Gateway Harmonized KLoSA, Version F.

Gateway to Global Aging Data, 2025.

<https://doi.org/10.25553/ogba-4r74>

We greatly appreciate support from the National Institute on Aging
(R01 AG030153, RC2 AG036619, R03 AG043052)

Preface

The Korean Longitudinal Study of Aging (KLoSA) is a longitudinal study of individuals over age 45 in South Korea. It was designed to better understand the socioeconomic determinants and consequences of aging. The survey includes a rich set of questions regarding economic standing, physical and psychological health, demographics and social networks of aged persons. The survey is designed to ensure comparability with the Health and Retirement Study (HRS) in the United States, the Survey of Health, Ageing and Retirement in Europe (SHARE) in continental Europe, and the English Longitudinal Study of Ageing (ELSA) in the United Kingdom. Part of the reason for the close connection is to allow cross-country comparisons using these data.

In order to make the data more accessible to researchers and to facilitate such comparisons, we, the USC Gateway to Global Aging Data team, created the Gateway Harmonized KLoSA, a user-friendly version of a subset of the KLoSA interviews. The Gateway Harmonized KLoSA initiative is part of a larger set of projects. With funding and support from the National Institute on Aging, we have also created Gateway Harmonized HRS (USA), Gateway Harmonized MHAS (Mexico), Gateway Harmonized ELSA (England), Gateway Harmonized SHARE (Europe and Israel), Gateway Harmonized CRELES (Costa Rica), Gateway Harmonized JSTAR (Japan), Gateway Harmonized TILDA (Ireland), Gateway Harmonized CHARLS (China), Gateway Harmonized NICOLA (Northern Ireland), Gateway Harmonized ELSI (Brazil), Gateway Harmonized SPS-ENCAVIDAM (Chile), Gateway Harmonized LASI (India), and Gateway Harmonized MARS (Malaysia). Further information about these Gateway Harmonized data files with questionnaires and other metadata is available on our searchable website, <https://g2aging.org/>.

In creating the Gateway Harmonized data files, we have followed the RAND HRS and Gateway Harmonized HRS conventions of variable naming and data structure. The RAND HRS is a user-friendly version of a subset of the HRS that the RAND Center for the Study of Aging created to increase usability. The Gateway Harmonized HRS is a supplementary dataset to the RAND HRS, which also includes a subset of the HRS data, that the Gateway to Global Aging Data team has created to increase usability of a greater number of HRS variables. The Gateway Harmonized KLoSA includes variables with a similar naming convention that mimics the RAND HRS, Gateway Harmonized HRS and other Gateway Harmonized variables. This document describes these data.

Note, however, that KLoSA license agreements do not allow us to disseminate the data directly. Instead, we make available a Stata script ('do file') that generates these derived variables from the data files that the user must obtain from the KLoSA website (<https://survey.keis.or.kr/eng/klosa/klosa01.jsp>). Data files and more information about KLoSA can be obtained at that website.

We are grateful for the continuing support of and funding from NIA. In working with the KLoSA data, we greatly benefited from discussions with and the suggestions from our colleagues: Hae Yeun Park, Yuxuan Wang, Sandy Chien, Ashley Lin, Joohong Min, Youngha Oh, Marieta Valev, Victoria Yonter, Chulhee Lee, Jeonghwan Yun, Hyewon Kim, Arie Kapteyn, Marco Angrisani, Erik Meijer, and Bas Weerman.

Requested Acknowledgment

We ask all users of the Gateway Harmonized KLoSA to please inform our team of any written analysis using data from the Gateway Harmonized KLoSA or information from the Gateway Harmonized KLoSA Codebook by sending an email to pers@g2aging.org. We also ask users to include the following acknowledgement in their written work:

This analysis uses data or information from the Gateway Harmonized KLoSA dataset and Codebook, Version F as of June 2025 developed by the Gateway to Global Aging Data. The development of the Gateway Harmonized KLoSA was funded by the National Institute on Aging (R01 AG030153, RC2 AG036619, R03 AG043052). For more information, please refer to <https://g2aging.org/>.

KLoSA Version and Acknowledgment

This document uses the English version of the core data from KLoSA Waves 1 through 9, the English version of imputations from KLoSA Waves 1 through 7, and exit interview data from KLoSA Waves 2 through 9 as of June 2025. These are the most recently released files at this time. KLoSA is organized by the Korea Employment Information Service (KEIS).

What's New in Version F of the Gateway Harmonized KLoSA?

Version F incorporates the latest released version of KLoSA data, and adds variables for Wave 9. It does not currently contain imputed variables for Waves 8 and 9 because they have not yet been released. It contains 11,174 observations or rows. It is a Respondent-level file so each row represents a unique Respondent. It also adds new variables and makes adjustments and corrections.

We have added the following variables to the file:

Demographics, Identifiers and Weights:

- We added **raeducel** to indicate the respondent's level of education according to a five-tier harmonized scale.

Health:

- We added **rWalzdeme** starting in Wave 7 to indicate if the respondent ever had dementia.
- We added **radiagalzdem** to indicate the respondent's age when first diagnosed with dementia.
- We added **rWrxalzdem** to indicate if the respondent takes medication or is receiving treatment for dementia or mild cognitive impairment.
- We added **rWalzdemlmt** to indicate if the respondent's daily activity has been limited due to dementia.
- We added **rWglasses** for all waves to indicate if the respondent usually uses glasses or contact lenses.
- We added **rWsmokefm** for all waves to indicate how many cigarettes were smoked on average per day when the respondent was smoking the most.
- We added **rWdenture** for all waves to indicate if the respondent usually uses dentures.

Cognition:

- We added **rWobject**, an object-naming summary score.

Family Structure:

- We added **ramomeducel** and **radadeducel** to indicate the education level completed by the respondent's mother and father, respectively, according to a five-tier harmonized scale.
- We added **hWkcntf1m**, **hWkcntpm1m**, and **hWkcnt1m** for Wave 1 to indicate whether the respondent has at least monthly contact with any of their children in person, through phone or mail, or in person or through phone or mail at the household level.
- We added **rWkcntf1m**, **rWkcntpm1m**, and **rWkcnt1m** starting in Wave 2 to indicate whether the respondent has at least monthly contact with any of their children in person, through phone or mail, or in person or through phone or mail.
- We added **rWrfcnt1m** for all waves to indicate whether the respondent has monthly contact with relatives and friends.
- We added **rWsocmn** and **rWsocyf** for all waves to indicate whether the respondent participates in monthly or yearly social activities.

Pension:

-
- We added **rWptyp1_k** starting in Wave 9, which is similar to **rWptyp1**, but with the addition of a value of 3 indicating that the respondent has an individual retirement pension through their current job.

We have made the following adjustments, improvements, and corrections to the data and documentation:

Demographics, Identifiers and Weights:

- **rWlwtresp** and **rWlwt5resp** are now assigned special missing value (.m) instead of plain missing (.) if a weight is not provided but they participated in the waves.
- We adjusted the coding for **raeduc1** so that completion of a two-year college degree counts as tertiary education, instead of upper secondary education.

Health:

- We renamed **rWhipe_k** to **rWhipfle** for consistency with other Gateway Harmonized data.
- We adjusted **rWhipfle** and **rWfallinj** to be assigned special missing value (.x) rather than special missing value (.f) if the respondent did not fall in the last 2 years for consistency with other Gateway Harmonized data.

Cognition:

- We renamed **rWtask** to **rWread** and **rWwrite** to **rWsenten** for consistency with other Gateway Harmonized data.

Family Structure:

- We adjusted the coding for **ramomeduc1** and **radadeduc1** so that completion of a two-year college degree counts as tertiary education, instead of upper secondary education.

Employment History:

- We adjusted **rWablewrk** to be set to special missing (.l) instead of (.k) if they were not looking for work for consistency with other Gateway Harmonized data.

Assistance and Caregiving:

- We corrected **r1ftrkids** as it was previously assigning 1 values for all people who reported receiving future help, instead of only people expecting to receive future help from children.

Stress:

- We fixed the value labels for **rWsatjob** and **rWsalary** to be 2.agree and 3.disagree (instead of 2.disagree and 3.agree).

Psychosocial:

- We corrected all variables so that they are assigned plain missing (.) rather than special missing (.m) if they did not participate in the given wave.

