, SwADEBT and SwAFDEBT employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Value of other debt in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS variable HwADEBT is different in significant ways from the Harmonized KLoSA variable of the same name. HRS asks respondents about any debt they have such as credit card balances, medical debts, life insurance policy loans, loans from relatives, and so forth. The Harmonized KLoSA variables RwADEBT and SwADEBT are the sum of four separately reported asset measures including the value owed to Gye, which is a form of debt specific to Korea. The RAND HRS variable HwADEBT should only be considered somewhat analogous to the Harmonized KLoSA variable of the same name due to the above mentioned differences.

KLoSA Variables Used:

Wave 1:	
W01F152CT	Unfolding Bracket value of w01F152
W01F206CT	Unfolding Bracket value of w01F206
W01F213CT	Unfolding Bracket value of w01F213
W01F228	The amount of other debt
Wave 1 Imputations:	

W01F145	Whether or not join any private savings club(Gy
W01F145_I	W01F145 Alternative instruction variable
W01F152	The amount of payment for Gye which still owe i
W01F152_I	W01F152 Alternative instruction variable
W01F205	Whether or not there is loans from financial in
W01F205_I	W01F205 Alternative instruction variable
W01F206	The amount of loans from financial institution
W01F206_I	W01F206 Alternative instruction variable
W01F212	Whether or not there is personal loans
W01F212_I	W01F212 Alternative instruction variable
W01F213	The amount of personal loans
W01F213_I	W01F213 Alternative instruction variable
W01F226	Whether or not there is other type of debt
W01F226_I	W01F226 Alternative instruction variable
Wave 2:	
W02F145	Whether or not join any private savings club(Gy
W02F152	The amount of any private savings club(Gye) whi
W02F205	Whether or not there is loans from financial in
W02F206CT	Unfolding Bracket value of w02F206
W02F212	Whether or not there is personal loans
W02F213	The amount of personal loans
W02F226	Whether or not there is other type of debt
Wave 2 Imputations:	
W02F206	The amount of loans from financial institution
W02F206_I	W02F206 Alternative instruction variable
Wave 3:	
W03F145	Whether or not join any private savings club(Gy
W03F152CT	Unfolding Bracket value of w03F152
W03F206CT	Unfolding Bracket value of w03F206
W03F213	The amount of personal loans
W03F226	Whether or not there is other type of debt
W03F228	The amount of other debt
Wave 3 Imputations:	
W03F152	The amount of any private savings club(Gye) whi
W03F152_I	W03F152 Alternative instruction variable
W03F205	Whether or not there is loans from financial in
W03F205_I	W03F205 Alternative instruction variable
W03F206	The amount of loans from financial institution
W03F206_I	W03F206 Alternative instruction variable
W03F212	Whether or not there is personal loans
W03F212_I	W03F212 Alternative instruction variable
Wave 4:	
W04F152	The amount of any private savings club(Gye) whi
W04F213CT	Unfolding Bracket value of w04F213
W04F228	The amount of other debt
Wave 4 Imputations:	
W04F145	Whether or not join any private savings club(Gy
W04F145_I	W04F145 Alternative instruction variable
W04F205	Whether or not there is loans from financial in
W04F205_I	W04F205 Alternative instruction variable
W04F206	The amount of loans from financial institution
W04F206_I	W04F206 Alternative instruction variable
W04F212	Whether or not there is personal loans
W04F212_I	W04F212 Alternative instruction variable
W04F213	The amount of personal loans
W04F213_I	W04F213 Alternative instruction variable
W04F226	Whether or not there is other type of debt
W04F226_I	W04F226 Alternative instruction variable
Wave 5:	
W05F145	Whether or not join any private savings club(Gy
W05F152	The amount of any private savings club(Gye) whi
W05F205	Whether or not there is loans from financial in
W05F206CT	Unfolding Bracket value of w05F206

W05F212	Whether or not there is personal loans
W05F213CT	Unfolding Bracket value of w05F213
W05F226	Whether or not there is other type of debt
W05F228	The amount of other debt
Wave 5 Imputations:	
W05F206	The amount of loans from financial institution
W05F206_I	W05F206 Alternative instruction variable
W05F213	The amount of personal loans
W05F213_I	W05F213 Alternative instruction variable
Wave 5 New:	
W05F152	The amount of any private savings club(Gye) whi
W05F206	The amount of loans from financial institution
W05F212	Whether or not there is personal loans
W05F213	The amount of personal loans
Wave 5 New Imputations:	
W05F145	Whether or not join any private savings club(Gy
W05F145_I	w05F145 Alternative instruction variable
W05F205	Whether or not there is loans from financial in
W05F205_I	w05F205 Alternative instruction variable
Wave 6:	
W06F152	The amount of any private savings club(Gye) whi
W06F205	Whether or not there is loans from financial in
W06F212	Whether or not there is personal loans
W06F226	Whether or not there is other type of debt
W06F228	The amount of other debt
Wave 6 Imputations:	
W06F206	The amount of loans from financial institution
W06F206_I	w06F206 Alternative instruction variable
W06F213	The amount of personal loans
W06F213_I	w06F213 Alternative instruction variable
Wave 7:	
W07F145	Whether or not join any private savings club(Gy
W07F152	The amount of any private savings club(Gye) whi
W07F205	Whether or not there is loans from financial in
W07F212	Whether or not there is personal loans
W07F226	Whether or not there is other type of debt
W07F228	The amount of other debt
Wave 7 Imputations:	
W07F206	The amount of loans from financial institution
W07F206CT	Unfolding Bracket value of w07F206
W07F206_I	w07F206 Alternative instruction variable
W07F213	The amount of personal loans
W07F213CT	Unfolding Bracket value of w07F213
W07F213_I	w07F213 Alternative instruction variable
Wave 8:	
W08F145	Whether or not join any private savings club(Gy
W08F152	The amount of any private savings club(Gye) whi
W08F205	Whether or not there is loans from financial in
W08F212	Whether or not there is personal loans
W08F226	Whether or not there is other type of debt
W08F228	The amount of other debt

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwAOTHAS is the value of other non-financial assets and includes imputed values in Waves 1-5, and 7. Respondents were asked whether they own other assets (aside from vehicles), such as valuables, paintings, antiques, golf membership, or any assets that they haven't told us about. If a respondent answered yes,

then they were then asked how much they are worth together. RWAOTHAS is the reported total value of other non-financial assets. If the respondent reported not owning any other assets, RWAOTHAS is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RWAFOHAS is a flag variable which indicates whether any components of RWAOTHAS are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SWAOTHAS is the respondent's spouse's value of other non-financial assets and is taken directly from the spouse's value of RWAOTHAS. SWAFOHAS is the respondent's spouse's imputation flag for value of other non-financial assets taken directly from the spouse's value of RWAFOHAS. Aside from the special missing values utilized by RWAOTHAS and SWAFOHAS, SWAOTHAS and SWAFOHAS employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA only provides imputations for Waves 1-5, and 7. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

HRS does not survey the value of other non-financial assets directly so there is no equivalent RAND HRS variable. HRS does ask about any other savings or assets, such as jewelry, money owed by others, a collection for investment purposes, rights in a trust or estate where you are the beneficiary, or an annuity not already mentioned in a single question. The responses to this question are included in HWAOTHR in the RAND HRS.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

KLoSA Variables Used:

Wave 1:	
W01F182CT	Unfolding Bracket value of w01F182
Wave 1 Imputations:	
W01F181	The ownership of other non-financial asset
W01F181_I	W01F181 Alternative instruction variable
W01F182	The amount of other non-financial asset
W01F182_I	W01F182 Alternative instruction variable
Wave 2:	
W02F181	The ownership of other non-financial asset
W02F182CT	Unfolding Bracket value of w02F182
Wave 2 Imputations:	
W02F182	The amount of other non-financial asset
W02F182_I	W02F182 Alternative instruction variable
Wave 3:	
W03F182	The amount of other non-financial asset
Wave 3 Imputations:	
W03F181	The ownership of other non-financial asset
W03F181_I	W03F181 Alternative instruction variable
Wave 4:	
W04F182CT	Unfolding Bracket value of w04F182

Wave 4 Imputations:
W04F181 The ownership of other non-financial asset
W04F181_I W04F181 Alternative instruction variable
W04F182 The amount of other non-financial asset
W04F182_I W04F182 Alternative instruction variable

Wave 5:
W05F182CT Unfolding Bracket value of w05F182

Wave 5 Imputations:
W05F181 The ownership of other non-financial asset
W05F181_I W05F181 Alternative instruction variable
W05F182 The amount of other non-financial asset
W05F182_I W05F182 Alternative instruction variable

Wave 5 New:
W05F181 The ownership of other non-financial asset
W05F182 The amount of other non-financial asset

Wave 6:
W06F181 The ownership of other non-financial asset
W06F182 The amount of other non-financial asset

Wave 7:
W07F181 The ownership of other non-financial asset

Wave 7 Imputations:
W07F182 The amount of other non-financial asset
W07F182CT Unfolding Bracket value of w07F182

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwHOWNRNT indicates whether the respondent owns or rents their primary residence, and is coded as follows: 1. owned, 2. rented, 3. other arrangement. RwHOWNRNT is coded as 1 if the respondent reported that they or a family member own their current residence (including joint ownership) and their name was the one on the deed. RwHOWNRNT is coded as 2 if the respondent reported that their residence is a deposit-based rental house without monthly rent, a monthly rental house with a deposit, or a monthly rental house without a deposit. RwHOWNRNT is coded as 3 if the respondent reported that their residence is owned by them or a family member, and the house is owned by their spouse, (grand)children, other

family members, or other persons. Don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwhOWNRNT is assigned plain missing (.) if the respondent did not participate in the current wave.

SwHOWNRNT indicates whether the respondent's spouse owns or rents their primary residence, and is taken directly from the spouse's value of RwhOWNRNT. In addition to the special missing codes employed by RwhOWNRNT, SwHOWNRNT employs two additional special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

HwhOWNRNT indicates whether the respondent's residence is owned or rented by them or their spouse. HwhOWNRNT takes the lower value between RwhOWNRNT and SwHOWNRNT, and is coded as follows: 1. owned, 2. rented, 3. other arrangement. HwhOWNRNT is coded as 1 if the respondent's residence is owned by either of the respondent or their spouse. HwhOWNRNT is coded as 2 if the respondent's residence was rented by at least one of the respondent and their spouse. HwhOWNRNT is coded as 3 if the respondent's residence is neither owned nor rented by at least one of the respondent and their spouse. Don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. HwhOWNRNT is assigned plain missing (.) if the respondent did not participate in the current wave.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

In HRS, this information can be taken from a single direct question asking whether the respondent and their spouse own their home, rent it, live rent free, or other, and so would only be available at the couple-level. KLoSA asks two questions, first whether the home is owned or rented, and then if owned, who has ownership of the house. As such, the Harmonized KLoSA has respondent-level variables, as well as a couple-level variable that would be comparable to what can be created for the HRS.

KLoSA Variables Used:

Wave 1:	
W01F001	The type of currently residing home
W01F004	Whether or not the residing home under R's name
Wave 2:	
W02F001	The type of currently residing home
W02F004	Whether or not the residing home under R's name
Wave 3:	
W03F001	The type of currently residing home
W03F004	Whether or not the residing home under R's name
Wave 4:	
W04F001	The type of currently residing home
W04F004	Whether or not the residing home under R's name
Wave 5:	
W05F001	The type of currently residing home
W05F004	Whether or not the residing home under R's name
Wave 5 New:	
W05F001	The type of currently residing home
W05F004	Whether or not the residing home under R's name
Wave 6:	
W06F001	The type of currently residing home
W06F004	Whether or not the residing home under R's name
Wave 7:	
W07F001	The type of currently residing home
W07F004	Whether or not the residing home under R's name
Wave 8:	

W08F001	The type of currently residing home
W08F004	Whether or not the residing home under R's name

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

The value of the current residence is asked to every respondent who reported they own a house. If a respondent reported they or a family member owned their current residence the respondent was then asked whether their name was the one on the deed. If the respondent's name was on the deed, the respondent was then asked, if multiple persons' names are on the deed how many names are listed on the deed and their share of the house. Starting in Wave 2, if the respondent reported that more names were on the deed than one, the respondent is asked how much is their share of the current residence. Regardless of the number of names on the deed or share in the house, the respondent was then asked the value of the current residence.

RwAHOUSA is the value of the current residence if sold today, not accounting for the number of names on the deed or share in the house, and includes imputed values in Waves 1-7. RwAHOUSA is set to zero if the respondent reported that they do not own (including joint ownership) their current residence. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwAFHOUSA is a flag variable which indicates whether any components of RwAHOUSA are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwAHOUSA is the respondent's spouse's value of current residence, not accounting for the number of names on the deed or share in the house, and is taken directly from the spouse's value of RwAHOUSA. SwAFHOUSA is the respondent's spouse's imputation flag for value of current residence taken directly from the spouse's value of RwAFHOUSA. Aside from the special missing values utilized by RwAHOUSA and RwAFHOUSA,

SWAHOUSA and SWAFHOUSA employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwAHRTO is the respondent's percentage of ownership of the current residence and includes imputed values in Waves 1 and 2. RwAHRTO is set to zero if the respondent reported that they do not own (including joint ownership) their current residence. RwAHRTO is set to 100 if the respondent reports that there are no other names on the deed other than their own. If multiple names are listed on the deed in Wave 1, RwAHRTO is derived using the number of names listed on the deed and assigning equal proportions to each name on the deed. If multiple names are listed on the deed in Wave 2 or later, RwAHRTO is derived using the percentage the respondent reported as their share of the current residence. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwAFHRTTO is a flag variable which indicates whether any components of RwAHRTO are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 5 indicates that the value was imputed. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SWAHRTO is the respondent's spouse's percentage of ownership of the current residence and is taken directly from the spouse's value of RwAHRTO. SwAFHRTTO is the respondent's spouse's imputation flag for the percentage of ownership of the current residence and is taken directly from the spouse's value of RwAFHRTTO. Aside from the special missing values utilized by RwAHRTO and RwAFHRTTO, SWAHRTO and SwAFHRTTO employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwAHOUS is the value of the current residence if sold today, accounting for the number of names on the deed or share in the house, and includes imputed values in Waves 1-7. RwAHOUS is derived as:

$$\text{RwAHOUS} = \text{RwAHOUSA} * (\text{RwAHRTO}/100)$$

Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwAFHOUS is a flag variable which indicates whether any components of RwAHOUS are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SWAHOUS is the respondent's spouse's value of the current residence, accounting for the number of names on the deed or share in the house, and is taken directly from the spouse's value of RwAHOUS. SwAFHOUS is the respondent's spouse's imputation flag for value of the current residence taken directly from the spouse's value of RwAFHOUS. Aside from the special missing values utilized by RwAHOUS and RwAFHOUS, SWAHOUS and SwAFHOUS employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1 if the respondent's name was on the deed, the respondent was then asked if multiple persons' names are on the deed, how many names are listed on the deed, and their share of the house. Starting in Wave 2 an additional question was added if the respondent reported that more names were on the deed than one. In these cases the respondent is then asked how much is their share of the current residence. In Wave 1 RwAHRTO is derived using the number of names listed on the deed and assigning equal proportions to

each name on the deed. Starting in Wave 2, RWAHRTO is derived using the percentage the respondent reported as their share of the current residence.

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Value of the current residence in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

HRS asks respondents about the value of their home or farm and the value of their mobile home and site separately. These two measures are combined in the RAND HRS value of current residence. Unlike HRS, KLoSA doesn't separately survey the value of a mobile home and site.

KLoSA Variables Used:

Wave 1:	
W01F004	Whether or not the residing home under R's name
W01F007CT	Unfolding Bracket value of w01F007
Wave 1 Imputations:	
W01F001	The type of currently residing home
W01F001_I	W01F001 Alternative instruction variable
W01F005	Persons listed on the house deed
W01F005_I	W01F005 Alternative instruction variable
W01F007	The current value of house
W01F007_I	W01F007 Alternative instruction variable
Wave 2:	
W02F001	The type of currently residing home
W02F004	Whether or not the residing home under R's name
W02F007CT	Unfolding Bracket value of w02F007
Wave 2 Imputations:	
W02F005	Whether or not residing home under multiple per
W02F005_I	W02F005 Alternative instruction variable
W02F006	R's share of the residing home (unit: %)
W02F006_I	W02F006 Alternative instruction variable
W02F007	The current value of the residing home (unit: 1
W02F007_I	W02F007 Alternative instruction variable
Wave 3:	
W03F001	The type of currently residing home
W03F005	Whether or not residing home under multiple per
W03F006	R's share of the residing home (unit: %)
W03F007CT	Unfolding Bracket value of w03F007
Wave 3 Imputations:	
W03F004	Whether or not the residing home under R's name
W03F004_I	W03F004 Alternative instruction variable
W03F007	The current value of the residing home (unit: 1
W03F007_I	W03F007 Alternative instruction variable
Wave 4:	
W04F001	The type of currently residing home
W04F005	Whether or not residing home under multiple per
W04F006	R's share of the residing home (unit: %)
W04F007CT	Unfolding Bracket value of w04F007
Wave 4 Imputations:	
W04F004	Whether or not the residing home under R's name
W04F004_I	W04F004 Alternative instruction variable
W04F007	The current value of the residing home (unit: 1

W04F007_I	W04F007 Alternative instruction variable
Wave 5:	
W05F001	The type of currently residing home
W05F005	Whether or not residing home under multiple per
W05F006	R's share of the residing home (unit: %)
W05F007CT	Unfolding Bracket value of w05F007
Wave 5 Imputations:	
W05F004	Whether or not the residing home under R's name
W05F004_I	W05F004 Alternative instruction variable
W05F007	The current value of the residing home (unit: 1
W05F007_I	W05F007 Alternative instruction variable
Wave 5 New:	
W05F001	The type of currently residing home
W05F004	Whether or not the residing home under R's name
W05F005	Whether or not residing home under multiple per
W05F006	R's share of the residing home (unit: %)
Wave 5 New Imputations:	
W05F006	The current value of the residing home (unit: 1
W05F006_I	w05F006 Alternative instruction variable
W05F007	The current value of the residing home (unit: 1
Wave 6:	
W06F001	The type of currently residing home
W06F004	Whether or not the residing home under R's name
W06F005	Whether or not residing home under multiple per
W06F006	R's share of the residing home (unit: %)
W06F007CT	Unfolding Bracket value of w06F007
Wave 6 Imputations:	
W06F007	The current value of the residing home (unit: 1
W06F007_I	w06F007 Alternative instruction variable
Wave 7:	
W07F001	The type of currently residing home
W07F004	Whether or not the residing home under R's name
W07F005	Whether or not residing home under multiple per
W07F006	R's share of the residing home (unit: %)
Wave 7 Imputations:	
W07F007	The current value of the residing home (unit: 1
W07F007CT	Unfolding Bracket value of w07F007
W07F007_I	w07F007 Alternative instruction variable
Wave 8:	
W08F001	The type of currently residing home
W08F004	Whether or not the residing home under R's name
W08F005	Whether or not residing home under multiple per
W08F006	R's share of the residing home (unit: %)

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwAMORT is the value of mortgage (primary residence) and includes imputed values in Waves 1-7. All respondents who reported that they (and their spouse/partner) own a home were asked if they got a loan to purchase the house they are currently living in and how much they still owe on the loan. If the respondent reported not owning their home, RwAMORT is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwAFMORT is a flag variable which indicates whether any components of RwAMORT are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A

code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwAMORT is the respondent's spouse's value of mortgage (primary residence) that is taken directly from the spouse's value of RwAMORT. SwAFMORT is the respondent's spouse's imputation flag for value of mortgage (primary residence) taken directly from the spouse's value of RوافMORT. Aside from the special missing values utilized by RwAMORT and RوافMORT, SwAMORT and SwAFMORT employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

There is a large number of respondents (300+) in Wave 5 who report owning their primary residence, having their name on the deed, and who reported a value for their primary residence, but who have missing values for the amount of money still owed on the house in both the original survey data and the imputed survey data. This issue does not arise in any other wave.

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Value of all mortgages (primary residence) in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

In HRS respondents are asked how much they still owe on a mortgage, land contract, second mortgage or any other loan that uses property as collateral. HRS respondents are also asked to not include the value of any home equity lines of credit. Unlike HRS, KLoSA only asks respondents how much they still owe on the loan used to purchase the house. The Harmonized KLoSA variables RwAMORT and SwAMORT therefore only account for one portion of the RAND HRS measure with the same name and should be considered not perfectly analogous.

KLoSA Variables Used:

Wave 1:	
W01F004	Whether or not the residing home under R's name
Wave 1 Imputations:	
W01F001	The type of currently residing home
W01F001_I	W01F001 Alternative instruction variable
W01F013	The amount of debt for purchasing own house
W01F013_I	W01F013 Alternative instruction variable
Wave 2:	
W02F001	The type of currently residing home
W02F004	Whether or not the residing home under R's name
Wave 2 Imputations:	
W02F013	The amount of debt for purchasing the house tha
W02F013_I	W02F013 Alternative instruction variable
Wave 3:	
W03F001	The type of currently residing home
Wave 3 Imputations:	
W03F004	Whether or not the residing home under R's name

W03F004_I	W03F004 Alternative instruction variable
W03F013	The amount of debt for purchasing the house tha
W03F013_I	W03F013 Alternative instruction variable
Wave 4:	
W04F001	The type of currently residing home
Wave 4 Imputations:	
W04F004	Whether or not the residing home under R's name
W04F004_I	W04F004 Alternative instruction variable
W04F013	The amount of debt for purchasing the house tha
W04F013_I	W04F013 Alternative instruction variable
Wave 5:	
W05F001	The type of currently residing home
Wave 5 Imputations:	
W05F004	Whether or not the residing home under R's name
W05F004_I	W05F004 Alternative instruction variable
W05F013	The amount of debt for purchasing the house tha
W05F013_I	W05F013 Alternative instruction variable
Wave 5 New:	
W05F001	The type of currently residing home
W05F004	Whether or not the residing home under R's name
Wave 5 New Imputations:	
W05F013	The amount of debt for purchasing the house tha
W05F013_I	w05F013 Alternative instruction variable
Wave 6:	
W06F001	The type of currently residing home
W06F004	Whether or not the residing home under R's name
Wave 6 Imputations:	
W06F013	The amount of debt for purchasing the house tha
W06F013_I	w06F013 Alternative instruction variable
Wave 7:	
W07F001	The type of currently residing home
W07F004	Whether or not the residing home under R's name
Wave 7 Imputations:	
W07F013	The amount of debt for purchasing the house tha
W07F013_I	w07F013 Alternative instruction variable
Wave 8:	
W08F001	The type of currently residing home
W08F004	Whether or not the residing home under R's name

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

The net value of housing is calculated as house value less value of mortgage:

$$RwATOTH = RWAHOUS - RWAAMORT$$

Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RWAFTOTH is a flag variable which indicates whether any components of RWAOTOTH are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SWATOTH is the respondent's spouse's net value of primary residence that is taken directly from the spouse's value of RWAOTOTH. SwAFTOTH is the respondent's spouse's imputation flag for net value of housing taken directly from the spouse's value of RWAFTOTH. Aside from the special missing values utilized by RWAOTOTH and RWAFTOTH, SWATOTH and SwAFTOTH employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Net value of primary residence in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS does not include imputation flags for summary variables.

Refer to "Differences with RAND HRS/Harmonized HRS" section of each component to identify differences with the RAND HRS variable of the same name.

KLoSA Variables Used:

Wave 1:	
W01F004	Whether or not the residing home under R's name

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwAHS DR is the value of the lease safety deposit received and includes imputed values in Waves 1-7. All respondents who reported that they own a home were asked if they are leasing part of their current residence to other people. Respondents who answered that they are leasing on a deposit basis (JEON-SE)

were then asked the amount of the security deposit they received. Respondents who answered that they were leasing on a secured monthly rent basis (JEON-WOL-SE) were then asked the amount of the safety deposit they received. RWAHSDR is the sum of both the value of the JEON-SE deposit and the value of the JEON-WOL-SE deposit. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RWAHSDR is a flag variable which indicates whether any components of RWAHSDR are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SWAHSDR is the respondent's spouse's value of the lease safety deposit received that is taken directly from the spouse's value of RWAHSDR. SwAFHSDR is the respondent's spouse's imputation flag for value of lease safety deposit received taken directly from the spouse's value of RWAHSDR. Aside from the special missing values utilized by RWAHSDR and SwAFHSDR, SWAHSDR and SwAFHSDR employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

HRS does not survey the value of the lease safety deposit received and so there is no equivalent RAND HRS or Harmonized HRS variable.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

KLoSA Variables Used:

Wave 1:

W01F004	Whether or not the residing home under R's name
W01F014M1	Leasing for a deposit basis without monthly rent
W01F014M2	Leasing for a secured monthly rent basis (ie JE)

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

RwAHS DP is the value of the rental safety deposit paid and includes imputed values in Waves 1-7. In Wave 1, all respondents who reported that they lease a home on a deposit basis without monthly rent (JEON-WOL-SE) were then asked the amount of the JEON-WOL-SE security deposit paid. All respondents who reported that they pay a monthly rent with a deposit for their home (JEON-WOL-SE) were then asked the amount of the JEON-WOL-SE safety deposit paid. Starting in Wave 2, all respondents who reported that they leased a home on a deposit basis without monthly rent (JEON-WOL-SE) were then asked if the JEON-WOL-SE contracts were under their name. All respondents who reported that the contracts were under their own name were then asked the amounts of the JEON-WOL-SE safety deposits paid. RwAHS DP is set to zero if the respondent

reported that they do not rent their home using a deposit-based rent or monthly rental with a deposit. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RWAHSDP is a flag variable which indicates whether any components of RWAHSDP are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwAHSDP is the respondent's spouse's value of rental safety deposit paid that is taken directly from the spouse's value of RWAHSDP. SwAFHSDP is the respondent's spouse's imputation flag for value of rental safety deposit paid taken directly from the spouse's value of RWAHSDP. Aside from the special missing values utilized by RWAHSDP and RWAHSDP, SwAHSDP and SwAFHSDP employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, all respondents who reported that they lease a home on a deposit basis without monthly rent (JEON-WOL-SE) were then asked the amount of the JEON-WOL-SE security deposit paid. All respondents who reported that they pay a monthly rent with a deposit for their home (JEON-WOL-SE) were then asked the amount of the JEON-WOL-SE safety deposit paid. Starting in Wave 2, all respondents who reported that they leased a home on a deposit basis without monthly rent (JEON-WOL-SE) were then asked if the JEON-WOL-SE contracts were under their name. All respondents who reported that the contracts were under their own name were then asked the amounts of the JEON-WOL-SE safety deposits paid.

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

HRS does not survey the value of rental safety deposit paid and so there is no equivalent RAND HRS or Harmonized HRS variable.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

Net value of non-housing financial wealth is calculated as the sum of the appropriate wealth components less debt:

$$RwATOTF = (RwASTCK + RwACHCK + RwABOND + RwAOTHR) - RwDEBT$$

Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwAFTOTF is a flag variable which indicates whether any components of RwATOTF are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwATOTF is the respondent's spouse's net value of non-housing financial wealth that is taken directly from the spouse's value of RwATOTF. SwAFTOTF is the respondent's spouse's imputation flag for net value of non-housing financial wealth taken directly from the spouse's value of RwAFTOTF. Aside from the special missing values utilized by RwATOTF and RwAFTOTF, SwATOTF and SwAFTOTF employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Note: This total does not include the value of any real estate, vehicles, or businesses.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

These values in KLoSA are measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS does not include imputation flags for summary variables.

Refer to "Differences with RAND HRS/Harmonized HRS" section of each component to identify differences with the RAND HRS variable of the same name.

General Comments:

All financial variables are denominated in nominal 10,000 Korean Won.

How Constructed:

The net value of total wealth (including second home) is calculated as the sum of all wealth components less all debt:

$$\text{RwATOTB} = (\text{RwAHOUS} + \text{RwAHSDP} + \text{RwARLES} + \text{RwAOSDP} + \text{RwATRAN} + \text{RwAOTHAS} + \text{RwABSNS} + \text{RwASTCK} + \text{RwACHCK} + \text{RwABOND} + \text{RwAOTHR}) - (\text{RwAMORT} + \text{RwADEBT} + \text{RwAHSDR} + \text{RwAOSDR})$$

Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RWAFTOTB is a flag variable which indicates whether any components of RwATOTB are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwATOTB is the respondent's spouse's net value of total wealth (including second home) that is taken directly from spouse's value of RwATOTB. SwAFTOTB is the respondent's spouse's imputation flag for net value of total wealth taken directly from spouse's value of RWAFTOTB. Aside from the special missing values utilized by RwATOTB and RWAFTOTB, SwATOTB and SwAFTOTB employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

These values in KLoSA are measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS does not include imputation flags for summary variables.

Refer to "Differences with RAND HRS/Harmonized HRS" section of each component to identify differences with the RAND HRS variable of the same name.

KLoSA Variables Used:

Wave 1:

W01F004	Whether or not the residing home under R's name
W01F004	Whether or not the residing home under R's name
W01F004	Whether or not the residing home under R's name
W01F007CT	Unfolding Bracket value of w01F007
W01F014M1	Leasing for a deposit basis without monthly ren

W01F014M2	Leasing for a secured monthly rent basis (ie JE
W01F015CT	Unfolding Bracket value of w01F015
W01F021CT	Unfolding Bracket value of w01F021
W01F035CT	Unfolding Bracket value of w01F035
W01F043CT	Unfolding Bracket value of w01F043
W01F057	Whether or not the ownership of other real esta
W01F057	Whether or not the ownership of other real esta
W01F058CT	Unfolding Bracket value of w01F058
W01F064	Leasing or not the real estate
W01F065CT	Unfolding Bracket value of w01F065
W01F078	Renting or not the real estate
W01F079	Any security deposit from renting the real esta
W01F085	Any investment on farm or other business
W01F086CT	Unfolding Bracket value of w01F086
W01F095CT	Unfolding Bracket value of w01F095
W01F102CT	Unfolding Bracket value of w01F102

How Constructed:

RwITEARN is the value of the respondent's after-tax income from employment wages and earnings from a side job in the past year. RwITEARN includes imputed values in Waves 1-7. RwITEARN is an aggregated value of two different reported values: 1) wages from employment and 2) earnings from a side job. RwITEARN is only provided if there are values for both components. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Respondents were asked whether they earned any income by being employed by another person or in a workplace in the past year. If the respondent answered yes, they were then asked which or the number of months in the past year they were paid. Respondents then reported their average monthly wage excluding various costs or taxes. In Waves 1-4, respondents were asked which months they received wages in the last calendar year. Starting in Wave 5, respondents were asked how many months they received wages in the last calendar year. Wages from employment in the past year are calculated using the reported monthly amount times the number of months receiving wages. If the respondent reported not earning income by being employed, a value of 0 is assigned.

Respondents were asked whether they earned any income from a side job in the past year. If the respondent answered yes, they were then asked to report their total earnings in the past year from the side job excluding various costs or taxes. If the respondent reported not earning income from a side job, a value of 0 is assigned.

RwITFWAGE is a flag variable which indicates whether any components of RwiTEARN are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwITEARN is the value of the respondent's spouse's after-tax income from employment wages and earnings from a side job in the past year that is taken directly from the spouse's values to RwiTEARN. SwITFEARN is a flag variable which indicates whether any components of SwITEARN are imputed by KLoSA, and if so, how much information is available for imputation. SwITFEARN is taken directly from the spouse's values to RwiTEARN. In addition to the special missing values utilized by RwiTEARN and RwiTFEARN, SwITEARN and SwITFEARN use two more special missing values, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Earnings from a side job are only imputed for Waves 1, 4, and 5. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

In Waves 1-4, respondents were asked which months they received employment wages in the last calendar year. Starting in Wave 5, respondents were asked how many months they received wages in the last calendar year.

Differences with the RAND HRS/Harmonized HRS

Earnings income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial income questions at the individual level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income. Furthermore, the components used in RwiTEARN in the RAND HRS are different from the components used for the variable RwiTEARN in the Harmonized KLoSA. In the RAND HRS, RwiTEARN contains income from wage/salary income, bonuses/overtime pay/commissions/tips, 2nd job or military reserve earnings, professional practice or trade income. In the Harmonized KLoSA, RwiTEARN includes the after tax income from wage income and second job earnings.

How Constructed:

RwITSEMP is the value of the respondent's after-tax earnings from self-employment and after-tax earnings from farm income in the past year. RwITSEMP includes imputed values in Waves 1-7. RwITSEMP is an

aggregated value of two different reported values: 1) earnings from self-employment and 2) earnings from agricultural and fisheries business. `RwITSEMP` is only provided if there are values for both components. Any remaining don't know, refused, or other missing responses are assigned `.d`, `.r`, `.m`, respectively. Plain missing (`.`) is assigned if the respondent was not interviewed in the current wave.

Respondents were asked whether they earned any income from self-employment or running their own business in the past year, excluding any income from agricultural and fisheries business. If the respondent answered yes, then they were asked which or the number of months in the past year they earned this income. Respondents then reported their average monthly wage excluding various costs or taxes. In Waves 1-4, respondents were asked which months they earned this income in the last calendar year. Starting in Wave 5, respondents were asked how many months they earned this income in the last calendar year. Earnings from self-employment in the past year are calculated using the reported monthly amount times the number of months earning this income. If the respondent reported not earning income from self-employment or running their own business, a value of 0 is assigned.

Respondents were asked whether they earned any income from an agricultural and fisheries business in the past year. If the respondent answered yes, then they were asked to report their total earnings in the past year from an agricultural and fisheries business excluding operating costs and taxes. If the respondent reported not earning income from an agricultural and fisheries business, a value of 0 is assigned.

`RwITFSEMP` is a flag variable which indicates whether any components of `RwITSEMP` are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (`.`) is assigned if the respondent was not interviewed in the current wave.

`RwIRENT` is the value of the respondent's rental income from their home and after-tax rental income from real estate in the past year. `RwIRENT` includes imputed values in Waves 1-6. `RwIRENT` is an aggregated value of two different reported values: 1) rental income from the home and 2) rental income from real estate. `RwIRENT` is only provided if there are values for both components. Any remaining don't know, refused, or other missing responses are assigned `.d`, `.r`, `.m`, respectively. Plain missing (`.`) is assigned if the respondent was not interviewed in the current wave.

Respondents who reported that they owned their own house and that the house is under their own name were asked whether they were currently leasing any parts of their house to other people. If the respondent answered that they are leasing on a secured monthly rent basis (i.e., JEON-WOL-SE) or leasing on a monthly rent basis (i.e., WOL-SE), they are asked to report the average monthly amount of rent they receive from leasing parts of the house they are currently living in. Rental income from the home in the past year is calculated using the reported average monthly amount times 12. If the respondent reported not owning their house, not having their house under their own name, or not leasing on a secured monthly rent or monthly rent basis, a value of 0 is assigned.