1. Introduction and Overview

This Codebook documents the Gateway Harmonized KLoSA data files, a streamlined collection of variables derived from the Korean Longitudinal Study of Aging (KLoSA). KLoSA is a panel survey of people aged 45 and over and their partners, living in private households in Korea. Its main goal is to provide an interdisciplinary data resource on health, economic position and quality of life as people age. The survey elicits information about demographics, income, assets, health, cognition, family structure and connections, health care use and costs, housing, job status and history, expectations, and insurance.

KLoSA surveys respondents every two years. Funded by the Korean Ministry of Labor, the Korean Institute of Labor (KLI) collected the first two waves, and the Korea Employment Information Service (KEIS) collected Waves 3, 4, 5, 6, 7, 8, and 9 of KLoSA. The first wave of the KLoSA survey was conducted in fall/winter of 2006. The sample population was selected as part of a stratified, multi-stage area probability design. The first component of this sampling framework is the probability proportional to size (PPS) systematic sampling of the 2005 (South Korean) Census enumeration districts after stratifying by the location (15 major metropolitan cities and provinces) and characteristic of the district (urban or rural, and apartment building or non-apartment dwelling). Households were selected within PSUs from a listing of households in the Census identified as age-eligible; that is, inhabited by at least one person 45 years of age and older. This initial sample included 10,254 respondents age 45 and over. The second wave was conducted in 2008 and had 8,688 respondents. The third wave was conducted in 2010 and had 7,920 respondents. The fourth wave was conducted in 2012 and had 7,486 respondents. There was no refresher sample in Waves 2 through 4. In 2014, a refreshment sample of individuals born in 1962 or 1963 was drawn and it included 920 individuals, which were added to the 7,029 remaining core sample respondents for a total of 7,949 Wave 5 respondents. The sixth wave was conducted in 2016 and had 7,490 respondents. The seventh wave was conducted in 2018 and had 6,940 respondents. The eighth wave was conducted in 2020 and had 6,488 respondents. The ninth wave was conducted in 2022 and had 6,057 respondents.

The data include any individual interviewed at least once. This includes individuals who were age-eligible at the time of their first interview and spouses who were age-eligible at baseline. Unlike other HRS family studies, KLoSA does not interview new spouses who were not part of that household's baseline sample.

Currently, Waves 1 to 9 from the core study are available for study. The nine waves of KLoSA micro data are available at the Korea Employment Information Service (KEIS) website (<https://survey.keis.or.kr/eng/klosa/klosa01.jsp>). The Gateway Harmonized KLoSA data file incorporates all nine waves of core interview data.

1.1. Gateway to Global Aging Data

The Health and Retirement Study (HRS) has achieved remarkable scientific success, as demonstrated by an impressive number of users, research studies, and publications using it. Its success has generated substantial interest in collecting similar data as population aging has progressed in every region of the world.

The result has been a number of surveys designed to be comparable with the HRS: the Mexican Health & Aging Survey (MHAS), the English Longitudinal Study of Ageing (ELSA), the Survey of Health, Ageing and Retirement in Europe (SHARE), the Costa Rican Longevity and Healthy Aging Study (CRELES), the Korean Longitudinal Study of Aging (KLoSA), the Japanese Study on Aging and Retirement (JSTAR), the Irish Longitudinal Study on Ageing (TILDA), the China Health and Retirement Longitudinal Study (CHARLS), the Northern Ireland Cohort Longitudinal Study of Ageing (NICOLA), the Brazilian Longitudinal Study of Ageing (ELSI), the Chilean Social Protection Survey of the Quality of Life of the Elderly (SPS-ENCAVIDAM), the Malaysia Ageing and Retirement Survey (MARS), and the Longitudinal Aging Study in India (LASI). The overview of this family of surveys, including their research designs, samples, and key domains can be found in Lee, Phillips and Wilkens (2019).

As these surveys were designed with harmonization as a goal, they provide remarkable opportunities for cross-country studies. The value of comparative analyses, especially the opportunities they offer for learning lessons resulting from policies adopted elsewhere, is widely recognized. Yet there are only a limited number of empirical studies exploiting such opportunities. This is partly due to the difficulty associated with learning multiple surveys and the policies and institutions of each country.

Identifying comparable questions across surveys is the first step toward cross-country analyses. The Gateway to Global Aging Data (Gateway) helps users understand and use these large-scale population surveys on health and retirement. The Gateway includes several tools to facilitate cross-national health and retirement research. It includes a digital library of

survey questions for all participating surveys. Its search engine enables users to find relevant survey questions. The Gateway also includes a concordance with information comparing measures within and across surveys over time. Using these tools, researchers can identify all questions related to particular key words or within a domain. The Gateway also includes population and sub-population estimates for key harmonized variables and present them in graphs and tables that can be downloaded.

The Gateway can be accessed at <https://g2aging.org>. For more information about using the Gateway visit the Help page. For more information about obtaining the data files used to make the Gateway Harmonized KLoSA from the KEIS website or downloading the Stata file used to create the Gateway Harmonized KLoSA using the Gateway see "Chapter 4. Distribution and Technical Notes."

1.2. Units of Observation

We distinguish between three units of observation: individual, couple, and household. A "couple" in this sense means "single individual, or individual with their spouse, whatever applicable". In KLoSA, once it was determined that there was an age-eligible member of the household, all age-eligible household members were interviewed. As a result, there are households in the data in which more than one "couple" is interviewed, for example, a husband and wife who were older than 45 and the mother of one of them.

In the HRS, an age-eligible individual is sampled and then this individual and their spouse or partner regardless of age is interviewed, but no other household members, even if they are age-eligible. Thus, in the HRS, there is usually no distinction between a "couple" and a "household". More precisely, "household" variables in the HRS (and the RAND HRS and Gateway Harmonized HRS) are actually "couple" variables. However, as mentioned above, in KLoSA, a household may consist of more than one "couple".

The HRS interviews all age-eligible individual's spouse or partner, so, for most of the variables, spouse-level information is available. In contrast, KLoSA does not interview non-age-eligible spouses or partners, and in such case, spouse-level information is missing.

1.3. Data File Structure

The Gateway Harmonized KLoSA data are contained in a single file, which includes the first nine waves of KLoSA. The data are stored in a 'fat format' where each observation represents one respondent. The unit of observation is the individual. Each individual is uniquely identified by the unique identifier **pid**. Households are identified by wave-specific **hhW_{hhid}** where 'W' refers to the specific wave. Couples are identified by wave-specific **hW_{coupid}** where 'W' refers to the specific wave. It is important to note that unlike the RAND HRS and Gateway Harmonized HRS, households in the KLoSA can include multiple couples. This file may be merged with other KLoSA data using **pid**.

1.4. Variable Naming Convention

With few exceptions, variable names in the Gateway Harmonized KLoSA Data follow a consistent pattern. The first character indicates whether the variable refers to the reference person ('r'), spouse ('s'), the couple ('h'), or the full household ('hh'). The second character indicates the wave to which the variable pertains: '1', '2', '3', '4', '5', '6', '7', '8', '9', or 'a'. The 'a' indicates 'all,' i.e., the variable is not specific to any single wave. An example is **rabyear**, the birth year of the respondent. The remaining characters describe the concept that the variable captures.

For example, variable **s2hlthlm** captures whether the spouse of the reference person experiences an impairment or health problem that limits the kind or amount of paid work they can do. The name of the variable does not indicate who provided the information. For example, the spouse's health problem may have been reported by the spouse themselves, or it may have been reported for the reference person by a proxy.

In the text below, we may refer to variables such as **sW_{hlthlm}**, for example, without specifying the wave. This reference points at the group of variables: **s1hlthlm**, **s2hlthlm**, **s3hlthlm**, **s4hlthlm**, **s5hlthlm**, **s6hlthlm**, **s7hlthlm**, **s8hlthlm**, and **s9hlthlm**.

Variable labels also follow a consistent pattern. The first characters denote the name of the variable, followed by a colon.

Then the wave to which the variable pertains (W1, W2, W3, W4, W5, W6, W7, W8 or W9) follows. The remainder of the label describes the concept that the variable captures. For example, the variable label of **s2hlthlm** is:

s2hlthlm:W2 s Hlth problems limit work

It may seem duplicative to include the name of the variable and the wave in the variable label. However, statistical packages often suppress the variable name and instead use its label in the presentation of results.

Variable names in the Gateway Harmonized KLoSA are generally based on the variable name used in the RAND HRS or Gateway Harmonized HRS for the same measure. Measures which are exactly or near-exactly comparable between the Gateway Harmonized KLoSA and RAND HRS or Gateway Harmonized HRS use the exact same name. For instance, **rbyear** is the variable name for the respondent birth year in both the Gateway Harmonized KLoSA as well as the RAND HRS. If the Gateway Harmonized KLoSA measure is deemed only somewhat comparable with the RAND HRS or Gateway Harmonized HRS version of that measure, the variable name in the Gateway Harmonized KLoSA will often end in "**_k**". This variable name suffix indicates some KLoSA-specific difference with the RAND HRS or Gateway Harmonized HRS version of this measure. For instance, the Gateway Harmonized KLoSA variable for satisfaction with their relationship with their spouse is named **rWsatps_k** while the Gateway Harmonized HRS variable is named **rWsatps**. The reason for this difference in variable name is that KLoSA used a different answer scale from HRS. Other reasons for Gateway Harmonized KLoSA-specific variable names include: differences in survey questions, differences in survey routing, and whether both sets of variables use imputed values. Gateway Harmonized KLoSA-specific variable names are used to notify the user that there are substantial differences between the RAND HRS or Gateway Harmonized HRS and Gateway Harmonized KLoSA measures and comparability between these measures is not straight-forward.

The Gateway Harmonized KLoSA includes some variables without Gateway Harmonized KLoSA-specific variable names even though the Gateway Harmonized KLoSA measure is significantly different from the RAND HRS or Gateway Harmonized HRS measure of the same name. In particular, wealth and income measures in the Gateway Harmonized KLoSA do not use Gateway Harmonized KLoSA-specific variable names even though wealth and income measures in the Gateway Harmonized KLoSA are expressed in 10,000 Korean won, while income and wealth measures in the RAND HRS and Gateway Harmonized HRS are always expressed in nominal U.S. dollars. Users should always check the 'Cross-Survey Differences with the HRS' section of each measure before comparing any Gateway Harmonized KLoSA measure to the RAND HRS or Gateway Harmonized HRS version of the same measure or any other Gateway Harmonized Dataset version of the same measure.

1.5. Missing Values, Nonresponse, and Imputations

Variables may contain missing values for several reasons. Stata, SAS, and SPSS offer the capability to distinguish multiple types of missing values, and we have attempted to record as much information as possible. Generally, the codes adhere to the classification in Table 1.

Table 1. Missing Codes

Code	Reason for missing
.	Reference person did not respond to this wave
.a	Age limit
.d	Don't know
.m	Other missing
.r	Refused
.s	Skipped due to routing
.u	Reference person is not married (for spouse variables)
.v	Spouse did not respond to this wave (for spouse variables)

The coding scheme varies across variables. Consult the Data Codebook for details on individual variables.

1.6. Weighting and Accounting for Survey Design

The Gateway Harmonized KLoSA includes variables to allow users to produce weighted estimates with survey design adjusted standard errors where provided by KLoSA. KLoSA data can be analyzed cross-sectionally or longitudinally. Cross-sectional

analysis uses one wave of data. Longitudinal analysis involves using multiple waves of data to analyze the change between those waves. In order to produce unbiased estimates, users should use weights, taking into account the selection probabilities and response rates of each sample.

KLoSA produces two types of respondent-level weights for the core survey: cross-sectional weights and longitudinal weights. Cross-sectional weights are available for all 9 waves of KLoSA. Starting in Wave 2, KLoSA also produces respondent-level longitudinal weights for the core survey. A new cohort of respondents was added in Wave 5 and while the cross-sectional weight is included in **rWwtresp** for this cohort along with the weights for the original cohort, the longitudinal person-level weight is available for this cohort in **rWwt5resp** starting in Wave 6.

In addition to weights, KLoSA also provides stratification and cluster variables to account for KLoSA's complex survey design. The three region variables, 15 cities/provinces (**region1**), dong/eup/myeon (**region2**), and housing type (**enu_type**) were used for the stratification variable, and enumeration district (**enu**) was the cluster variable. For more detailed information about weight and survey design, please see the [KLoSA Wave 1 User Guide](#).

1.7. Availability of Stress Measures

In 2015, Drs. Elissa Epel and Wendy Mendes partnered with the Gateway to Global Aging Data team to form the Stress Measurement Network funded by the National Institute on Aging (NIA/NIH R24 AG048024). The goal of the Stress Network is to promote better theory and measurement of psychosocial stress in population-based studies. One of the specific aims is to facilitate the use of stress measures in population based studies, which was led by Drs. Tara Gruenewald, Alexandra Crosswell, and Jinkook Lee. It is hoped that identification of such measures will facilitate examination of the association of stressor conditions with cognitive-affective and physiological distress experience and poor psychological and physical health states hypothesized to follow from stressor exposure.

As a result of the work of the NIA Stress Measurement Network, the Gateway Harmonized KLoSA provides harmonized stress measures beginning in 2006, KLoSA Wave 1, and through 2022, KLoSA Wave 9. All available stress measures in KLoSA are related to the Karasek demand-control measure of job strain and come from the core KLoSA interview.

KLoSA included six measures of job strain/stress derived from the Karasek demand-control measure of job strain. Those include the respondent's satisfaction with their job, whether their job is physically demanding, whether the respondent feels like their salary is adequate, whether the respondent feels like their job security is poor, whether the job requires the respondent to do more challenging tasks than they are used to, and how much the respondent agrees that their job involves a lot of stress.

For more specific information about all stress measures included in the KLoSA, as well as comparable stress measures in HRS sister studies, please refer to the Measures of Stress in the Health and Retirement Study (HRS) and the HRS Family of Studies (2020) user guide.

2. Wealth and Income Variables

2.1. Units of Observation and Financial Respondent

Unlike HRS, KLoSA asks financial questions at the individual level. All respondents and spouses answer about their own financial status, including the value of cash, saving accounts, stocks, mutual funds, government bonds, debt, all other savings, individual earnings (wage and bonus), pension income, government transfer income, other income and capital income. On the other hand, HRS asks financial income questions at the household level, and only the financial respondent, who is the most knowledgeable person about the financial assets of the family, will answer the questions.

Since the KLoSA financial values correspond to the individual level, the variable names begin with 'r' for respondent or 's' for spouse. We do observe some cases in which the respondent and spouse report the same amount for their income or asset. To avoid the possibility of double counting, we did not create the couple level ('h') variables.

Starting in Wave 2, a single consumption respondent is chosen to answer monthly expenditure questions on behalf of the entire household. Starting in Wave 2, the consumption respondent is asked about the costs associated with food consumed inside the house, food consumed outside the house, public education, private education, housing, medical expenditures, and clothing. Starting in Wave 5, the consumption respondent is also asked about the costs associated with insurance premiums, vehicle maintenance, telecommunication service, leisure activities, and family events/tributes.

Since the KLoSA consumption values correspond to the household level, the variable names begin with 'hh' for household.

For harmonization purposes, it is preferable to use the same unit of observation in different harmonized data sets.

2.2. Currency

All KLoSA financial variables are expressed in 10,000 Korean won. For cross-country comparisons of financial variables, these values have to be converted to a single monetary unit. The Gateway Harmonized KLoSA dataset includes a consumer price index for this purpose, provided in `cYYYYcpindex`. It is the users' responsibility to check what period a variable refers to and accordingly use the appropriate index.

In KLoSA, asset questions ask about current asset values, while income questions ask about income in the last calendar year (2005, if the interview was conducted in 2006).

3. Structure of Codebook

The Data Codebook contains the codebook documenting all variables in the Gateway Harmonized KLoSA Data. This section explains how to interpret the codebook entries. The figure below shows a typical codebook page; the numbers in blue correspond to comments below.