Respondents who reported that they had any other property assets, other than their current house, such as houses or buildings, commercial property, studio apartments, second houses, forest land, land, or apartments were asked whether they earned any regular income, such as monthly rent or land rent, from the property, excluding security deposits which were received. If the respondent answered yes, they were then asked to report the total amount of rental income received after taxes and other deductions. If the respondent reported not having any other property assets or not earning any regular income, a value of 0 is assigned.

`RwIFRENT` is a flag variable which indicates whether any components of `RwIRENT` are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was

set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

RwIREST is the annual interest that a respondent received from financial assets in the past year and includes imputed values in Waves 1-7. In Waves 1-3 all respondents were asked how much interest they earned per month from financial assets in the past year. Starting in Wave 4, respondents who reported having cash (in hand or in a checking account), money in installment savings, mutual savings, certificates of deposits, or other savings account, stocks or investment trust funds, private savings club (Gye), or any other financial assets were asked how much interest they earned per month from financial assets in the past year. RwIREST is calculated using the reported monthly amount times 12. If the respondent reported not having any of the listed financial assets after Wave 4, RwIREST is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwIFREST is a flag variable which indicates whether any components of RwIREST are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

RwICAP is the summary of the respondent's capital income in the past year that includes after tax self-employment income, after tax own business income, rental income from renting part of their own house, after tax rental income from renting out other real estate or land, and interest income from financial assets in the past year. Specifically, RwICAP is calculated as:

$$\text{RwICAP} = \text{RwITSEMP} + \text{RwIRENT} + \text{RwIREST}$$

RwICAP is only provided if there are values for all three components. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwIFCAP is a flag variable which indicates whether any components of RwICAP are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwITSEMP, SwIRENT, SwIREST, and SwICAP are taken directly from the spouse's values to RwITSEMP, RwIRENT, RwIREST, and RwICAP. SwITFSEMP, SwIFRENT, SwIFREST, and SwIFCAP are taken directly from the spouse's values to RwITFSEMP, RwIFRENT, RwIFREST, and RwIFCAP. In addition to the special missing values utilized by RwITSEMP, RwIRENT, RwIREST, and RwICAP, SwITSEMP, SwIRENT, SwIREST, and SwICAP use two more special missing values, .u and .v. In addition to the special missing values utilized by RwITFSEMP, RwIFRENT, RwIFREST, and RwIFCAP, SwITFSEMP, SwIFRENT, SwIFREST, and SwIFCAP use two more special missing values, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Rental income from the home is only imputed for Waves 1, 3, 5, and 6. KLoSA does not impute income from real estate for Wave 7. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

In Waves 1-4, respondents were asked which months they earned self-employment income in the last calendar year. Starting in Wave 5, respondents were asked how many months they earned this income in the last calendar year.

In Waves 1-3 all respondents were asked how much interest they earned per month from financial assets in the past year. Starting in Wave 4, only respondents who reported having cash (in hand or in a checking account), money in installment savings, mutual savings, certificates of deposits, or other savings account, stocks or investment trust funds, private savings club (Gye), or any other financial assets were asked how much interest they earned per month from financial assets in the past year.

Differences with the RAND HRS/Harmonized HRS

Capital income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial income questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income.

The components of RwICAP used in KLoSA are different from the components of HwICAP in the RAND HRS. In the RAND HRS, HwICAP contains income from business, rental, stock and mutual funds, bonds, CDs and treasury bills, checking and saving accounts, dividend and interest, and trust fund or royalties. In the Harmonized KLoSA, RwICAP includes after-tax self-employment income, after-tax own business income, rental income from renting part of their own house, after-tax rental income from renting out other real estate or land, and interest income from financial assets.

How Constructed:

RwIPENA is the value of the respondent's income from occupational and private pensions in the past year. RwIPENA includes imputed values in Waves 1-3 and 5-7. RwIPENA is an aggregated value of two different reported values: 1) occupational pension benefits and 2) private pension benefits. RwIPENA is only provided if there are values for both components. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Respondents were asked whether they received any benefits from the occupational pension system, including government employees' pension, military personnel pension, and private school teachers' pension, in the past year. Respondents could report that they received monthly benefits, lump-sum benefits, both, or didn't receive any benefit. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly occupational pension

benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from occupational pension benefits in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving monthly benefits or lump-sum benefits, a value of 0 is assigned.

Respondents were asked whether they received any benefits from a private pension, aside from national pension and occupational pension, in the past year. Respondents could report that they received monthly benefits, lump-sum benefits, both, or didn't receive any benefit. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly private pension benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from private pension benefits in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving monthly benefits or lump-sum benefits, a value of 0 is assigned.

RwIFPENA is a flag variable which indicates whether any components of RwIPENA are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwIPENA and SwIFPENA are taken directly from the spouse's values to RwIPENA and RwIFPENA. In addition to the special missing values utilized by RwIPENA and RwIFPENA, SwIPENA and SwIFPENA uses two more special missing values, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA only provides imputations for occupational pension benefit for Waves 1, 2, 3, 5, and 6. KLoSA only provides imputations for private pension benefit for Waves 5, 6 and 7. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year.

Differences with the RAND HRS/Harmonized HRS

Private pension income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The RAND HRS private pension variable of the same name does not include the values of lump sum pension payments as does RwIPENA in the Harmonized KLoSA. Instead, lump sum pension payments in the RAND HRS are included in the other household income variable, HwIOTHR.

HRS asks financial income questions at the individual level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income. Moreover, HRS asked about the amount of

any pensions that the respondent has received, whereas KLoSA asked the amount of each specific pension type that the respondent has received.

How Constructed:

RwIPUBPEN is the value of respondent's income from the National Pension System in the past year and includes imputed values in Waves 1-7. Respondents were asked whether they received any benefits from the National Pension System, including old age pension, disability pension, survivors' pension, and lump-sum death payments, in the past year. Respondents could report that they received monthly benefits, lump-sum benefits, both, or didn't receive any benefit. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly public pension benefits in the past year is calculated using the reported monthly amount times the number

of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. `RwIPUBPEN` is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving monthly benefits or lump-sum benefits, `RwIPUBPEN` is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned `.d`, `.r`, `.m`, respectively. Plain missing (`.`) is assigned if the respondent was not interviewed in the current wave.

`RwIFPUBPEN` is a flag variable which indicates whether any components of `RwIPUBPEN` are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (`.`) is assigned if the respondent was not interviewed in the current wave.

`SwIPUBPEN` and `SwIFPUBPEN` are taken directly from the spouse's values to `RwIPUBPEN` and `RwIFPUBPEN`. In addition to the special missing values utilized by `RwIPUBPEN` and `RwIFPUBPEN`, `SwIPUBPEN` and `SwIFPUBPEN` use two more special missing values, `.u` and `.v`. Special missing value `.u` is used when the respondent does not report being coupled in the current wave. Special missing value `.v` is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year.

Differences with the RAND HRS/Harmonized HRS

Public pension income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The RAND HRS public pension variables, `RwISSDI` and `RwISRET` do not include the values of lump sum pension payments as does `RwIPUBPEN` in the Harmonized KLoSA. Instead, lump sum pension payments in the RAND HRS are included in the other household income variable, `HwIOTHR`.

HRS asks financial income questions at the individual level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income. Moreover, HRS asks about the amount of any pensions that the respondent has received, whereas KLoSA asks about the amount of specific pension types that the respondent has received.

How Constructed:

RwIGXFR is the value of the respondent's income from government transfers in the past year. RwIGXFR includes imputed values in Waves 1, 2, 6, and 7. RwIGXFR is an aggregated value of five different reported values: 1) unemployment benefits, 2) industrial accident compensation, 3) national basic living security benefits, 4) veteran benefits, and 5) other welfare benefits. RwIGXFR is only provided if there are values for all five components. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Respondents were asked whether they received any unemployment benefits in the past year. If the respondent answered yes, they were then asked how they received the benefit, whether monthly, lump sum,

or both. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly unemployment benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from unemployment benefits in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving unemployment benefits, a value of 0 is assigned.

Respondents were asked whether they received any industrial accident compensation (includes wage-replacement benefits, disability benefits, and survivors' benefits) in the past year. If the respondent answered yes, they were then asked how they received the benefits and compensation, whether monthly, lump sum, or both. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly industrial accident compensation in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from industrial accident compensation in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving industrial accident compensation, a value of 0 is assigned.

Respondents were asked whether they received any national basic living security benefits (general and self-reliance benefits) in the past year. In Waves 1-5 if the respondent answered yes, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. In Wave 5, respondents were asked how many months they received this benefit in the last calendar year. In Waves 1-5 income from national basic living security benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. In Wave 6 if the respondent answered that they received national basic living security benefits, they were then asked whether they applied in the first half of 2015 and received the benefit, applied in the second half of 2015 and received the benefit, or both. If the respondent reported having applied in the first half of 2015 then they were asked the number of months they received this benefit between January 2015 and June 2015 and the average monthly amount of the benefit for the same time period. If the respondent reported having applied in the second half of 2015 then they were asked the number of months between July 2015 and December 2015 they received living benefits, they received housing benefits, and they received education benefits, each separately. The respondent was then asked the average monthly amount of the benefits for the same time period separately for living benefits, housing benefits, and education benefits. In Wave 6 income from national basic living security benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit from the first half of 2015 plus the sum of the reported monthly amounts times the number of months they received living benefits, housing benefits, and education benefits from the second half of 2015. Starting in Wave 7, respondents who reported they received national basic living security benefits were asked to report the number of months they received living benefits, housing benefits, and education benefits separately in the last calendar year. The respondents were then asked the average monthly amount of the benefits for the same time period separately for living benefits, housing benefits, and education benefits. Starting in Wave 7 income from national basic living security benefits in the past year is calculated using the sum of the reported monthly amount times the number of months they received living benefits, housing benefits, and education benefits. At all waves if the respondent reported not receiving national basic living security benefits, a value of 0 is assigned.

Respondents were asked whether they received any veteran benefits (includes benefits for patriots and their surviving families, and pensions and nursing allowances for wounded policemen and soldiers) in the past year. If the respondent answered yes, they were then asked how they received the benefit, whether monthly, lump sum, or both. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly veteran benefits in the

past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from veteran benefits in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving veteran benefits, a value of 0 is assigned.

Respondents were asked whether they received any other welfare benefits in the past year. If the respondent answered yes, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from other welfare benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported not receiving other welfare benefits, a value of 0 is assigned.

RwIFGXFR is a flag variable which indicates whether any components of RwIGXFR are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwIGXFR and SwIFGXFR are taken directly from the spouse's values to RwIGXFR and RwIFGXFR. In addition to the special missing values utilized by RwIGXFR and RwIFGXFR, SwIGXFR and SwIFGXFR use two more special missing values, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Income from unemployment benefits is only imputed by KLoSA for Wave 1. Income from veteran benefits is only imputed by KLoSA for Waves 1 and 4. Income from other welfare benefits is only imputed by KLoSA for Waves 1, 2, and 6. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

In Waves 1, 5, and 6 the options for receiving unemployment benefits were monthly, as a lump sum and both, whereas in Waves 2-4 the only two options are monthly and both monthly and a lump sum.

In Waves 1-4, respondents were asked which months they received benefits in the last calendar year. Starting in Wave 5, respondents were asked how many months they received benefits in the last calendar year.

In Waves 1-5, respondents who reported receiving national basic living security benefits are asked which or the number of months in the past year they received this benefit and the average monthly amount of the benefit in the past year. In Wave 6 if the respondent answered that they received national basic living security benefits, they were then asked whether they applied in the first half of 2015 and received the benefit, applied in the second half of 2015 and received the benefit, or both. If the respondent reported having applied in the first half of 2015 then they were asked the number of months they received this benefit between January 2015 and June 2015 and the average monthly amount of the benefit for the same time period. If the respondent reported having applied in the second half of 2015 then they were asked the number of months between July 2015 and December 2015 they received living benefits, they received housing benefits, and they received education benefits, each separately. The respondent was then asked the average monthly amount of the benefits for the same time period separately for living benefits, housing benefits, and education benefits. In Wave 6 income from national basic living security benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit from the first half of 2015 plus the sum of the reported monthly amounts times the number of months they received living benefits, housing benefits, and education benefits from the second half of 2015. Starting in Wave 7, respondents who reported that they received national basic living security

benefits were asked to report the number of months they received living benefits, housing benefits, and education benefits in the last calendar year separately. The respondents were then asked the average monthly amount of the benefits for the same time period separately for living benefits, housing benefits, and education benefits. Starting in Wave 7 income from national basic living security benefits in the past year is calculated using the sum of the reported monthly amount times the number of months they received living benefits, housing benefits, and education benefits.

Starting in Wave 5, KLoSA added basic pension (e.g. basic old-age pension) and disabled benefit to the list of other possible government transfers. These values are not incorporated into RwigXFR as it is assumed they were also reported in income from the National Pension System. Starting in Wave 6, KLoSA added earned income tax credit to the list of other possible government transfers. Currently these values are also not yet incorporated into RwigXFR.

Differences with the RAND HRS/Harmonized HRS

Total public transfer income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial income questions at the individual level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income. Furthermore, the components used in RwigXFR in the RAND HRS are different from the components used for the same variable in the Harmonized KLoSA. In RAND HRS, RwigXFR contains veteran's benefits, welfare, and food stamps. In Harmonized KLoSA, RwigXFR includes unemployment benefits, industrial accident compensation, basic living security benefits, veteran benefits, and other welfare benefits.

How Constructed:

RwITOTHR is the value of the respondent's after tax other income in the past year and includes imputed values in Waves 1, 3-4, and 6. Respondents were asked whether they received any other income, aside from everything else already asked about in the survey, including income from alimony, copyrights, and patent fees. If the respondent answered yes, they were then asked to report the total amount of other income after taxes and deductions. If the respondent reported not receiving any other income, RwITOTHR is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwITFOTHR is a flag variable which indicates whether any components of RwITOTHR are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that

the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SWITOTHR and SWITFOTHR are taken directly from the spouse's values to RWITOTHR and RWITFOTHR. In addition to the special missing values utilized by RWITOTHR and RWITFOTHR, SWITOTHR and SWITFOTHR use two more special missing values, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

KLoSA only imputes components of RWITOTHR for Waves 1, 3-4, and 6. Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

Other income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial income questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income.

How Constructed:

RwITOT is the total income that the respondent received in the past year, that is, the total of the sum of after-tax earnings, capital income, private pension income, public pension income, government transfers, and after tax other income. Specifically RwITOT is calculated as:

$$\text{RwITOT} = \text{RwITEARN} + \text{RwICAP} + \text{RwIPENA} + \text{RwIPUBPEN} + \text{RwIGXFR} + \text{RwITOTHR}$$

RwITOT is only provided if there are values for all six of its components. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwIFTOT is a flag variable which indicates whether any components of RwITOT are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwITOT and SwIFTOT are taken directly from the spouse's values to RwITOT and RwIFTOT. In addition to the special missing values utilized by RwITOT and RwIFTOT, SwITOT and SwIFTOT use two more special missing values, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Refer to "Cross Wave Differences in KLoSA" section of each component to identify differences across waves for the components of RwITOT.

Differences with the RAND HRS/Harmonized HRS

Total individual income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Refer to "Differences with the RAND HRS/Harmonized HRS" section of each component to identify differences with the RAND HRS variable of the same name.

How Constructed:

RwITOTHHINC is the total household income in the past year. Respondents reported past year total income excluding taxes and other deductions. The reported income includes the income from other household members and the respondent themselves. This is a direct question from the questionnaire and is different from the aggregate individual total income variable RwITOT. Any remaining don't know, refused, or other missing responses are assigned .d, .r, .m, respectively. RwIFTOTHHINC is a flag variable which indicates whether the value of RwITOTHHINC is imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as

KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

SwITOTHHINC and SwIFTOTHHINC are taken directly from the spouse’s values to RwiTOTHHINC and RwiFTOTHHINC. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Imputed values are not yet available for Wave 8, thus flag variables have not yet been generated for this wave.

Differences with the RAND HRS/Harmonized HRS

This variable is not available in the RAND HRS.

HH8CFOOD1M	6478	58.41	33.41	0.00	300.00

How Constructed:

HHwCFOODI1M represents the typical monthly amount spent by the household on food consumed at home in Korean won. The household respondent is asked, "What was your household's average monthly expenditure on food in the last calendar year?" Don't know, refuse, and other missing responses of HHwCFOODI1M are assigned special missing codes .d, .r, .m, respectively. HHwCFOODI1M is set to plain missing (.) for respondents who did not respond to the current wave.

HHwCFOODO1M represents the typical monthly amount spent by the household on food consumed outside of the home in Korean won. The respondent is asked, "What was your household's average monthly expenditure on dining out in the last calendar year?" Don't know, refuse, and other missing responses of HHwCFOODO1M are assigned special missing codes .d, .r, .m, respectively. HHwCFOODO1M is set to plain missing (.) for respondents who did not respond to the current wave.

HHwCFOOD1M represents the total typical monthly amount spent by the household on food consumption in Korean won. HHwCFOOD1M is defined as: HHwCFOODI1M + HHwCFOODO1M. It is only summed if there are values for both components. Don't know, refuse, and other missing responses of HHwCFOOD1M are assigned special missing codes .d, .r, .m, respectively. HHwCFOOD1M is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in KLoSA

Food consumption questions were asked starting in Wave 2.

Differences with the RAND HRS/Harmonized HRS

The HRS asks about food consumption per week, however equivalent variables could be created.

HH8CNF1M	6439	85.76	64.52	0.00	570.00

How Constructed:

HHwCNF1M represents the monthly amount spent by the household on non-food consumption in Korean won. HHwCNF1M consists of the following questions:

1. The respondent is asked, "How much did your household spend on public education (tuition, textbooks, materials, etc.) in an average month in the last calendar year?"
2. The respondent is asked, "How much did you spend on private education (private educational institutions, tutoring, textbooks, materials, etc.) in an average month in the last calendar year?"
3. The respondent is asked, "How much did your household spend on housing (monthly rent, utilities including electricity, water and gas, etc.) in an average month in the last calendar year?"
4. The respondent is asked, "How much did your household spend on medical expenditure (including health insurance premiums) in an average month in the last calendar year?"
5. The respondent is asked, "How much did your household spend on clothing (clothes, shoes, etc.) in an average month in the last calendar year?"
6. The respondent is asked, "How much did your household spend on insurance premium in an average month in the last calendar year?" This question is asked starting at Wave 5.
7. The respondent is asked, "How much did your household spend on vehicle maintenance in an average month in the last calendar year?" This question is asked starting at Wave 5.
8. The respondent is asked, "How much did your household spend on telecommunication service in an average month in the last calendar year?" This question is asked starting at Wave 5.
9. The respondent is asked, "How much did your household spend on leisure activities (travel, picnic, movie, performance, exhibition, sport game, hobby or any community activities) in an average month in the last calendar year?" This question is asked starting at Wave 5.
10. The respondent is asked, "How much did your household spend on family events/ tributes in an average month in the last calendar year?" This question is asked starting at Wave 5.

These values are only summed if none of the components are missing. Don't know, refuse, and other missing responses of HHwCNFlM are assigned special missing codes .d, .r, .m, respectively. HHwCNFlM is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in KLoSA

The amount spent by the household on public education, private education, housing, medical expenditures, and clothing are asked starting at Wave 2. In Waves 2 and forward, if the respondent refuses or does not know the value for each expenditure, a series of unfolding bracket questions are asked. The question wording, bracket amounts and entry points are the same in all waves in which the question is asked and vary by question.

The amount spent by the household on insurance premiums, vehicle maintenance, telecommunication service, leisure activities, and family events/tributes are asked starting at Wave 5. In Wave 5 and forward, if the respondent refuses or does not know the value for each expenditure, a series of unfolding bracket questions are asked. The question wording, bracket amounts and entry points are the same in all waves in which the question is asked and vary by question.

Differences with the RAND HRS/Harmonized HRS

The HRS does not have equivalent variables.

How Constructed:

HHwCTOT represents the total typical amount spent annually by the household in Korean won. HHwCTOT is equal to the sum of HHwCFOOD1M and HHwCNF1M multiplied by 12. It is only summed if none of its components are missing. If any of the components of HHwCTOT are assigned don't know, refuse, and other missing responses, then HHwCTOT is assigned the special missing codes .d, .r, .m, respectively. HHwCTOT is set to plain missing (.) for respondents who did not respond to the current wave.

HHwCPERC is the per capita household consumption. This variable is calculated by taking total household consumption divided by the number of people in the household; this is, HHwCPERC = HHwCTOT/HwHHRES. If any of the components are assigned don't know, refuse, and other missing responses, HHwCPERC is assigned the special missing codes .d, .r, .m, respectively. HHwCPERC is set to plain missing (.) for respondents who did not respond to the current wave.

HHwCTOTR1M represents the reported total typical monthly amount spent by the household in Korean won. The respondent is asked, "Now I am going to ask you about your living costs and related items in the last calendar year. Related items include food and dining out, public and private education, housing, medical, and clothing expenditures. First, what was your household's average monthly living cost in the last calendar year?". HHwCTOTR1M takes the values reported by the respondent. Don't know, refuse, and other missing responses of HHwCTOTR1M are assigned special missing codes .d, .r, .m, respectively. HHwCTOTR1M is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in KLoSA

Consumption questions are only asked starting in Wave 2. Expenditures for food consumed in the house, food consumed out of the house, public education, private education, housing, medical expenditures, and clothing are asked starting in Wave 2. Expenditures for insurance premiums, vehicle maintenance, telecommunication service, leisure activities, and family events/tributes are asked starting in Wave 5. As a result, the calculated totals are much higher at Waves 5 and forward in comparison to Waves 2 through 4.

Differences with the RAND HRS/Harmonized HRS

The HRS does not have equivalent variables.

KLoSA Variables Used:

Wave 2:	
W02E201	In last year, the monthly average amount of liv
Wave 3:

H8HHRES	6488	2.83	1.34	1.00	10.00

How Constructed:

HwHHRES counts the number of people living in the household, including the respondents.

The number of residents living in a household is obtained using the Coverscreen Module which includes all members reported to live in the household. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

HRS asks the number of people living in the household once per couple per wave; however, KLoSA asks the number of people living in the household once per household for new respondents.

KLoSA Variables Used:

Wave 1:	
W01HHSIZE	The number of household

How Constructed:

HwCHILD is the number of living children of the respondent and their spouse or partner. It is the same between members of a couple. KLoSA asks the family respondent directly for the number of living children, and then proceeds through a loop to ask about characteristics of each child for both the respondent and the spouse. KLoSA records information for up to ten children. HwCHILD takes the value of the direct report, and if missing, takes the value of the total number of living children in the loop.

HwSON is the number of living sons of the respondent and their spouse or partner. The son(s) may or may not be living with the respondent and their spouse or partner.

HwDAU is the number of living daughters of the respondent and their spouse or partner. The daughter(s) may or may not be living with the respondent and their spouse or partner.

HwCHILD, HwSON, and HwDAU are assigned special missing .f in Wave 7 if these questions were skipped because there was no family respondent. Don't know, refused, or missing responses to HwCHILD, HwSON and HwDAU are assigned special missing values .d, .r, .m, respectively. HwCHILD, HwSON and HwDAU are set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in KLoSA

These questions were skipped in Wave 7 if there was no family respondent.

Differences with the RAND HRS/Harmonized HRS

No differences known.

KLoSA Variables Used:

Wave 1:

W01BA003	The number of alive children (unit: person)

H7GRCHILD	6939	3.65	3.69	0.00	50.00
H8GRCHILD	6487	3.59	3.50	0.00	44.00

How Constructed:

HwGRCHILD provides the number of grandchildren of the respondent and their spouse or partner. KLoSA asks the respondent how many grandchildren they and their spouse/partner have altogether and HwGRCHILD takes the value reported. Don't know, refused, or missing responses to HwGRCHILD are assigned special missing values .d, .r, .m, respectively. HwGRCHILD is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Number of grandchildren is not provided in the main RAND HRS file but is included in the RAND HRS Family Data which record the number of grandchildren for each child.

The Harmonized HRS includes the respondent's and their spouse's total number of grandchildren in HwGRCHILD, which is comparable to HwGRCHILD in the Harmonized KLoSA.

KLoSA Variables Used:

Wave 1:	
W01BA068	The number of grandchild (unit: person)

How Constructed:

RwLIVSIB is the number of the respondent's living siblings. In the first interview, KLoSA asks the respondent directly for the number of living siblings, and then proceeds through a loop to ask about the characteristics of each sibling, including their relationship. At subsequent interviews, the questions become "Now I am going to ask you about your sibling, [sibling's name]. Is [sibling's name] currently alive?" KLoSA records information for up to fourteen siblings. If information about the total number of siblings is not available - on account of the respondent's refusal or not knowing - special missing codes .r and .d, respectively, are assigned. Missing responses are assigned special missing values .m. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

SwLIVSIB is the number of the spouse's siblings. They are taken from the spouse's value to RwLIVSIB. Aside from the special missing values utilized by RwLIVSIB, SwLIVSIB employs two additional special missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed

to be single, a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married, a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1, KLoSA asks the respondent directly for the number of living siblings, and then proceeds through a loop to ask about characteristics of each sibling, including the relationship. Starting in Wave 2, the questions are "Now I am going to ask you about your sibling, [sibling's name]. Is [sibling's name] currently alive?"

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, KLoSA does not survey the number of living siblings in each wave. KLoSA only asks respondents to report the number of living siblings in the first interview. Starting in Wave 2 and forward respondents were asked how many of the siblings reported in Wave 1 (or the first wave interviewed) are still alive.

KLoSA Variables Used:

Wave 1:	
W01B001	The number of alive siblings (unit: person)
Wave 2:	
W02BB001_01	1st sibling survival
W02BB001_02	2nd sibling survival
W02BB001_03	3rd sibling survival
W02BB001_04	4th sibling survival
W02BB001_05	5th sibling survival
W02BB001_06	6th sibling survival
W02BB001_07	7th sibling survival
W02BB001_08	8th sibling survival
W02BB001_09	9th sibling survival
W02BB001_10	10th sibling survival
W02BB001_11	11th sibling survival
W02BB001_12	12th sibling survival

How Constructed:

RwMOMLIV and RwDADLIV indicate whether the respondent's mother and father are alive at the current wave. After the initial interview, these questions are skipped if the respondent's mother or father is not alive in a previous wave or missing. A code of 0 indicates that the respondent's mother or father is not alive at the current wave and a code of 1 indicates that the respondent's mother or father is alive at the current wave. To account for displaced families in the Korean War, respondents can also indicate that their family was dispersed. For these individuals a special missing code of .f is used. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwLIVPAR is the number of living parents of the respondent. KLoSA asks about the respondent's mother and father separately allowing for a maximum of 2 living parents. Respondents with one or both parents whose status is not known because the family is dispersed are assigned the special missing value of .f. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwMOMAGE and RwDADAGE are the respondent's mother's and father's current age in years if the mother or father is still alive or the respondent's mother's and father's age at death. We rely on the first reported mother's and father's age at death. To account for displaced families in the Korean War, respondents can also indicate that their family was dispersed. For these individuals a special missing code of .f is used. Don't know, refused, or missing responses to mother/father age are assigned special missing values .d, .r, .m, respectively. RwMOMAGE and RwDADAGE are set to plain missing (.) for respondents who did not respond to the current wave.

In the initial interview respondents are asked either their mother/father's age if they reported their mother/father was alive or the age when their mother/father died if they reported their mother/father was no longer alive. RlMOMAGE and RlDADAGE are based on these age reports. In subsequent waves respondents are only asked if their mother/father are still alive if they were reported alive in their last interview. For those respondents whose mother/father was reported deceased at the last wave RwMOMAGE and RwDADAGE are carried forward from the previous wave. If the respondent reported that their mother/father has died since the last interview they are asked the month and year their mother/father died; in this case, RwMOMAGE and RwDADAGE are calculated using the previously reported parent's age and the year in which the parent was reported to have died. If the respondent reported that their mother/father is still alive RwMOMAGE and RwDADAGE are calculated using the previously reported parent's age and the number of years since the last interview.

SwMOMLIV, SwDADLIV, SwLIVPAR, SwMOMAGE and SwDADAGE indicate whether the current wave's spouse's mother and father are alive, the number of living parents, and mother's and father's age/passing age at the current wave, respectively. They are taken from the spouse's values to RwMOMLIV, RwDADLIV, RwLIVPAR, RwMOMAGE and RwDADAGE. Aside from the special missing values utilized by RwMOMLIV, RwDADLIV, RwLIVPAR, RwMOMAGE and RwDADAGE, SwMOMLIV, SwDADLIV, SwLIVPAR, SwMOMAGE and SwDADAGE employ two additional special missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

The questions about parents' mortality are only asked to all respondents in Wave 1 and to new respondents in Wave 5. In subsequent interviews, these questions are skipped if the respondent's mother or father is not alive in the previous wave and respondents are only asked if their mother or father is still alive if they were reported living in the previous wave, and if not, their year of death. Age of living parents are only asked in initial interviews. Ages in subsequent waves are calculated.

Differences with the RAND HRS/Harmonized HRS

No differences known.

KLoSA Variables Used:

Wave 1:

W01B010	Father's age (unit: years old)
W01B015	The age of father's death(unit: years old)

How Constructed:

RAMEDUC_K and RAFEDUC_K indicate the education level completed by the respondent's mother and father, respectively. The question asks "What is the highest level of school or college your father completed?" and places educational attainment into nine categories: 1) No formal education (illiterate), 2) No formal education (capable of reading), 3) Elementary school, 4) Middle School, 5) High School, 6) Two-year college, 7) College grad, 8) Post college (Master), and 9) Post college (PhD). Special missing .o is assigned if "other" was given as the response. Don't know and refused responses are coded as special missing .d and .r respectively. Other missing responses are assigned special missing .m.

SwMEDUC_K and SwFEDUC_K indicate the current wave's spouse's mother's and father's level of education. They are taken from the spouse's values to RAMEDUC_K and RAFEDUC_K. Aside from the special missing values utilized by RAMEDUC_K and RAFEDUC_K, SwMEDUC_K and SwFEDUC_K employ two additional special missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

RAMOMEDUCL and RADADEDUCL indicate the education level completed by the respondent's mother and father, respectively, according to a three-tier harmonized scale which we developed to compare education levels across countries. This Harmonized education scale is a simplified version of 1997 International Standard Classification of Education (ISCED-97) codes. For more information on ISCED codes, see www.uis.unesco.org

and the OECD document entitled "Classifying Educational Programmes: Manual for ISCED-97 Implementation in OECD Countries, 1999 Edition". RAMOMEDUCL is coded as follows: 1.Less than lower secondary education, 2.Upper secondary & vocational training, and 3.Tertiary education. Respondents are assigned a code of 1 if the respondent reports an education level of "No Formal Education (Illiterate)", "No Formal Education (Capable of reading)", "Elementary School" or "Middle School". If the respondent reports an education of level of "High School" a code of 2 is assigned. Respondents are assigned a code of 3 if the respondent reports an education level of "Two-year College", "College Grad" or "Post-graduate degree (Master or PhD)". Special missing .o is assigned if "other" was given as the response. Don't know and refused responses are coded as special missing .d and .r respectively. Other missing responses are assigned special missing .m.

SwMOMEDUCL and SwDADEDUCL indicate the current wave's spouse's mother's and father's category of education. They are taken from the spouse's values to RAMOMEDUCL and RADADEDUCL. Aside from the special missing values utilized by RAMOMEDUCL and RADADEDUCL, SwMOMEDUCL and SwDADEDUCL employ two additional special missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

Parental education questions were only asked in the initial interview-i.e. at Wave 1 and for the new sample in Wave 5.

Differences with the RAND HRS/Harmonized HRS

A notable modification to the RAND HRS category schema here is the additional two categories to capture lower levels of educational attainment - middle school and elementary school education.

KLoSA Variables Used:

Wave 1:		
W01B007		Father's education
W01B017		Mother's education
Wave 5 New:		
W05BB007W5_1		Father's education
W05BB013W05_1		Mother's education

Any Child Co-resides with Respondent

1.yes	3445	2820	2271	1948

How Constructed:

HwCORESD indicates whether any child is co-residing with the respondent and their spouse or partner.

For each child the family respondent reports for their self and their spouse, they are then asked whether this child co-resides with the respondent and their spouse. HwCORESD is coded as yes, 1, if the respondent reported any child co-resides with the respondent or spouse. Otherwise, HwCORESD is coded as no, 0. Special missing code .k is assigned if the respondent reports they do not have any living children. HwCORESD is assigned special missing .f in Wave 7 if this question was not asked because there was no family respondent. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

Cross Wave Differences in KLoSA

This question is not asked in Wave 7 if there was no family respondent.

Differences with the RAND HRS/Harmonized HRS

This variable is not available in RAND HRS but available in the RAND Family data.

KLoSA Variables Used:

Wave 1:

W01BA003	The number of alive children (unit: person)
W01BA013_01	The 1st child is currently co-residing with me
W01BA013_02	The 2nd child is currently co-residing with me
W01BA013_03	The 3rd child is currently co-residing with me
W01BA013_04	The 4th child is currently co-residing with me
W01BA013_05	The 5th child is currently co-residing with me
W01BA013_06	The 6th child is currently co-residing with me
W01BA013_07	The 7th child is currently co-residing with me
W01BA013_08	The 8th child is currently co-residing with me
W01BA013_09	The 9th child is currently co-residing with me
W01BA013_10	The 10th child is currently co-residing with me

Wave 2:

W02BA003	The number of alive children (unit: person)
W02BA013_01	The 1st child is currently co-residing with me
W02BA013_02	The 2nd child is currently co-residing with me
W02BA013_03	The 3rd child is currently co-residing with me
W02BA013_04	The 4th child is currently co-residing with me
W02BA013_05	The 5th child is currently co-residing with me
W02BA013_06	The 6th child is currently co-residing with me
W02BA013_07	The 7th child is currently co-residing with me
W02BA013_08	The 8th child is currently co-residing with me
W02BA013_09	The 9th child is currently co-residing with me
W02BA013_10	The 10th child is currently co-residing with me

Wave 3:

W03BA003	The number of alive children (unit: person)
W03BA013_01	The 1st child is currently co-residing with me
W03BA013_02	The 2nd child is currently co-residing with me
W03BA013_03	The 3rd child is currently co-residing with me
W03BA013_04	The 4th child is currently co-residing with me
W03BA013_05	The 5th child is currently co-residing with me
W03BA013_06	The 6th child is currently co-residing with me
W03BA013_07	The 7th child is currently co-residing with me
W03BA013_08	The 8th child is currently co-residing with me

How Constructed:

For each child not reported as co-residing with the respondent and the spouse, respondents are asked how close this child lives to the respondent and the spouse. In Wave 1, the family respondent reports closeness with each living child on behalf of themselves and their spouse. Starting in Wave 2, if the family respondent reported having living children, each individual respondent is asked closeness with each child. Because of the difference in questionnaires, this variable is a household-level variable in Wave 1 and a respondent-level variable starting in Wave 2. Respondents are allowed to report the following categories of closeness: within a 30-minute distance, within a one-hour distance, within a two-hour distance, or more than a two-hour distance by public transportation.

HwLVNEAR indicates whether the respondent or spouse has any child who lives within a 30-minute distance by public transportation. HwLVNEAR is coded as yes and given a value of 1 if any child lives within a 30-minute distance or a child is co-residing with the respondent or their spouse. Otherwise, HwLVNEAR is coded as no, 0. Special missing code .k is assigned if the respondent reports not having any children. HwLVNEAR is assigned special missing .f if this question is skipped because there is no family respondent. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwLVNEAR indicates whether the respondent has any child who lives within a 30-minute distance by public transportation. RwLVNEAR is coded as yes and given a value of 1 if any child lives within a 30-minute distance or a child is co-residing with the respondent or their spouse. Otherwise, RwLVNEAR is coded as no, 0. Special missing code .k is assigned if the respondent reports not having any children. RwLVNEAR is assigned special missing .f if this question is skipped because there is no family respondent. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

SwLVNEAR indicates whether the current wave's spouse has any child who lives within a 30-minute distance by public transportation. It is taken from the spouse's values to RwLVNEAR. Aside from the special missing values utilized by RwLVNEAR, SwLVNEAR employs two additional special missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special

missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1, only the family respondent is asked how close each child lives. Starting in Wave 2, if the family respondent reported having living children, all respondents are asked how close each of their children live.

Differences with the RAND HRS/Harmonized HRS

These variables are not available in the RAND HRS, but are available in the RAND Family data at the household level.

KLoSA Variables Used:

Wave 1:

W01BA003	The number of alive children (unit: person)
W01BA018_01	(Not live together) The 1st child's neighboring
W01BA018_02	(Not live together) The 2nd child's neighboring
W01BA018_03	(Not live together) The 3rd child's neighboring
W01BA018_04	(Not live together) The 4th child's neighboring
W01BA018_05	(Not live together) The 5th child's neighboring
W01BA018_06	(Not live together) The 6th child's neighboring
W01BA018_07	(Not live together) The 7th child's neighboring
W01BA018_08	(Not live together) The 8th child's neighboring
W01BA018_09	(Not live together) The 9th child's neighboring
W01BA018_10	(Not live together) The 10th child's neighboring

Wave 2:

W02BA003	The number of alive children (unit: person)
W02BA018_01	(Not live together) The 1st child's neighboring
W02BA018_02	(Not live together) The 2nd child's neighboring
W02BA018_03	(Not live together) The 3rd child's neighboring
W02BA018_04	(Not live together) The 4th child's neighboring
W02BA018_05	(Not live together) The 5th child's neighboring
W02BA018_06	(Not live together) The 6th child's neighboring
W02BA018_07	(Not live together) The 7th child's neighboring
W02BA018_08	(Not live together) The 8th child's neighboring
W02BA018_09	(Not live together) The 9th child's neighboring
W02BA018_10	(Not live together) The 10th child's neighboring

Wave 3:

W03BA003	The number of alive children (unit: person)
W03BA018_01	(Not live together) The 1st child's neighboring
W03BA018_02	(Not live together) The 2nd child's neighboring
W03BA018_03	(Not live together) The 3rd child's neighboring
W03BA018_04	(Not live together) The 4th child's neighboring
W03BA018_05	(Not live together) The 5th child's neighboring
W03BA018_06	(Not live together) The 6th child's neighboring
W03BA018_07	(Not live together) The 7th child's neighboring
W03BA018_08	(Not live together) The 8th child's neighboring
W03BA018_09	(Not live together) The 9th child's neighboring
W03BA018_10	(Not live together) The 10th child's neighboring

Wave 4:

W04BA003	The number of alive children (unit: person)
W04BA018_01	(Not live together) The 1st child's neighboring
W04BA018_02	(Not live together) The 2nd child's neighboring
W04BA018_03	(Not live together) The 3rd child's neighboring
W04BA018_04	(Not live together) The 4th child's neighboring
W04BA018_05	(Not live together) The 5th child's neighboring
W04BA018_06	(Not live together) The 6th child's neighboring
W04BA018_07	(Not live together) The 7th child's neighboring
W04BA018_08	(Not live together) The 8th child's neighboring

W04BA018_09	(Not live together) The 9th child's neighboring
W04BA018_10	(Not live together) The 10th child's neighboring
Wave 5:	
W05BA003	The number of alive children (unit: person)
W05BA018_01	(Not live together) The 1st child's neighboring
W05BA018_02	(Not live together) The 2nd child's neighboring
W05BA018_03	(Not live together) The 3rd child's neighboring
W05BA018_04	(Not live together) The 4th child's neighboring
W05BA018_05	(Not live together) The 5th child's neighboring
W05BA018_06	(Not live together) The 6th child's neighboring
W05BA018_07	(Not live together) The 7th child's neighboring
W05BA018_08	(Not live together) The 8th child's neighboring
W05BA018_09	(Not live together) The 9th child's neighboring
Wave 5 New:

How Constructed:

Respondents can report contact with each of their children using the following categories: almost every day, two to three times a week, once a week, twice a month, once a month, five or six times a year, three or four times a year, once or twice a year, almost never in a year, and never. Weekly contact is defined as the respondent contacting at least one of their children at least once a week. In Wave 1, the questionnaire only asked the family respondent questions about child contact. Starting in Wave 2, if the family respondent reported having living children, each respondent was asked about child contact. Therefore the variables HwKCNTF, HwKCNTPM and HwKCNT are only available in Wave 1 and RwKCNTF, RwKCNTPM, RwKCNT, SwKCNTF, SwKCNTPM and SwKCNT are available starting from Wave 2.

HwKCNTF indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children in person at the household level. A code of 1 is used if the respondent reports any in-person-contact either almost every day, two to three times a week, or once a week. A code of 1 is also used if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any weekly in-person contact and the respondent does not have any co-residing children. If the respondent and spouse don't have any children a special missing value .k is assigned. HwKCNTF is assigned special missing .f if this question is skipped because there is no family respondent. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

HwKCNTPM indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their non-co-residing children by phone, mail or e-mail at the household level. A code of 1 is used if the respondent reports contact by phone, mail or e-mail either almost every day, two to three times a week, or once a week. A code of 0 is used if the respondent did not report any weekly contact by phone, mail, or e-mail. If the respondent and spouse don't have any children a special missing value .k is assigned. If the respondent and spouse do have children but all children co-reside with the respondent and spouse then special missing value .h is used. HwKCNTPM is assigned special missing .f if this question is skipped because there is no family respondent. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

HwKCNT indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children either in person or by phone, mail or e-mail at the household level. HwKCNT is derived by using HwKCNTF and HwKCNTPM. A code of 1 is used if the respondent reports any weekly contact either in person or by phone, mail or e-mail, or if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any weekly contact. If the respondent and spouse don't have any children a special missing value .k is assigned. HwKCNT is assigned special missing .f if this question is skipped because there is no family respondent. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwKCNTF indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children in person. A code of 1 is used if the respondent reports any in-person contact either almost every day, two to three times a week, or once a week. A code of 1 is also used if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any weekly in-person contact and the respondent does not have any co-residing children. If the respondent and spouse don't have any children a special missing value .k is assigned. RwKCNTF is assigned special missing .f if this question was skipped because there was no family respondent. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwKCNTPM indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their non-co-residing children by phone, mail or e-mail. A code of 1 is used if the respondent reports contact by phone, mail or e-mail either almost every day, two to three times a week, or once a week. A code of 0 is used if the respondent did not report any weekly contact by phone, mail, or e-mail. If the respondent and spouse don't have any children a special missing value .k is assigned. If the respondent and spouse do have children but all children co-reside with the respondent and spouse then special missing value .h is used. RwKCNTPM is assigned special missing .f if this question was skipped because there was no family respondent. Don't know, refused, or missing responses are assigned special missing

values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwKCNT indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children either in person or by phone, mail or e-mail. RwKCNT is derived by using RwKCNTF and RwKCNTPM. A code of 1 is used if the respondent reports any weekly contact either in person or by phone, mail or e-mail. A code of 0 is used if the respondent did not report any weekly contact. If the respondent and spouse don't have any children a special missing value .k is assigned. RwKCNT is assigned special missing .f if these questions were skipped because there was no family respondent. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

SwKCNTF, SwKCNTPM and SwKCNT indicate whether the current wave's spouse has any frequent contact with any of their children in person, by phone, mail or e-mail at the current wave. They are taken from the spouse's values to RwKCNTF, RwKCNTPM and RwKCNT. Aside from the special missing values utilized by RwKCNTF, RwKCNTPM and RwKCNT, SwKCNTF, SwKCNTPM and SwKCNT employ two additional special missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1, only the family respondent is asked children contact and proximity questions. Starting in Wave 2, if the family respondent reported having living children, all respondents are asked children contact and proximity questions.

Differences with the RAND HRS/Harmonized HRS

The Harmonized HRS includes HwKCNT, RwKCNTF, RwKCNTPM, and RwKCNT for most waves, which are comparable to H1KCNT, RwKCNTF, RwKCNTPM, and RwKCNT in the Harmonized KLoSA. Please note that the respondent-level children contact variables in the HRS are asked in the leave-behind questionnaire, and so have a special missing value in the Harmonized HRS, which is not necessary for KLoSA. RwKCNTPM in the Harmonized KLoSA includes a special missing value if all of the respondent's children co-reside with the respondent, which is not necessary for HRS.

KLoSA Variables Used:

Wave 1:

W01BA003	The number of alive children (unit: person)
W01BA019_01	(Not live together) The frequency which 1st chi
W01BA019_02	(Not live together) The frequency which 2nd chi
W01BA019_03	(Not live together) The frequency which 3rd chi
W01BA019_04	(Not live together) The frequency which 4th chi
W01BA019_05	(Not live together) The frequency which 5th chi
W01BA019_06	(Not live together) The frequency which 6th chi
W01BA019_07	(Not live together) The frequency which 7th chi
W01BA019_08	(Not live together) The frequency which 8th chi
W01BA019_09	(Not live together) The frequency which 9th chi
W01BA019_10	(Not live together) The frequency which 10th ch
W01BA020_01	(Not live together) The frequency which 1st chi
W01BA020_02	(Not live together) The frequency which 2nd chi
W01BA020_03	(Not live together) The frequency which 3rd chi
W01BA020_04	(Not live together) The frequency which 4th chi
W01BA020_05	(Not live together) The frequency which 5th chi
W01BA020_06	(Not live together) The frequency which 6th chi
W01BA020_07	(Not live together) The frequency which 7th chi
W01BA020_08	(Not live together) The frequency which 8th chi
W01BA020_09	(Not live together) The frequency which 9th chi
W01BA020_10	(Not live together) The frequency which 10th ch

Wave 2:

W02BA003	The number of alive children (unit: person)
W02BA019_01	(Not live together) The frequency which 1st chi

W02BA019_02	(Not live together)	The frequency which 2nd chi
W02BA019_03	(Not live together)	The frequency which 3rd chi
W02BA019_04	(Not live together)	The frequency which 4th chi
W02BA019_05	(Not live together)	The frequency which 5th chi
W02BA019_06	(Not live together)	The frequency which 6th chi
W02BA019_07	(Not live together)	The frequency which 7th chi
W02BA019_08	(Not live together)	The frequency which 8th chi
W02BA019_09	(Not live together)	The frequency which 9th chi
W02BA019_10	(Not live together)	The frequency which 10th ch
W02BA020_01	(Not live together)	The frequency which 1st chi
W02BA020_02	(Not live together)	The frequency which 2nd chi
W02BA020_03	(Not live together)	The frequency which 3rd chi
W02BA020_04	(Not live together)	The frequency which 4th chi
W02BA020_05	(Not live together)	The frequency which 5th chi
W02BA020_06	(Not live together)	The frequency which 6th chi
W02BA020_07	(Not live together)	The frequency which 7th chi
W02BA020_08	(Not live together)	The frequency which 8th chi
W02BA020_09	(Not live together)	The frequency which 9th chi
W02BA020_10	(Not live together)	The frequency which 10th ch

Wave 3:

W03BA003	The number of alive	children (unit: person)
W03BA019_01	(Not live together)	The frequency which 1st chi
W03BA019_02	(Not live together)	The frequency which 2nd chi
W03BA019_03	(Not live together)	The frequency which 3rd chi
W03BA019_04	(Not live together)	The frequency which 4th chi
W03BA019_05	(Not live together)	The frequency which 5th chi
W03BA019_06	(Not live together)	The frequency which 6th chi
W03BA019_07	(Not live together)	The frequency which 7th chi
W03BA019_08	(Not live together)	The frequency which 8th chi
W03BA019_09	(Not live together)	The frequency which 9th chi
W03BA019_10	(Not live together)	The frequency which 10th ch
W03BA020_01	(Not live together)	The frequency which 1st chi
W03BA020_02	(Not live together)	The frequency which 2nd chi
W03BA020_03	(Not live together)	The frequency which 3rd chi
W03BA020_04	(Not live together)	The frequency which 4th chi
W03BA020_05	(Not live together)	The frequency which 5th chi
W03BA020_06	(Not live together)	The frequency which 6th chi
W03BA020_07	(Not live together)	The frequency which 7th chi
W03BA020_08	(Not live together)	The frequency which 8th chi
W03BA020_09	(Not live together)	The frequency which 9th chi
W03BA020_10	(Not live together)	The frequency which 10th ch

Wave 4:

W04BA003	The number of alive children (unit: person)
W04BA019_01	(Not live together) The frequency which 1st child
W04BA019_02	(Not live together) The frequency which 2nd child
W04BA019_03	(Not live together) The frequency which 3rd child
W04BA019_04	(Not live together) The frequency which 4th child
W04BA019_05	(Not live together) The frequency which 5th child
W04BA019_06	(Not live together) The frequency which 6th child
W04BA019_07	(Not live together) The frequency which 7th child
W04BA019_08	(Not live together) The frequency which 8th child
W04BA019_09	(Not live together) The frequency which 9th child
W04BA019_10	(Not live together) The frequency which 10th child
W04BA020_01	(Not live together) The frequency which 1st child
W04BA020_02	(Not live together) The frequency which 2nd child
W04BA020_03	(Not live together) The frequency which 3rd child
W04BA020_04	(Not live together) The frequency which 4th child
W04BA020_05	(Not live together) The frequency which 5th child
W04BA020_06	(Not live together) The frequency which 6th child
W04BA020_07	(Not live together) The frequency which 7th child
W04BA020_08	(Not live together) The frequency which 8th child
W04BA020_09	(Not live together) The frequency which 9th child
W04BA020_10	(Not live together) The frequency which 10th child

Wave 5:

W05BA003	The number of alive children (unit: person)
W05BA019_01	(Not live together) The frequency which 1st chi
W05BA019_02	(Not live together) The frequency which 2nd chi
W05BA019_03	(Not live together) The frequency which 3rd chi
W05BA019_04	(Not live together) The frequency which 4th chi
W05BA019_05	(Not live together) The frequency which 5th chi
W05BA019_06	(Not live together) The frequency which 6th chi
W05BA019_07	(Not live together) The frequency which 7th chi
W05BA019_08	(Not live together) The frequency which 8th chi
W05BA019_09	(Not live together) The frequency which 9th chi
W05BA020_01	(Not live together) The frequency which 1st chi
W05BA020_02	(Not live together) The frequency which 2nd chi
W05BA020_03	(Not live together) The frequency which 3rd chi
W05BA020_04	(Not live together) The frequency which 4th chi
W05BA020_05	(Not live together) The frequency which 5th chi
W05BA020_06	(Not live together) The frequency which 6th chi
W05BA020_07	(Not live together) The frequency which 7th chi
W05BA020_08	(Not live together) The frequency which 8th chi
W05BA020_09	(Not live together) The frequency which 9th chi

Wave 5 New:

W05BA003	The number of alive children (unit: person)
W05BA019_01	The frequency which 1st child meets (in person)
W05BA019_02	The frequency which 2nd child meets (in person)
W05BA019_03	The frequency which 3rd child meets (in person)
W05BA019_04	The frequency which 4th child meets (in person)
W05BA019_05	The frequency which 5th child meets (in person)
W05BA019_06	The frequency which 6th child meets (in person)
W05BA019_07	The frequency which 7th child meets (in person)
W05BA019_08	The frequency which 8th child meets (in person)
W05BA019_09	The frequency which 9th child meets (in person)
W05BA020_01	The frequency which 1st child contacts (phone,
W05BA020_02	The frequency which 2nd child contacts (phone,
W05BA020_03	The frequency which 3rd child contacts (phone,
W05BA020_04	The frequency which 4th child contacts (phone,
W05BA020_05	The frequency which 5th child contacts (phone,
W05BA020_06	The frequency which 6th child contacts (phone,
W05BA020_07	The frequency which 7th child contacts (phone,
W05BA020_08	The frequency which 8th child contacts (phone,
W05BA020_09	The frequency which 9th child contacts (phone,

Wave 6:

W06BA003	The number of alive children (unit: person)
W06BA019_01	(Not live together) The frequency which 1st chi
W06BA019_02	(Not live together) The frequency which 2nd chi
W06BA019_03	(Not live together) The frequency which 3rd chi
W06BA019_04	(Not live together) The frequency which 4th chi
W06BA019_05	(Not live together) The frequency which 5th chi
W06BA019_06	(Not live together) The frequency which 6th chi
W06BA019_07	(Not live together) The frequency which 7th chi
W06BA019_08	(Not live together) The frequency which 8th chi
W06BA019_09	(Not live together) The frequency which 9th chi
W06BA020_01	(Not live together) The frequency which 1st chi
W06BA020_02	(Not live together) The frequency which 2nd chi
W06BA020_03	(Not live together) The frequency which 3rd chi
W06BA020_04	(Not live together) The frequency which 4th chi
W06BA020_05	(Not live together) The frequency which 5th chi
W06BA020_06	(Not live together) The frequency which 6th chi
W06BA020_07	(Not live together) The frequency which 7th chi
W06BA020_08	(Not live together) The frequency which 8th chi
W06BA020_09	(Not live together) The frequency which 9th chi

Wave 7:

W07BA003	The number of alive children (unit: person)
W07BA019_01	(Not live together) The frequency which 1st chi

W07BA019_02	(Not live together)	The frequency which 2nd chi
W07BA019_03	(Not live together)	The frequency which 3rd chi
W07BA019_04	(Not live together)	The frequency which 4th chi
W07BA019_05	(Not live together)	The frequency which 5th chi
W07BA019_06	(Not live together)	The frequency which 6th chi
W07BA019_07	(Not live together)	The frequency which 7th chi
W07BA019_08	(Not live together)	The frequency which 8th chi
W07BA019_09	(Not live together)	The frequency which 9th chi
W07BA020_01	(Not live together)	The frequency which 1st chi
W07BA020_02	(Not live together)	The frequency which 2nd chi
W07BA020_03	(Not live together)	The frequency which 3rd chi
W07BA020_04	(Not live together)	The frequency which 4th chi
W07BA020_05	(Not live together)	The frequency which 5th chi
W07BA020_06	(Not live together)	The frequency which 6th chi
W07BA020_07	(Not live together)	The frequency which 7th chi
W07BA020_08	(Not live together)	The frequency which 8th chi
W07BA020_09	(Not live together)	The frequency which 9th chi

Wave 8:

W08BA003	The number of alive children (unit: person)	
W08BA019_01	(Not live together)	The frequency which 1st chi
W08BA019_02	(Not live together)	The frequency which 2nd chi
W08BA019_03	(Not live together)	The frequency which 3rd chi
W08BA019_04	(Not live together)	The frequency which 4th chi
W08BA019_05	(Not live together)	The frequency which 5th chi
W08BA019_06	(Not live together)	The frequency which 6th chi
W08BA019_07	(Not live together)	The frequency which 7th chi
W08BA019_08	(Not live together)	The frequency which 8th chi
W08BA019_09	(Not live together)	The frequency which 9th chi
W08BA020_01	(Not live together)	The frequency which 1st chi
W08BA020_02	(Not live together)	The frequency which 2nd chi
W08BA020_03	(Not live together)	The frequency which 3rd chi
W08BA020_04	(Not live together)	The frequency which 4th chi
W08BA020_05	(Not live together)	The frequency which 5th chi
W08BA020_06	(Not live together)	The frequency which 6th chi
W08BA020_07	(Not live together)	The frequency which 7th chi
W08BA020_08	(Not live together)	The frequency which 8th chi
W08BA020_09	(Not live together)	The frequency which 9th chi

Frequent or Weekly Contact with Relatives and Friends

How Constructed:

RwRFCNTX_K indicates the frequency of contact with relatives and friends and is coded as follows: 1.almost every day, 2.two to three times a week, 3.once a week, 4.twice a month, 5.once a month, 6.five or six times a year, 7.three or four times a year, 8.once or twice a year, 9.almost never in a year, and 10.no close friend or relative. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwRFCNT indicates whether the respondent has weekly contact with relatives and friends. A code of 1 indicates that the respondent contacts relatives and/or friends at least once a week, i.e., RwRFCNTX_K is either almost every day, two or three times a week, or once a week. Otherwise, RwRFCNT is coded as 0. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

SwRFCNTX_K and SwRFCNT give the information for the respondent's spouse or partner. They are taken directly from the spouse's values to RwRFCNTX_K and RwRFCNT. Aside from the special missing values utilized by RwRFCNTX_K and RwRFCNT, SwRFCNTX_K and SwRFCNT employ two additional special missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

The Harmonized HRS includes RwRFCNT, which is comparable to the variable of the same name in the Harmonized KLoSA. The Harmonized HRS also includes RwRFCNTF and RwRFCNTPM, indicating whether the respondent had weekly contact with relatives or friends in person or by phone, mail, e-mail, or social media.

KLoSA Variables Used:

Wave 1:	
W01A016	The number of times that meet with the familiar
Wave 2:

How Constructed:

RwSOCWK indicates whether the respondent participates in weekly social activities. The social activities include church or other religious groups, social clubs, sports clubs, arts or music groups or classes for seniors, alumni society, society for people from the same hometown, family councils, volunteer groups, political party, NGOs, interest groups, or other groups. The respondent was asked the frequency of participating in these social activities: almost every day, two to three times a week, once a week, twice a month, once a month, five or six times a year, three or four times a year, once or twice a year, almost never in a year, and almost never.

RwSOCWK is coded as 1 if the respondent reports having any social activities at least once a week, i.e., either almost every day, two or three times a week, or once a week. Otherwise, RwSOCWK is coded as 0. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwSOCRELG_K indicates the frequency of participating in church or other religious activities, which could be: 1.almost every day, 2.two to three times a week, 3.once a week, 4.twice a month, 5.once a month, 6.five or six times a year, 7.three or four times a year, 8.once or twice a year, 9.almost never in a year, and 10.almost never. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

RwRELGWK indicates whether a respondent participates in weekly church or other religious activities. A code of 1 indicates the respondent participates at least once a week in church or other religious activities, i.e., either almost every day, two or three times a week, or once a week. Otherwise, RwRELGWK is coded as 0. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

SwSOCWK, SwSOCRELG_K and SwRELGWK give the information for the respondent's spouse or partner. They are taken directly from the spouse's values to RwSOCWK, RwSOCRELG_K and RwRELGWK. Aside from the special missing values utilized by RwSOCWK, RwSOCRELG_K and RwRELGWK, SwSOCWK, SwSOCRELG_K and SwRELGWK employ two additional special missing codes, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

The list of activities included in Rwsocwk is slightly different across the Harmonized HRS and Harmonized KLoSA, but the variables are largely comparable.

RwRELGWK in the Harmonized KLoSA indicates weekly participation in religious groups, while the variable of the same name in the Harmonized HRS indicates weekly participation in religious services. The frequency of attending religious activities is different across the two studies, which is why we have provided study-specific variables indicating the frequency of participation.

KLoSA Variables Used:

Wave 1:

W01A017M01	Participating to the Religious groups
W01A017M02	Participating to the Social clubs (eg, private
W01A017M03	Participating to the Leisure/culture/sports rel
W01A017M04	Participating to the Alumni associations, homet
W01A017M05	Participating to the Volunteer groups
W01A017M06	Participating to the Political parties, the NGO
W01A017M07	Participating to other group
W01A019_01	Number of times which participates to Religious
W01A019_02	Number of times which participates to Social cl
W01A019_03	Number of times which participates to Leisure/c
W01A019_04	Number of times which participates to Alumni as
W01A019_05	Number of times which participates to Volunteer
W01A019_06	Number of times which participates to Political
W01A019_07	Number of times which participates to other act

Wave 2:

W02A033M01	Participating to the Religious groups
W02A033M02	Participating to the Social clubs (eg, private
W02A033M03	Participating to the Leisure/culture/sports rel
W02A033M04	Participating to the Alumni associations, homet
W02A033M05	Participating to the Volunteer groups
W02A033M06	Participating to the Political parties, the NGO
W02A033M07	Participating to other group
W02A035_01	Number of times which participates to Religious
W02A035_02	Number of times which participates to Social cl
W02A035_03	Number of times which participates to Leisure/c
W02A035_03	Number of times which participates to Leisure/c
W02A035_04	Number of times which participates to Alumni as
W02A035_05	Number of times which participates to Volunteer
W02A035_06	Number of times which participates to Political
W02A035_07	Number of times which participates to other act

Wave 3:

W03A033M01	Participating to the Religious groups
W03A033M02	Participating to the Social clubs (eg, private
W03A033M03	Participating to the Leisure/culture/sports rel

How Constructed:

For each child identified by the family respondent, the family respondent is asked which months the child lived with them in the last calendar year, if any. Starting in Wave 5, the family respondent was asked the number of months each child lived with them, rather than which months. Then for every child who did not live with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse gave monetary transfers such as pocket money, living expenses or medical expenses to each child while living separately. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers, or starting in Wave 5, the number of months they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, for all children who lived with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse gave any monetary transfers to each child while living together. If the respondent reports that they gave monetary transfers, they are asked to report those total values for the last calendar year in 10,000 Korean won.

In Wave 1, the family respondent is asked whether they and their spouse gave financial help to any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they gave financial help, they are asked for the relationship of the family member(s) they provided help to, which includes son/daughter-in-law and grandchildren as options. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which are reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse gave financial help to any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they gave financial help, they are then asked the same questions as in Wave 1.

HwTCANY indicates whether the respondent and spouse gave any financial help to their children, children-in-law and/or grandchildren in the last year. In Wave 1 it includes any regular or occasional monetary transfers to currently non-co-residing children, and any regular or occasional monetary transfers to non-co-residing children-in-law and grandchildren. Starting in Wave 2 it includes any regular or occasional monetary transfers to any child who did not live with the respondent and spouse for at least one month in the last calendar year, any monetary transfers to any child who lived with the respondent and spouse for at least one month in the last calendar year, and any regular or occasional monetary transfers to children-in-law and grandchildren, without specifying their co-residency status. A code of 0 indicates that the respondent and spouse did not give any financial support to any of their children, children-in-law, and grandchildren, or that the respondent has no living children. A code of 1 indicates that the respondent and spouse gave at least some financial support to at least one of their children, children-in-law, or grandchildren. Special missing value of .f is used if they are not asked whether they gave financial help to their children because there was no family respondent.

HwTCAMT is the total financial transfer amount, in 10,000 Korean won, the respondent and spouse gave to their children, children-in-law and/or grandchildren in the last year. In Wave 1 it includes regular monetary transfers and occasional monetary transfers to currently non-co-residing children, and to non-co-residing children-in-law and grandchildren. Starting in Wave 2 it includes regular monetary transfers and occasional monetary transfers to any child who did not live with the respondent and spouse for at least one month in the last calendar year, monetary transfers to any child who lived with the respondent and spouse for at least one month in the last calendar year, and regular and occasional monetary transfers to children-in-law and grandchildren, without specifying their co-residency status. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they gave regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. HwTCAMT is assigned a value of 0

if the respondent has no living children or the respondent gave no monetary transfers to their children. Special missing value of .f is used if they are not asked how much they transferred to their children because there was no family respondent.

When respondents don't know, refuse to answer, or their answer is missing for other reason, HwTCANY and HwTCAMT are assigned special missing codes .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

Cross Wave Differences in KLoSA

Wave 1 did not include separate questions asking the family respondent to identify the months each child did or did not live with them in the last calendar year. Instead, the financial transfer questions were asked for any child who was not currently living with the respondent and spouse. Likewise, the Wave 1 question asked specifically about financial transfers to children-in-law and grandchildren who were not living with the respondent.

Starting in Wave 2, the family respondent was asked about financial transfers to both children who were not living with the respondent and spouse and those who were. Also starting in Wave 2, the family respondent was asked about financial transfers to children-in-law and grandchildren, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months each child lived with them, rather than which months, as well as the number of months the respondent and spouse made financial transfers to their children/children-in-law/grandchildren, rather than which months they made the transfers.

Differences with the RAND HRS/Harmonized HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers to children in KLoSA are measured in 10,000 Korean won, whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfers to children. Unlike HRS, KLoSA asked regular transfers and irregular transfers to non-resident children, to co-resident children, to non-resident children-in-law and grandchildren, and to children-in-law and grandchildren, depending on the wave.

KLoSA Variables Used:

Wave 1:

W01BA003	The number of alive children (unit: person)
W01BA013_01	The 1st child is currently co-residing with me

How Constructed:

For each child identified by the family respondent, the family respondent is asked which months the child lived with them in the last calendar year, if any. Starting in Wave 5, the family respondent was asked the number of months each child lived with them, rather than which months. Then for every child who did not live with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse received monetary transfers such as pocket money, living expenses or medical expenses from each child while living separately. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers, or starting in Wave 5, the number of months they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, for all children who lived with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse received any monetary transfers from each child while living together. If the respondent reports that they received monetary transfers, they are asked to report those total values for the last calendar year, which are in 10,000 Korean won.

In Wave 1, the family respondent is asked whether they and their spouse received financial help from any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they received financial help, they are asked for the relationship of the family member(s) they received help from, which includes son/daughter-in-law and grandchildren as options. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse received financial help from any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they received financial help, they are then asked the same questions as in Wave 1.

HwFCANY indicates whether the respondent and spouse received any financial help from their children, children-in-law and/or grandchildren in the last year. In Wave 1 it includes any regular or occasional monetary transfers from currently non-co-residing children, and any regular or occasional monetary transfers from non-co-residing children-in-law and grandchildren. From Wave 2 onward, it includes any regular or occasional monetary transfers from any child who did not live with the respondent and spouse for at least one month in the last calendar year, any monetary transfers from any child who lived with the respondent and spouse for at least one month in the last calendar year, and any regular or occasional monetary transfers from children-in-law and grandchildren, without specifying their co-residency status. A code of 0 indicates that the respondent and spouse did not receive any financial support from any of their children, children-in-law, or grandchildren, or that the respondent has no living children. A code of 1 indicates that the respondent and spouse received at least some financial support from at least one of their children, children-in-law, or grandchildren. Special missing value of .f is used if they are not asked whether they received financial help from their children because there was no family respondent.

HwFCAMT is the total financial transfer amount, in 10,000 Korean won, the respondent and spouse received from their children, children-in-law, and/or grandchildren in the last year. In Wave 1 it includes regular monetary transfers and occasional monetary transfers from currently non-co-residing children, and from non-co-residing children-in-law and grandchildren. From Wave 2 onward, it includes regular monetary transfers and occasional monetary transfers from any child who did not live with the respondent and spouse for at least one month in the last calendar year, monetary transfers from any child who lived with the respondent and spouse for at least one month in the last calendar year, and regular and occasional monetary transfers from children-in-law and grandchildren, without specifying their co-residency status. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by

the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. HwFCAMT is assigned a value of 0 if the respondent has no living children or the respondent did not receive any monetary transfers from their children. Special missing value of .f is used if they are not asked how much they received from their children because there was no family respondent.

When respondents don't know, refuse to answer, or their answer is missing for other reasons, HwFCANY and HwFCAMT are assigned special missing codes .d, .r, .m, respectively. Blank missing (.) is assigned if the family respondent was not interviewed in the current wave.

Cross Wave Differences in KLoSA

Wave 1 did not include a separate question asking the family respondent to identify the months each child did or did not live with them in the last calendar year. Instead, the financial transfer questions were asked for any child who was not currently living with the respondent and spouse. Likewise, the Wave 1 question asked specifically about financial transfers from children-in-law and grandchildren who were not living with the respondent.

Starting in Wave 2, the family respondent was asked about financial transfers from both children who were not living with the respondent and spouse and those who were. Also starting in Wave 2, the family respondent was asked about financial transfers from children-in-law and grandchildren, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months each child lived with them, rather than which months, as well as the number of months the respondent and spouse received financial transfers from their children, children-in-law, grandchildren, rather than which months they received the transfers.

Differences with the RAND HRS/Harmonized HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers from children in KLoSA are measured in 10,000 Korean won, whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfers from children. Unlike HRS, KLoSA asked regular transfers and irregular transfers from non-resident children, from co-resident children, from non-resident children-in-law and grandchildren, and from children-in-law and grandchildren, depending on the wave.

KLoSA Variables Used:

Wave 1:

W01BA003	The number of alive children (unit: person)
W01BA013_01	The 1st child is currently co-residing with me

How Constructed:

In Wave 1, questions about financial transfers to parents are asked only if the respondent reports not co-residing with their parent(s). The questions are asked separately for respondents with both parents living, with only a mother living, or with only a father living. If the respondent reports at least one living parent who the respondent does not report co-residing with, then the family respondent is asked if during the last calendar year they and their spouse gave monetary transfers such as pocket money, living expenses or medical expenses to their parent(s) while living separately. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers, or starting in Wave 5, the number of months they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, if at least one of the respondent's parent(s) co-resided with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse gave any monetary transfers to their parent(s) while living together. If the respondent reports that they gave monetary transfers, they are asked to report those total values for the last calendar year in 10,000 Korean won.

In Wave 1, the family respondent is asked whether they and their spouse gave financial help to any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they gave financial help, they are asked for the relationship of the family member(s) they provided help to, which includes mother-in-law and father-in-law as options. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse gave financial help to any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they gave financial help, they are then asked the same questions as in Wave 1.

HwTPANY indicates whether the respondent and spouse gave any financial transfers to their mother, father, mother-in-law, or father-in-law in the past year. A code of 0 indicates that the respondent and spouse did not give any financial support to their parents, or that the respondent reports having no living or only dispersed parents. A code of 1 indicates that the respondent and spouse did give some financial support to their parents. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

HwTPAMT is the amount of financial transfers altogether, in 10,000 Korean won, that the respondent and spouse made to their parents in the past year. In Wave 1 it includes regular monetary transfers and occasional monetary transfers to currently non-co-residing parents. From Wave 2 onward, it includes regular monetary transfers and occasional monetary transfers to any parent who did not live with the respondent and spouse in the last calendar year, monetary transfers to any parent who lived with the respondent and spouse in the last calendar year, and regular or occasional monetary transfers to any parents-in-law. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. HwTPAMT is assigned a value of 0 if the respondent has no living parents or only dispersed parents or if the respondent gave no monetary transfers to their parents. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

Cross Wave Differences in KLoSA

In Wave 1 the financial transfer questions were asked for any parent who was not currently living with the respondent and spouse. Likewise, the Wave 1 question asked specifically about financial transfers to parents-in-law who were not living with the respondent.