1

Health Care Utilization: Insurance Premium				
Variable	Waves	Label	Type	
2 rWprmm	1-9	rWprmm:ww r total monthly premium amnt	Cont	
sWprmm	1-9	sWprmm:ww s total monthly premium amnt	Cont	
rWprmmf	1-9	rWprmmf:ww r NHI premium flag	Categ	
sWprmmf	1-9	sWprmmf:ww s NHI premium flag	Categ	

3 **How Constructed**

Healthcare is socialized in South Korea; as such citizens are enrolled in the National Health Insurance (NHI) plan. Persons that cannot afford the NHI plan are afforded Medical Aid; Medical Aid eliminates the premium for NHI. However, those covered by Medical Aid often still pay co-pays at doctor offices. Additionally, South Koreans can also enroll in private insurance.

rWprmm is the total amount of monthly insurance premiums the respondent reports paying. **rWprmm** is the sum of the monthly insurance premiums paid into the National Health Insurance System and monthly insurance premiums paid for any private health insurances. KLoSA asks respondents who are currently paying their NHI premiums and allows respondents to report that either themselves or their spouse, son/daughter, son/daughter-in-law, or other relatives are currently paying these premiums. **rWprmm** includes the amount paid either by the respondent or their spouse. Respondents who are covered by the Medical Aid Program (who do not have to pay NHI premiums) and are not covered under any private health insurance are assigned a 0 value for **rWprmm**. Respondents who have their NHI premiums paid by someone other than their spouse are also assigned a 0, unless they pay for private insurance, in which case **rWprmm** is assigned the private insurance amount. Don't know, refused, or missing responses to either insurance premium paid are assigned special missing values (.d), (.r), (.m), respectively. **rWprmm** is set to plain missing (.) for respondents who did not respond to the current wave.

rWprmmf is a flag variable which indicates who paid for the respondent's National Health Insurance System premiums. A code of 1 indicates that the respondent paid for their own premiums. A code of 2 indicates that the respondent's spouse paid for the respondent's premium. A code of 3 indicates that other people (not the respondent or their spouse) paid for the respondent's premium. The amount paid by other people is available in the raw data, but not in the Harmonized KLoSA dataset. Respondents covered by Medical Aid are coded as special missing value (.n). Don't know, refused, or missing responses to who paid the respondent's NHI premiums are assigned special missing values (.d), (.r), (.m), respectively. **rWprmmf** is set to plain missing (.) for respondents who did not respond to the current wave.

sWprmm and **sWprmmf** provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWprmm** and **rWprmmf**. In addition to the special missing codes used in **rWprmm** and **rWprmmf**, **sWprmm** and **sWprmmf** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

4

Cross-Wave Differences in KLoSA

No differences known.

5

Cross-Study Differences with the HRS

Medical expenditures in KLoSA are measured in Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The RAND HRS provides the monthly insurance premium for Medicare and Medicaid in **rWmrprem**, for Medicare Part D in **rWrxprem**, and for private health insurance in **rWprprm1**, **rWprprm2**, and **rWprprm3**. Whereas the total monthly insurance premium for public or private health insurance is provided in **rWprmm** in the Gateway Harmonized KLoSA.

- 1 **Title:** The variables are documented in groups according to the concept that they measure. For example, there are four variables related to insurance premiums, corresponding to nine waves and respondent/spouse.
- 2 **Variable Overview:** This entry overviews the provided variables in this group. The table includes the names of variables with a "W" in place of individual wave numbers. The wave column displays the waves for which this variable is built or a "All" in the case of variable which is not wave-specific (e.g. birth year). Variable labels are also included which typically include the name of the variable and a short description. Lastly, the Type column indicates the variable type, which may be continuous (Cont), categorical (Categ), or character (Char).
- 3 **How Constructed:** This entry provides background on the manner in which variables were constructed.
- 4 **Cross-Wave Differences in KLoSA:** This entry briefly describes differences in question wording or contents between interview waves.
- 5 **Cross-Study Differences with the HRS:** This entry describes any differences between the RAND HRS or Gateway Harmonized HRS version of the variable and the Gateway Harmonized KLoSA version of the variable. It is imperative these differences are understood when using harmonized measures.
- 6 **Continuous Variable Distributions:** This entry shows descriptive statistics of each continuous variable. They include the number of nonmissing values, the mean, standard deviation, minimum value, maximum value, and number of missing values in the wave.
- 7 **Categorical Variable Frequencies:** This entry shows the value label codes. These are only relevant for categorical variables. The first character(s) of the value labels indicate the value to which each label has been assigned. For example, value '1' is mapped into '1.Paid by R' (not just 'Paid by R'). The entry also indicates which labels are assigned to which variables, and shows frequency tabulations for all categorical variables.
- 8 **Original KLoSA Variables Used:** This entry provides the names and labels of raw KLoSA variables that were used to construct the new variables.

4. Distribution and Technical Notes

The Gateway Harmonized KLoSA Data file is created using the Gateway to Global Aging Data (<https://g2aging.org/>) and saved in a Stata format. To create and use the file one must have at least Stata/IC, version 12 or higher. To create the Gateway Harmonized KLoSA, visit the Harmonized Data, Get Data tab of the Gateway to Global Aging Data (<https://g2aging.org/hrd/get-data>). Under the KLoSA column, click the link for the Gateway Harmonized KLoSA Stata Code (also accessible here: <https://g2aging.org/harmonized-klosa/creation-code>). From this page you can download the Gateway Harmonized KLoSA Stata Creation Code and find further instructions on running the Creation Code in Stata. The original KLoSA data is distributed by the Korea Employment Information Service (KEIS). Once created, the Gateway Harmonized KLoSA Data file can be accessed anytime by the user. The original KLoSA data is made available free of charge but only to users who register with KEIS and agree to the standard conditions. For more information on obtaining access to the KLoSA data, visit: <https://survey.keis.or.kr/eng/klosa/klosa01.jsp>.

This is version **F** of the Gateway Harmonized KLoSA Data.

A copy of the Stata programs used to create the Gateway Harmonized KLoSA and a copy of this Gateway Harmonized KLoSA Codebook can be obtained on the Gateway to Global Aging Data under the Gateway Harmonized Data and Get Data tabs (<https://g2aging.org/hrd/get-data>).

5. Data Codebook

A. Demographics, Identifiers and Weights

Person Specific Identifier			
Variable	Waves	Label	Type
pid	All	Personal ID	Cont
hhid	All	household ID	Cont
pn	All	pn: Person number within household (num)	Cont
pnc	All	pnc: Person number within household (char)	Char

How Constructed

KLoSA provides a unique identifier for each respondent, **pid**. It consists of two separate parts:

hhid is the numeric version of the household identifier. **pn** is the person identifier to identify each participant within each household. **pnc** is a character version of **pn**.

Cross-Wave Differences in KLoSA

A new cohort of respondents was added in Wave 5. **hhid** for this cohort was derived using the unique household identifier from the Wave 5 add file.

Cross-Study Differences with the HRS

No differences known.

Original KLoSA Variables Used

Wave 1:

pid	Personal ID
hhid	Household ID

Wave 5 Add:

pid	Personal ID
hhid	In 2014, Household ID

Household Identifier

Variable	Waves	Label	Type
hhWhhid	1-9	hhWhhid: wW full HHold ID /num	Cont
hhWhhidc	1-9	hhWhhidc: wW full HHold ID /4-char	Char

How Constructed

hhWhhid uniquely identifies households in the KLoSA in a given wave and is taken directly from the KLoSA wave-specific **hhid** (Wave 1 and Wave 5 new cohort), **hhid08**, **hhid10**, **hhid12**, **hhid14**, **hhid16**, **hhid18**, **hhid20**, and **hhid22** variables. **hhWhhidc** are character versions of **hhWhhid**.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

No differences known.

Original KLoSA Variables Used

Wave 1:	
hhid	Household ID
Wave 2:	
hhid08	In 2008, Household ID
Wave 3:	
hhid10	In 2010, Household ID
Wave 4:	
hhid12	In 2012, Household ID
Wave 5:	
hhid14	In 2014, Household ID
Wave 5 Add:	
hhid	In 2014, Household ID
Wave 6:	
hhid16	In 2016, Household ID
Wave 7:	
hhid18	In 2018, Household ID
Wave 8:	
hhid20	In 2020, Household ID
Wave 9:	
hhid22	In 2020, Household ID

Couple Identifier

Variable	Waves	Label	Type
hWcupid	1-9	hWcupid:ww couple linkage code /num	Cont

How Constructed

hWcupid is the couple identifier. It is taken directly from KLoSA's **cidYY**. Similar to the way other identification variables were constructed in KLoSA, **hWcupid** consists of the **hhid** and the person number of the first person listed in a couple inside a household. **hWcupid** is the same for each person in the couple, allowing researchers to match spouses who are both in the data.

A respondent whose spouse or partner does not appear in the survey data (due to age ineligibility, institutionalization, etc.) or does not have a spouse or partner (unmarried, divorced, widowed, separated) are also assigned a **hWcupid**, such that **hWcupid** is not missing for any respondent in a given wave. **hWcupid** is equivalent to the respondent's **pid** for these uncoupled persons, hence it will not have a corresponding **hWcupid** in the data.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike the HRS, KLoSA was conducted on any eligible individual present at the household during the time of the interview. In this regard, there are households which contain a couple and another uncoupled individual or households with two or more uncoupled individuals. The use of couple ID is imperative for identifying sub-households and for comparison to the RAND HRS concept of household.

Original KLoSA Variables Used

Wave 1:

hhid	Household ID
cido6	Couple ID

Wave 2:

hhid	Household ID
cido8	Couple ID

Wave 3:

hhid	Household ID
cid10	Couple ID

Wave 4:

hhid	Household ID
cid12	Couple ID

Wave 5:

hhid	Household ID
cid14	Couple ID

Wave 5 Add:

hhid	In 2014, Household ID
cid	Couple ID

Wave 6:

hhid	Household ID
------	--------------

Section A. Demographics, Identifiers and Weights

cid16	Couple ID
Wave 7:	
hhid	Household ID
cid18	Couple ID
Wave 8:	
hhid	Household ID
cid20	Couple ID
Wave 9:	
hhid	Household ID
cid22	Couple ID

Spouse Identifier

Variable	Waves	Label	Type
sWpid	1-9	sWpid:WW spouse pid	Cont

How Constructed

sWpid is derived from the pid of persons with a matching couple ID. If the respondent is not married or partnered or if the respondent is married but there is no other respondent in the data then sWpid is 0.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike the HRS, KLoSA does not interview any new spouses of an original respondent, so although the original spouse might or might not be interviewed in the future, the respondent will not be associated with any other respondent as a spouse.

Original KLoSA Variables Used

Wave 1:

hhid	Household ID
cido6	Couple ID
wo1aoo6	Currently marital status

Wave 2:

hhid	Household ID
cido8	Couple ID
wo2marital	In 2008, the current marital status

Wave 3:

hhid	Household ID
cid10	Couple ID
wo3marital	In 2010, the current marital status

Wave 4:

hhid	Household ID
cid12	Couple ID
wo4marital	In 2012, the current marital status

Wave 5:

hhid	Household ID
cid14	Couple ID
wo5marital	In 2014, the current marital status

Wave 5 Add:

hhid	In 2014, Household ID
cid	Couple ID
wo5marital	In 2014, the current marital status

Wave 6:

hhid	Household ID
cid16	Couple ID
wo6marital	In 2016, the current marital status

Wave 7:

hhid	Household ID
cid18	Couple ID
wo7marital	In 2018, the current marital status

Wave 8:

hhid	Household ID
cid20	Couple ID
wo8marital	In 2020, the current marital status

Wave 9:

hhid	Household ID
cid22	Couple ID
wogmarital	In 2020, the current marital status

Wave Status: Response Indicator

Variable	Waves	Label	Type
inwW	1-9	inwW: =1 if respondent wW	Categ

How Constructed

inwW indicates whether an individual in the KLoSA sample responded to a particular wave. Respondents identified as having either a full or partial interview either in person or through a proxy are considered to have responded and are coded as 1. Otherwise, they are coded as 0.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

No differences known.

Categorical Variable Frequencies

Wave Status: Interview Status

Variable	Waves	Label	Type
rWiwstat	1-9	rWiwstat:WW R interview status	Categ
sWiwstat	1-9	sWiwstat:WW S interview status	Categ

How Constructed

rWiwstat indicates the response and mortality status of the respondent at each wave. Respondents are identified by a code of 1, while non-respondents are identified by codes 4-6, and 9.

Mortality status is derived from individual wave specific outcomes in the KLoSA Exit File. Similar to the RAND HRS, a non-response code of 4 means that the respondent is alive but did not respond. A code of 5 means that the respondent died between the last interview and the current one, and a code of 6 means that the respondent had died before a previous wave. A code of 9 means that we don't know if the individual is alive or not.

sWiwstat indicates the current wave's spouse's interview status. It is taken from the spouse's values to **rWiwstat**. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

No differences known.

Sampling Design

Variable	Waves	Label	Type
raeclust	All	raeclust: cluster variable	Cont
raestrat	All	raestrat: stratification variable	Char

How Constructed

raeclust is the clustering variable based off the primary sampling units in KLoSA (**w01enu_type**). These units correspond to the enumeration district included in the sample. An enumeration district is a unit defined by the National Statistics Office for the Korean Population and Housing Census. Of 261,237 enumeration districts in South Korea, 1,000 were selected for KLoSA sampling and are included in Wave 1. A new cohort of respondents was added in Wave 5. The clustering variable for those individuals is based on the Wave 5 sampling units (**w05enu_type**).

raestrat is the stratification variable of the KLoSA data. It was created by concatenating variables **w01region1**, **w01region2**, and **w01enu_type**, which corresponded to a particular region or metropolitan city (**w0wregion1**), village or town status (**w0wregion2**), and whether or not the respondent lived in a house or apartment complex (**w0wenu_type**). The stratification variable for the new cohort of respondents added in Wave 5 is based on concatenating variables **w05region1**, **w05region2**, and **w05enu_type**.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

In the RAND HRS, the cluster variable is named **raehsamp**. In the RAND HRS, the stratification variable is named **raestrat**.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing
raeclust	11,174	1.38	0.48	1.00	2.00	0

Original KLoSA Variables Used

Wave 1:

w01region1	Region1: a local variable
w01region2	Region2: village/town
w01enu_type	A residential type

Wave 5 Add:

w05region1	Region1: a local variable
w05region2	Region2: village/town
w05enu_type	A residential type

Sample Cohort

Variable	Waves	Label	Type
hacohort	All	hacohort:Sample cohort	Categ

How Constructed

hacohort identifies the cohort in which the household was originally sampled. **hacohort** is assigned a 1 if the household was part of the original KLoSA sample interviewed starting in Wave 1. **hacohort** is assigned a 2 if the household was part of the Wave 5 add sample interviewed starting in Wave 5.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

No differences known.

Person-Level Analysis Weight			
Variable	Waves	Label	Type
rWwtresp	1-9	rWwtresp:ww R person-level cross-sectional weight	Cont
sWwtresp	1-9	sWwtresp:ww S person-level cross-sectional weight	Cont
rWlwtresp	2-9	rWlwtresp:ww R person-level longitudinal weight, core sample	Cont
sWlwtresp	2-9	sWlwtresp:ww S person-level longitudinal weight, core sample	Cont
rWlwt5resp	6-9	rWlwt5resp:ww R person-level longitudinal weight, wave W base	Cont
sWlwt5resp	6-9	sWlwt5resp:ww S person-level longitudinal weight, wave W base	Cont

How Constructed

rWwtresp is the person-level cross-sectional weight as provided by KLoSA. The weight is provided to make the data a nationally representative sample. Starting in Wave 5, **rWwtresp** takes the values of the cross-sectional weights constructed for the combined sample of the original cohort and the new Wave 5 cohort. **rWlwtresp** is the person-level longitudinal weight using Wave 1 as the base and is only available for Waves 2 and forward. This weight is not available for the new cohort added in Wave 5 and therefore a special missing of (.n) is assigned to the weight value of those respondents. **rWlwt5resp** is the person-level longitudinal weight using Wave 5 as the base and is only available for Wave 6 and forward. **rWlwt5resp** takes the values of the longitudinal weights constructed for the combined sample of the original cohort and the new Wave 5 cohort. **rWlwtresp** and **rWlwt5resp** are assigned special missing value (.m) if a weight is not provided. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

sWwtresp, **sWlwtresp**, and **sWlwt5resp** are the person-level cross-sectional and longitudinal weights of the respondent's spouse, and their values are taken from **rWwtresp**, **rWlwtresp**, and **rWlwt5resp**. If the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married, a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

Longitudinal weights are not available for some respondents in Waves 3, 4, 5, 6, 7, 8 and 9.