Starting in Wave 2, the family respondent was asked about financial transfers to both parents who were not living with the respondent and spouse and those who were. Also starting in Wave 2, the family respondent was asked about financial transfers to parents-in-law, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months in which they transferred money to their parents, as well as the number of months the respondent and spouse made financial transfers to their parents-in-law, rather than whether or not they made a financial transfer to their parents each named month.

Differences with the RAND HRS/Harmonized HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers to parents in KLoSA are measured in 10,000 Korean won whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfers to parents. Unlike HRS, KLoSA asked regular transfers and irregular transfers to both non-resident and co-resident parents and non-resident and co-resident parents-in-law.

How Constructed:

In Wave 1, questions about financial transfers from parents are asked only if the respondent reports not co-residing with their parent(s). The questions are asked separately for respondents with both parents living, with only a mother living, or with only a father living. If the respondent reports at least one living parent who the respondent does not report co-residing with, then the family respondent is asked if during the last calendar year they and their spouse received monetary transfers such as pocket money, living expenses or medical expenses from their parent(s) while living separately. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers, or starting in Wave 5, the number of months they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, if at least one of the respondent's parent(s) co-resided with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse received any monetary transfers from their parent(s) while living together. If the respondent reports that they received monetary transfers, they are asked to report those total values for the last calendar year in 10,000 Korean won.

In Wave 1, the family respondent is asked whether they and their spouse received financial help from any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they received financial help, they are asked for the relationship of the family member(s) they received help from, which includes mother-in-law and father-in-law as options. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse received financial help from any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they received financial help, they are then asked the same questions as in Wave 1.

HwFPANY indicates whether the respondent and spouse received any financial transfers from their mother, father, mother-in-law, or father-in-law in the past year. A code of 0 indicates that the respondent and spouse did not receive any financial support from their parents, or that the respondent reports having no living or only dispersed parents. A code of 1 indicates that the respondent and spouse did receive some financial support from their parents. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

HwFPAMT is the amount of financial transfers altogether, in 10,000 Korean won, that the respondent and spouse received from their parents in the past year. In Wave 1 it includes regular monetary transfers and occasional monetary transfers from non-co-residing parents. From Wave 2 onward, it includes regular monetary transfers and occasional monetary transfers from any parent who did not live with the respondent and spouse in the last calendar year, monetary transfers from any parent who lived with the respondent and spouse in the last calendar year, and regular or occasional monetary transfers from any parents-in-law. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. HwFPAMT is assigned a value of 0 if the respondent has no living parents or only dispersed parents or if the respondent received no monetary transfers from their parents. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

Cross Wave Differences in KLoSA

In Wave 1 the financial transfer questions were asked for any parent who was not currently living with the respondent and spouse. Likewise, the Wave 1 question asked specifically about financial transfers to parents-in-law who were not living with the respondent.

Starting in Wave 2, the family respondent was asked about financial transfers from both parents who were not living with the respondent and spouse and those who were. Also starting in Wave 2, the family respondent was asked about financial transfers to parents-in-law, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months in which parents transferred money to them, as well as the number of months the respondent and spouse received financial transfers from their parents-in-law, rather than whether or not they received a financial transfer from the parents during each named month.

Differences with the RAND HRS/Harmonized HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers from parents in KLoSA are measured in 10,000 Korean won whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfers from parents. Unlike HRS, KLoSA asked regular transfer and irregular transfer from both non-resident and co-resident parents and non-resident and co-resident parents-in-law.

How Constructed:

In Wave 1, the family respondent is asked whether they and their spouse gave financial help to any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they gave financial help, they are asked for the relationship of the family member(s) they provided help to, which includes brothers, sisters, brothers-in-law, sisters-in-law, and other relatives as options. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse gave financial help to any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they gave financial help, they are then asked the same questions as in Wave 1.

HwTOANY indicates whether the financial respondent reports that the respondent and spouse gave any financial transfers to other relatives in the past year. These relatives include brothers, sisters, brothers-in-law, sisters-in-law, or other relatives. A code of 0 indicates that the respondent and spouse did not give any financial support to their other relatives. A code of 1 indicates that the respondent and spouse did give some financial support to their other relatives. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

HwTOAMT is the amount of financial transfers altogether, in 10,000 Korean won, that the respondent and spouse made to other relatives in the past year. It includes regular monetary transfers and occasional monetary transfers to other relatives. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. HwTOAMT is assigned a value of 0 if the respondent gave no monetary transfers to their relatives. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

Cross Wave Differences in KLoSA

In Wave 1, the financial transfer questions were asked only about relatives who were not living with the respondent. Starting in Wave 2, the financial transfer questions were asked about relatives, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months in which they transferred money to other relatives, rather than whether or not they made a financial transfer to their other relatives during each named month.

Differences with the RAND HRS/Harmonized HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers to other relatives in KLoSA are measured in 10,000 Korean won, whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfer to other relatives. Unlike HRS, KLoSA asked regular transfers and irregular transfers to other relatives.

KLoSA Variables Used:

Wave 1:	
W01BB151A03	I gave financial support to the 1st sibling
W01BB151A04	I gave financial support to the 2nd sibling

How Constructed:

In Wave 1, the family respondent is asked whether they and their spouse received financial help from any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they received financial help, they are asked for the relationship of the family member(s) they received help from, which includes brothers, sisters, brothers-in-law, sisters-in-law, and other relatives as options. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse received financial help from any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they received financial help, they are then asked the same questions as in Wave 1.

HwFOANY indicates whether the financial respondent reports that the respondent and spouse received any financial transfers from other relatives in the past year. These relatives include brothers, sisters, brothers-in-law, sisters-in-law, or other relatives. A code of 0 indicates that the respondent and spouse did not receive any financial support from other relatives. A code of 1 indicates that the respondent and spouse did receive some financial support from other relatives. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

HwFOAMT is the amount of financial transfers altogether, in 10,000 Korean won, that the respondent and spouse received from other relatives in the past year. It includes regular monetary transfers and occasional monetary transfers from other relatives. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. HwFOAMT is assigned a value of 0 if the respondent received no monetary transfers from their relatives. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

Cross Wave Differences in KLoSA

In Wave 1, the financial transfer questions were asked only about relatives who were not living with the respondent. Starting in Wave 2, the financial transfer questions were asked about relatives, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months in which other relatives transferred money to them, rather than whether or not they received a financial transfer from their other relatives during each named month.

Differences with the RAND HRS/Harmonized HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers from other relatives in KLoSA are measured in 10,000 Korean won whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfer from other relatives. Unlike HRS, KLoSA asked regular transfers and irregular transfers from other relatives.

How Constructed:

HwFREC indicates the total amount of financial transfers that the respondent and spouse received in the past year. It is a summary variable which includes the following components:

1. amount of transfers from children/children-in-law or grandchildren (HwFCAMT)
2. amount of transfers from parents or parents-in-law (HwFPAMT)
3. amount of transfers from other relatives (HwFOAMT)

HwFREC = HwFCAMT + HwFPAMT + HwFOAMT. A value for HwFREC is only provided if none of its components have missing values.

HwTGIV indicates the total amount of financial transfers that the respondent and spouse gave in the past year. It is a summary variable which includes the following components:

1. amount of transfers to children or grandchildren (HwTCAMT)
2. amount of transfers to parents or parents-in-law (HwTPAMT)
3. amount of transfers to other relatives (HwTOAMT)

HwTGIV = HwTCAMT + HwTPAMT + HwTOAMT. A value for HwTGIV is only provided if none of its components have missing values.

HwFTOT indicates the net value of financial transfers in the past year.

HwFTOT = HwFREC - HwTGIV. A value for HwFTOT is only provided if none of its components have missing values.

Missing values for these variables are assigned .m, .d and .r respectively. Special missing value of .f is used if they are not asked how much they transferred to their children because there was no family respondent. HwFREC, HwTGIV, and HwTOT are set to blank missing (.) when the respondent did not participate in the current wave.

Cross Wave Differences in KLoSA

Generally, values given in Wave 1 include transfers to/from relatives who did not co-reside with the respondent, while values given in Wave 2 and onward include transfers to/from relatives regardless of co-residency status.

Refer to the "Cross Wave Differences in KLoSA" section of each component to identify additional differences between waves.

Differences with the RAND HRS/Harmonized HRS

These values in KLoSA are measured in Korean won, whereas the equivalent measure in RAND HRS is measured in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Refer to "Differences with RAND HRS/Harmonized HRS" section of each component to identify differences with the RAND HRS variable of the same name.

How Constructed:

KLoSA asks each respondent whether they are currently working for pay. RwWORK indicates the respondent's response to this question. A value of 0 indicates that the respondent is not currently doing paid work and a value of 1 indicates that the respondent is currently doing paid work. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwWORK is set to plain missing (.) for respondents who did not respond to the current wave.

KLoSA asks all respondents who report working or being retired if they have a second job. RwWORK2 indicates whether the respondent is working at a second or part-time job. A value of 0 indicates that the respondent is not employed or the respondent is employed but does not work a second job. A code of 1 indicates the respondent is working a second or part-time job. Don't know, refused, or missing responses to second job are assigned special missing values .d, .r, .m, respectively. RwWORK2 is set to plain missing (.) for respondents who did not respond to the current wave.

SwWORK indicates whether the respondent's spouse in the current wave is working for pay. It is taken from the spouse's values to RwWORK. SwWORK2 indicates whether the respondent's spouse in the current wave is working at a second job. It is taken from the spouse's values to RwWORK2. Aside from the special missings utilized by RwWORK and RwWORK2, SwWORK and SwWORK2 use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

1.Self-employed		1027	887	747	668

How Constructed:

RwSLFEMP indicates whether the respondent is self-employed. KLoSA asks all respondents who report currently being employed to identify whether they are employed by another person or company, are self-employed, work for family without pay for 18 hours or more a week, or work for family without pay for less than 18 hours a week. RwSLFEMP has a value of 0 if the respondent is not self-employed and a value of 1 if the respondent is self-employed. A special missing code .w is assigned if the respondent is not currently employed. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwSLFEMP is set to plain missing (.) for respondents who did not respond to the current wave.

SwSLFEMP indicates whether the respondent's spouse in the current wave is self-employed. It is taken from the spouse's values to RwSLFEMP. Aside from the special missings utilized by RwSLFEMP, SwSLFEMP uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

8.disabled	11	14	7	3
9.not in lbr frc	1167	1088	1048	1071

How Constructed:

RwLBRF_K summarizes the labor force status for the respondent at each wave as 1.employed full-time, 2.employed part-time, 3.self-employed, 4.help with family 18 hours or more per week, 5.unemployed, 6.partly retired, 7.retired, 8.disabled, or 9.not in labor force.

RwLBRF_K is derived from a number of different questions, some that are asked at each wave and some that are asked once per job. A respondent can report working, being retired, being unemployed in combination with other statuses. RwLBRF_K assigns one labor force status to each respondent giving precedence to working and retirement statuses. In Wave 1 RwLBRF_K is based on a number of questions such as "are you currently employed", "which of the following best describes your primary job", "are you looking for work", and what is your current retirement status." Starting in Wave 2, respondents are asked to confirm the details of the job they held during the previous interview and then report whether this job (or some property of the job such as number of hours) has changed. If the respondent reports that the job has changed, the information for the new labor force status is used for RwLBRF_K. If the respondent reports that the job has not changed then RwLBRF_K takes information for the previous report. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to labor force

status are assigned special missing values .d, .r, .m, respectively. RwlBRF_K is set to plain missing (.) for respondents who did not respond to the current wave.

If the respondent is employed by another person or company for pay, RwlBRF_K is set to 1.working full-time or 2.part-time based on the working classification the respondent gives for the job. If the respondent is employed but reports being self-employed, RwlBRF_K is set to 3.self-employed. If the respondent is employed and reports working without pay for family more than 18 hours per week, RwlBRF_K is set to 4.help with family 18 hours or more per week.

If a non-working respondent is looking for work and reports being able to work if offered a job and then confirms that they have done something to find work in the last 4 weeks, RwlBRF_K is set to 5.unemployed.

If a non-working respondent is not looking for work and reports being retired, RwlBRF_K is set to 7.retired if the respondent does not later mention working for pay or looking for paid work. If the respondent does later mention working for pay or looking for paid work RwlBRF_K is set to 6.partly retired.

If a non-working respondent is looking for work but then reports not being able to accept work or look for work due to poor health or a disability, RwlBRF_K is set to 8.disabled.

RwlBRF_K is set to 9.not in labor force for respondents who are looking for work but not able to accept work or are not looking for work for any reason other than a disability, and respondents who are not looking for work and report they have never had a job.

SwLBRF_K summarizes the labor force status for the respondent's spouse or partner. It is taken from the spouse's values to RwlBRF_K. Aside from the special missings utilized by RwlBRF_K, SwLBRF_K uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

After Wave 1 the order of the questions used to determine current employment and the order of some of the possible answers are slightly different. These changes mean that the derivation of RlLBRF_K is fairly different from RwlBRF_K from Wave 2 forward and users should use caution in identifying employment changes from Wave 1 based on RwlBRF_K alone.

Differences with the RAND HRS/Harmonized HRS

In the RAND HRS, the derivation of RwlBRF uses different survey questions than are used to derive RwlBRF_K.

Because of differences in surveys, RwlBRF_K uses a slightly different categorization than RwlBRF in the RAND HRS. Specifically, RwlBRF_K includes a category of working for family without pay 18 hours or more a week which is not present in RwlBRF in the RAND HRS.

How Constructed:

RwJHOURS is the usual number of hours per week the respondent works at their main jobs, excluding lunch time. KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week how many hours a week they work on average. If the respondent is not currently employed a special missing code .w is assigned. Reports of working more than 160 hours a week are considered invalid and assigned a special missing value .i. Don't know, refused, or missing responses to hours works per week are assigned special missing values .d, .r, .m, respectively. RwJHOURS is set to plain missing (.) for respondents who did not respond to the current wave.

RwJHOUR2 is the usual number of hours per week the respondent works at a second job. In Wave 1 KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who are retired how many hours a week they work on their second/other jobs. Starting in Wave 2 KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, respondents who work for their family without pay for 18 hours or more a week, and respondents who are retired or who have never had a job how many hours a week they work on their second/other jobs. If the respondent does not have a second job a special missing code .w is assigned. Don't know, refused, or missing responses to hours works per week at 2nd job are assigned special missing values .d, .r, .m, respectively. RwJHOUR2 is set to plain missing (.) for respondents who did not respond to the current wave.

SwJHOURS indicates the number of hours the respondent's spouse in the current wave spends on their main job. It is taken from the spouse's values to RwJHOURS. SwJHOUR2 indicates the number of hours the respondent's spouse in the current wave spends on their second job. It is taken from the spouse's values to RwJHOUR2. Aside from the special missings utilized by RwJHOURS and RwJHOUR2, SwJHOURS and SwJHOUR2 use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1 KLoSA asks respondents who are employed by another person or company for pay, respondents who are self-employed, respondents who work for their family without pay for 18 hours or more a week, and respondents who are retired how many hours a week they work on their second/other jobs. Starting in Wave 2 KLoSA asks respondents who are employed by another person or company for pay, respondents who are self-employed, respondents who work for their family without pay for 18 hours or more a week, respondents who work for their family without pay for less than 18 hours a week, and respondents who are retired or who have never had a job how many hours a week they work on their second/other jobs.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, KLoSA allows respondents who initially report they are not working to report a second job.

KLoSA Variables Used:

Wave 1:

W01D001	Currently work

How Constructed:

RwTWGIHR is the respondent's hourly wage rate after tax and RwTWGIWK is the weekly wage rate after tax.

If the respondent reports working for another person or company for pay, they are asked how much the job pays after taxes and other deductions per month. If the respondent reports being self-employed, they are asked how much profit per month is earned. Usual hours per week for both job types are also asked.

RwTWGIHR is calculated using the monthly pay rate divided by the product of the usual hours worked per week and 4.333. RwTWGIHR is expressed in 10,000 Korean won. If the respondent does not work, special missing .w is assigned. If the respondent reports working for family without pay for 18 or more hours a week, special missing .f is assigned. Don't know, refused, or missing responses to wage rate or hours works per week are assigned special missing values .d, .r, .m, respectively. RwTWGIHR is set to plain missing (.) for respondents who did not respond to the current wave.

RwTWGIWK is calculated using the monthly pay rate divided by 4.333 so as to express the weekly wage rate. RwTWGIWK is expressed in 10,000 Korean won. If the respondent does not work, special missing .w is assigned. If the respondent reports working for family without pay for 18 or more hours a week, special missing .f is assigned. Don't know, refused, or missing responses to wage rate or hours works per week are assigned special missing values .d, .r, .m, respectively. RwTWGIWK is set to plain missing (.) for respondents who did not respond to the current wave.

SwTWGIHR indicates the respondent's spouse's in the current wave hourly wage rate after tax. It is taken from the spouse's values to RwTWGIHR. SwTWGIWK indicates the respondent's spouse's in the current wave weekly wage rate after tax. It is taken from the spouse's values to RwTWGIWK. Aside from the special missings utilized by RwTWGIHR and RwTWGIWK, SwTWGIHR and SwTWGIWK use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Wages in KLoSA are measured as after tax in 10,000 Korean won whereas the equivalent measure in the RAND HRS is before tax and in U.S. dollars. As a result, the RAND HRS includes RwTWGIHR and RwTWGIWK, while the Harmonized KLoSA includes RwTWGIHR and RwTWGIWK.

RwWGIHR in the RAND HRS includes imputations for unemployed respondents but RwWGIHR in the Harmonized KLoSA does not include imputations for respondents of any labor force status.

4.Strongly disagree		116	129	142	140

How Constructed:

RwJPHYSA indicates the respondent's level of agreement with the statement "My job requires lots of physical effort." A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. If the respondent is not working or is an unpaid family worker working less than 18 hours a week, RwJPHYSA is set to a .w missing code. Don't know, refused, or missing responses to their job being physically demanding are assigned special missing values .d, .r, .m, respectively. RwJPHYSA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJPHYSA indicates the agreement about the occupation's level of physical effort for the respondent's spouse. It is taken from the spouse's values to RwJPHYSA. Aside from the special missings utilized by RwJPHYSA, SwJPHYSA uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJPHYSA differs substantially from the variable RwJPHYS in the RAND HRS. HRS asks respondents to report how often their job requires lots of physical effort, whereas KLoSA simply elicits the respondent's agreement with the statement "My job requires lots of physical effort."

How Constructed:

RwJLIFTA indicates the respondent’s level of agreement with the statement “My job requires lifting heavy loads.” A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. If the respondent is not working or is an unpaid family worker working less than 18 hours a week, RwJLIFTA is set to a .w missing code. Don’t know, refused, or missing responses to their job requiring lifting heavy loads are assigned special missing values .d, .r, .m, respectively. RwJLIFTA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJLIFTA indicates the agreement about the level of heavy lifting that the respondent’s spouse’s occupation requires. It is taken from the spouse's values to RwJLIFTA. Aside from the special missings utilized by RwJLIFTA, SwJLIFTA uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJLIFTA differs substantially from the variable RwJLIFT in the RAND HRS. HRS asks respondents to report how often their job requires lifting heavy loads, whereas KLoSA simply elicits the respondent’s agreement with the statement “My job requires lifting heavy loads.”

How Constructed:

RwJCONCNTRA indicates the respondent's level of agreement with the statement "My job requires intense concentration and attention to details." This question is asked of wage workers, self-employed individuals, and family workers. A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. If the respondent is not working or is an unpaid family worker working less than 18 hours, RwJCONCNTRA is set to a .w missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJCONCNTRA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJCONCNTRA indicates the respondent's spouse's level of agreement with the statement "My job requires intense concentration and attention to details." It is taken from the spouse's values to RwJCONCNTRA. Aside from the special missings utilized by RwJCONCNTRA, SwJCONCNTRA uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJCONCNTRA differs substantially from the variable RwJCONCNTRB in the Harmonized HRS. HRS asks respondents to report how often their job involves intense concentration or attention, whereas KLoSA simply elicits the respondent's agreement with the statement "My job requires intense concentration and attention to details."

How Constructed:

RwJDEALPPLA indicates the respondent’s level of agreement with the statement “My job requires skills in dealing with people.” This question is asked of wage workers, self-employed individuals, and family workers. A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. If the respondent is not working or is an unpaid family worker working less than 18 hours, RwJDEALPPLA is set to a .w missing code. Don’t know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJDEALPPLA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJDEALPPLA indicates the respondent’s spouse’s level of agreement with the statement “My job requires skills in dealing with people.” It is taken from the spouse's values to RwJDEALPPLA. Aside from the special missings utilized by RwJDEALPPLA, SwJDEALPPLA uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJDEALPPLA differs substantially from the variable RwJDEALPPLB in the Harmonized HRS. HRS asks respondents to report how often their job requires skill in dealing with other people, whereas KLoSA simply elicits the respondent's agreement with the statement "My job requires skills in dealing with people."

How Constructed:

RwJPROSENA indicates the respondent's level of agreement with the statement "Promotion is done on the basis of seniority in my company." A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. Only respondents working as a wage worker are asked the question. If the respondent is self-employed, RwJPROSENA is set to a .s missing code. If the respondent is an unpaid family worker working 18 or more hours, RwJPROSENA is set to a .f missing code. If the respondent is not working or is an unpaid family worker working less than 18 hours, RwJPROSENA is set to a .w missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJPROSENA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJPROSENA indicates the respondent's spouse's level of agreement with the statement "Promotion is done on the basis of seniority in my company." It is taken from the spouse's values to RwJPROSENA. Aside from the special missings utilized by RwJPROSENA, SwJPROSENA uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJPROSENA is not available in the RAND HRS. There is no directly comparable question in HRS.

How Constructed:

RwJOLDRETA indicates the respondent's level of agreement with the statement "My co-workers make older workers feel that they ought to retire before reaching at the retirement age." A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. Only respondents working as a wage worker are asked the question. If the respondent is self-employed, RwJOLDRETA is set to a .s missing code. If the respondent is an unpaid family worker working 18 or more hours, RwJOLDRETA is set to a .f missing code. If the respondent is not working or is an unpaid family worker working less than 18 hours, RwJOLDRETA is set to a .w missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJOLDRETA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJOLDRETA indicates the respondent's spouse's level of agreement with the statement "My co-workers make older workers feel that they ought to retire before reaching at the retirement age." It is taken from the spouse's values to RwJOLDRETA. Aside from the special missings utilized by RwJOLDRETA, SwJOLDRETA uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJOLDRETA is comparable to the variable RwJOLDRETA in the Harmonized HRS.

How Constructed:

RwJMLDEMA indicates the respondent's level of agreement with the statement "My employer would let older workers move to a less demanding job with less pay if they wanted to." A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. Only respondents working as a wage worker are asked the question. If the respondent is self-employed, RwJMLDEMA is set to a .s missing code. If the respondent is an unpaid family worker working 18 or more hours, RwJMLDEMA is set to a .f missing code. If the respondent is not working or is an unpaid family worker working less than 18 hours, RwJMLDEMA is set to a .w missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJMLDEMA is set to plain missing (.) for respondents who did not respond to the current wave.

SwJMLDEMA indicates the respondent's spouse's level of agreement with the statement "My employer would let older workers move to a less demanding job with less pay if they wanted to." It is taken from the spouse's values to RwJMLDEMA. Aside from the special missings utilized by RwJMLDEMA, SwJMLDEMA uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJMLDEMA is comparable to RwJMLDEMA in the Harmonized HRS.

How Constructed:

KLoSA asks all respondents who report being a wage worker whether they are currently in a position to supervise others. RwJSPRVS indicates the respondent's response to this question. A value of 0 indicates that the respondent is not currently in a position to supervise others and a value of 1 indicates that the respondent is currently in a position to supervise others. If the respondent is self-employed, RwJSPRVS is set to a .s missing code. If the respondent is an unpaid family worker working any number of hours, RwJSPRVS is set to a .f missing code. If the respondent is not working, RwJSPRVS is set to a .w missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJSPRVS is set to plain missing (.) for respondents who did not respond to the current wave.

SwJSPRVS indicates whether the respondent's spouse in the current wave is in a position to supervise others. It is taken from the spouse's values to RwJSPRVS. Aside from the special missings utilized by RwJSPRVS, SwJSPRVS uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJSPRVS is comparable to RwJSPRVS in the Harmonized HRS. The Harmonized HRS also includes RwJSPRVSN indicating the number of people the respondent supervises, which is not asked in KLoSA.

How Constructed:

KLoSA asks all respondents who report being a wage worker how many workers work for their company or organization at all locations and at their location. RwCSIZE is the number of employees that work for the respondent's company or organization at all locations. RwFSIZE is the number of employees that work for the respondent's company or organization at the location where they work. Starting in Wave 2, if a respondent did not change jobs or positions, then the question is not asked again so the value of RwCSIZE and RwFSIZE are carried forward. If a respondent changed locations but not companies, then they are asked the size of their new location only. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA public data repository. Respondents with missing values for this reason are assigned a special missing value .i. If the respondent is self-employed, RwCSIZE and RwFSIZE are set to a .s missing code. If the respondent is an unpaid family worker working any number of hours, RwCSIZE and RwFSIZE are set to a .f missing code. If the respondent is not working, RwCSIZE and RwFSIZE are set to a .w missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwCSIZE and RwFSIZE are set to plain missing (.) for respondents who did not respond to the current wave.

SwCSIZE is the respondent's spouse's size of company or organization at all locations. It is taken directly from the spouse's value to RwCSIZE. SwFSIZE is the respondent's spouse's size of company or organization at the location where they work. It is taken directly from the spouse's value to RwFSIZE. Aside from the special missings utilized by RwCSIZE and RwFSIZE, SwCSIZE and SwFSIZE use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1, all wage workers are asked both the size of the company they currently work for and the size of their specific location. Starting in Wave 2, if a respondent did not change their job or position, then the question is not asked again so the value of RwCSIZE and RwFSIZE are carried forward. If a respondent changed locations but not companies, then they are asked the size of their new location only.

Differences with the RAND HRS/Harmonized HRS

RwFSIZE is similar to the variable in the RAND HRS for wage workers. RwCSIZE is similar to the variable in the Harmonized HRS for wage workers.

KLoSA Variables Used:

How Constructed:

KLoSA asks all respondents who report being a wage worker whether their current job has a union and whether they are in a union. RwUNIONA indicates the respondent's response to whether their job has a union. A value of 0 indicates that the respondent's job does not have a union and a value of 1 indicates that the respondent's job has a union. RwUNION indicates the respondent's response to whether they are in a union. A value of 0 indicates that the respondent is not in a union and a value of 1 indicates that the respondent is in a union. If the respondent is self-employed, RwUNIONA and RwUNION are set to a .s missing code. If the respondent is an unpaid family worker working any number of hours, RwUNIONA and RwUNION are set to a .f missing code. If the respondent is not working, RwUNIONA and RwUNION are set to a .w missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwUNIONA and RwUNION are set to plain missing (.) for respondents who did not respond to the current wave.

SwUNIONA indicates whether the respondent's spouse in the current wave has a union at their current job. It is taken from the spouse's values to RwUNIONA. SwUNION indicates whether the respondent's spouse in the current wave is in a union. It is taken from the spouse's values to RwUNION. Aside from the special missings utilized by RwUNIONA and RwUNION, SwUNIONA and SwUNION use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

In KLoSA, RwUNION is asked each wave, regardless of whether or not in the same job, and not carried forward like in the RAND HRS. HRS does not survey whether the respondent's current job has a union so there is no equivalent variable to RwUNIONA in the RAND HRS.

How Constructed:

KLoSA asks all respondents who report being a wage worker the number of days of paid leave and paid sick days at their current job. RwJPLEAVE is the number of days of paid leave reported by the respondent and RwJPSICK is the number of paid sick days reported by the respondent. RwJPDYSA is total paid days off, the sum of RwJPLEAVE and RwJPSICK. It is only summed if there are values for both sub-components. If the respondent is self-employed, RwJPLEAVE, RwJPSICK, and RwJPDYSA are set to a .s missing code. If the respondent is an unpaid family worker working any number of hours, RwJPLEAVE, RwJPSICK, and RwJPDYSA are set to a .f missing code. If the respondent is not working, RwJPLEAVE, RwJPSICK, and RwJPDYSA are set to a .w missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwJPLEAVE, RwJPSICK, and RwJPDYSA are set to plain missing (.) for respondents who did not respond to the current wave.

SwJPLEAVE, SwJPSICK, and SwJPDYSA are the days of paid leave for respondent's spouse in the current wave. The values are taken from the spouse's values to RwJPLEAVE, RwJPSICK, and RwJPDYSA. Aside from the special missings utilized by RwJPLEAVE, RwJPSICK, and RwJPDYSA, SwJPLEAVE, SwJPSICK, and SwJPDYSA use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwJPLEAVE, RwJPSICK, and RwJPDYSA are comparable to the variables of the same name in the Harmonized HRS. RwJPLEAVE in the Harmonized HRS includes paid vacation time and paid time off.

KLoSA Variables Used:

How Constructed:

RwJCTEN is the respondent's years of tenure on their current job. Current work status, reported job changes, current job start date and current interview date are used to derive the current job tenure for each interview. It is calculated in years, using current interview date minus current job start date. In Wave 1 KLoSA separately surveyed job start date for respondents who were employed by another person or company for pay, respondents who were self-employed, and respondents who worked for family without pay for 18 hours or more per week. Starting in Wave 2, KLoSA surveys all respondents who reported taking a new job since the last interview as to the start date of that new job with the same question.

If the respondent reports a job for the first time, RwJCTEN is calculated by subtracting the date they reported starting the job from the interview date. In following interviews, if the respondent reports that they have not changed jobs or employers since the previously reported job, RwJCTEN is calculated using the originally reported start date and the current interview date. Starting in Wave 2, KLoSA asks

respondents to confirm the job title and name of workplace or unemployment status from the prior wave. Respondents can refute a prior job in which case RwJCTEN does not use the job start date from the previous report and since KLoSA also does not ask for a corrected job start date from respondents who refute the previous report, RwJCTEN is missing .m for these respondents.

In the case that the respondent recalls the start year of their current job but does not know or refuses to give the start month, RwJCTEN is calculated assuming that they started their job in the middle of the year (in June, month 6). If the respondent reports a job start date after the current interview date a special missing code of .i is assigned. If the respondent is not working this variable is set to a .w missing code. New respondents first interviewed in Wave 5 are asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the publicly available KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to job tenure are assigned special missing values .d, .r, .m, respectively. RwJCTEN is set to plain missing (.) for respondents who did not respond to the current wave.

SwJCTEN is the respondent's spouse's years of tenure on the current job. It is taken from the spouse's values to RwJCTEN. Aside from the special missings utilized by RwJCTEN, SwJCTEN uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1, KLoSA separately surveyed job start date for respondents who were employed by another person or company for pay, respondents who were self-employed, and respondents who worked for family without pay for 18 hours or more per week. Starting in Wave 2, KLoSA surveys all respondents who reported taking a new job since the last interview as to the start date of that new job with the same question.

Also starting in Wave 2, KLoSA asks respondents to confirm the job title and name of workplace or unemployment status from the prior wave. Respondents can refute a prior job in which case RwJCTEN does not use the job start date from the previous report and since KLoSA also does not ask respondents correcting a prior report the job start date, RwJCTEN is missing .m for these respondents.

Differences with the RAND HRS/Harmonized HRS

In the RAND HRS, if the respondent reports being self-employed, the given job start date is used, rather than the job start date from the interview when the job was first reported.

How Constructed:

RwJCOCC_K is the respondent's occupational classification for their current job in Wave `w'. RwJCOCC_K is derived from a number of different questions and coded as follows: 1. Legislators/senior official/managers, 2.Technicians/(associate) professionals, 3.Clerical support workers, 4.Service workers, 5.Sales workers, 6.Skilled agricultural, forestry, and fishery workers, 7.Craft and related trades workers, 8.Plant and machine operators, and assemblers, 9.Elementary occupations, and 10.Armed forces occupation. In Wave 1, KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week what kind of work they do. Starting in Wave 2, respondents are asked whether their work changed within the workplace they reported in the previous interview, and if the respondent reports their work had changed, then they are asked what their new work was. If the respondent reports that their work has not changed, RwJCOCC_K takes information for the previous report. If the respondent reports that their work has changed, the information for the new kind of work is used for RwJCOCC_K. In a separate question, respondents are asked whether they found a new job since the previous interview. If the respondent reports finding a new job, then they are asked what kind of work they do in the workplace.

If the respondent reports that they had a new job, the information for the kind of work in the new job is used for `RwJCOCC_K`. If the respondent is not working `RwJCOCC_K` is set to a .w missing code. New respondents first interviewed in Wave 5 were asked to confirm their job history in the 2014 job history interview, but the data is not available. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to labor force status are assigned special missing values .d, .r, .m, respectively. `RwJCOCC_K` is set to plain missing (.) for respondents who did not respond to the current wave.

`SwJCOCC_K` indicates the respondent's spouse's occupational classification. It is taken from the spouse's values to `RwJCOCC_K` in the current wave. Aside from the special missings utilized by `RwJCOCC_K`, `SwJCOCC_K` uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1, KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week what kind of work they do. Starting in Wave 2, respondents are asked whether their work changed within the workplace they reported in the previous interview, and if the respondent reports their position had changed, then they are asked what their new work was. In a separate question, respondents are asked whether they found a new job since the previous interview. If the respondent reports finding a new job, then they are asked what kind of work they do in the workplace.

Occupations are classified slightly differently in Wave 1 and in Waves 2-8. In Wave 1, they are classified as follows: 0.Legislators, senior officials and managers, 1.Professionals, 2. Technicians and associate professionals, 3.Clerical support workers, 4.Service workers, 5.Sales workers, 6.Skilled agricultural, forestry, and fishery workers, 7.Craft and related trades workers, 8.Plant and machine operators, and assemblers, and 9.Elementary occupations. 0.Legislators, senior officials and managers in KLoSA is coded as 1.Legislators/senior official/managers in the Harmonized KLoSA. 1.Professionals and 2.Technicians and associate professionals in KLoSA are combined to be 2.Technicians/(associate) professionals in the Harmonized KLoSA. In Waves 2-8, occupations are classified as follows: 1.Managers, 2.(Associate) Professionals, 3.Clerical support workers, 4.Service workers, 5.Sales workers, 6.Skilled agricultural, forestry, and fishery workers, 7.Craft and related trades workers, 8.Plant and machine operators, and assemblers, 9.Elementary occupations, and 10.Armed forces occupation. For Waves 2-8, numeric values are the same as in the Harmonized KLoSA.

Differences with the RAND HRS/Harmonized HRS

`RwJCOCC_K` is based on a different set of occupational classifications than `RwJCOCC` in the RAND HRS. While some comparisons are possible, complete harmonization of the two sets of codes is not possible.