A new cohort of respondents was added in Wave 5, and as a result, the cross-sectional weight designed for the combined original and new Wave 5 cohorts is assigned to **rWwtresp** starting in Wave 5. Starting in Wave 5, the longitudinal weights using Wave 1 as the base are not available for the new Wave 5 cohort, and so are assigned special missing (.n) for **rWlwtresp** in these waves. Starting in Wave 6, **rWlwt5resp** is added to provide the longitudinal weight for the combined original and new Wave 5 cohorts using Wave 5 as the base. Please note that KLoSA data also includes a cross-sectional weight that includes only the original cohort and not the new Wave 5 cohort starting in Wave 5, which has not been included in the Gateway Harmonized KLoSA.

Cross-Study Differences with the HRS

Unlike the HRS, KLoSA does not provide separate weights for households – only individual-level weights are available.

Number of Household Respondents

Variable	Waves	Label	Type
hhWhhresp	1-9	hhWhhresp:WW number of household respondents	Cont

How Constructed

hhWhhresp is the number of age-eligible household respondents who completed an interview in the current wave of data collection. It counts the number of respondents sharing the same household ID. **hhWhhresp** is assigned blank missing (.) if the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

While the HRS defines a household as only containing a respondent and spouse (if coupled), so that the number of household respondents is either 1 or 2, KLoSA households may contain more than a single age-eligible couple, including any combination of age-eligible couples and age-eligible single individuals.

Continuous Variable Distributions

Whether Coupled Household			
Variable	Waves	Label	Type
hWcp1	1-9	hWcpl:ww whether coupled	Categ

How Constructed

hWcp1 indicates whether the respondent is a member of a couple in which both members are respondents in the current wave of data. **hWcp1** is set to 0 if the respondent is not coupled with any other respondent in the current wave, and is set to 1 if the respondent is coupled with another respondent. Respondents who are married or partnered and living with their spouse/partner are not counted as a couple if their spouse is ineligible to participate in KLoSA or does not participate for any other reason. **hWcp1** is assigned blank missing (.) if the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Family Respondent

Variable	Waves	Label	Type
rWfamr	1-9	rWfamr:ww whether family representative	Categ
sWfamr	1-9	sWfamr:ww whether family representative	Categ
hWanyfam	1-9	hWanyfam:ww Whether any fam resp for couple	Categ

How Constructed

If two respondents are a couple, family and family transfer questions were only asked to one family representative on behalf of both members of the couple. If the respondent's spouse is not interviewed, the respondent is always the family representative. **rWfamr** indicates whether the respondent is the designated family representative. It is coded as 0 if they are not the family representative, and 1 if they are the family representative. **rWfamr** is assigned blank missing (.) if the respondent did not participate in the current wave.

sWfamr indicates whether the current wave's spouse was the family representative. Its values are taken from **rWfamr** of the respondent's spouse. If the respondent is not designated as coupled in the current wave and unmarried, a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

There are instances where no member of the couple is identified as the family respondent. Although generally uncommon, there are a number of couples at Wave 6 which do not have a family respondent. These households are identified at all waves by **hWanyfam**. A code of 1 indicates that the couple did have a family respondent and a code of 0 indicates that the couple did not have a family respondent. There are also a few instances where both members of a couple are designated as family respondents and both answer the family respondent questions. In these cases, the couple-level variables based on family respondent questions might differ between spouses as they represent each spouse's report of the couple. These couples can be identified by comparing **rWfamr** for each member of the couple. **hWanyfam** is assigned blank missing (.) if the respondent did not participate in the current wave.

The identification of the family representative is also used in the KLoSA imputation process. If a value of a respondent is missing then KLoSA imputed a value using the answer given by the family representative. If the family representative's answer is missing, then the value of the respondent was imputed using the answer of another household member.

Cross-Wave Differences in KLoSA

There are a number of couples at Wave 6 which did not have a family respondent.

Cross-Study Differences with the HRS

No differences known.

Consumption Respondent

Variable	Waves	Label	Type
rWconr	2-9	rWconr:WW whether R consumption representative	Categ
sWconr	2-9	sWconr:WW whether S consumption representative	Categ
hhWanycon	2-9	hhWanycon:WW Whether any cons resp for household	Categ

How Constructed

If there are multiple respondents in a household, consumption questions were only asked to one consumption representative on behalf of the entire household. **rWconr** indicates whether the respondent is the designated consumption representative. It is coded as 0 if they are not the consumption representative, and 1 if they are the consumption representative. **rWconr** is assigned blank missing (.) if the respondent did not participate in the current wave.

In Wave 8 there are several hundred households in which the assigned consumption respondent did not answer consumption questions, but the questions were answered instead by another member of the household. In these cases, we have corrected **rWconr** to take a value of 0 if they were the designated respondent but the questions were answered by another household member, and to take a value of 1 if they were not the designated respondent but answered the consumption questions.

sWconr indicates whether the current wave's spouse was the consumption representative. Its values are taken from **rWconr** of the respondent's spouse. If the respondent is not designated as coupled in the current wave and unmarried, a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

It is possible that no member of the household is identified as the consumption respondent. These households are identified at all waves by **hhWanycon**. A code of 1 indicates that the household did have a consumption respondent and a code of 0 indicates that the household did not have a consumption respondent. **hhWanycon** is assigned blank missing (.) if the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

Consumption questions are asked starting in Wave 2.

In Wave 8, there are several hundred households in which the assigned consumption respondent was not the actual consumption respondent. We have taken steps to correct these cases so that the actual respondent is designated as the assigned respondent.

Cross-Study Differences with the HRS

No differences known.

Interview Dates

Variable	Waves	Label	Type
rWiwm	1-9	rWiwm:ww R interview month	Cont
sWiwm	1-9	sWiwm:ww S interview month	Cont
rWiwY	1-9	rWiwY:ww R interview year	Cont
sWiwY	1-9	sWiwY:ww S interview year	Cont

How Constructed

rWiwm and rWiwY indicate the individual interview month and year, respectively. rWiwm and rWiwY are set to special missing (.m) if the value is missing. rWiwm and rWiwY are set to plain missing (.) for respondents who did not respond to the current wave.

sWiwm and sWiwY indicate the current wave's spouse's individual interview month and year, respectively. They are taken from rWiwm and rWiwY of the respondent's spouse. If the respondent is not designated as coupled in the current wave and unmarried, a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike the HRS, KLoSA does not mark interviews with beginning, middle, and end times and dates. Instead, KLoSA provides one interview date for each individual respondent, though typically all age-eligible members of the same household who participated in the first wave data collection were interviewed on the same day. KLoSA provides interview date information down to the year and month.

Birth Date

Variable	Waves	Label	Type
rabyear	All	rabyear: R birth year	Cont
sWbyear	1-9	sWbyear:wW S birth year	Cont
rabmonth	All	rabmonth: R birth month	Cont
sWbmonth	1-9	sWbmonth:wW S birth month	Cont

How Constructed

rabyear and **rabmonth** are the year and month of the respondent's self-reported birth date in Wave 1. A new cohort of respondents was added in Wave 5, so **rabyear** and **rabmonth** for this cohort are based on data from Wave 5.

sWbyear and **sWbmonth** indicate the spouse's birth year and birth month, respectively. They are taken from **rabyear** and **rabmonth** of the respondent's spouse. If the respondent is not designated as coupled in the current wave and not married, a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave, but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

No differences known.

Original KLoSA Variables Used

Wave 1:

w01a001 The date when the respondent is born (unit: yyyy+mm)

Wave 5 Add:

w05a001 The date when the respondent is born (unit: yyyy+mm)

Death Date: Month and Year

Variable	Waves	Label	Type
radyear	All	radyear: r death year	Cont
radmonth	All	radmonth: r death month	Cont

How Constructed

radyear is the respondent's reported death year. **radmonth** is the respondent's reported month of death. **radyear** and **radmonth** are based on questions asked as part of the exit interview asked at each wave starting with Wave 2. **radyear** and **radmonth** are assigned special missing (.x) if the respondent has not passed away.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

No differences known.