KLoSA Variables Used:

Wave 1:	
W01D001	Currently work
W01D109OCC	Wage worker : Occupational classification
W01D314OCC	Self-employed : Occupational classification
W01D407OCC	Unpaid family worker : Occupational classification
Wave 2:	
W02D001	Currently work
W02D051_01	Since previous interview, the occupation of 1st

How Constructed:

RwJCIND_K is the respondent's industrial classification for their current job in Wave `w`. RwJCIND_K is derived from a number of different questions and coded as follows: 1.Agriculture/forestry, 2.Fishing, 3.Mining and quarrying, 4.Manufacturing, 5.Electricity, gas, and water supply, 6.Construction, 7.Wholesale and retail trade, 8.Hotels and restaurants, 9.Transport, 10.Post and telecommunications, 11.Financial and insurance activities, 12.Real estate and renting and leasing, and 13.Other activities. In Wave 1, KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week what kind of business or industry they work in. Starting in Wave 2, respondents are asked whether they are currently working in the workplace they responded they were working in the previous wave. If the respondent reports that they are working in the same workplace, RwJCIND_K takes information from the previous report. In a separate question, respondents are asked whether they found a new job since the previous interview. If the respondent reports finding a new job, then they are asked what their workplaces do. If the respondent reports that they had a new job, the information for the new job is used for RwJCIND_K. If the respondent is not working, RwJCIND_K is set to a .w missing code. New respondents first interviewed in Wave 5 were asked to confirm their job history in the 2014 job history interview, but the data are not available. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to labor force status are assigned special missing values .d, .r, .m, respectively. RwJCIND_K is set to plain missing (.) for respondents who did not respond to the current wave.

SwJCIND_K indicates the respondent's spouse's industrial classification. It is taken from the spouse's values to RwJCIND_K in the current wave. Aside from the special missings utilized by RwJCIND_K, SwJCIND_K uses two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1, KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week what kind of business or industry they work in. Starting in Wave 2, respondents are asked whether they are currently working in the workplace they responded they were working in the previous wave. Also, in a separate question, respondents are asked whether they found a new job since the previous interview in Waves 2-8.

New respondents first interviewed in Wave 5 were asked to confirm their job history in the 2014 job history interview, but the data is not available.

Industries are classified slightly differently in Wave 1 and in Waves 2-8. While classifications are the same in KLoSA Waves 2-8 and the Harmonized KLoSA, in Wave 1 they are classified as follows: 1.Agriculture/forestry, 2.Fishing, 3.Mining and quarrying, 4.Manufacturing, 5.Electricity, gas, and water supply, 6.Construction, 7.Wholesale and retail trade, 8.Hotels and restaurants, 9.Transport, 10.Post and telecommunications, 11.Financial and insurance activities, 12.Real estate and renting and leasing, 13.Business activities, 14.Public administration and defence; compulsory social security, 15.Education, 16.Health and social work, 17.Recreational, cultural and sporting activities, 18.Other community, repair and personal service activities, 19.Private households with employed persons, and 20.Extra-territorial organizations and bodies. From 13.Business activities to 20.Extra-territorial organizations and bodies are combined to be 13.Other activities in the Harmonized KLoSA.

Differences with the RAND HRS/Harmonized HRS

RwJCIND_K is a KLoSA specific variable which attempts to capture similar information as RwJCIND in the RAND HRS.

KLoSA Variables Used:

Wave 1:	
W01D001	Currently work
W01D103IND	Wage worker : Industrial classification

W01D308IND	Self-employed : Industrial classification
W01D405IND	Unpaid family worker : Industrial classificatio
Wave 2:	
W02D001	Currently work
W02D036	Whether or not R currently works in the same jo
W02D046_01	Since previous interview, industry of 1st new j
W02D046_02	Since previous interview, industry of 2nd new j
W02D046_03	Since previous interview, industry of 3rd new j
W02D046_04	Since previous interview, industry of 4th new j
Wave 3:	
W03D001	Currently work
W03D036	Whether or not R currently works in the same jo
W03D046_01	Since previous interview, industry of 1st new j
W03D046_02	Since previous interview, industry of 2nd new j
Wave 4:	
W04D001	Currently work
W04D036	Whether or not R currently works in the same jo

How Constructed:

RwJLASTM and RwJLASTY are the month and year, respectively, when the respondent last worked. In Wave 1, most non-working respondents who have ever worked are asked about their last job. Starting in Wave 2, respondents are asked when their last job ended if the respondent reports that they are no longer working at the job reported in the previous interview. If the respondent never worked, RwJLASTY is set to special missing .n. RwJLASTM and RwJLASTY are set to missing value .w if the respondent is working at Wave 'w'. In Wave 1 if the respondent was unemployed and reported looking for work and being able to work if they found a job, KLoSA did not ask the respondent about their last job (instead asking the respondent about their job search), for these respondents a special missing value .b is assigned in Wave 1. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA publicly available dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to last worked date are assigned special missing values .d, .r, .m, respectively. RwJLASTM and RwJLASTY are set to plain missing (.) for respondents who did not respond to the current wave.

SwJLASTM and SwJLASTY are the month and year, respectively, when the respondent's spouse last worked. They are taken from the spouse's values to RwJLASTM and RwJLASTY, respectively. Aside from the special missings utilized by RwJLASTM and RwJLASTY, SwJLASTM and SwJLASTY use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In Wave 1 respondents who are unemployed and reported looking for work and being able to work if they found a job are not asked about their last job (instead they are asked about their job search). Starting in Wave 2 all respondents who report quitting their previously reported job are asked when they quit their last job.

Differences with the RAND HRS/Harmonized HRS

Unlike in the RAND HRS, RwJLASTM and RwJLASTY in the Harmonized KLoSA do not use the months and years given for retirement, disability, unemployment, and temporary layoff to fill in missing job stop dates.

How Constructed:

KLoSA asks respondents who report not being a wage worker, self-employed, or working as an unpaid family worker for more than 18 hours a week, specific job search questions.

RwLOOKWRK1W indicates the respondent's response to the question "Did you look for a job or other work to earn money in the past week?". A value of 0 indicates that the respondent did not look for a job in the past week and a value of 1 indicates that the respondent did look for a job in the past week. In Wave 1, respondents who reported that they are not looking for a job are also coded with a value of 0.

RwLOOKWRK4W indicates the respondent's response to the question "Did you look for a job or other work to earn money in the past four weeks?". A value of 0 indicates that the respondent did not look for a job in the past four weeks and a value of 1 indicates that the respondent did look for a job in the past four weeks. Respondents who reported looking for a job in the past week were not asked the question about the past four weeks and RwLOOKWRK4W is coded as 1 for those respondents. In Wave 1, respondents who reported that they are not looking for a job are also coded with a value of 0.

RwABLEWRK indicates the respondent's response to the question "Would you have been able to work last week if there had been an appropriate job or work?". A value of 0 indicates that the respondent reported not being able to work and a value of 1 indicates that the respondent reported being able to work. Respondents who reported that they were not looking for a job in the past four weeks were not asked this question and are designated special missing code .k.

RwWILLWRK indicates the respondent's response to the question "Are you willing to work if there is an appropriate job?". A value of 0 indicates that the respondent reported not being willing to work and a value of 1 indicates that the respondent reported being willing to work. Respondents who were looking for a job at least in the past four weeks are assigned a 1 as well, although they are not asked this question.

In all waves, only those that reported that they were not employed for income or family workers for less than 18 hours a week are asked the job search questions. If the respondent is employed, RwLOOKWRK1W, RwLOOKWRK4W, RwABLEWRK, and RwWILLWRK are set to a .e missing code. In addition to this skip pattern, in Wave 1, only people who answered yes to both "Are you looking for a job?" and "Are you able to work if you are offered a job right now?" were asked the job search questions. As such, Wave 1 job search variables have an additional special missing value: .a for those who reported they were not able to work if offered a job right now. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwLOOKWRK1W, RwLOOKWRK4W, RwABLEWRK, and RwWILLWRK are set to plain missing (.) for respondents who did not respond to the current wave.

SwLOOKWRK1W, SwLOOKWRK4W, SwABLEWRK, and SwWILLWRK are taken from the spouse's values to RwLOOKWRK1W, RwLOOKWRK4W, RwABLEWRK, and RwWILLWRK. Aside from the special missings utilized by RwLOOKWRK1W, RwLOOKWRK4W, RwABLEWRK, and RwWILLWRK, SwLOOKWRK1W, SwLOOKWRK4W, SwABLEWRK, and SwWILLWRK use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current

wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In all waves, only those who reported that they were not employed for income or family workers for less than 18 hours a week are asked the job search questions. In addition to this skip pattern, in Wave 1, only people who answered yes to both "Are you looking for a job?" and "Are you able to work if you are offered a job right now?" were asked the job search questions.

A new cohort of interviewees was added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

RwLOOKWRK1W, RwABLEWRK, and RwWILLWRK have no comparable questions in the HRS and so there are no comparable variables in the RAND HRS or Harmonized HRS. RwLBRF in the RAND HRS uses a question of whether looked for work in the past 4 weeks to define the unemployed labor force status, this question is comparable to the question used to build RwLOOKWRK4W in the Harmonized KLoSA.

How Constructed:

KLoSA asks respondents who report not being a wage worker, self-employed, or working as an unpaid family worker for more than 18 hours a week specific job search questions.

RwUNEMPMO indicates the number of months the respondent has been looking for a job, at the time of the interview, and is available in Wave 1 only. It is calculated by subtracting the date when the respondent began looking for a job from the interview date. Starting in Wave 2, RwUNEMPM indicates the number of months the respondent has been looking for a job since the past interview. The respondents are asked when they started looking for a job, and when they stopped looking if they have not looked in the past four weeks. If the respondent only reported the year and not the month, then June was used. If the respondent is still looking for a job at the time of the interview, the interview date is used to determine the months of unemployment in the same fashion as in Wave 1.

RwUNEMPMF is the flag variable for missing month used to calculate RwUNEMPM. A value of 0 indicates that the respondent did not report the month for either starting to look for a job or stopping to look for a job. In such cases, June was used in place of the missing month. A value of 1 indicates that the respondent reported the month of starting/stopping to look for a job.

In all waves, only those who reported that they were not employed for income or family workers for less than 18 hours a week are asked the job search questions. In addition to this skip pattern, in Wave 1, only people who answered yes to both "Are you looking for a job?" and "Are you able to work if you are offered a job right now?" were asked the job search questions. As such, if the respondent reported not being able to work, RwUNEMPM, RwUNEMPM and RwUNEMPMF are set to a .a missing code. If the respondent reported not being willing to work, RwUNEMPM, RwUNEMPM and RwUNEMPMF are set to a .w missing code. If the respondent has not looked for a job since the last interview, RwUNEMPM, RwUNEMPM and RwUNEMPMF are set to a .j missing code. If the respondent is employed, RwUNEMPM, RwUNEMPM and RwUNEMPMF are set to a .e missing code. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwUNEMPM, RwUNEMPM and RwUNEMPMF are set to plain missing (.) for respondents who did not respond to the current wave.

SwUNEMPM, SwUNEMPM and SwUNEMPMF are taken from the spouse's values to RwUNEMPM, RwUNEMPM and RwUNEMPMF. Aside from the special missings utilized by RwUNEMPM, RwUNEMPM and RwUNEMPMF, SwUNEMPM, SwUNEMPM and SwUNEMPMF use two additional special missings, .u and .v. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of .u is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of .v is used.

Cross Wave Differences in KLoSA

In all waves, only those who reported that they were not employed for income or family workers for less than 18 hours a week are asked the job search questions. In addition to this skip pattern, in Wave 1, only people who answered yes to both "Are you looking for a job?" and "Are you able to work if you are offered a job right now?" were asked the job search questions. Starting in Wave 2, KLoSA did not ask when the respondent started looking for a job to those who reported not being willing to work.

The number of months reported in RwUNEMPM are since the last interview starting in Wave 2. Starting in Wave 2, KLoSA asks if the respondent has looked for a job since the past interview, including looking prior to the past four weeks, and if so, when the respondent started and stopped looking for a job.

Differences with the RAND HRS/Harmonized HRS

HRS does not ask these specific job search questions so there are no equivalent variables to RwUNEMPMO, RwUNEMPM and RwUNEMPMF in the RAND HRS or the Harmonized HRS.

How Constructed:

RwRETEMP indicates the respondent's retirement status. RwRETEMP is set to 1 if the respondent is currently retired, 2 if the respondent is retired but does some work, is looking for a job, or desires to work for pay regardless of retirement status, and 0 if the respondent is not retired. Respondents who have never worked are coded 0 and not considered to be retired. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave. RwRETEMP is based on the RwLBRF_K variable from the Employment section—please refer to that for more details.

SwRETEMP gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's value to RwRETEMP. Aside from the special missing values utilized by RwRETEMP, SwRETEMP employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

See also Labor Force Status (RwLBRF_K and SwLBRF_K) in the Employment section.

Cross Wave Differences in KLoSA

The variable is derived from three questions; however, one of the questions changes the wording starting from Wave 2. In Wave 1, the respondents are asked "What is your current employment status with regard to working in the labor market?" and the question has only three options for the respondent to choose : "1. Worked before but currently retired", "3.Worked before and intend to work in the future but currently not looking for a job" and "5.Never had a job before." Starting in Wave 2, the question has been changed to "Which of the following best describes your status with regard to working in the labor market?" and has 5 options for the respondent to choose: "1.Never had a job before", "3.Currently retired (no intent to work unless circumstances change)", "5.Intend to work if the wage and working conditions meet my expectations and circumstances are good", "7.Intend to work if the wage and working conditions meet my expectations" and "9.Intend to work even if the wage and working conditions are slightly below my expectations." Starting in Wave 5, the option "I have done a little work this and that but I have never had a clear job" was added.

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

See also Labor Force Status (RwLBRF_K and SwLBRF_K) in the Employment section.

Differences with the RAND HRS/Harmonized HRS

In RAND HRS, `RwRETEMP` is derived from several questions about the respondent's employment status. In the Harmonized KLoSA, `RwRETEMP` is also derived from several different questions about the respondent's employment status but questions used in KLoSA are different from the questions used in HRS.

See also Labor Force Status (`RwLBRF_K` and `SwLBRF_K`) in the Employment section.

How Constructed:

RwRETMON and RwRETYR indicate the respondent's retirement month and year, respectively. These variables are derived only for respondents who say they are completely or partially retired, i.e., where RwRETEMP is either 1 or 2. In Wave 1 all respondents who report being currently retired, are asked the time of that retirement. Starting in Wave 2, only respondents who were working in their previous interview and report being retired at the current interview are asked the time of retirement. RwRETMON and RwRETYR are derived by taking the reported month and year of retirement for the respondent's current retirement, this is accomplished either by taking the respondent's current report of time of retirement or the respondent's previous report of time of retirement if the respondent reports still being retired and not having had any new employment since the last wave. RwRETMON and RwRETYR are assigned special missing value .n if the respondent reports not being retired. A special missing value .x is used when the respondent reported a non-working but non-retired employment status in the previous wave and then reported being retired in the next wave in which case the time of retirement is not asked to the respondent. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to time of retirement are assigned special missing values .d, .r, .m, respectively. RwRETMON and RwRETYR are set to plain missing (.) for respondents who did not respond to the current wave.

SwRETMON and SwRETYR give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwRETMON and RwRETYR. In addition to the special missing codes used in RwRETMON and RwRETYR, SwRETMON and SwRETYR employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1 all respondents who report being currently retired, are asked the time of that retirement. Starting in Wave 2, only respondents who were working in their previous interview and report being retired at the current interview are asked the time of retirement. Because of this, time of retirement is not asked for respondents who reported a non-working but non-retired employment status in the previous wave and then reported being retired in the next wave.

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

Differences with the RAND HRS/Harmonized HRS

In HRS, retirement month and year are asked in a number of different questions depending on the respondent's employment status. In KLoSA, retirement month and year are asked once per survey.

KLoSA Variables Used:

Wave 1:

W01D001	Currently work
W01D005	Job-searching activity
W01D010	The current working status (if not searching fo

How Constructed:

RwRETAGE indicates the respondent's retirement age. This variable is derived using birth year and month and retirement year and month, and then rounding down to the nearest integer for the age at retirement. RwRETAGE is assigned special missing value .n if the respondent reports not being retired. A special missing value .x is used when the respondent reported a non-working but non-retired employment status in the previous wave and then reported being retired in the next wave in which case the time of retirement is not asked to the respondent. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to time of retirement are assigned special missing values .d, .r, .m, respectively. RwRETMON and RwRETYR are set to plain missing (.) for respondents who did not respond to the current wave.

SwRETAGE gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to RwRETAGE. In addition to the special missing codes used for RwRETAGE, SwRETAGE employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s.

Differences with the RAND HRS/Harmonized HRS

In HRS, retirement month and year are asked in a number of different questions depending on the respondent's employment status. In KLoSA, retirement month and year are asked once per survey. A comparable variable is not currently available in the RAND HRS but can be constructed using HRS data.

How Constructed:

RwPLNYA is the year the respondent plans to retire or when they think they will stop working, not considering any insignificant, "pastime" work. KLoSA asks these questions in four different places to non-retired respondents: for those who are currently working, for those working but self-employed, for non-wage family workers, and for unemployed people. KLoSA asks at what age the respondent plans to stop working. Respondents who are retired but report some "pastime" work are not asked when they plan to completely retire from the labor market. RwPLNYA is derived using the age at which the respondent plans to stop working added to the respondent's year of birth. Respondents who are already retired are assigned a special missing code of .a. Respondents who report never having worked are assigned special missing value of .w. Respondents who, when asked when they plan to retire, answered that they plan to keep working as long as they are physically capable are assigned special missing value .n. In Wave 1, respondents who reported they were unemployed and looking for work but had either not looked for work in the last 4 weeks or reported that they would not have worked last week if there was an appropriate job or

work were also not asked planned retirement year. These respondents are assigned special missing value .b. Don't know, refused, or missing responses to planned year of retirement are assigned special missing values .d, .r, .m, respectively. RwPLNYA is set to plain missing (.) for respondents who did not respond to the current wave.

SwPLNYA gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to RwPLNYA. In addition to the special missing values used in RwPLNYA, SwPLNYA employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, respondents who reported they were unemployed and looking for work but had either not looked for work in the last 4 weeks or reported that they would not have worked last week if there was an appropriate job or work were not asked for their planned retirement year. Starting in Wave 2 all unemployed respondents were asked when they planned to retire.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, KLoSA asked the retirement plan question four times separately for the following four job status categories: currently working, working but self-employed, non-wage family workers, and unemployed.

How Constructed:

In KLoSA, respondents are asked about the probability of living about another 10 years. KLoSA respondents select the probability from a non-continuous scale ranging from 0 to 100: 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100.

RwLIV10 is the respondent's self-reported probability of living to age 75 if the respondent is younger than 65; probability of living to age 80 if the respondent is aged 65-69; probability of living to age 85 if the respondent is aged 70-74; probability of living to age 90 if the respondent is aged 75-79; probability of living to age 95 if the respondent is aged 80-84; probability of living to age 100 if the respondent is aged 85-94; probability of living to age 105 if the respondent is aged 95-99; probability of living to age 110 if the respondent is 100 years old or older. The age about which the respondent is asked is stored in the variable RwLIV10A. Don't know, refused, or missing responses to self-reported probability of living about another 10 years are assigned special missing values .d, .r, .m, respectively. RwLIV10 and RwLIV10A are set to plain missing (.) for respondents who did not respond to the current wave.

SwLIV10 and SwLIV10A give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwLIV10 and RwLIV10A. In addition to the special missing codes used in RwLIV10 and RwLIV10A, SwLIV10 and SwLIV10A employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

KLoSA uses a different set of ages to measure the probability of living to a specific age than the HRS. In particular, the ages used by KLoSA range from 75-110 while the ages used in HRS range from 80-100.

KLoSA Variables Used:

Wave 1:	
W01A001_AGE	Respondent age(=2006-w01A001y)

S8INHER	866	28.19	29.12	0.00	100.00

How Constructed:

RwINHER is the self-reported probability of receiving an inheritance of at least 10,000 Korean Won (KW). Like other questions in the KLoSA modules that deal with self-reported probabilities, KLoSA does not use a continuous scale for this question about inheritance. Answers can be 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, or if the respondents is absolutely sure they will receive an inheritance, 100. This question is only asked if the respondent's mother or father is currently alive. If the respondent was not asked this question because both the respondent's parents have died or have dispersed due to the Korean War then RwINHER is assigned special missing value .q. Don't know, refused, or missing responses to self-reported probability of receiving an inheritance are assigned special missing values .d, .r, .m, respectively. RwINHER is set to plain missing (.) for respondents who did not respond to the current wave.

SwINHER gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's value to RwINHER. In addition to the special missing codes used in RwINHER, SwINHER

employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike in RAND HRS, in KLOSA this question is only asked if the respondent’s mother or father is still alive.

In HRS, the question is asked specifically about receiving an inheritance in the next 10 years, however KLoSA does not refer to a specific time window in the question.

KLoSA Variables Used:

S8BEQ10W	4232	48.87	31.19	0.00	100.00

How Constructed:

RwBEQ10W is the self-reported probability of leaving a bequest, including property and other valuables that the respondent might own, totaling 10,000 Korean Won (KW) or more. As with other expectation questions in KLoSA, probabilities are not reported on a continuous scale. Responses range from 0 to 100 at intervals of 10: 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100. Don't know, refused, or missing responses to self-reported probability of leaving a bequest are assigned special missing values .d, .r, .m, respectively. RwBEQ10W is set to plain missing (.) for respondents who did not respond to the current wave.

SwBEQ10W gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's value to RwBEQ10W. In addition to the special missing values used in RwBEQ10W, SwBEQ10W employs two other missing codes, .u and .v. Special missing value .u is used when the respondent

does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, KLoSA does not ask about bequests of other valuables.

S8WORK5A	345	65.00	0.00	65.00	65.00

How Constructed:

RwWORK5 is the self-reported probability of working at their present job in the next five years. As with other expectation questions in the KLoSA, probabilities are not reported on a continuous scale. Responses range from 0 to 100 at intervals of 10: 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100. In Waves 1-4, respondents younger than 50 were asked the self-reported probability of working at their present job until they reach age 55; respondents aged 50-59 were asked the probability of working at their present job until they reach age 60; respondents 60 years old or older were asked the probability of working at their present job for the next 5 years. Starting in Wave 5, respondent's younger than 50 are asked the self-reported probability of working at their present job until they reach age 55; respondents aged 50-54 are asked the probability of working at their present job until they reach age 60; respondents aged 55-59 are asked the probability of working at their present job until they reach age 65; respondents 60 years old or older are asked the probability of working at their present job in the next 5 years. RwWORK5A records the age the respondent is asked to consider when they think about working in the future. RwWORK5A is coded with special missing code of .a if the respondent was not asked the probability that they will be working at a specific age but is instead asked the probability they will still be working in the next five years. For respondents who are not working, a special missing code of .w is used. Don't know, refused, or missing responses to self-reported probability of working full time are assigned special missing values .d, .r, .m, respectively. RwWORK5 and RwWORK5A are set to plain missing (.) for respondents who did not respond to the current wave.

SwWORK5 and SwWORK5A give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to RwWORK5 and RwWORK5A. In addition to the special missing values used in RwWORK5 and RwWORK5A, SwWORK5 and SwWORK5A employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

The age categories which were used to determine what age respondents were asked in the self-reported probability of working full-time questions changed slightly after Wave 4. In Waves 1-4, respondent's younger than 50 were asked the self-reported probability of working after they reach age 55; respondents aged 50-59 were asked the probability of working after they reach age 60; respondents 60 years old or older were asked the probability of working in the next 5 years. Starting in Wave 5, respondents younger than 50 are asked the self-reported probability of working after they reach age 55; respondents aged 50-54 are asked the probability of working after they reach age 60; respondents aged 55-59 are asked the probability of working after they reach age 65; respondents 60 years old or older are asked the probability of working in the next 5 years.

Differences with the RAND HRS/Harmonized HRS

This variable is not available in RAND HRS or Harmonized HRS.

KLoSA Variables Used:

Wave 1:	
W01A001_AGE	Respondent age(=2006-w01A001y)
W01D001	Currently work
W01G003	Expectation (45~49 yo)_I am likely to continue
W01G004	Expectation (50~54 yo)_I am likely to continue
W01G005	Expectation (over 55 yo)_I am likely to continu

How Constructed:

RwRETSAT is the self-reported retirement satisfaction of the respondent, among those respondents who have retired. A code of 1 indicates the respondent is very satisfied with their retirement. A code of 2 indicates the respondent is moderately satisfied with their retirement. A code of 3 indicates the respondent is not at all satisfied with their retirement. Respondents who are not retired are assigned a special missing value of .n. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to retirement satisfaction are assigned special missing values .d, .r, .m, respectively. RwRETSAT is set to plain missing (.) for respondents who did not respond to the current wave.

SwRETSAT gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to RwRETSAT. In addition to the special missing codes used in RwRETSAT, SwRETSAT employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

Differences with the RAND HRS/Harmonized HRS

No differences known.

How Constructed:

RwRYRCMP is the respondent's comparison of their life before and after retirement, if they have retired. A code of 1 indicates the respondent says their life is better than before retirement. A code of 3 indicates the respondent says their life is about the same as before retirement. A code of 5 indicates the respondent says their life is worse than before retirement. Respondents who are not retired are assigned a special missing value of .n. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses to how retirement years compare are assigned special missing values .d, .r, .m, respectively. RwRYRCMP is set to plain missing (.) for respondents who did not respond to the current wave.

SwRYRCMP gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to RwRYRCMP. In addition to the special missing values used in RwRYRCMP, SwRYRCMP employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

Differences with the RAND HRS/Harmonized HRS

In HRS, respondents are asked to compare their retirement years to the time just before retirement. In KLoSA, respondents are asked to compare their life after retirement to their life before retirement without any further indication towards a particular time before retirement.

How Constructed:

RwRETWRK indicates whether the respondent wants to work for pay regardless of retirement status. RwRETWRK is coded as 0 if the respondent does not want to work for pay regardless of retirement status, and is coded as 1 if the respondent does want to work for pay regardless of retirement status. Respondents who are currently in the labor marker are not asked this question. Thus, respondents who are currently working, unemployed, family workers, or self-employed are coded with the special missing value of .n since this question was not asked of them. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value .s. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. RwRETWRK is set to plain missing (.) if the respondent did not participate in the current wave.

SwRETWRK gives this information for the respondent's spouse or partner. In addition to the special missing values used in RwRETWRK, SwRETWRK employs two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

Differences with the RAND HRS/Harmonized HRS

No differences known.

How Constructed:

RwPUBPEN indicates whether the respondent is currently receiving a public pension. A value of 0 indicates the respondent is not receiving any benefit from the National Pension System. A value of 1 indicates the respondent is receiving the benefits either monthly, in a lump-sum, or both. Don't know, refused, or other missing responses of RwPUBPEN are assigned special missing codes .d, .r, .m, respectively. RwPUBPEN is set to plain missing (.) for respondents who did not respond to the current wave.

SwPUBPEN indicates whether the current wave's spouse is currently receiving a public pension, and is taken from the spouse's values to RwPUBPEN. In addition to the special missing codes used in RwPUBPEN, SwPUBPEN employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

RwPUBPEN in KLoSA is comparable to RASSRECV in the RAND HRS. While RwPUBPEN indicates whether the respondent to KLoSA is receiving a public pension at each wave, RASSRECV indicates whether the respondent to HRS received social security income at any wave. Please note that KLoSA has a value for each wave of the study, while the HRS has a single value that encompasses all waves.

Components included in Harmonized KLoSA and RAND HRS are slightly different for public pensions representing different institutional arrangements in each country. However, we kept the concepts included as comparable as possible.

S8PUBAGE	1173	62.13	4.32	42.00	92.00

How Constructed:

RwPUBAGE indicates the respondent's age when they started to receive their current public pension. RwPUBAGE is set to special missing .x if the respondent is not currently receiving a public pension. RwPUBAGE is set to special missing .i if the respondent reports receiving the public pension at a future date. Don't know, refused, or other missing responses of RwPUBAGE are assigned special missing codes .d, .r, .m, respectively. In Wave 7, the majority of respondents who reported receiving a public pension in a previous wave were not asked when they started to receive their current public pension. For these cases, R7PUBAGE is assigned the age they reported first receiving their current public pension in wave 6. RwPUBAGE is set to plain missing (.) for respondents who did not respond to the current wave.

SwPUBAGE indicates the current wave's spouse's age when they started to receive their current public pension, and is taken from the spouse's values to RwPUBAGE. In addition to the special missing codes used in RwPUBAGE, SwPUBAGE employs two other missing codes, .u and .v. A special missing value .u is used when

the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 7, the majority of respondents who reported receiving a public pension in a previous wave were not asked when they started to receive their current public pension. For these cases, the age reported in the previous wave is carried forward.

Differences with the RAND HRS/Harmonized HRS

RAND HRS and Harmonized HRS do not have a comparable variable.

How Constructed:

RwPENINC indicates whether the respondent is currently receiving any private or occupational pension. A value of 0 indicates that the respondent is not currently receiving any benefit from the private/occupational pension. A value of 1 indicates that the respondent is currently receiving such benefits either monthly, in a lump sum, or both. Don't know, refused, or other missing responses of RwPENINC are assigned special missing codes .d, .r, .m, respectively. RwPENINC is set to plain missing (.) for respondents who did not respond to the current wave.

SwPENINC indicates whether the current wave's spouse is currently receiving any private or occupational pension, and is taken from the spouse's values to RwPENINC. In addition to the special missing codes used in RwPENINC, SwPENINC employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

How Constructed:

RwPENIC indicates whether someone could receive full or part of the respondent's current private pension, if he/she were to die. RwPENIC is coded as 0.no if the pension benefits would stop, and 1.yes if the pension benefits would stay the same or continue at a reduced level. RwPENIC is assigned special missing values .d or .r, if don't know or refused, respectively. RwPENIC is assigned special missing value .o if the respondent reports that something other would happen to their private pension if they should die. RwPENIC is assigned special missing value .c if the respondent is receiving a corporate or occupational pension but not a separate private pension, and this question is not asked. RwPENIC is assigned special missing value .n if the respondent is not currently receiving any private pension. The variable is set to plain missing (.) for respondents who did not respond to the current wave.

SwPENIC indicates whether the current wave's spouse's private pension would continue if he/she were to die, and is taken from the spouse's values of RwPENIC. In addition to the special missing codes used in RwPENIC, if the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of .u is used. Also, if the respondent is not designated as coupled in the current wave but reports being married, a special missing value of .v is used.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Components included in Harmonized KLoSA and RAND HRS are slightly different for private pensions representing different institutional arrangements in each country. However, we kept the concepts included as comparable as possible.

KLoSA Variables Used:

How Constructed:

RwJCPEN indicates whether or not the respondent is a member of a retirement pension scheme through their current work. A value of 0 indicates that the respondent is not a member of a retirement pension scheme through their current job. A value of 1 indicates that the respondent is a member of a retirement pension scheme through their current job. RwJCPEN is set to special missing .w if the respondent is not currently employed. RwJCPEN is set to special missing .s if the respondent is self-employed or helps their family's business without payment. Don't know, refused, or other missing responses of RwJCPEN are assigned special missing codes .d, .r, .m, respectively. RwJCPEN is set to plain missing (.) for respondents who did not respond to the current wave.

SwJCPEN indicates whether the current wave's spouse is a member of a pension scheme through their current job, and is taken from the spouse's values to RwJCPEN. In addition to the special missing codes used in RwJCPEN, SwJCPEN employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

How Constructed:

RwPTY1 indicates the type of pension the respondent has from their current job. Respondents who are members of their employer's retirement pension schemes are asked whether their pension is "Defined Contributions: Money is accumulated as the employer makes pre-determined amount of contributions" or "Defined Benefits: Benefits are pre-determined, usually based on a formula involving age, years of service and salary." A value of 1 indicates that the respondent has a defined benefit pension through their current job. A value of 2 indicates that the respondent has a defined contribution pension through their current job. RwPTY1 is set to special missing .w if the respondent is not currently employed. RwPTY1 is set to special missing .x if the respondent does not have a pension through their current job. RwPTY1 is set to special missing .s if the respondent is self-employed or helps their family's business without payment. Don't know, refused, or other missing responses of RwPTY1 are assigned special missing codes .d, .r, .m, respectively. RwPTY1 is set to plain missing (.) for respondents who did not respond to the current wave.

SwPTY1 indicates the type of pension the current wave's spouse has from their current job, and is taken from the spouse's values to RwPTY1. In addition to the special missing codes used in RwPTY1, SwPTY1 employs two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

While KLoSA asks the type of pension for only the employer provided pension, HRS asks about the type of pension for 3 to an unlimited number of pensions depending on the wave, and reports the type of up to 4 pensions.

How Constructed:

RwDOMHAND indicates the respondent's dominant hand. RwDOMHAND is coded as follows: 1.right hand, 2.left hand, and 3.both hands are equally dominant. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m. Special missing .p is assigned if the questions were skipped because

the interview was done by proxy. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwDOMHAND indicates the respondent's current wave's spouse's dominant hand, and is taken from RwdOMHAND. In addition to the special missing codes used for RwdOMHAND, SwDOMHAND employs two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwLGRIP1, RwLGRIP2, RwRGRIP1, and RwRGRIP2 indicate the respondent's first and second hand strength measurements for the left and right hand, respectively. RwLGRIP and RwRGRIP indicate the respondent's maximum hand strength measurement for the left and right hand, respectively. RwGRIPSUM indicates the maximum measurement of the dominant hand, as such, RwLGRIP is used for respondents with a dominant left hand, and RwRGRIP is used for respondents with a dominant right hand. For respondents with equally dominant hands, the greater value between RwLGRIP and RwRGRIP is used. Don't know, refused, or other missing responses of all hand strength measurements are assigned special missing codes .d, .r, .m. Special missing .x is assigned if the respondent tried to do the test but was unable to do it. Special missing .p is assigned if the questions were skipped because the interview was done by proxy. Special missing .n is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Special missing .l is assigned to RwLGRIP1, RwLGRIP2, RwLGRIP, and RwGRIPSUM if the respondent was unable to use their left hand, but was able to take the test for the right hand. Special missing .t is assigned to RwRGRIP1, RwRGRIP2, RwRGRIP, and RwGRIPSUM if the respondent was unable to use their right hand, but was able to take the test for the left hand. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwLGRIP1, SwLGRIP2, SwRGRIP1, and SwRGRIP2 indicate the respondent's current wave's spouse's first and second, left and right hand strength measurements, and are taken from the corresponding respondent variables. SwLGRIP and SwRGRIP indicate the current wave's spouse's maximum hand strength measurement for the left and right hand, respectively. SwGRIPSUM indicates the current wave's spouse's dominant hand measurement, and is taken from the spouse's values to RwGRIPSUM. In addition to the special missing codes used by RwLGRIP1, RwLGRIP2, RwRGRIP1, RwRGRIP2, RwLGRIP, RwRGRIP, and RwGRIPSUM, SwLGRIP1, SwLGRIP2, SwRGRIP1, SwRGRIP2, SwLGRIP, SwRGRIP, and SwGRIPSUM employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwGRIPCOMP indicates whether the respondent is willing and able to complete the grip strength test. RwGRIPCOMP is coded as 1 if the respondent did not signal having had surgery or experience swelling, inflammation, severe pain, or injury in at least one hand within the last 6 months, the respondent understood the directions for the test, both the respondent and the interviewer felt it would be safe to complete the test, and the tests were at least attempted. RwGRIPCOMP is coded as 0 if the respondent did have surgery or experience swelling, inflammation, severe pain, or injury in both hands within the last 6 months, the respondent did not understand the instructions, or the respondent or interviewer felt it would be unsafe to complete the test, so the tests were not attempted. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m, respectively. Special missing .p is assigned if the questions were skipped because the interview was done by proxy. This measure is set to plain missing (.) for respondents who did not respond to the current wave.