Age at Interview

Variable	Waves	Label	Type
rWagey	1-9	rWagey:ww R age in years at iww	Cont
sWagey	1-9	sWagey:ww S age in years at iww	Cont

How Constructed

rWagey is the respondent's age in years at the time of the current wave's interview. Respondent's age is provided directly by KLoSA. Age in Korea is not determined by the number of full years since birthdate but is derived by subtracting the year of birth from the current year, in this case the year the survey was administered. **rWagey** is set to missing (.m) if the birth year and/or the interview year are missing. **rWagey** is set to missing (.) if the respondent did not respond to the current wave.

sWagey gives this information for the respondent's spouse or partner. **sWagey** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike the HRS, KLoSA does not mark interviews with beginning and end dates. Instead, KLoSA provides one interview date for each individual.

Age in Korea is not determined by the number of full years since birthdate but is derived by subtracting the year of birth from the current year, so **rWagey** in the RAND HRS is a slightly different measure from **rWagey** in the Gateway Harmonized KLoSA.

Continuous Variable Distributions

Gender

Variable	Waves	Label	Type
ragender	All	ragender: R gender	Categ
sWgender	1-9	sWgender:wW S gender	Categ

How Constructed

ragender was derived by using the first non-missing report of gender. **ragender** is set to 1 for man and 2 for woman as self-reported by the respondent. Special missing (.m) is used if gender information is missing from the data. The plain missing code (.) is used if the respondent did not respond to the current wave.

sWgender indicates the current wave's spouse's gender. It is taken from the **ragender** value of the respondent's spouse. If a spouse is not found in the current wave data and the respondent is unmarried, a special missing value of (.u) is used. If a spouse is not found in the current wave data and the respondent is married, a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

No differences known.

Education: Summary Category

Variable	Waves	Label	Type
raeduc_k	All	raeduc_k:R Education category	Categ
sWeduc_k	1-9	sWeduc_k:wW S Education category	Categ

How Constructed

KLoSA surveys respondents as to their highest educational level and whether they completed this level of education. **raeduc_k** identifies the highest level of education the respondent reported completing. KLoSA re-checks the education after the first wave. The first non-missing report of education was always used. **raeduc_k** is defined using the following codes: 1.No education (illiterate), 2.No education (reading), 3.Elementary school, 4.Middle school, 5.High school, 6.Two-year college, 7.College grad, 8.Post college (Master) and 9.Post college(PhD). When respondents don't know or refuse to answer, **raeduc_k** is assigned special missing values (.d) or (.r), respectively.

sWeduc_k indicates the current wave's spouse's category of education. It is taken from the spouse's value to **raeduc_k**. If a spouse is not found in the current wave data and the respondent is unmarried, a special missing value of (.u) is used. If a spouse is not found in the current wave data and the respondent is married, a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

A notable modification to the RAND HRS category schema here is the addition of two categories to capture lower levels of educational attainment – middle school and elementary school education.

Education: Harmonized Categories

Variable	Waves	Label	Type
raeducel	All	raeducel:R harmonized early education	Categ
sWeducel	1-9	sWeducel:wW S harmonized early education	Categ
raeduc1	All	raeduc1:R harmonized education	Categ
sWeduc1	1-9	sWeduc1:wW S harmonized education	Categ

How Constructed

In KLoSA, respondents are asked to report their highest school degree and degrees of further education or vocational training and whether they completed this level of education. KLoSA re-checks the education after the first wave.

raeducel and **raeduc1** identify the level of education completed according to five-tier and three-tier harmonized scales which we developed to compare education levels across countries. These Gateway Harmonized education scales are simplified versions of 1997 International Standard Classification of Education (ISCED-97) codes. For more information on ISCED codes, see www.uis.unesco.org and the OECD document entitled "Classifying Educational Programmes: Manual for ISCED-97 Implementation in OECD Countries, 1999 Edition". **raeducel** is coded as follows: 1.Less than primary education, 2.Primary education, 3.Lower secondary education, 4.Upper secondary education, and 5.Tertiary education. **raeducel** is assigned a code of 1 if the respondent had no education (illiterate or reading). **raeducel** is assigned a code of 2 if the respondent finished elementary. **raeducel** is assigned a code of 3 if the respondent finished middle school. **raeducel** is assigned a code of 4 if the respondent finished high school. **raeducel** is assigned a code of 5 if the respondent finished two year college, college or post college (master or PhD). **raeduc1** is coded as follows: 1.Less than lower secondary education, 2.Upper secondary education, and 3.Tertiary education. **raeduc1** is assigned a code of 1 if the respondent had no education (illiterate or reading), or finished elementary or middle school. **raeduc1** is assigned a code of 2 if the respondent finished high school. **raeduc1** is assigned a code of 3 if the respondent finished two year college, college or post college (master or PhD). The first non-missing report of education was always used. Don't know, refuse to answer, or other missing is assigned special missing values (.d), (.r), or (.m), respectively.

sWeducel and **sWeduc1** indicate the current wave's spouse's category of education. It is taken from the spouse's value to **raeducel** and **raeduc1**. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used. **sWeducel** and **sWeduc1** is set to plain missing (.) for respondents who did not respond to this wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

The RAND HRS does not include an International Standard Classification of Education categorization of education attainment, however the Gateway Harmonized HRS contains a comparable variable to **raeduc1** and will contain a comparable variable to **raeducel** in the next version.

Current Marital Status: With Partnership

Variable	Waves	Label	Type
rWmstat	1-9	rWmstat:wW r marital status w/partners, filled	Categ
sWmstat	1-9	sWmstat:wW s marital status w/partners, filled	Categ

How Constructed

This variable is created using the current marital status reported in each wave and their implied partnership status. Partnership status is assigned to respondents who report being currently unmarried but who are coupled with another respondent through couple ID.

rWmstat indicates a respondent's marital status in the current wave with implied partnership status. A code of 1 indicates the respondent is married or living with a partner. A code of 3 indicates that the respondent is partnered, through implied partnership. A code of 4 indicates the respondent is separated. A code of 5 indicates the respondent is divorced. A code of 7 indicates the respondent is widowed. A code of 8 indicates the respondent has never been married. Don't know, refused, or other missing values of **rWmstat** are assigned special missing codes (.d), (.r), (.m), respectively. **rWmstat** is set to plain missing (.) for respondents who did not respond to the current wave.

sWmstat indicates the current wave's spouse's marital status. It is taken from the spouse's values to **rWmstat**. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

The KLoSA survey wording for being married is slightly different from the HRS survey. While the HRS asks respondents if they are married, KLoSA asks respondents if they are married or living with a partner.

Current Marital Status: Without Partnership

Variable	Waves	Label	Type
rWmstath	1-9	rWmstath:ww R marital status	Categ
sWmstath	1-9	sWmstath:ww S marital status	Categ

How Constructed

This variable is created using the current marital status reported in each wave. While the **rWmstat** variables, described above, specifically code partnership, which override actual marital status, **rWmstath** ignores implied partnership status and indicates reported marital status in the current wave. A code of 1 indicates the respondent reports being married or living with a partner. A code of 4 indicates the respondent reports being separated. A code of 5 indicates the respondent reports being divorced. A code of 7 indicates the respondent reports being widowed. A code of 8 indicates the respondent reports they have never been married. Don't know, refused, or other missing values of **rWmstath** are assigned special missing codes (.d), (.r), (.m), respectively. **rWmstath** is set to plain missing (.) for respondents who did not respond to the current wave.

sWmstath indicates the current wave's spouse's marital status without partnership. It is taken from the spouse's values to **rWmstath**. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

The KLoSA survey wording for being married is slightly different from the HRS survey. While the HRS asks respondents if they are married, KLoSA asks respondents if they are married or living with a partner.