SwGRIPCOMP indicates whether the respondent's current wave's spouse is willing and able to complete the grip strength test, and its values are taken from RwGRIPCOMP. In addition to the special missing codes employed by RwGRIPCOMP, SwGRIPCOMP employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwGRIPPOS indicates the respondent's position when they took the grip strength test. RwGRIPPOS is coded as follows: 1.standing, 2.sitting, and 3.lying down. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m. Special missing .p is assigned if the questions were skipped because the interview was done by proxy. Special missing .n is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwGRIPPOS indicates the respondent's current wave's spouse's position when they took the grip strength test, and is taken from RwGRIPPOS. In addition to the special missing codes used for RwGRIPPOS, SwGRIPPOS employs two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwGRIPEFF indicates the amount of effort the respondent put into the grip strength test as reported by the interviewer. RwGRIPEFF is coded as follows: 1.gave full effort, 2.not full effort-illness, and 3.not full effort-no reason. RwGRIPEFF is coded as 2 if the interviewer reports that the respondent was prevented from giving full effort by illness, pain, symptoms or discomfort, and is coded as 3 if the interviewer reports that the respondent did not appear to give full effort without an obvious reason. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m. Special missing .p is assigned if the questions were skipped because the interview was done by proxy. Special missing .n is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwGRIPEFF indicates the amount of effort the respondent's current wave's spouse put into the grip strength test, and its values are taken from RwGRIPEFF. In addition to the special missing codes used for RwGRIPEFF, SwGRIPEFF employs two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwGRIPAST indicates whether the respondent received a support while performing the grip strength test. RwGRIPAST is coded as 0 if no support was needed, and is coded as 1 if the respondent received a support while performing the grip strength test. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m. Special missing .p is assigned if the questions were skipped because the interview was done by proxy. Special missing .n is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwGRIPAST indicates whether the respondent's current wave's spouse received a support while performing the grip strength test, and its values are taken from RwGRIPAST. In addition to the special missing codes used for RwGRIPAST, SwGRIPAST employs two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

A new cohort of respondents is added in Wave 5. The question confirming that the respondent is responding for themselves is present in the Wave 5 Add questionnaire, but not in the Wave 5 Add data, hence we cannot tell if any of the missing responses there are due to an interview by proxy.

Differences with the RAND HRS/Harmonized HRS

In HRS hand strength tests began in Wave 7 with a random subsample of approximately 3,300 respondents. Hand strength tests were given to a larger sample of HRS respondents starting in Wave 8. KLoSA includes hand strength tests starting in Wave 1 and tests everyone who is willing and able to participate.

HRS tested the left hand first and then the right hand, whereas KLoSA tested the right hand first, then the left hand.

The Harmonized HRS includes RwGRIPSTA, which indicates whether the respondent rested their arms on a support during the grip strength test, whereas the Harmonized KLoSA includes RwGRIPAST, which indicates whether the respondent received a support during the grip strength test.

KLoSA Variables Used:

Wave 1:

W01C501	A right-handed/left-handed
W01C502	Acceptance of grip measurement
W01C503	Safety confirmation of grip measurement (check
W01C504	A painful hand for grip measurement
W01C505_01	The reason for not carrying out grip measuremen
W01C505_02	The reason for not carrying out grip measuremen
W01C505_03	The reason for not carrying out grip measuremen
W01C505_04	The reason for not carrying out grip measuremen
W01C507	Grip measurement value (the right hand, first t
W01C508	Grip measurement value (the right hand, second
W01C509	Grip measurement value (the left hand, first ti
W01C510	Grip measurement value (the left hand, second t
W01C511	Position when taking grip measurement
W01C512	Any assistance required for taking grip measure
W01C513	An effort degree of a respondent for a test
W01C550	Respondent confirmation (check the assistance o
Wave 2:	
W02C501	A right-handed/left-handed
W02C502	Acceptance of grip measurement
W02C503	Safety confirmation of grip measurement (check
W02C504	A painful hand for grip measurement
W02C505	The reason for not carrying out grip measuremen
W02C507	Grip measurement value (the right hand, first t
W02C508	Grip measurement value (the right hand, second
W02C509	Grip measurement value (the left hand, first ti
W02C510	Grip measurement value (the left hand, second t
W02C511	Position when taking grip measurement
W02C512	Any assistance required for taking grip measure
W02C513	An effort degree of a respondent for a test
W02C550	Respondent confirmation (check the assistance o
Wave 3:	
W03C501	A right-handed/left-handed
W03C502	Acceptance of grip measurement
W03C503	Safety confirmation of grip measurement (check
W03C504	A painful hand for grip measurement
W03C505	The reason for not carrying out grip measuremen
W03C507	Grip measurement value (the right hand, first t
W03C508	Grip measurement value (the right hand, second
W03C509	Grip measurement value (the left hand, first ti
W03C510	Grip measurement value (the left hand, second t
W03C511	Position when taking grip measurement
W03C512	Any assistance required for taking grip measure
W03C513	An effort degree of a respondent for a test
W03C550	Respondent confirmation (check the assistance o
Wave 4:	
W04C501	A right-handed/left-handed
W04C502	Acceptance of grip measurement
W04C503	Safety confirmation of grip measurement (check
W04C504	A painful hand for grip measurement
W04C505	The reason for not carrying out grip measuremen
W04C507	Grip measurement value (the right hand, first t
W04C508	Grip measurement value (the right hand, second
W04C509	Grip measurement value (the left hand, first ti
W04C510	Grip measurement value (the left hand, second t
W04C511	Position when taking grip measurement
W04C512	Any assistance required for taking grip measure
W04C513	An effort degree of a respondent for a test
W04C550	Respondent confirmation (check the assistance o
Wave 5:	
W05C501	A right-handed/left-handed
W05C502	Acceptance of grip measurement
W05C503	Safety confirmation of grip measurement (check
W05C504	A painful hand for grip measurement

W05C505	The reason for not carrying out grip measuremen
W05C507	Grip measurement value (the right hand, first t
W05C508	Grip measurement value (the right hand, second
W05C509	Grip measurement value (the left hand, first ti
W05C510	Grip measurement value (the left hand, second t
W05C511	Position when taking grip measurement
W05C512	Any assistance required for taking grip measure
W05C513	An effort degree of a respondent for a test
W05C550	Respondent confirmation (check the assistance o
Wave 5 New:	
W05C501	A right-handed/left-handed
W05C502	Acceptance of grip measurement
W05C503	Safety confirmation of grip measurement (check
W05C504	A painful hand for grip measurement
W05C505	The reason for not carrying out grip measuremen
W05C507	Grip measurement value (the right hand, first t
W05C508	Grip measurement value (the right hand, second
W05C509	Grip measurement value (the left hand, first ti
W05C510	Grip measurement value (the left hand, second t
W05C511	Position when taking grip measurement
W05C512	Any assistance required for taking grip measure
W05C513	An effort degree of a respondent for a test
Wave 6:	
W06C501	A right-handed/left-handed
W06C502	Acceptance of grip measurement
W06C503	Safety confirmation of grip measurement (check
W06C504	A painful hand for grip measurement
W06C505	The reason for not carrying out grip measuremen
W06C507	Grip measurement value (the right hand, first t
W06C508	Grip measurement value (the right hand, second
W06C509	Grip measurement value (the left hand, first ti
W06C510	Grip measurement value (the left hand, second t
W06C511	Position when taking grip measurement
W06C512	Any assistance required for taking grip measure
W06C513	An effort degree of a respondent for a test
W06C550	Respondent confirmation (check the assistance o
Wave 7:	
W07C501	A right-handed/left-handed
W07C502	Acceptance of grip measurement
W07C503	Safety confirmation of grip measurement (check
W07C504	A painful hand for grip measurement
W07C505	The reason for not carrying out grip measuremen
W07C507	Grip measurement value (the right hand, first t
W07C508	Grip measurement value (the right hand, second
W07C509	Grip measurement value (the left hand, first ti
W07C510	Grip measurement value (the left hand, second t
W07C511	Position when taking grip measurement
W07C512	Any assistance required for taking grip measure
W07C513	An effort degree of a respondent for a test
W07C550	Respondent confirmation (check the assistance o
Wave 8:	
W08C501	A right-handed/left-handed
W08C502	Acceptance of grip measurement
W08C503	Safety confirmation of grip measurement (check
W08C504	A painful hand for grip measurement
W08C505	The reason for not carrying out grip measuremen
W08C507	Grip measurement value (the right hand, first t
W08C508	Grip measurement value (the right hand, second
W08C509	Grip measurement value (the left hand, first ti
W08C510	Grip measurement value (the left hand, second t
W08C511	Position when taking grip measurement
W08C512	Any assistance required for taking grip measure
W08C513	An effort degree of a respondent for a test

How Constructed:

RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, and RwGRIPOTHR indicate the reasons the respondent did not complete the grip strength test, as reported by the interviewer. RwGRIPSFT indicates whether the respondent felt it would not be safe, the interviewer felt it would not be safe, or the respondent had surgery, injury or swelling in both hands in the past six months. RwGRIPREF indicates whether the respondent refused to participate. RwGRIPTRYU indicates whether the respondent tried but was unable to complete the test. RwGRIPOTHR indicates whether the respondent did not understand the instructions or did not complete the measurement for other reasons. RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, and RwGRIPOTHR are coded as 0 if the specific reason was not given, and are coded as 1 if the specific reason was given. In Wave 1, the interviewer is able to report up to 4 reasons for the respondent not completing the grip strength test, but starting in Wave 2, the interviewer is only able to report 1 reason for the respondent not completing the grip strength test. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, .m. Special missing .p is assigned if the questions were skipped because the interview was done by proxy. Special missing .c is assigned if the respondent completed the hand strength measurements in at least one hand. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwGRIPSFT, SwGRIPREF, SwGRIPTRYU, and SwGRIPOTHR indicate the reasons the respondent's current wave's spouse did not complete the grip strength test, and their values are taken from RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, and RwGRIPOTHR. In addition to the special missing codes used for RwGRIPSFT, RwGRIPREF, RwGRIPTRYU, and RwGRIPOTHR, SwGRIPSFT, SwGRIPREF, SwGRIPTRYU, and SwGRIPOTHR employ two additional missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, the data contains variables for up to 4 reasons why the grip strength measurement tests may not have been carried out. Starting in Wave 2, the data contains only a single reason for not taking the hand grip measurement tests, and not multiple reasons like in Wave 1.

A new cohort of respondents is added in Wave 5. The question confirming that the respondent is responding for themselves is present in the Wave 5 Add questionnaire, but not in the Wave 5 Add data, hence we cannot tell if any of the missing responses there are due to an interview by proxy.

Differences with the RAND HRS/Harmonized HRS

In HRS hand strength tests began in Wave 7 with a random subsample of approximately 3,300 respondents. Hand strength tests were given to a larger sample of HRS respondents starting in Wave 8. KLoSA includes hand strength tests starting in Wave 1 and tests everyone who is willing and able to participate.

The Harmonized HRS includes an additional variable, `RwGRIPEQUP`, indicating whether the respondent was unable to complete the grip strength test due to equipment failures. This reason is not available in the KLoSA and so this variable is not available in the Harmonized KLoSA.

KLoSA Variables Used:

Wave 1:

W01C501	A right-handed/left-handed
W01C502	Acceptance of grip measurement
W01C503	Safety confirmation of grip measurement (check
W01C504	A painful hand for grip measurement
W01C505_01	The reason for not carrying out grip measuremen
W01C505_02	The reason for not carrying out grip measuremen
W01C505_03	The reason for not carrying out grip measuremen
W01C505_04	The reason for not carrying out grip measuremen

Wave 2:

W02C501	A right-handed/left-handed
W02C502	Acceptance of grip measurement
W02C503	Safety confirmation of grip measurement (check
W02C504	A painful hand for grip measurement
W02C505	The reason for not carrying out grip measuremen

Wave 3:

W03C501	A right-handed/left-handed
W03C502	Acceptance of grip measurement
W03C503	Safety confirmation of grip measurement (check
W03C504	A painful hand for grip measurement
W03C505	The reason for not carrying out grip measuremen

Wave 4:

W04C501	A right-handed/left-handed
W04C502	Acceptance of grip measurement
W04C503	Safety confirmation of grip measurement (check
W04C504	A painful hand for grip measurement
W04C505	The reason for not carrying out grip measuremen

Wave 5:

W05C501	A right-handed/left-handed
W05C502	Acceptance of grip measurement
W05C503	Safety confirmation of grip measurement (check
W05C504	A painful hand for grip measurement
W05C505	The reason for not carrying out grip measuremen

Wave 5 New:

W05C501	A right-handed/left-handed
W05C502	Acceptance of grip measurement
W05C503	Safety confirmation of grip measurement (check
W05C504	A painful hand for grip measurement
W05C505	The reason for not carrying out grip measuremen

Wave 6:

W06C501	A right-handed/left-handed
W06C502	Acceptance of grip measurement
W06C503	Safety confirmation of grip measurement (check
W06C504	A painful hand for grip measurement
W06C505	The reason for not carrying out grip measuremen

Wave 7:

- W07C501 A right-handed/left-handed
- W07C502 Acceptance of grip measurement
- W07C503 Safety confirmation of grip measurement (check
- W07C504 A painful hand for grip measurement
- W07C505 The reason for not carrying out grip measuremen

Wave 8:

- W08C501 A right-handed/left-handed
- W08C502 Acceptance of grip measurement
- W08C503 Safety confirmation of grip measurement (check
- W08C504 A painful hand for grip measurement
- W08C505 The reason for not carrying out grip measuremen

How Constructed:

RwFTRHLP indicates whether, supposing in the future the respondent needed help with basic personal care activities like eating or dressing (i.e. ADLs), they have relatives or friends who would be willing and able to help them over a long period with said needs. The question wording changed significantly after Wave 1 and so is not very comparable between Wave 1 and future waves. In Wave 1, the respondent is first asked, "Suppose in the future, you needed help with basic daily activities like eating or dressing. Do you have relatives or friends (besides your spouse/partner) who would be willing and able to help you over a long period of time?" Starting in Wave 2, the respondent is asked, "Who is likely to help you if you need help with activities of daily living, such as eating, dressing, or using the bathroom, over a long period of time in the future?", and the respondent is presented with a list of different possible helpers including spouse, parents, children, sibling, grandchildren, others, voluntary workers, publicly provided helpers, personally hired helpers, or no helper. The respondent can choose all that apply. In Wave 1, RwFTRHLP is coded as 1 if the respondent reported that someone would be willing and able to help them in the future, and is coded as 0 if the respondent reported that nobody could help. Starting in Wave 2, RwFTRHLP is coded as 1 if the respondent reports at least one person who would be willing and able to help them in the future, and is coded as 0 if the respondent reported that no helper would be available. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m,

respectively. `RwFTRHLP` is set to plain missing (.) for respondents who did not participate in the current wave.

`SwFTRHLP` indicates whether the respondent's current wave's spouse has someone who could help with future ADL needs, and is taken from `RwFTRHLP`. In addition to the special missing codes employed by `RwFTRHLP`, `SwFTRHLP` employs two additional special missing codes. A special missing value `.u` is used when the respondent does not report being coupled in the current wave. A special missing value `.v` is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

`RwFTRSP` indicates whether the respondent's spouse would be willing and able to help the respondent with basic personal care activities if needed in the future and is available starting in Wave 2. `RwFTRSP` is coded as 0 if the respondent reported that nobody could help or did not select their spouse as a future helper, and is coded as 1 if the respondent selected their spouse as a future helper. Don't know, refused, or other missing responses are assigned special missing codes `.d`, `.r`, and `.m`, respectively. `RwFTRSP` is set to plain missing (.) for respondents who did not participate in the current wave.

`SwFTRSP` indicates whether the respondent can help the respondent's current wave's spouse with future ADL needs, and is taken from `RwFTRSP`. In addition to the special missing codes employed by `RwFTRSP`, `SwFTRSP` employs two additional special missing codes. A special missing value `.u` is used when the respondent does not report being coupled in the current wave. A special missing value `.v` is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

`RwFTRKIDS` indicates whether a child, child-in-law, or grandchild of the respondent would be willing and able to help the respondent with basic personal care activities if needed in the future. In Wave 1, if the respondent answered that there would be someone willing and able to help them in the future if they needed help, they are then asked what that person's relationship is to them and presented with a list which includes children, children-in-law, and grandchildren. Starting in Wave 2, all respondents are asked who would help if they needed help in the future and presented with a list which includes children, children-in-law, and grandchildren. `RwFTRKIDS` is coded as 0 if the respondent reported that nobody could help or did not select their child, child-in-law, or grandchild as a future helper, and is coded as 1 if the respondent selected their child, child-in-law, or grandchild as a future helper. Don't know, refused, or other missing responses are assigned special missing codes `.d`, `.r`, and `.m`, respectively. `RwFTRKIDS` is set to plain missing (.) for respondents who did not participate in the current wave.

`SwFTRKIDS` indicates whether a child, child-in-law, or grandchild would help the respondent's current wave's spouse with future ADL needs, and is taken from `RwFTRKIDS`. In addition to the special missing codes employed by `RwFTRKIDS`, `SwFTRKIDS` employs two additional special missing codes. A special missing value `.u` is used when the respondent does not report being coupled in the current wave. A special missing value `.v` is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

`RwFTROTHR` indicates whether a relative of the respondent or someone else would be willing and able to help the respondent with basic personal care activities if needed in the future. In Wave 1, if the respondent answered that there would be someone willing and able to help them in the future if they needed help, they are then asked what that person's relationship is to them and presented with a list which includes parents, parents-in-law, siblings, siblings-in-law, other relatives, and others. Starting in Wave 2, all respondents are asked who would help if they needed help in the future and presented with a list which includes parents, siblings, and others. Relatives and other individuals include parents, parents-in-law, siblings, siblings-in-law, other relatives, or other persons. `RwFTROTHR` is coded as 0 if the respondent reported that nobody could help or did not select a relative or someone else as a future helper, and is coded as 1 if the respondent selected their relative or someone else as a future helper. Don't know, refused, or other missing responses are assigned special missing codes `.d`, `.r`, and `.m`, respectively. `RwFTROTHR` is set to plain missing (.) for respondents who did not participate in the current wave.

`SwFTROTHR` indicates whether a relative or someone else would help the respondent's current wave's spouse with future ADL needs, and is taken from `RwFTROTHR`. In addition to the special missing codes employed by `RwFTROTHR`, `SwFTROTHR` employs two additional special missing codes. A special missing value `.u` is used when the respondent does not report being coupled in the current wave. A special missing value `.v` is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

`RwFTRPRO` indicates whether a professional helper would be able to help the respondent with basic personal care activities if needed in the future. Professional helpers include voluntary workers, publicly

provided helpers, and personally hired helpers. In Wave 1, if the respondent answered that there would be someone willing and able to help them in the future if they needed help, they are then asked what that person's relationship is to them and presented with a list which includes voluntary worker / publicly provided helper and personally hired helper. Starting in Wave 2, all respondents are asked who would help if they needed help in the future and presented with a list which includes voluntary worker, publicly provided helper, and personally hired helper. RwfTRPRO is coded as 0 if the respondent reported that nobody could help or did not select a professional helper as a future helper, and is coded as 1 if the respondent selected a professional helper as a future helper. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwfTRPRO is set to plain missing (.) for respondents who did not participate in the current wave.

SwFTRPRO indicates whether a professional helper would help the respondent's current wave's spouse with future ADL needs, and is taken from RwfTROTHR. In addition to the special missing codes employed by RwfTRPRO, SwFTRPRO employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, the respondent is first asked, "Suppose in the future, you needed help with basic daily activities like eating or dressing. Do you have relatives or friends (besides your spouse/partner) who would be willing and able to help you over a long period of time?" and if so, then "What is the relationship to you of that person or persons?", and the respondent can choose all that apply. Starting in Wave 2, the respondent is asked, "Who is likely to help you if you need help with activities of daily living, such as eating, dressing, or using the bathroom, over a long period of time in the future?", and the respondent can choose all that apply. Spouse is an option starting in Wave 2.

In Wave 1, volunteer and employee of facility are included in the same relationship category. Starting in Wave 2, voluntary worker and publicly provided helpers are included as separate relationship categories, and employee of facility is no longer included. In Wave 1, they use the phrase "paid helper" and starting in Wave 2, they use the phrase "personally hired helper".

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

In all available waves of RwfTRHLP in the Harmonized HRS, help from a spouse is specifically excluded based on the question wording and those who currently receive help with ADLs or IADLs are not asked this question (or those living in a nursing home starting in Wave 6 of HRS). However, in all waves of the KLoSA, this question is asked of every respondent, irrespective of whether they are currently receiving help, and starting in Wave 2 of the Harmonized KLoSA, RwfTRHLP also includes help from a spouse.

Unlike HRS, KLoSA includes the options of professional helpers and spouses as options of who would be able to assist the respondent with ADL activities in the future, leading to the use of RwfTRSP and RwfTRPRO in the Harmonized KLoSA.

KLoSA Variables Used:

Wave 1:

W01CB32	Whether or not there is a possible helper (exce
W01CB33M01	Mother can help
W01CB33M02	Father can help
W01CB33M03	Spouse's mother can help

How Constructed:

The respondent is first asked to name all family members over the age of 10 who are unable to carry out activities of daily living, and if there are family members who are unable to carry out these activities, the respondent is asked which family members they cared for during the past year. If the respondent provided care for someone, they are then asked how many hours per week and how many weeks during the past year the respondent cared for that person. Respondents reported helping a maximum of 1 person in Waves 4, 7, and 8 with ADL difficulties, so in these waves, the missing counts for hours per week and weeks per year are not necessary and not provided.

RwGASCARE indicates whether the respondent reported helping their spouse with any activities of daily living (ADL) in the past year. RwGASCARE is coded as 1 if the respondent helps their spouse, while a 0 indicates they do not help their spouse, their spouse requires no help, or they do not have a spouse. RwGASCAREHPW indicates the number of hours the respondent helps their spouse per week and is the sum of hours spent helping with ADL needs for any spouse reported. The total number of hours per week can exceed 168 if the respondent reports helping multiple spouses with ADL needs, although it is not seen in the data. RwGASCAREHPWM indicates the number of instances in which the respondent helped their spouse but no value of hours was reported and was not accounted for in RwGASCAREHPW. RwGASCAREWPY indicates the number of weeks the respondent helped their spouse in the past year and is the sum of weeks spent helping with ADL needs for any spouse reported. The total number of weeks per year can exceed 52 if the respondent reports helping multiple spouses with ADL needs, although it is not seen in the data. RwGASCAREWPYM indicates the number of instances in which the respondent helped their spouse but no value of weeks was reported and was not accounted for in RwGASCAREWPY. RwGASCAREHPW, RwGASCAREHPWM, RwGASCAREWPY, and RwGASCAREWPYM are assigned a value of 0 if the spouse required no help, if the respondent provided no help to their spouse, or the respondent has no spouse. Don't know, refused, or other missing responses to RwGASCARELY, RwGASCAREHPW, and RwGASCAREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, or other missing responses are assigned special missing .m in

RwGASCAREHPWM and RwGASCAREWPYM. RwGASCARE, RwGASCAREHPW, RwGASCAREHPWM, RwGASCAREWPY, and RwGASCAREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGACCARE indicates whether the respondent reported helping their children and/or children-in-law with any activities of daily living (ADL) in the past year. RwGACCARE is coded as 1 if the respondent does help their children or children-in-law, while a 0 indicates they do not help their children or children-in-law, their children or children-in-law require no help, or they have no children. RwGACCAREHPW indicates the number of hours the respondent helps their children or children-in-law per week and is the sum of hours spent helping all reported children with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple children or children-in-law. RwGACCAREHPWM indicates the number of children or children-in-law who the respondent helps but for whom no value of hours was reported and was not accounted for in RwGACCAREHPW. RwGACCAREWPY indicates the number of weeks the respondent helped their children or children-in-law in the past year and is the sum of weeks spent helping all reported children with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple children or children-in-law. RwGACCAREWPYM indicates the number of children or children-in-law who the respondent helps but for whom no value of weeks was reported and was not accounted for in RwGACCAREWPY. RwGACCAREHPW, RwGACCAREHPWM, RwGACCAREWPY, and RwGACCAREWPYM are assigned a value of 0 if the children or children-in-law required no help, if the respondent provided no help to them, or if they have no children. Don't know, refused, or other missing responses to RwGACCARE, RwGACCAREHPW, and RwGACCAREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, or other missing responses are assigned special missing .m in RwGACCAREHPWM and RwGACCAREWPYM. RwGACCARE, RwGACCAREHPW, RwGACCAREHPWM, RwGACCAREWPY, and RwGACCAREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGAKCARE indicates whether the respondent reported helping their grandchildren with any activities of daily living (ADL) in the past year. RwGAKCARE is coded as 1 if the respondent does help their grandchildren, while a 0 indicates they do not help their grandchildren, their grandchildren require no help, or they have no grandchildren. RwGAKCAREHPW indicates the number of hours the respondent helps their grandchildren per week and is the sum of hours spent helping all reported grandchildren with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple grandchildren. RwGAKCAREHPWM indicates the number of grandchildren who the respondent helps but for whom no value of hours was reported and was not accounted for in RwGAKCAREHPW. RwGAKCAREWPY indicates the number of weeks the respondent helped their grandchildren in the past year and is the sum of weeks spent helping all reported grandchildren with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple grandchildren. RwGAKCAREWPYM indicates the number of grandchildren who the respondent helps but for whom no value of weeks was reported and was not accounted for in RwGAKCAREWPY. RwGAKCAREHPW, RwGAKCAREHPWM, RwGAKCAREWPY, and RwGAKCAREWPYM are assigned a value of 0 if the grandchildren required no help, if the respondent provided no help to them, or if they have no grandchildren. Don't know, refused, or other missing responses to RwGAKCARE, RwGAKCAREHPW, and RwGAKCAREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, or other missing responses are assigned special missing .m in RwGAKCAREHPWM and RwGAKCAREWPYM. RwGAKCARE, RwGAKCAREHPW, RwGAKCAREHPWM, RwGAKCAREWPY, and RwGAKCAREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGAPCARE indicates whether the respondent reported helping their mother, father, mother-in-law, or father-in-law with any activities of daily living (ADL) in the past year. RwGAPCARE is coded as 1 if the respondent does help their parents, while a 0 indicates they do not help their parents, or their parents require no help. RwGAPCAREHPW indicates the number of hours the respondent helps their parents per week and is the sum of hours spent helping all reported parents with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple parents. RwGAPCAREHPWM indicates the number of parents who the respondent helps but for whom no value of hours was reported and was not accounted for in RwGAPCAREHPW. RwGAPCAREWPY indicates the number of weeks the respondent helped their parents in the past year and is the sum of weeks spent helping all reported parents with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple parents. RwGAPCAREWPYM indicates the number of parents who the respondent helps but for whom no value of weeks was reported and was not accounted for in RwGAPCAREWPY. RwGAPCAREHPW, RwGAPCAREHPWM, RwGAPCAREWPY, and RwGAPCAREWPYM are assigned a value of 0 if the parents required no help, or if the respondent provided no help to them. Don't know, refused, or other missing responses to RwGAPCARE, RwGAPCAREHPW, and RwGAPCAREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, or other missing responses are assigned special missing .m in RwGAPCAREHPWM and RwGAPCAREWPYM. RwGAPCARE, RwGAPCAREHPW, RwGAPCAREHPWM, RwGAPCAREWPY, and RwGAPCAREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGABCARE indicates whether the respondent reported helping their siblings or spouse of siblings with any activities of daily living (ADL) in the past year. RwGABCARE is coded as 1 if the respondent does help their siblings, while a 0 indicates they do not help their siblings, or their siblings require no help. RwGABCAREHPW indicates the number of hours the respondent helps their siblings per week and is the sum of hours spent helping all reported parents with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple siblings. RwGABCAREHPWM indicates the number of siblings who the respondent helps but for whom no value of hours was reported and was not accounted for in RwGABCAREHPW. RwGABCAREWPY indicates the number of weeks the respondent helped their siblings in the past year and is the sum of weeks spent helping all reported siblings with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple siblings. RwGABCAREWPYM indicates the number of siblings who the respondent helps but for whom no value of weeks was reported and was not accounted for in RwGABCAREWPY. RwGABCAREHPW, RwGABCAREHPWM, RwGABCAREWPY, and RwGABCAREWPYM are assigned a value of 0 if the siblings required no help, or if the respondent provided no help to them. Don't know, refused, or other missing responses to RwGABCARE, RwGABCAREHPW, and RwGABCAREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, or other missing responses are assigned special missing .m in RwGABCAREHPWM and RwGABCAREWPYM. RwGABCARE, RwGABCAREHPW, RwGABCAREHPWM, RwGABCAREWPY, and RwGABCAREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGARCARE indicates whether the respondent reported helping their relatives with any activities of daily living (ADL) in the past year. Relatives include the respondent's grandchildren, mother, father, mother-in-law, father-in-law, sibling, spouse of siblings, and other relatives. As such, RwGARCARE incorporates information from RwGAKCARE, RwGAPCARE, RwGABCARE, and information about other relatives. RwGARCARE is coded as 1 if the respondent does help their relatives, while a 0 indicates they do not help their relatives or their relatives require no help. RwGARCAREHPW indicates the number of hours the respondent helps their relatives per week and is the sum of hours spent helping all reported relatives with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple relatives. RwGARCAREHPWM indicates the number of relatives who the respondent helps but for whom no value of hours was reported and was not accounted for in RwGARCAREHPW. RwGARCAREWPY indicates the number of weeks the respondent helped their relatives in the past year and is the sum of weeks spent helping all reported relatives with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple relatives. RwGARCAREWPYM indicates the number of relatives who the respondent helps but for whom no value of weeks was reported and was not accounted for in RwGARCAREWPY. RwGARCAREHPW, RwGARCAREHPWM, RwGARCAREWPY, and RwGARCAREWPYM are assigned a value of 0 if the relatives required no help, or if the respondent provided no help to them. Don't know, refused, or other missing responses to RwGARCARE, RwGARCAREHPW, and RwGARCAREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, or other missing responses are assigned special missing .m in RwGARCAREHPWM and RwGARCAREWPYM. RwGARCARE, RwGARCAREHPW, RwGARCAREHPWM, RwGARCAREWPY, and RwGARCAREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGACARE indicates whether the respondent reported helping any family members with ADL difficulties in the past year. RwGACARE summarizes the information in RwGASCARE, RwGACCARE, and RwGARCARE. It is assigned a 0 if the respondent reported helping no family members with ADL difficulties in the past year or not having any family members with ADL difficulties, and is assigned a 1 if the respondent reported helping at least one family member with ADL difficulties in the past year. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwGACARE is set to plain missing (.) for respondents who did not participate in the current wave.

SwGASCARE, SwGASCAREHPW, SwGASCAREHPWM, SwGASCAREWPY, SwGASCAREWPYM, SwGACCARE, SwGACCAREHPW, SwGACCAREHPWM, SwGACCAREWPY, SwGACCAREWPYM, SwGAKCARE, SwGAKCAREHPW, SwGAKCAREHPWM, SwGAKCAREWPY, SwGAKCAREWPYM, SwGAPCARE, SwGAPCAREHPW, SwGAPCAREHPWM, SwGAPCAREWPY, SwGAPCAREWPYM, SwGABCARE, SwGABCAREHPW, SwGABCAREHPWM, SwGABCAREWPY, SwGABCAREWPYM, SwGARCARE, SwGARCAREHPW, SwGARCAREHPWM, SwGARCAREWPY, SwGARCAREWPYM indicate whether, the number of hours, and the number of weeks the respondent's current wave's spouse helps their spouse, children, grandchildren, parents, siblings and relatives with ADL difficulties, and their values are taken from the respondent variables. SwGACARE indicates whether the respondent's current wave's spouse helps any family members with ADL difficulties and its values are taken from RwGACARE. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Respondents reported a maximum of one person who they helped with ADL difficulties in Waves 4, 7, and 8. As such, the missing count for the number of days per week or weeks per year are not necessary and so not produced in these waves.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The Harmonized HRS includes HwGAPCARE which indicates whether the respondent and/or their spouse provided 100 or more hours of personal care to their parents or parents-in-law in the last two years. The Harmonized KLoSA includes RwgAPCARE which indicates whether the respondent provided help for difficulty with ADLs to their parents or parents-in-law in the last year. The variable in the Harmonized HRS is at the couple-level and requires a minimum amount of time over the last two years, while the variable in the Harmonized KLoSA is at the respondent-level and does not require a minimum amount of time over the last year.

KLoSA asks about help the respondent provides to other family members who have ADL difficulties and the frequency of help given, and as a result, the Harmonized KLoSA provides many variables which are not available in the Harmonized HRS.

How Constructed:

The respondent is asked to name all family members over the age of 10 who are not living with the respondent, who the respondent helped with household chores, errands, transportation, grocery shopping, financial management, etc. during the past year. If the respondent helps someone, they are then asked how many hours per week and how many weeks during the past year the respondent cared for that person. Starting in Wave 7, the number of hours or weeks they provided care is only released for care given to their spouse. Respondents reported helping a maximum of 1 person out of their household with chores in Waves 4 and 6, so in these waves, the missing counts for hours per week and weeks per year are not necessary and not provided. In Waves 7 and 8, the responses to the number of hours per week and weeks per year the respondent helped family members out of their household with chores are only provided for their spouse, mother, mother-in-law, and first sibling. As a result, these variables are not provided at all for children and grandchildren, and the missing counts are not necessary and not provided for spouses and siblings in these waves.

RwGSCHORE indicates whether the respondent reported helping their spouse, who they are not living with, with chores in the past year. RwGSCHORE is coded as 1 if the respondent does help their spouse, while a 0 indicates they do not help their spouse or they do not have a spouse. RwGSCHOREHPW indicates the number of hours the respondent helps their spouse per week and is the sum of hours spent helping all reported spouses. The total number of hours per week can exceed 168 if the respondent reports helping multiple spouses, although it is not seen in the data. RwGSCHOREHPWM indicates the number of instances in which the respondent helped their spouse but no value of hours was reported and was not accounted for in RwGSCHOREHPW. RwGSCHOREWPY indicates the number of weeks the respondent helped their spouse in the past year and is the sum of weeks spent helping all reported spouses. The total number of weeks per year can exceed 52 if the respondent reports helping multiple spouses, although it is not seen in the data. RwGSCHOREWPYM indicates the number of instances in which the respondent helped their spouse but no value of weeks was reported and was not accounted for in RwGSCHOREWPY. RwGSCHOREHPW, RwGSCHOREHPWM, RwGSCHOREWPY, and RwGSCHOREWPYM are assigned a value of 0 if the respondent provided no help to their spouse or they do not have a spouse. In Wave 1, the respondent is not given an option to report helping their spouse with chores, and so RwGSCHOREHPW, RwGSCHOREHPWM, RwGSCHOREWPY, and RwGSCHOREWPYM are not available in this wave. Don't know, refused, or other missing responses to RwGSCHORE, RwGSCHOREHPW, and RwGSCHOREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, no spouse, or other missing responses are assigned special missing .m in RwGSCHOREHPWM and RwGSCHOREWPYM. RwGSCHORE, RwGSCHOREHPW, RwGSCHOREHPWM, RwGSCHOREWPY, and RwGSCHOREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGCCHORE indicates whether the respondent reported helping their children and/or children-in-law, who they are not living with, with chores in the past year. RwGCCHORE is coded as 1 if the respondent does help their children or children-in-law, while a 0 indicates they do not help their children or children-in-law or they do not have any children. RwGCCHOREHPW indicates the number of hours the respondent helps their children or children-in-law per week and is the sum of hours spent helping all reported children. The total number of hours per week can exceed 168 if the respondent reports helping multiple children or children-in-law. RwGCCHOREHPWM indicates the number of children or children-in-law who the respondent helps but for whom no value of hours was reported and was not accounted for in RwGCCHOREHPW. RwGCCHOREWPY indicates the number of weeks the respondent helped their children or children-in-law in the past year

and is the sum of weeks spent helping all reported children. The total number of weeks per year can exceed 52 if the respondent reports helping multiple children or children-in-law. `RwGCCHOREWPYM` indicates the number of children or children-in-law who the respondent helps but for whom no value of weeks was reported and was not accounted for in `RwGCCHOREWPY`. `RwGCCHOREHPW`, `RwGCCHOREHPWM`, `RwGCCHOREWPY`, and `RwGCCHOREWPYM` are assigned a value of 0 if the respondent provided no help to their children or they have no children. Starting in Wave 7, the number of hours or weeks the respondent provided help to children outside of the house with chores is not provided in the dataset, therefore, `RwGCCHOREHPW` and `RwGCCHOREWPY` are no longer available. Don't know, refused, or other missing responses to `RwGCCHORE`, `RwGCCHOREHPW`, and `RwGCCHOREWPY` are assigned special missing codes `.d`, `.r`, and `.m`, respectively. Don't know, refused, or other missing responses are assigned special missing `.m` in `RwGCCHOREHPWM` and `RwGCCHOREWPYM`. `RwGCCHORE`, `RwGCCHOREHPW`, `RwGCCHOREHPWM`, `RwGCCHOREWPY`, and `RwGCCHOREWPYM` are set to plain missing (`.`) for respondents who did not participate in the current wave.

`RwGKCHORE` indicates whether the respondent reported helping their grandchildren, who they are not living with, with chores in the past year. `RwGKCHORE` is coded as 1 if the respondent does help their grandchildren, while a 0 indicates they do not help their grandchildren or they do not have any grandchildren. `RwGKCHOREHPW` indicates the number of hours the respondent helps their grandchildren per week and is the sum of hours spent helping all reported grandchildren. The total number of hours per week can exceed 168 if the respondent reports helping multiple grandchildren. `RwGKCHOREHPWM` indicates the number of grandchildren who the respondent helps but for whom no value of hours was reported and was not accounted for in `RwGKCHOREHPW`. `RwGKCHOREWPY` indicates the number of weeks the respondent helped their grandchildren in the past year and is the sum of weeks spent helping all reported grandchildren. The total number of weeks per year can exceed 52 if the respondent reports helping multiple grandchildren. `RwGKCHOREWPYM` indicates the number of grandchildren who the respondent helps but for whom no value of weeks was reported and was not accounted for in `RwGKCHOREWPY`. `RwGKCHOREHPW`, `RwGKCHOREHPWM`, `RwGKCHOREWPY`, and `RwGKCHOREWPYM` are assigned a value of 0 if the respondent provided no help to their grandchildren or they have no grandchildren. Starting in Wave 7, the number of hours or weeks the respondent provided help to grandchildren outside of the house with chores is not provided in the dataset, therefore, `RwGKCHOREHPW` and `RwGKCHOREWPY` are no longer available. Don't know, refused, or other missing responses to `RwGKCHORE`, `RwGKCHOREHPW`, and `RwGKCHOREWPY` are assigned special missing codes `.d`, `.r`, and `.m`, respectively. Don't know, refused, or other missing responses are assigned special missing `.m` in `RwGKCHOREHPWM` and `RwGKCHOREWPYM`. `RwGKCHORE`, `RwGKCHOREHPW`, `RwGKCHOREHPWM`, `RwGKCHOREWPY`, and `RwGKCHOREWPYM` are set to plain missing (`.`) for respondents who did not participate in the current wave.

`RwGPCHORE` indicates whether the respondent reported helping their mother, father, mother-in-law, or father-in-law, who they are not living with, with chores in the past year. `RwGPCHORE` is coded as 1 if the respondent does help their parents, while a 0 indicates they do not help their parents. `RwGPCHOREHPW` indicates the number of hours the respondent helps their parents per week and is the sum of hours spent helping all reported parents. The total number of hours per week can exceed 168 if the respondent reports helping multiple parents. `RwGPCHOREHPWM` indicates the number of parents who the respondent helps but for whom no value of hours was reported and was not accounted for in `RwGPCHOREHPW`. `RwGPCHOREWPY` indicates the number of weeks the respondent helped their parents in the past year and is the sum of weeks spent helping all reported parents. The total number of weeks per year can exceed 52 if the respondent reports helping multiple parents. `RwGPCHOREWPYM` indicates the number of parents who the respondent helps but for whom no value of weeks was reported and was not accounted for in `RwGPCHOREWPY`. `RwGPCHOREHPW`, `RwGPCHOREHPWM`, `RwGPCHOREWPY`, and `RwGPCHOREWPYM` are assigned a value of 0 if the respondent provided no help to their parents. Starting in Wave 7, the number of hours or weeks the respondent provided help to their mother or mother-in-law outside of the house with chores is provided in the dataset but time spent helping their father or father-in-law is not, therefore, `RwGPCHOREHPW` and `RwGPCHOREWPY` only include information about help given to their mother or mother-in-law in these waves. Don't know, refused, or other missing responses to `RwGPCHORE`, `RwGPCHOREHPW`, and `RwGPCHOREWPY` are assigned special missing codes `.d`, `.r`, and `.m`, respectively. Don't know, refused, or other missing responses are assigned special missing `.m` in `RwGPCHOREHPWM` and `RwGPCHOREWPYM`. `RwGPCHORE`, `RwGPCHOREHPW`, `RwGPCHOREHPWM`, `RwGPCHOREWPY`, and `RwGPCHOREWPYM` are set to plain missing (`.`) for respondents who did not participate in the current wave.

`RwGBCHORE` indicates whether the respondent reported helping their siblings or spouse of sibling, who they are not living with, with chores in the past year. `RwGBCHORE` is coded as 1 if the respondent does help their siblings, while a 0 indicates they do not help their siblings. `RwGBCHOREHPW` indicates the number of hours the respondent helps their siblings per week and is the sum of hours spent helping all reported siblings. The total number of hours per week can exceed 168 if the respondent reports helping multiple siblings. `RwGBCHOREHPWM` indicates the number of siblings who the respondent helps but for whom no value of hours was reported and was not accounted for in `RwGBCHOREHPW`. `RwGBCHOREWPY` indicates the number of weeks the respondent helped their siblings in the past year and is the sum of weeks spent helping all

reported siblings. The total number of weeks per year can exceed 52 if the respondent reports helping multiple siblings. RwgBCHOREWPYM indicates the number of siblings who the respondent helps but for whom no value of weeks was reported and was not accounted for in RwgBCHOREWPY. RwgBCHOREHPW, RwgBCHOREHPWM, RwgBCHOREWPY, and RwgBCHOREWPYM are assigned a value of 0 if the respondent provided no help to their siblings. Starting in Wave 7, the number of hours or weeks the respondent provided help to their first sibling outside of the house with chores is provided in the dataset but time spent any other siblings is not, therefore, RwgBCHOREHPW and RwgBCHOREWPY only include information about help given to their first sibling in these waves. Don't know, refused, or other missing responses to RwgBCHORE, RwgBCHOREHPW, and RwgBCHOREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, or other missing responses are assigned special missing .m in RwgBCHOREHPWM and RwgBCHOREWPYM. RwgBCHORE, RwgBCHOREHPW, RwgBCHOREHPWM, RwgBCHOREWPY, and RwgBCHOREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGRCHORE indicates whether the respondent reported helping their relatives, who they are not living with, with chores in the past year. Relatives include the respondent's grandchildren, mother, father, mother-in-law, father-in-law, sibling, spouse of siblings, and other relatives. As such, RwGRCHORE incorporates information from RwgKCHORE, RwgPCHORE, RwgBCHORE, and information about other relatives. RwGRCHORE is coded as 1 if the respondent does help their relatives, while a 0 indicates they do not help their relatives. RwGRCHOREHPW indicates the number of hours the respondent helps their relatives per week and is the sum of hours spent helping all reported relatives. The total number of hours per week can exceed 168 if the respondent reports helping multiple relatives. RwGRCHOREHPWM indicates the number of relatives who the respondent helps but for whom no value of hours was reported and was not accounted for in RwGRCHOREHPW. RwGRCHOREWPY indicates the number of weeks the respondent helped their relatives in the past year and is the sum of weeks spent helping all reported relatives. The total number of weeks per year can exceed 52 if the respondent reports helping multiple relatives. RwGRCHOREWPYM indicates the number of relatives who the respondent helps but for whom no value of weeks was reported and was not accounted for in RwGRCHOREWPY. RwGRCHOREHPW, RwGRCHOREHPWM, RwGRCHOREWPY, and RwGRCHOREWPYM are assigned a value of 0 if the respondent provided no help to their relatives. Starting in Wave 7, the number of hours or weeks the respondent provided help to their mother, mother-in-law, and first sibling outside of the house with chores is provided in the dataset but time spent helping their grandchildren, father, father-in-law, other siblings, spouse or siblings, and other relatives is not, therefore, RwGRCHOREHPW and RwGRCHOREWPY only include information about help given to their mother, mother-in-law, and first sibling in these waves. Don't know, refused, or other missing responses to RwGRCHORE, RwGRCHOREHPW, and RwGRCHOREWPY are assigned special missing codes .d, .r, and .m, respectively. Don't know, refused, or other missing responses are assigned special missing .m in RwGRCHOREHPWM and RwGRCHOREWPYM. RwGRCHORE, RwGRCHOREHPW, RwGRCHOREHPWM, RwGRCHOREWPY, and RwGRCHOREWPYM are set to plain missing (.) for respondents who did not participate in the current wave.

RwGOCHORE indicates whether the respondent reported helping family members outside of their household with chores in the past year. RwGOCHORE summarizes the information in RwgSCHORE, RwgCCHORE, and RwGRCHORE. RwGOCHORE is assigned a 0 if the respondent reported helping no family members outside of their household in the past year with chores, and is assigned a 1 if the respondent reported helping at least one family member outside of their household in the past year with chores. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwGOCHORE is set to plain missing (.) for respondents who did not participate in the current wave.

SwGSCHORE, SwGSCHOREHPW, SwGSCHOREHPWM, SwGSCHOREWPY, SwGSCHOREWPYM, SwGCCCHORE, SwGCCCHOREHPW, SwGCCCHOREHPWM, SwGCCCHOREWPY, SwGCCCHOREWPYM, SwGKCHORE, SwGKCHOREHPW, SwGKCHOREHPWM, SwGKCHOREWPY, SwGKCHOREWPYM, SwGPCHORE, SwGPCHOREHPW, SwGPCHOREHPWM, SwGPCHOREWPY, SwGPCHOREWPYM, SwGBCHORE, SwGBCHOREHPW, SwGBCHOREHPWM, SwGBCHOREWPY, SwGBCHOREWPYM, SwGRCHORELY, SwGRCHOREHPW, SwGRCHOREHPWM, SwGRCHOREWPY, and SwGRCHOREWPYM indicate whether, the number of hours, and the number of weeks the respondent's current wave's spouse helps their spouse, children, grandchildren, parents, siblings, and relatives, and their values are taken from the respondent variables. SwGOCHORE indicates whether the respondent's current wave's spouse helps family members outside of their household with chores and its values are taken from RwGOCHORE. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, when the respondent is asked who they help with chores who live outside the home, spouse is not one of the options. As such, RwgSCHORE, RwgSCHOREHPW, RwgSCHOREHPWM, RwgSCHOREWPY, and RwgSCHOREWPYM are not available in Wave 1.

Respondents reported helping a maximum of 1 person out of their household with chores in Waves 4 and 6, so in these waves, the missing counts for hours per week and weeks per year are not necessary and not provided.

In Waves 7 and 8, the responses to the number of hours per week and weeks per year the respondent helped family members out of their household with chores are only provided for their spouse, mother, mother-in-law, and first sibling. As a result, these variables are not provided at all for children and grandchildren, and the missing counts are not necessary and not provided for spouses and siblings in these waves.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The Harmonized HRS includes HwGPCHORE which indicates whether the respondent and/or their spouse provided 100 or more hours of help with household chores, errands, transportation, etc. to their parents or parents-in-law in the last two years. The Harmonized KLoSA includes RwgPCHORE which indicates whether the respondent provided help with household chores, errands, transportation, grocery shopping, financial management, etc. to their parents or parents-in-law in the last year. The variable in the Harmonized HRS is at the couple-level and requires a minimum amount of time over the last two years, while the variable in the Harmonized KLoSA is at the respondent-level and does not require a minimum amount of time over the last year.

KLoSA asks about help the respondent provides to other family members outside of their household with chores and the frequency of help given, and as a result, the Harmonized KLoSA provides many variables which are not available in the Harmonized HRS.

How Constructed:

RwGKSIT indicates whether the respondent took care of any grandchildren under the age of 10 during the past year. In Wave 1, the respondent is asked whether they took care of any of their grandchildren younger than 10 years during the past year if they reported having grandchildren. In Waves 2 through 4, if the respondent reported having grandchildren, the respondent is first asked whether they took care of any of their grandchildren under the age of 10, and then asked whether they took care of any of their grandchildren younger than age 10 in the past year. Starting in Wave 5, if the respondent reported having grandchildren, the respondent is first asked whether they took care of any of their grandchildren under the age of 10, and if so, then asked whether they took care of any of their grandchildren younger than age 10 in the past year. RwGKSIT is coded as 1 if the respondent did take care of grandchildren during the past year, and is coded as 0 if the respondent did not take care of grandchildren during the past year, never took care of grandchildren, or has no grandchildren. Don't know, refused, or other missing responses to RwGKSIT are assigned special missing codes .d, .r, and .m, respectively. RwGKSIT is set to plain missing (.) for respondents who did not participate in the current wave.

SwGKSIT indicate whether the respondent's current wave's spouse took care of any grandchildren, and its values are taken from RwGKSIT. In addition to the special missing codes employed by RwGKSIT, SwGKSIT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, the respondent is asked whether they took care of any of their grandchildren younger than 10 years during the past year if they reported having grandchildren. In Waves 2 through 4, if the respondent reported having grandchildren, the respondent is first asked whether they took care of any of their grandchildren under the age of 10 and then asked whether they took care of any of their grandchildren younger than age 10 in the past year regardless of their answer to the first question. Starting in Wave 5, if the respondent reported having grandchildren, the respondent is first asked whether they took care of any of their grandchildren under the age of 10, and if so, then asked whether they took care of any of their grandchildren younger than age 10 in the past year. Please note that the questionnaire for the original cohort in Wave 5 suggests this skip pattern, but the data suggests that respondents were still asked both questions. This skip pattern is in place for the new cohort in Wave 5.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

HwGKSIT in the Harmonized HRS indicates whether the respondent and/or their spouse spent at least 100 hours in the past 2 years caring for grandchildren, while RwGKSIT in the Harmonized KLoSA indicates whether the respondent spent any time in the past year caring for grandchildren. This variable as at the couple-level in the Harmonized HRS and at the respondent-level in the Harmonized KLoSA.

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with.

RwRCANY indicates whether the respondent receives any help for difficulties with ADL needs or IADL needs. RwRCANY is coded as 0 if the respondent needs help with at least one activity but receives no help. RwRCANY is coded as 1 if the respondent needs help with at least one activity and at least one person provides help. RwRCANY is assigned special missing .y if the respondent reports not needing help with any ADLs or IADLs. Don't know, refused, or other missing responses are assigned special missing codes .d, .r,

and .m, respectively. RwRCANY is set to plain missing (.) for respondents who did not participate in the current wave.

RwHLPN counts the number of people who help the respondent most with any ADL needs or any IADL needs. RwHLPN is coded as 0 if the respondent reports needing help with an ADL or IADL but does not receive any help. RwHLPN is assigned special missing .y if the respondent reports not needing help with any ADLs or IADLs. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwHLPN is set to plain missing (.) for respondents who did not participate in the current wave.

RwHLPFG indicates whether the respondent reported being helped by the maximum number of helpers a respondent is allowed to report during each wave, which is three in Wave 1 and five starting in Wave 2. RwHLPFG is coded as 0 if the respondent reported being helped by less than the maximum or no helpers, and is coded as 1 if the respondent reported being helped by the maximum number of helpers allowed in the wave. Don't know, refused, or other missing responses are assigned special missing .m. RwHLPFG is set to plain missing (.) for respondents who did not participate in the current wave.

SwRCANY, SwHLPN, and SwHLPFG indicate whether the respondent's current wave's spouse receives help from others, the number of people who helped, and whether they reported the maximum number of helpers allowed for the wave, respectively, and their values are taken from RwRCANY, RwHLPN, and RwHLPFG. In addition to the special missing codes employed by RwRCANY, RwHLPN, and RwHLPFG, SwRCANY, SwHLPN, and SwHLPFG employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

The maximum number of helpers a respondent is allowed to report in Wave 1 is three, whereas that number increases to five starting in Wave 2.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

RwHLPN and RwHLPFG are not created in the Harmonized HRS, but could be derived using the data.

0.no		150	204	141	158
1.yes		371	306	292	239

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with.

RwRCAANY indicates whether the respondent receives any informal care for difficulties with ADL needs or IADL needs. We consider informal care to include help from the respondent's spouse, mother, father, mother-in-law, father-in-law, children, siblings, brother-in-law or sister-in-law, son-in-law or daughter-in-law, grandchild, or other relative. In Wave 1, this also includes those selected for the category "helper or other non-relative" who were not paid. Starting in Wave 2, this also includes other non-relatives. RwRCAANY is coded as 0 if the respondent needs help with at least one activity and receives help but not from relatives or other non-relatives, or if they receive no help at all. RwRCAANY is coded as 1 if the respondent needs help with at least one activity and at least one relative or other non-relative provides informal care. RwRCAANY is assigned special missing .y if the respondent reports not needing help with any ADLs or IADLs. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwRCAANY is set to plain missing (.) for respondents who did not participate in the current wave.

SwRCAANY indicates whether the respondent's current wave's spouse receives informal care, and its values are taken from RwRCAANY. In addition to the special missing codes employed by RwRCAANY, SwRCAANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, helpers categorized as a "helper or other non-relative" have to be unpaid to be considered to provide informal care. Starting in Wave 2, this category is no longer available, and helpers categorized as "others" are considered to provide informal care.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing .y if the respondent reports not needing help with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRSCARE indicates whether the respondent's spouse helps the respondent with any ADL or IADL needs. RwRSCARE is coded as 0 if the respondent receives no assistance from their spouse, and coded as 1 if the respondent does receive help from their spouse. RwRSCAREN indicates the number of people reported as spouses who help the respondent with any ADL or IADL needs.

RwRSCAREDPM indicates the number of total days per month the respondent's spouse helps the respondent with ADL or IADL needs. It sums the days reported by each spouse helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from a spouse. RwRSCAREDPMM indicates the number of spouses who helped the respondent for whom no value of days was reported and was not accounted for in RwRSCAREDPM.

RwRSCAREHR indicates the number of total hours per day the respondent's spouse helps the respondent with ADL or IADL needs. It sums the hours reported by each spouse helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from a spouse. RwRSCAREHRM indicates the number of spouses who helped the respondent for whom no value of hours was reported and was not accounted for in RwRSCAREHR.

RwRSCAREPD indicates whether the respondent's spouse helper was paid. RwRSCAREPD is coded as 0 if the respondent receives no assistance from their spouse or if they do receive assistance from their spouse but their spouse is not paid, and is coded as 1 if the respondent receives assistance from their spouse and their spouse is paid.

SwRSCARE, SwRSCAREN, SwRSCAREDPM, SwRSCAREDPMM, SwRSCAREHR, and SwRSCAREHRM indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from the respondent, and their values are taken from RwRSCARE, RwRSCAREN, RwRSCAREDPM, RwRSCAREDPMM, RwRSCAREHR, and RwRSCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse

variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, recorded in RwrSCAREDPM indicating days per month in the Harmonized HRS, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help, recorded in RwrSCAREDPM in the Harmonized KLoSA.

In the HRS, the respondent is not asked whether spouse helpers are paid, so RwrSCAREPD is not available in the Harmonized HRS as it is in the Harmonized KLoSA.

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing .y if the respondent reports not needing help with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwRCCARE indicates whether the respondent's children, children-in-law, or grandchildren help the respondent with any ADL or IADL needs. RwRCCARE is coded as 0 if the respondent receives no assistance from their children, children-in-law, or grandchildren, and coded as 1 if the respondent does receive help from their children, children-in-law, or grandchildren. RwRCCAREN indicates the number of children, children-in-law, or grandchildren who help the respondent with any ADL or IADL needs.

RwRCCAREDPM indicates the number of total days per month the respondent's children, children-in-law, or grandchildren help the respondent with ADL or IADL needs. It sums the days reported by each child, child-in-law, or grandchild helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any children, children-in-law, or grandchildren. RwRCCAREDPMM indicates the number of children, children-in-law, or grandchildren who helped the respondent for whom no value of days was reported and was not accounted for in RwRCCAREDPM.

RwRCCAREHR indicates the number of total hours per day the respondent's children, children-in-law, or grandchildren help the respondent with ADL or IADL needs. It sums the hours reported by each child, child-in-law, or grandchild helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any children, children-in-law, or grandchildren. RwRCCAREHRM indicates the number of children, children-in-law, or grandchildren who helped the respondent for whom no value of hours was reported and was not accounted for in RwRCCAREHR.

RwRCCAREPD indicates whether any of the respondent's child, child-in-law, or grandchild helpers were paid. RwRCCAREPD is coded as 0 if the respondent receives no assistance from their children, children-in-law, or grandchildren or if they do receive assistance from their children, children-in-law, or grandchildren but they are not paid, and is coded as 1 if the respondent receives assistance from their children, children-in-law, or grandchildren and at least one is paid.

SwRCCARE, SwRCCAREN, SwRCCAREDPM, SwRCCAREDPMM, SwRCCAREHR, and SwRCCAREHRM indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from their children, children-in-law, or grandchildren, and their values are taken from RwRCCARE, RwRCCAREN, RwRCCAREDPM, RwRCCAREDPMM, RwRCCAREHR, and RwRCCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, recorded in RwRCCAREDPM indicating days per month in the Harmonized HRS, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help, recorded in RwRCCAREDPM in the Harmonized KLoSA.

The group of individuals falling in the "children" category in HRS is wider including help from sons, step-sons, spouse/partner of daughters, son-in-laws, daughters, step-daughters, spouse/partner of sons, daughter-in-laws, grandchildren, unlisted children or children-in-law, former step-children, former children-in-law, spouse/partner of grandchildren, ambiguous child relation, and ambiguous child-in-law relation, whereas the group in KLoSA includes children, children-in-law, and grandchildren.

KLoSA Variables Used:

Wave 1:

W01C201	Help required for activities of daily life(ADL)
W01C202	Help required for activities of daily life(ADL)

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing .y if the respondent reports not needing help with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

The following variables include help received from the respondent's relatives, which includes their mother, father, mother-in-law, father-in-law, siblings, brother-in-law or sister-in-law, or other relative.

RwRRCARE indicates whether the respondent's relatives help the respondent with any ADL or IADL needs. RwRRCARE is coded as 0 if the respondent receives no assistance from their relatives, and coded as 1 if the respondent does receive help from their relatives. RwRRCAREN indicates the number of relatives who help the respondent with any ADL or IADL needs.

RwRRCAREDPM indicates the number of total days per month the respondent's relatives help the respondent with ADL or IADL needs. It sums the days reported by each relative helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any relatives. RwRRCAREDPMM indicates the number of relatives who helped the respondent for whom no value of days was reported and was not accounted for in RwRRCAREDPM.

RwRRCAREHR indicates the number of total hours per day the respondent's relatives help the respondent with ADL or IADL needs. It sums the hours reported by each relative helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any relatives. RwRRCAREHRM indicates the number of relatives who helped the respondent for whom no value of hours was reported and was not accounted for in RwRRCAREHR.

RwRRCAREPD indicates whether any of the respondent's relative helpers were paid. RwRRCAREPD is coded as 0 if the respondent receives no assistance from their relatives or if they do receive assistance from their relatives but they are not paid, and is coded as 1 if the respondent receives assistance from their relatives and at least one is paid.

SwRRCARE, SwRRCAREN, SwRRCAREDPM, SwRRCAREDPMM, SwRRCAREHR, and SwRRCAREHRM indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from their relatives, and their values are taken from RwRRCARE, RwRRCAREN, RwRRCAREDPM, RwRRCAREDPMM, RwRRCAREHR, and RwRRCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, recorded in RwRRCAREDPM indicating days per month in the Harmonized HRS, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help, recorded in RwRRCAREDPM in the Harmonized KLoSA.

KLoSA Variables Used:

Wave 1:

W01C201	Help required for activities of daily life(ADL)
W01C202	Help required for activities of daily life(ADL)
W01C203	Help required for activities of daily life(ADL)
W01C204	Help required for activities of daily life(ADL)
W01C205	Help required for activities of daily life(ADL)
W01C206	Help required for activities of daily life(ADL)

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing .y if the respondent reports not needing help with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

The following variables include help received from non-relatives, which includes a "helper or other non-relative" if they are unpaid in Wave 1, and which includes help from "others" starting in Wave 2.

RwRFCARE indicates whether the respondent's non-relatives help the respondent with any ADL or IADL needs. RwRFCARE is coded as 0 if the respondent receives no assistance from their non-relatives, and coded as 1 if the respondent does receive help from their non-relatives. RwrFCAREN indicates the number of non-relatives who help the respondent with any ADL or IADL needs.

RwRFCAREDPM indicates the number of total days per month the respondent's non-relatives help the respondent with ADL or IADL needs. It sums the days reported by each non-relative helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any non-relatives. RwrFCAREDPMM indicates the number of non-relatives who helped the respondent for whom no value of days was reported and was not accounted for in RwRFCAREDPM.

RwRFCAREHR indicates the number of total hours per day the respondent's non-relatives help the respondent with ADL or IADL needs. It sums the hours reported by each non-relative helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any non-relatives. RwrFCAREHRM indicates the number of non-relatives who helped the respondent for whom no value of hours was reported and was not accounted for in RwRFCAREHR.

RwRFCAREPD indicates whether any of the respondent's non-relative helpers were paid. RwRFCAREPD is coded as 0 if the respondent receives no assistance from their non-relatives or if they do receive assistance from their non-relatives but they are not paid, and is coded as 1 if the respondent receives assistance from their non-relatives and at least one is paid. RwRFCAREPD is not created for wave 1 because helpers falling within this category have to be unpaid.

SwRFCARE, SwRFCAREN, SwRFCAREDPM, SwRFCAREDPMM, SwRFCAREHR, and SwRFCAREHRM indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from their non-relatives, and their values are taken from RwRFCARE, RwRFCAREN, RwRFCAREDPM, RwRFCAREDPMM, RwRFCAREHR, and RwRFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the

respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, helpers falling in the category "helper or other non-relative" are considered to be non-relative helpers if they are unpaid. In Wave 2, the categories change slightly, and so helpers falling in the category "others" are considered to be non-relative helpers.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, recorded in RwrFCAREDPM indicating days per month in the Harmonized HRS, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help, recorded in RwrFCAREDPM in the Harmonized KLoSA.

The group of individuals falling in the "other" category in HRS is slightly different including help from other individual, and person of unknown relationship, whereas the group in KLoSA includes unpaid helper or other non-relatives, or other people.

KLoSA Variables Used:

Wave 1:

W01C201	Help required for activities of daily life(ADL)

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with.

RwRFAANY indicates whether the respondent receives any formal care for difficulties with ADL needs or IADL needs. In Wave 1, we consider formal care to include help from a "helper or other non-relative" if they are paid. Starting in Wave 2, we consider formal care to include help from a voluntary worker, publicly provided helper, or personally hired helper. RwRFAANY is coded as 0 if the respondent needs help with at least one activity and receives help but not from any professionals, or if they receive no help at all. RwRFAANY is coded as 1 if the respondent needs help with at least one activity and at least one professional provides formal care. RwRFAANY is assigned special missing .y if the respondent reports not needing help with any ADLs or IADLs. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. RwRFAANY is set to plain missing (.) for respondents who did not participate in the current wave.

SwRFAANY indicates whether the respondent's current wave's spouse receives formal care, and its values are taken from RwRFAANY. In addition to the special missing codes employed by RwRFAANY, SwRFAANY employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, helpers categorized as a "helper or other non-relative" have to be paid to be considered to provide formal care. Starting in Wave 2, this category is no longer available, and helpers categorized as voluntary workers, publicly provided helpers, or personally hired helpers are considered to provide formal care.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about needing help with washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5

people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

KLoSA Variables Used:

Wave 1:

W01C201	Help required for activities of daily life(ADL)

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing .y if the respondent reports not needing help with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

The following variables include help received from paid professionals, which includes a "helper or other non-relative" if they are paid in Wave 1. In Waves 2 through 4, it includes voluntary workers, publicly provided helpers, or personally hired helpers if they are paid. Starting in Wave 5, it includes publicly provided helpers or personally hired helpers if they are paid.

RwRPFCARE indicates whether paid professionals help the respondent with any ADL or IADL needs. RwRPFCARE is coded as 0 if the respondent receives no assistance from paid professionals, and coded as 1 if the respondent does receive help from paid professionals. RwRPFCAREN indicates the number of paid professionals who help the respondent with any ADL or IADL needs.

RwRPFCAREDPM indicates the number of total days per month paid professionals help the respondent with ADL or IADL needs. It sums the days reported by each paid professional helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any paid professionals. RwRPFCAREDPMM indicates the number of paid professionals who helped the respondent for whom no value of days was reported and was not accounted for in RwRPFCAREDPM.

RwRPFCAREHR indicates the number of total hours per day paid professionals help the respondent with ADL or IADL needs. It sums the hours reported by each paid professional helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any paid professionals. RwRPFCAREHRM indicates the number of paid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in RwRPFCAREHR.

SwRPFCARE, SwRPFCAREN, SwRPFCAREDPM, SwRPFCAREDPMM, SwRPFCAREHR, and SwRPFCAREHRM indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from paid professionals, and their values are taken from RwRPFCARE, RwRPFCAREN, RwRPFCAREDPM, RwRPFCAREDPMM, RwRPFCAREHR, and RwRPFCAREHRM. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u

is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, helpers falling in the category "helper or other non-relative" are considered to be paid professional helpers if they are paid. In Wave 2, the categories change slightly. In Waves 2 through 4, helpers falling in the category "voluntary worker", "publicly provided helper", and "personally hired helper" who are paid are considered to be paid professional helpers. Starting in Wave 5, respondents are no longer asked if helpers falling into the category of "voluntary worker" are paid. As such, starting in Wave 5, helpers falling in the category "publicly provided helper" and "personally hired helper" who are paid are considered to be paid professional helpers.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, recorded in RwrPFCAREDPM indicating days per month in the Harmonized HRS, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help, recorded in RwrPFCAREDPM in the Harmonized KLoSA.

The group of individuals falling in the paid professional category in HRS is slightly different including help from organization, employee of institution, paid helper, and professional if they are paid, whereas the group in KLoSA includes voluntary worker, publicly provided helper, personally hired helper, or helper or other non-relatives if they are paid.

In the HRS, respondents are not asked whether employees of institutions are paid, but it is assumed that they are paid for these variables.

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each

helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing .y if the respondent reports not needing help with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

The following variables include help received from unpaid professionals, which includes a voluntary worker, publicly provided helper, or personally hired helper if they are not paid in Waves 2 through 4. It includes a publicly provided helper or personally hired helper if they are not paid and includes all voluntary workers starting in Wave 5.

RwRUF CARE indicates whether unpaid professionals help the respondent with any ADL or IADL needs. RwRUF CARE is coded as 0 if the respondent receives no assistance from unpaid professionals, and coded as 1 if the respondent does receive help from unpaid professionals. RwRUF CAREN indicates the number of unpaid professionals who help the respondent with any ADL or IADL needs. RwRUF CARE and RwRUF CAREN are not available in wave 1 when there is no appropriate helper category.

RwRUF CARE DPM indicates the number of total days per month unpaid professionals help the respondent with ADL or IADL needs. It sums the days reported by each unpaid professional helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any unpaid professionals. RwRUF CARE DPM indicates the number of unpaid professionals who helped the respondent for whom no value of days was reported and was not accounted for in RwRUF CARE DPM. RwRUF CARE DPM and RwRUF CARE DPM are not available in wave 1 when there is no appropriate helper category.

RwRUF CARE HR indicates the number of total hours per day unpaid professionals help the respondent with ADL or IADL needs. It sums the hours reported by each unpaid professional helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any unpaid professionals. RwRUF CARE HR indicates the number of unpaid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in RwRUF CARE HR. RwRUF CARE HR and RwRUF CARE HR are not available in wave 1 when there is no appropriate helper category.

SwRUF CARE, SwRUF CAREN, SwRUF CARE DPM, SwRUF CARE DPM, SwRUF CARE HR, and SwRUF CARE HR indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from unpaid professionals, and their values are taken from RwRUF CARE, RwRUF CAREN, RwRUF CARE DPM, RwRUF CARE DPM, RwRUF CARE HR, and RwRUF CARE HR. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Wave 1, no helper categories are considered to be unpaid professional helpers. Starting in Wave 2, the categories change slightly, and so helpers falling in the categories of "voluntary worker", "publicly provided helper", and "personally hired helper" who are not paid are considered to be unpaid professional helpers. Starting in Wave 5, the respondent is no longer asked whether voluntary workers are paid, and so we assume that they are unpaid. As such, starting in Wave 5 all voluntary workers are considered unpaid professional helpers, as are publicly provided helpers and personally hired helpers who are not paid.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about

personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, recorded in RWRUFCAREDPM indicating days per month in the Harmonized HRS, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help, recorded in RWRUFCAREDPM in the Harmonized KLoSA.

The group of individuals falling in the unpaid professional category in HRS is slightly different including help from organizations, paid helpers, and professionals who are not paid, whereas the group in KLoSA includes voluntary workers, publicly provided helpers, and personally hired helpers who are not paid.

How Constructed:

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing .y if the respondent reports not needing help with any ADL or IADL, and are coded as special missing .h if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes .d, .r, and .m, respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

RwHLPPDN indicates the number of helpers who are paid to help the respondent. This question is asked for every helper the respondent reported helped them (spouse, children and grandchildren, relative, non-relative, private professional, and public professional helpers). Starting in Wave 5, respondents are not asked whether voluntary workers are paid, and we assume that they are not.

SwHLPPDN indicates the number of helpers who are paid to help the respondent's current wave's spouse, and its values are taken from RwHLPPDN. In addition to the special missing codes employed by RwHLPPDN, SwHLPPDN employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwHLPPDAMT indicates the total monthly out-of-pocket cost paid by the respondent and their spouse for the respondent's paid caregiving and is measured in 10,000 Korean Won. RwHLPPDAMT takes the value of the total out-of-pocket monthly costs paid for all paid helpers by the respondent (not accounting expenses paid by relatives, or private health insurance). RwHLPPDAMT is assigned a value of 0 if the respondent did not pay for any helpers. RwHLPPDAMT is not available in Wave 1, but becomes available from Wave 2 onward.

SwHLPPDAMT indicates the total monthly out-of-pocket cost paid by the respondent and their spouse for the respondent's current wave's spouse's paid caregiving, and its values are taken from RwhLPPDAMT. In addition to the special missing codes employed by RwhLPPDAMT, SwHLPPDAMT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwhLPPDI indicates whether private health insurances help to reimburse the costs of the respondent's paid care. RwhLPPDI is assigned a value of 0 if the respondent has no paid helpers or if private health insurance did not reimburse any of the costs of the respondent's paid care. RwhLPPDI is assigned a value of 1 if the respondent reports that private health insurance reimbursed any positive amount of money for the respondent's paid care. RwhLPPDI is not available in Wave 1, but becomes available from Wave 2 onward.

SwHLPPDI indicates whether private health insurances help to reimburse the costs of the respondent's current wave's spouse's paid care, and its values are taken from RwhLPPDI. In addition to the special missing codes employed by RwhLPPDAMT, SwHLPPDAMT employs two additional special missing codes. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

The total monthly out-of-pocket cost and whether private health insurances help to reimburse costs for the respondent's paid caregiving are not available in Wave 1 of KLoSA, but become available in Wave 2 and onward when the respondent is asked for the total out-of-pocket costs for paid caregiving covered by the respondent, relatives, and private health insurances.

Starting in Wave 5, the respondent is no longer asked whether voluntary workers are paid, and we assume that they are unpaid for RwhLPPDN.

A new cohort of respondents is added in Wave 5.

Differences with the RAND HRS/Harmonized HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Harmonized HRS use special missing value .x to indicate no difficulty and the variables in the Harmonized KLoSA use special missing value .y to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The respondent's total monthly out-of-pocket paid caregiving cost is measured in 10,000 Korean Won in the Harmonized KLoSA, and in US dollars in the Harmonized HRS, so a conversion to common currency is needed to compare the two values.

In all available waves of the HRS, the respondent is not asked whether spouse helpers or employee of institution helpers are paid, whereas respondents are asked whether all helpers are paid, with the exception of voluntary workers starting in Wave 5 in KLoSA.

How Constructed:

RwSATJOB indicates how much the respondent agrees that they are satisfied with their job, all things considered.

RwDEMAND indicates how much the respondent agrees that their job requires lots of physical effort, which is comparable to asking whether their job is physically demanding.

RwSALARY indicates how much the respondent agrees that their salary is adequate.

RwSECURE indicates how much the respondent agrees that their job security is poor. The original statement is "My job security is good", however we have coded the variables to match the meaning of that in HRS.

RwNSKILLS_K indicates how much the respondent agrees that their job requires them to do more challenging tasks than they are used to.

RwJSTRESS indicates how much the respondent agrees that their job involves a lot of stress.

The questions about job satisfaction, job being physically demanding, job requiring respondents to do more challenging tasks than they are used to, and job involving a lot of stress, are asked of wage workers, self-employed respondents and those who are unpaid family workers. The questions about salary adequacy and job security are only asked of wage workers and self-employed respondents, not those who are unpaid family workers.

To match the HRS scale and to ensure that higher values are associated with more stress, the RwDEMAND, RwSECURE, RwNSKILLS_K, and RwJSTRESS have been coded as follows: a code of 1 is assigned if the respondent strongly disagreed with the statement. A code of 2 is assigned if the respondent disagreed with the statement. A code of 3 is assigned if the respondent agreed with the statement. A code of 4 is assigned if the respondent strongly agreed with the statement. RwSATJOB and RwSALARY have been coded as follows: a code of 1 is assigned if the respondent strongly agreed with the statement. A code of 2 is assigned if the respondent agreed with the statement. A code of 3 is assigned if the respondent disagreed with the statement. A code of 4 is assigned if the respondent strongly disagreed with the statement. If the respondent is not working, special missing .w is assigned. If the respondent is working as an unpaid family worker then special missing .f is assigned to RwSALARY and RwSECURE. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. Plain missing (.) is assigned for respondents who did not respond to the current wave.

SwSATJOB, SwDEMAND, SwSALARY, SwSECURE, SwNSKILLS_K, and SwJSTRESS indicate the current wave's spouse's level of agreement with statements about their job and are taken from the spouse's values to RwSATJOB, RwDEMAND, RwSALARY, RwSECURE, RwNSKILLS_K, and RwJSTRESS. In addition to the special missing codes used in RwSATJOB, RwDEMAND, RwSALARY, RwSECURE, RwNSKILLS_K, and RwJSTRESS, SwSATJOB, SwDEMAND, SwSALARY, SwSECURE, SwNSKILLS_K, and SwJSTRESS employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwJOBSUM_K indicates the mean of the six different job stress questions (RwSATJOB, RwDEMAND, RwSALARY, RwSECURE, RwNSKILLS_K and RwJSTRESS) and can be used as a summary score. It is calculated so that higher scores indicate more stress that the respondent feels about their job. The coding of RwDEMAND, RwNSKILLS_K, RwSECURE and RwJSTRESS did not change. RwJOBSUM_K is calculated for any respondent with at least one non-missing value for its six components. RwJOBSUM_K counts the number of components with

missing values in `RwJOBSUM_K`, which could be between no missing components (0) and six missing components (6). Special missing `.w` is assigned if the respondent indicates they are not currently working. Special missing `.m` is assigned if all six components of `RwJOBSUM_K` are missing. The variables are assigned plain missing `(.)` if the respondent did not participate in the current wave.

`SwJOBSUM_K` and `SwJOBSUMM_K` indicate the mean summary score of six different job stress questions and the count of any missing components in that score for the current wave's spouse and are taken from the spouse's values to `RwJOBSUM_K` and `RwJOBSUMM_K`. In addition to the special missing codes used in `RwJOBSUM_K` and `RwJOBSUMM_K`, `SwJOBSUM_K` and `SwJOBSUMM_K` employ two other missing codes, `.u` and `.v`. A special missing value `.u` is used when the respondent does not report being coupled in the current wave. A special missing value `.v` is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

Unlike HRS, KLoSA's original answer options range from strongly agree to strongly disagree, which have been primarily coded to correspond with the HRS's answer options of strongly disagree to strongly agree, or so that higher values indicate more stress.

In the HRS, the question related to whether the respondent's job involves a lot of stress is asked in the main interview, while all other questions that are made into harmonized job stress variables are asked in the self-completion questionnaire. Whereas in the KLoSA, all questions that are made into harmonized stress variables are asked in the main interview. Please note that `RwJSTRES` is available in the RAND HRS Longitudinal dataset, while `RwSATJOB`, `RwDEMAND`, `RwSALARY`, `RwSECURE`, and `RwNSKILLS` are available in the Harmonized HRS dataset.

Unlike HRS, KLoSA only includes the questions about job satisfaction, whether the respondent's job is physically demanding, whether the respondent's salary is adequate, about the respondent's job security, whether the respondent is required to learn new skills, and whether the respondent's job involves a lot of stress.

The job stress summary score in the Harmonized HRS includes 6 items: `RwSATJOB`, `RwDEMAND`, `RwSALARY`, `RwSECURE`, `RwTIMEPRE`, and `RwNSKILLS`. Whereas, the 6-item job stress summary score in the Harmonized KLoSA includes `RwSATJOB`, `RwDEMAND`, `RwSALARY`, `RwSECURE`, `RwNSKILLS_K`, and `RwJSTRESS`.

Please note, KLoSA has different question wording when asking whether the respondent's job is physically demanding, about job security, and about learning new skills.

`RwDEMAND` in the Harmonized KLoSA is based on agreement with the statement "My job requires lots of physical effort". `RwDEMAND` in the Harmonized HRS instead is based on agreement with the statement of "My job is physically demanding."

`RwSECURE` in the Harmonized KLoSA is based on agreement with the statement "My job security is good". `RwSECURE` in the Harmonized HRS is based on agreement with the statement "My job security is poor." `RwSECURE` in the Harmonized KLoSA is reverse coded to account for the difference in question wording, so that `RwSECURE` in the Harmonized KLoSA matches the Harmonized HRS version.

`RwNSKILLS_K` is based on agreement with the statement "My job requires me to do more challenging tasks than it used to". `RwNSKILLS` in the Harmonized HRS is based on agreement with the statement "I have the opportunity to develop new skills." Due to the substantial difference in the question wording, `RwNSKILLS_K` should not be considered immediately comparable to `RwNSKILLS` in the Harmonized HRS.

How Constructed:

HwLIFEIN indicates whether the household has any saving insurance, including term life insurance, whole life insurance, or annuity insurance. It is asked at the household-level of the financial respondent. A code of 1 indicates the household is covered by saving insurance. A code of 0 indicates the household is not covered by saving insurance. Don't know and refused responses are assigned special missing values .d and .r, respectively. HwLIFEIN is set to plain missing (.) for respondents who did not respond to the current wave.

HwNLFINS indicates the total number of life insurance policies the respondent reports the household having. HwNLFINS takes the sum of the number of term and whole life insurance policies the respondent reports the household having. HwNLFINS can take the values of 0 to 5, and if the respondent reports having more than 5 policies, then HwNLFINS takes the value of 5. Don't know and refused responses are assigned special missing values .d and .r, respectively. HwNLFINS is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in KLoSA

No differences known.

Differences with the RAND HRS/Harmonized HRS

In the RAND HRS, RwLIFEIN is based on questions asked specifically about term and whole life insurance policies and is answered by respondents and spouses. In the Harmonized KLoSA, HwLIFEIN is based on a question asking about saving insurance, which includes term and whole life insurance policies along with annuity insurance, and is answered by the financial respondent on behalf of the household.

In certain waves of the HRS, the number of life insurance policies is grouped at 5 or more policies, so RwnLFINS in the Harmonized HRS is grouped at 5 or more policies. The number of life insurance policies in KLoSA is not grouped in any wave so a continuous value could be calculated, but HwNLFINS in the Harmonized KLoSA is grouped at 5 or more policies for consistency.

How Constructed:

HwTLIFEIN indicates whether the household has any term life insurance. It is asked at the household-level of the financial respondent. A code of 1 indicates the household is covered by term life insurance. A code of 0 indicates the household is not covered by term life insurance. Don't know and refused responses are assigned special missing values .d and .r, respectively. HwTLIFEIN is set to plain missing (.) for respondents who did not respond to the current wave.

HwNTLFINS indicates the total number of term life insurance policies the respondent reports having. HwNTLFINS can take the values of 0 to 5, and if the respondent reports having more than 5 policies, then HwNTLFINS takes the value of 5. Don't know and refused responses are assigned special missing values .d and .r, respectively. HwNTLFINS is set to plain missing (.) for respondents who did not respond to the current wave.

HwTLIPRM is the amount that the household pays monthly for term life insurance in nominal 10,000 Korean won. It is asked at the household-level of the financial respondent. HwTLIPRM is the sum of all term life insurance premiums reported, and is only calculated if there is a monthly, or monthly equivalent, premium value reported for all term life insurance policies. In Wave 1, the financial respondent can report the premium on a monthly basis or report that the frequency was other. If the respondent reported that the premium payment frequency was other, HwTLIPRM is assigned special missing .o in Wave 1. Starting in Wave 2, the financial respondent can report that the premium was paid monthly, twice a year, once a year, or in a single payment. Payment frequencies of twice a year and once a year were adjusted to a monthly equivalent payment for HwTLIPRM. If a single payment was reported for any of the term life insurance policies, then HwTLIPRM is assigned special missing .f in Wave 2 and onward. If the respondent reports having no term life insurance policies, then HwTLIPRM takes a value of 0. Don't know and refused responses are assigned special missing values .d and .r, respectively. HwTLIPRM is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in KLoSA

In Wave 1, the financial respondent can report payment frequencies monthly or other. Because we cannot calculate a monthly equivalent premium payment for the "other" category, HwTLIPRM is assigned a special missing .o in Wave 1. Starting in Wave 2, the financial respondent can report payment frequencies monthly, twice a year, once a year, or in a single payment. Because we cannot calculate a monthly equivalent premium payment for single payments, HwTLIPRM is assigned special missing .f in Wave 2 and onward.

Differences with the RAND HRS/Harmonized HRS

There is currently no equivalent for HwTLIFEIN or HwNTLFINS in the RAND HRS or Harmonized HRS, but respondent-level equivalents could be created based on the HRS data.

In the RAND HRS, RwTLIPRM is based on questions answered by respondents and spouses. In the Harmonized KLoSA, HwTLIPRM is based on questions answered by the financial respondent on behalf of the household.

How Constructed:

HwWLIFEIN indicates whether the household has any whole life insurance. It is asked at the household-level of the financial respondent. A code of 1 indicates the household is covered by whole life insurance. A code of 0 indicates the household is not covered by whole life insurance. Don't know and refused responses are assigned special missing values .d and .r, respectively. HwWLIFEIN is set to plain missing (.) for respondents who did not respond to the current wave.

HwNWLFINS indicates the total number of whole life insurance policies the respondent reports having. HwNWLFINS can take the values of 0 to 5, and if the respondent reports having more than 5 policies, then HwNWLFINS takes the value of 5. Don't know and refused responses are assigned special missing values .d and .r, respectively. HwNWLFINS is set to plain missing (.) for respondents who did not respond to the current wave.

HwWLIPRM is the amount that the household pays monthly for whole life insurance in nominal 10,000 Korean won. It is asked at the household-level of the financial respondent. HwWLIPRM is the sum of all whole life insurance premiums reported, and is only calculated if there is a monthly, or monthly equivalent, premium value reported for all whole life insurance policies. In Wave 1, the financial respondent can report the premium on a monthly basis or report that the frequency was other. If the respondent reported that the premium payment frequency was other, HwWLIPRM is assigned special missing .o in Wave 1. Starting in Wave 2, the financial respondent can report that the premium was paid monthly, twice a year, once a year, or in a single payment. Payment frequencies of twice a year and once a year were adjusted to a monthly equivalent payment for HwWLIPRM. If a single payment was reported for any of the whole life insurance policies, then HwWLIPRM is assigned special missing .f in Wave 2 and onward. If the respondent reports having no whole life insurance policies, then HwWLIPRM takes a value of 0. Don't know and refused responses are assigned special missing values .d and .r, respectively. Otherwise missing responses are

assigned special missing value .m. HwWLIPRM is set to plain missing (.) for respondents who did not respond to the current wave.

HwWLIFEINV is the total value of the respondent's whole life insurance policies. It is asked at the household-level of the financial respondent. HwWLIFEINV is the sum of all whole life insurance policies reported, and is only calculated if there is a policy value reported for all whole life insurance policies. If the respondent reports having no whole life insurance policies, then HwWLIFEINV takes a value of 0. Don't know and refused responses are assigned special missing values .d and .r, respectively. Otherwise missing responses are assigned special missing value .m. HwWLIFEINV is set to plain missing (.) for respondents who did not respond to the current wave.

Cross Wave Differences in KLoSA

In Wave 1, the financial respondent can report payment frequencies monthly or other. Because we cannot calculate a monthly equivalent premium payment for the "other" category, HwWLIPRM is assigned a special missing .o in Wave 1. Starting in Wave 2, the financial respondent can report payment frequencies monthly, twice a year, once a year, or in a single payment. Because we cannot calculate a monthly equivalent premium payment for single payments, HwWLIPRM is assigned special missing .f in Wave 2 and onward.

Differences with the RAND HRS/Harmonized HRS

In the Harmonized HRS, RwnWLIFEIN and RwnWLFINS are based on questions answered by respondents and spouses. In the Harmonized KLoSA, HwWLIFEIN and HwnWLFINS are based on questions answered by the financial respondent on behalf of the household.

In the RAND HRS, RwnWLIPRM is based on questions answered by respondents and spouses. In the Harmonized KLoSA, HwWLIPRM is based on questions answered by the financial respondent on behalf of the household.

There is currently no equivalent for HwWLIFEINV in the RAND HRS or Harmonized HRS, but respondent-level equivalents could be created based on the HRS data.

KLoSA Variables Used:

Wave 1:

W01F122	The ownership of insurance (term/ whole life/ a
W01F127	The number of enrolled whole life insurance pro
W01F128_01	The payment period of whole life insurance prem
W01F128_02	The payment period of whole life insurance prem
W01F129_01	The amount of enrolled whole life insurance pre
W01F129_02	The amount of enrolled whole life insurance pre
W01F131_01	The face value of death benefit of whole life i
W01F131_02	The face value of death benefit of whole life i

Wave 2:

W02F122	The ownership of insurance (term/ whole life/ a
W02F127	The number of enrolled whole life insurance pro
W02F128_01	The payment period of whole life insurance prem
W02F128_02	The payment period of whole life insurance prem
W02F128_03	The payment period of whole life insurance prem
W02F129_01	The amount of enrolled whole life insurance pre
W02F129_02	The amount of enrolled whole life insurance pre
W02F129_03	The amount of enrolled whole life insurance pre
W02F131_01	The face value of death benefit of whole life i
W02F131_02	The face value of death benefit of whole life i
W02F131_03	The face value of death benefit of whole life i

Wave 3:

W03F122	The ownership of insurance (term/ whole life/ a
W03F127	The number of enrolled whole life insurance pro
W03F128_01	The payment period of whole life insurance prem
W03F128_02	The payment period of whole life insurance prem
W03F129_01	The amount of enrolled whole life insurance pre
W03F129_02	The amount of enrolled whole life insurance pre

W03F131_01	The face value of death benefit of whole life i
W03F131_02	The face value of death benefit of whole life i
Wave 4:	
W04F122	The ownership of insurance (term/ whole life/ a
W04F127	The number of enrolled whole life insurance pro
W04F128_01	The payment period of whole life insurance prem
W04F128_02	The payment period of whole life insurance prem
W04F129_01	The amount of enrolled whole life insurance pre
W04F129_02	The amount of enrolled whole life insurance pre
W04F131_01	The face value of death benefit of whole life i
W04F131_02	The face value of death benefit of whole life i
Wave 5:	
W05F122	The ownership of insurance (term/ whole life/ a
W05F127	The number of enrolled whole life insurance pro
W05F128_01	The payment period of whole life insurance prem
W05F128_02	The payment period of whole life insurance prem
W05F129_01	The amount of enrolled whole life insurance pre
W05F129_02	The amount of enrolled whole life insurance pre
W05F131_01	The face value of death benefit of whole life i
W05F131_02	The face value of death benefit of whole life i
Wave 5 New:	
W05F122	The ownership of insurance (term/ whole life/ a
W05F127	The number of enrolled whole life insurance pro
W05F128_01	The payment period of whole life insurance prem
W05F128_02	The payment period of whole life insurance prem
W05F129_01	The amount of enrolled whole life insurance pre
W05F129_02	The amount of enrolled whole life insurance pre
W05F131_01	The face value of death benefit of whole life i
W05F131_02	The face value of death benefit of whole life i
Wave 6:	
W06F122	The ownership of insurance (term/ whole life/ a
W06F127	The number of enrolled whole life insurance pro
W06F128_01	The payment period of whole life insurance prem
W06F128_02	The payment period of whole life insurance prem
W06F128_03	The payment period of whole life insurance prem
W06F129_01	The amount of enrolled whole life insurance pre
W06F129_02	The amount of enrolled whole life insurance pre
W06F129_03	The amount of enrolled whole life insurance pre
W06F131_01	The face value of death benefit of whole life i
W06F131_02	The face value of death benefit of whole life i
W06F131_03	The face value of death benefit of whole life i
Wave 7:	
W07F122	The ownership of insurance (term/ whole life/ a
W07F127	The number of enrolled whole life insurance pro
W07F128_01	The payment period of whole life insurance prem
W07F128_02	The payment period of whole life insurance prem
W07F128_03	The payment period of whole life insurance prem
W07F128_04	The payment period of whole life insurance prem
W07F129_01	The amount of enrolled whole life insurance pre
W07F129_02	The amount of enrolled whole life insurance pre

How Constructed:

RwDEPRESL, RwMINDTSL, RwsSLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RweFFORTL, RwenLIFEL, RwfEARFLL, RwGOINGL, RwfSADL, RwUNFRNDL, and RwfDISLKL are questions from the Center for Epidemiologic Studies-Depression scale fielded in KLoSA. RwDEPRESL, RwsSLEEPRL, RwwHAPPYL, RwFLONEL, RweFFORTL, RwenLIFEL, and RwGOINGL are available for all waves; RwMINDTSL, RwbOTHERL, and RwfEARFLL are only available for Waves 1-4; RwfSADL, RwUNFRNDL, and RwfDISLKL are available starting in Wave 5. In Waves 1-4, respondents were asked the frequency of feeling depressed (RwDEPRESL), having trouble keeping their mind on what they were doing (RwMINDTSL), having restless sleep (RwsSLEEPRL), feeling happy (RwwHAPPYL), feeling lonely (RwFLONEL), feeling bothered (RwbOTHERL), feeling that everything was an effort (RweFFORTL), enjoying life (RwenLIFEL), feeling fearful (RwfEARFLL), and having a hard time getting going (RwGOINGL). Starting in Wave 5, respondents were asked the frequency of feeling depressed (RwDEPRESL), feeling sad (RwfSADL), having restless sleep (RwsSLEEPRL), feeling happy (RwwHAPPYL), feeling lonely (RwFLONEL), feeling that people were unfriendly (RwUNFRNDL), feeling that everything was an effort (RweFFORTL), enjoying life (RwenLIFEL), feeling like people disliked me (RwfDISLKL), and having a hard time getting going (RwGOINGL). Respondents indicate how often they felt these symptoms over a two week period in the last 12 months, so these variables are coded as follows: 1.very rarely (less than 1 day), 2.sometimes (1 to 2 days), 3.often (3 to 4 days), or 4.almost always (5 to 7 days). Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. These variables are assigned blank missing (.) for respondents who did not participate in the current wave.

In Waves 1-4, these questions are not asked of respondents who indicate they "did not feel depressed because [he or she] was taking anti-depressant medication." For these individuals, a special missing code of .z is used. Additionally, these questions are not asked if the interview is done by proxy. Please note that KLoSA does not include variables indicating whether or not an interview was done by a proxy respondent.

SwDEPRESL, SwMINDTSL, SwsSLEEPRL, SwwHAPPYL, SwFLONEL, SwbOTHERL, SweFFORTL, SwenLIFEL, SwfEARFLL, SwGOINGL, SwfSADL, SwUNFRNDL, and SwfDISLKL give this information for the respondent's spouse and are taken directly from RwDEPRESL, RwMINDTSL, RwsSLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RweFFORTL, RwenLIFEL, RwfEARFLL, RwGOINGL, RwfSADL, RwUNFRNDL, and RwfDISLKL. SwDEPRESL, SwMINDTSL, SwsSLEEPRL, SwwHAPPYL, SwFLONEL, SwbOTHERL, SweFFORTL, SwenLIFEL, SwfEARFLL, SwGOINGL, SwfSADL, SwUNFRNDL, and SwfDISLKL employ two other missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

RwCESD10A is the sum of RwDEPRESL, RwMINDTSL, RwsSLEEPRL, RwwHAPPYL, RwFLONEL, RwbOTHERL, RweFFORTL, RwenLIFEL, RwfEARFLL, RwGOINGL in Waves 1-4, after reverse coding RwenLIFEL and RwwHAPPYL. RwCESD10B is the sum of RwDEPRESL, RwsSLEEPRL, RwwHAPPYL, RwFLONEL, RweFFORTL, RwenLIFEL, RwGOINGL, RwfSADL, RwUNFRNDL, and RwfDISLKL starting in Wave 5, after reverse coding RwenLIFEL and RwwHAPPYL. Additionally, the scales for each of the ten questions was adjusted so that the anchors were 0 to 3, rather than 1 to 4. RwCESD10A and RwCESD10B range from 0 to 30 with higher scores indicating that the respondent felt more negative feelings during the past two weeks. RwCESD10AM and RwCESD10BM are the number of CESD components with missing values for Waves 1-4 and Wave 5 and onward, respectively, ranging from 0 to 10. RwCESD10A and RwCESD10B are calculated as long as there is at least one non-missing component. Don't know, refused, or missing responses are assigned special missing values .d, .r, .m, respectively. A special missing .z was used if the CESD questions were skipped because the respondent was taking an anti-depressant. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

SwCESD10A, SwCESD10B, SwCESD10AM, and SwCESD10BM record the respondent's spouse's CESD summary score and the number of missing CESD components used to derive that score. SwCESD10A, SwCESD10B, SwCESD10AM, and SwCESD10BM are taken directly from the spouse's values of RwCESD10A, RwCESD10B, RwCESD10AM, and RwCESD10BM respectively. SwCESD10A, SwCESD10B, SwCESD10AM, and SwCESD10BM employ two special missing codes, .u and .v. Special missing value .u is used when the respondent does not report being coupled in

the current wave. Special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

In Waves 1-4, the CESD questions are not asked of respondents who indicate that they “did not feel depressed because [he or she] was taking anti-depressant medication.” Starting in Wave 5, there was no skip pattern for anti-depressant medication because respondents were not asked about whether or not they were taking an anti-depressant medication.

In Waves 1-4, respondents were asked the frequency of feeling depressed, having trouble concentrating, having restless sleep, feeling happy, feeling lonely, feeling bothered, feeling that everything was an effort, enjoying life, feeling afraid, and having a hard time getting going. Starting in Wave 5, respondents were asked the frequency of feeling depressed, feeling sad, having restless sleep, feeling happy, feeling lonely, feeling like people were unfriendly, feeling that everything was an effort, enjoying life, feeling like people disliked them, and having a hard time getting going.

In Waves 1-4, RWCESD10A and RWCESD10AM are the CESD summary score and number missing, respectively, for the 10 questions used in these waves. Because the CESD questions changed starting in Wave 5, RWCESD10B and RWCESD10BM are the CESD summary score and number missing, respectively, for the 10 questions used starting in Wave 5.

Differences with the RAND/Harmonized HRS

In KLoSA, CESD questions are asked using a four-point Likert scale. In all but the first wave of HRS, respondents were asked CESD questions as yes and no questions.

Unlike HRS, Waves 1-4 of KLoSA does not include a question asking respondents whether they felt sad. In Waves 1-4, three additional variables, not included in RAND HRS, are included in KLoSA that ask about how often the respondent has trouble concentrating, feels bothered by things, or feels afraid: RWMINDTSL, RWBOTHERL, and RWFEARFLL. Starting in Wave 5, KLoSA includes all the variables included in RAND HRS, with two additional variables that ask how often the respondent is feeling that people were unfriendly and people disliked them: RWUNFRNDL, RWFDISLKL.

While RAND HRS uses an 8-item version of the CESD scale, the Korean version of the CESD scale was validated with 10-items. In Waves 1-4, RWCESD10A is based on the 10 KLoSA CESD questions in Waves 1-4 which, unlike RAND HRS measure RWCESD, doesn't include a question about feeling sad and does include three additional questions: RWMINDTSL, RWBOTHERL, and RWFEARFLL. Starting in Wave 5, RWCESD10B is based on the 10 KLoSA CESD questions in Waves 5 onward which and unlike the RAND HRS measure RWCESD include two additional questions: RWUNFRNDL and RWFDISLKL. Because of the difference in the number of questions used for the summary measure and the use of a 4-point scale for each question, RWCESD10A and RWCESD10B range from 0-30 unlike the RAND HRS RWCESD which ranges from 0-8.

How Constructed:

The following variables pertain to the respondent's domain-specific satisfaction responses. The respondent is given the following prompt, "Now I'm going to ask your satisfaction with your life. Please answer how much you are satisfied with the following sentences compared to your friends."

RwSATSPS_K, RwSATCHILD_K, RwsATFNNCL_K, RwsATHLTH_K, and RwsATWLIFE_K indicate how much the respondent is satisfied with specific components of their life.

RwSATSPS_K is a rating of the respondent's satisfaction using the statement "How satisfied are you with your relationship with your spouse?" This question is not asked if the respondent is not married, in which case RwSATSPS_K is assigned special missing .s.

RwSATCHILD_K is a rating of the respondent's satisfaction using the statement "How satisfied are you with your relationship with your children?" This question is not asked if the respondent has no living children, in which case RwSATCHILD_K is assigned special missing .k. Starting in Wave 2, if the respondent's spouse is the family respondent, then this question is skipped even if the spouse reports having living children, in which case RwSATCHILD_K is assigned special missing .f. RwSATCHILD_K is also assigned special missing .f in Wave 7 if there is no family respondent.

RwsATFNNCL_K is a rating of the respondent's satisfaction using the statement "How satisfied are you with your economic status?"

RwsATHLTH_K is a rating of the respondent's satisfaction using the statement "How satisfied are you with your health?"

RwsATWLIFE_K is a rating of the respondent's satisfaction using the statement "How satisfied are you with your overall quality of life (or how happy you feel)?"

RwSATSPS_K, RwSATCHILD_K, RwsATFNNCL_K, RwsATHLTH_K, and RwsATWLIFE_K have scores ranging from 0 to 100, where 0 indicates they are satisfied and 100 indicates they are dissatisfied. Please note that the answer scale in the original questions goes from 0 indicating dissatisfied to 100 indicating satisfied, which have been reverse-coded for these variables to 0 indicating satisfied and 100 indicating dissatisfied. Don't know, refused, or other missing values are assigned special missing codes .d, .r, .m, respectively. RwSATSPS_K, RwSATCHILD_K, RwsATFNNCL_K, RwsATHLTH_K, and RwsATWLIFE_K are set to plain missing (.) for respondents who did not respond to the current wave.

SwSATSPS_K, SwSATCHILD_K, SwSATFNNCL_K, SwSATHLTH_K, and SwSATWLIFE_K indicate how much the respondent's spouse agrees with specific statements about their satisfaction with components of their life and are taken directly from the spouse's responses to RwsATSPS_K, RwsATCHILD_K, RwsATFNNCL_K, RwsATHLTH_K, and RwsATWLIFE_K, respectively. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, .u and .v. A special missing value .u is used when the respondent does not report being coupled in the current wave. A special missing value .v is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

Starting in Wave 2, the respondent is not asked to rate their satisfaction with their relationship with their children if their spouse is the family respondent. This is likely due to a skip pattern error in

which the number of living children is not copied to the respondent from their spouse's answer, and so this question is skipped.

In Wave 7, there is a higher occurrence of having no family respondent for the household. As such, the question directly asking the number of children is not asked, and the question asking the respondent's satisfaction with their relationship with their children is skipped.

Please note that there is a higher occurrence of .m special missing values for RwsATCHD_K in Waves 5, 6, and 8. There is no clear reason for this elevated level of missing values in these waves.

Differences with the RAND/Harmonized HRS

The HRS and KLoSA both ask respondents about their satisfaction with their current financial situation, their health, and their life as a whole. However, in KLoSA, domain-specific satisfaction questions are asked using a scale ranging from 0 being absolutely dissatisfied to 100 being absolutely satisfied. In HRS, respondents were asked domain-specific satisfaction questions using a 5-point scale. As a result, these variables in the Harmonized KLoSA end in "_K" to indicate that they are not fully comparable.

Unlike HRS, Waves 1-8 of KLoSA do not include questions asking whether the respondent is satisfied with the condition of the place where they live, satisfied with the city or town they live in, satisfied with their daily life and leisure activities, and satisfied with their family life.

Unlike KLoSA, HRS does not include questions asking whether the respondent is satisfied with their relationship with their spouse or children.

KLoSA Variables Used:

Wave 1:	
W01G026	Satisfaction with a R's health status
W01G027	Satisfaction with a R's economic status
W01G028	Satisfaction with the relationship with a R's s
W01G029	Satisfaction with the relationship with a R's c
W01G030	Satisfaction with a R's overall quality with li
Wave 2:	
W02G026	Satisfaction with a R's health status
W02G027	Satisfaction with a R's economic status
W02G028	Satisfaction with the relationship with a R's s
W02G029	Satisfaction with the relationship with a R's c
W02G030	Satisfaction with a R's overall quality with li
Wave 3:	
W03G026	Satisfaction with a R's health status
W03G027	Satisfaction with a R's economic status
W03G028	Satisfaction with the relationship with a R's s
W03G029	Satisfaction with the relationship with a R's c
W03G030	Satisfaction with a R's overall quality with li
Wave 4:	
W04G026	Satisfaction with a R's health status
W04G027	Satisfaction with a R's economic status
W04G028	Satisfaction with the relationship with a R's s
W04G029	Satisfaction with the relationship with a R's c
W04G030	Satisfaction with a R's overall quality with li
Wave 5:	
W05G026	Satisfaction with a R's health status
W05G027	Satisfaction with a R's economic status
W05G028	Satisfaction with the relationship with a R's s
W05G029	Satisfaction with the relationship with a R's c
W05G030	Satisfaction with a R's overall quality with li
Wave 5 New:	
W05G026	Satisfaction with a R's health status
W05G027	Satisfaction with a R's economic status
W05G028	Satisfaction with the relationship with a R's s
W05G029	Satisfaction with the relationship with a R's c

W05G030	Satisfaction with a R's overall quality with li
Wave 6:	
W06G026	Satisfaction with a R's health status
W06G027	Satisfaction with a R's economic status
W06G028	Satisfaction with the relationship with a R's s
W06G029	Satisfaction with the relationship with a R's c
W06G030	Satisfaction with a R's overall quality with li
Wave 7:	
W07G026	Satisfaction with a R's health status
W07G027	Satisfaction with a R's economic status
W07G028	Satisfaction with the relationship with a R's s
W07G029	Satisfaction with the relationship with a R's c
W07G030	Satisfaction with a R's overall quality with li
Wave 8:	
W08G026	Satisfaction with a R's health status
W08G027	Satisfaction with a R's economic status
W08G028	Satisfaction with the relationship with a R's s
W08G029	Satisfaction with the relationship with a R's c
W08G030	Satisfaction with a R's overall quality with li