Current Marital Status: Never Married

Variable	Waves	Label	Type
rWmnev	1-9	rWmnev:wW R never married	Categ
sWmnev	1-9	sWmnev:wW S never married	Categ

How Constructed

rWmnev indicates whether the respondent ever reported being married by the time of the current wave. A code of 0 indicates that the respondent was married at least once and a code of 1 indicates that the respondent has never been married. **rWmnev** is set to special missing (.d) when marriage status is reported as “don’t know.” **rWmnev** is set to special missing (.m) when marriage status is reported as “missing.” **rWmnev** is set to special missing (.r) when marriage status is reported as “refused.” **rWmnev** is set to plain missing (.) for respondents who did not respond to the current wave.

sWmnev indicates whether the current wave’s spouse has ever been married. It is taken from the spouse's **rWmnev**. If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

sWrural	1-9	sWrural:ww S lives in rural or urban	Categ
rWmetrop_k	1-9	rWmetrop_k:ww R metropolitan, city, town (Korea)	Categ
sWmetrop_k	1-9	sWmetrop_k:ww S metropolitan, city, town (Korea)	Categ

How Constructed

rWregion_k is the region of the respondent's residence. These locations correspond to self-governing, large metropolitan centers, such as Seoul and Busan, and also provinces such as Gyeonggi and Jeonam. **rWregion_k** is coded as follows: 11.Seoul, 21.Busan, 22.Daegu, 23.Incheon, 24.GwangJu, 25.Daejeon, 26.Ulsan, 27.Sejong, 31.Gyeonggi, 32.Gangwon, 33.Chungbuk, 34.Chungnam, 35.Jeonbuk, 36.Jeonam, 37.Gyeonbuk, 38.Gyeongnam. **rWregion_k** is assigned blank missing (.) if the respondent did not participate in the current wave.

rWrural indicates whether the respondent lives in a rural or urban area. **rWrural** is coded as 0.urban and 1.rural. **rWrural** is assigned blank missing (.) if the respondent did not participate in the current wave.

rWmetrop_k indicates whether the respondent lives in a metropolitan area, city or town. **rWmetrop_k** is coded as 1.metropolitan, 2.city, 3.town. **rWmetrop_k** is assigned blank missing (.) if the respondent did not participate in the current wave.

sWregion_k, **sWrural** and **sWmetrop_k** are the current wave's spouse's region of residence, indicator of whether the spouse lives in a rural or urban area, as well as whether they live in a metropolitan area, city or town, respectively. These are taken from the spouse's values to **rWregion_k**, **rWrural** and **rWmetrop_k**. If a spouse is not found in the current wave data and the respondent is unmarried, a special missing value of (.u) is used. If a spouse is not found in the current wave data and the respondent is married, a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

Participants from region 27, Sejong, were added in Wave 5 with the new cohort of respondents.

Cross-Study Differences with the HRS

Unlike the HRS, the regions that are measured in the KLoSA are not census regions but the names of metropolitan cities and provinces used in the sampling of KLoSA. There should be no assumption of code similarities between **rWregion_k** in the Gateway Harmonized KLoSA and **rWregion** in the RAND HRS.

Religion

Variable	Waves	Label	Type
rWrelig_k	1-9	rWrelig_k:WW R religion	Categ
sWrelig_k	1-9	sWrelig_k:WW S religion	Categ

How Constructed

KLoSA asks about the religious preference of the respondent, which is captured in **rWrelig_k**. Responses to **rWrelig_k** are coded as follows: 1. Protestant, 2. Catholic, 3. Buddhist, 4. Won Buddhist, 5. Other religion, and 6. No religion or no preference. **rWrelig_k** is set to special missing (.d) when religion is reported as “don’t know.” **rWrelig_k** is set to special missing (.r) when religion is reported as “refused.” Special missing (.m) is used if religion information is otherwise missing from the data. **rWrelig_k** is set to plain missing (.) if the respondent did not respond to the current wave.

sWrelig_k captures the religion of the respondent’s spouse in the current wave. It is taken from the spouse's value to **rWrelig_k**. If a spouse is not found in the current wave data and the respondent is unmarried, a special missing value of (.u) is used. If a spouse is not found in the current wave data and the respondent is married, a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

B. Health

Self-Report of Health

Variable	Waves	Label	Type
rWshlt	1-9	rWshlt:WW R self-rated health	Categ
sWshlt	1-9	sWshlt:WW S self-rated health	Categ
rWshlta	1-9	rWshlta:WW R self-rated health, alt.	Categ
sWshlta	1-9	sWshlta:WW S self-rated health, alt.	Categ

How Constructed

KLoSA asks about self-reported health twice, once at the beginning of the health module and once again at the end, using two different scales of answer choices. KLoSA randomly selects which scale will appear at the beginning of the module and which will appear at the end of the module. Information about the position of **rWshlt** and **rWshlta** is not available with the public use data set from KLoSA.

rWshlt is the respondent's self-reported general health status using the US scale of self-reported health. Codes are assigned as follows: 1.Excellent, 2.Very good, 3.Good, 4.Fair, 5.Poor. "Don't know" and "Refused" are recoded with special missing codes of (.d) and (.r). Other missing responses are assigned special missing (.m). **rWshlt** is assigned blank missing (.) if the respondent did not participate in the current wave.

rWshlta is the respondent's self-reported general health status, using the European scale of self-reported health. Codes are assigned as follows: 1.Very good, 2.Good, 3.Fair, 4.Poor, 5.Very poor. "Don't Know" and "Refused" are recoded with special missing codes of (.d) and (.r), respectively. Other missing responses are assigned special missing (.m). **rWshlta** is assigned blank missing (.) if the respondent did not participate in the current wave.

sWshlt and **sWshlta** are the respondent's spouse's self-reported general health status taken directly from spouse's responses to **rWshlt** and **rWshlta**, respectively. In addition to the special missing codes used in **rWshlt** and **rWshlta**, **sWshlt** and **sWshlta** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

In addition to the US scale of self-reported health used for **rWshlt**, KLoSA also uses a second scale, the Korean or European scale, to measure self-reported health.

Whether Health Limits Work

Variable	Waves	Label	Type
rWhlthlm	1-9	rWhlthlm:ww R hlth problem limit work	Categ
sWhlthlm	1-9	sWhlthlm:ww S hlth problem limit work	Categ

How Constructed

rWhlthlm indicates whether the respondent's health limits their ability to work. **rWhlthlm** is based on a single question in the Health module which asks all respondents, "Does your health condition hamper your doing work?" and respondents can answer 1)Yes, very much so, 2) Yes, to some degree, 3)No, not much, or 4)No, not at all. If a respondent indicates that health limits their ability to work very much or to some degree then a code of 1 is assigned. If a respondent indicates that health limits their ability to work not much or not at all then a code of 0 is assigned. Don't know, refused, or other missing responses are assigned special missing (.d), (.r), (.m), respectively. **rWhlthlm** is assigned blank missing (.) if the respondent did not participate in the current wave.

sWhlthlm is the respondent's spouse's self-reported limitation in their ability to work because of health problems. It was taken directly from spouse's responses to **rWhlthlm**. **sWhlthlm** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

HRS specifically asks respondents "Do you have any impairment or health problem that limits the kind or amount of paid work you can do?" Differently in KLoSA, respondents are asked "Does your health condition hamper you doing work?", without specifying whether the work in reference is paid or not. KLoSA respondents can also provide 2 levels of yes answers and 2 levels of no answers, which have been condensed in **rWhlthlm** to be comparable to the single yes and no answers allowed in HRS.

rWurinb	1-9	rWurinb:WW R needs help-controlling urination and defecation	Categ
sWurinb	1-9	sWurinb:WW S needs help-controlling urination and defecation	Categ

How Constructed

rWdressb, **rWbathb**, **rWeatb**, **rWtoiletb**, **rWbedb_k**, **rWbrushb**, and **rWurinb** are indicators that measure the respondent's need for help with a select number of activities of daily living (ADLs): dressing one's self, bathing one's self, eating, using a toilet including getting up and down, getting out of bed and walking across a room, washing face, hair and brushing teeth, and controlling urination and defecation.

These ADL variables are derived from specific questions in KLoSA which ask the respondent if they don't need any help, need help to some extent, or need help in every respect with the tasks listed. Respondents who indicated that they do not need any help are coded 0 for each of **rWdressb**, **rWbathb**, **rWeatb**, **rWtoiletb**, **rWbedb_k**, **rWbrushb**, and **rWurinb**, while respondents who respond that they need help to some extent or need help in every respect are coded as 1 for needing at least some help with the activities. Don't know, refused, or other missing responses are assigned special missing (.d), (.r), (.m), respectively. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

sWdressb, **sWbathb**, **sWeatb**, **sWtoiletb**, **sWbedb_k**, **sWbrushb**, and **sWurinb** give this information for the respondent's spouse or partner. These variables are taken from the spouse's values to **rWdressb**, **rWbathb**, **rWeatb**, **rWtoiletb**, **rWbedb_k**, **rWbrushb**, and **rWurinb**. In addition to the special missings utilized by **rWdressb**, **rWbathb**, **rWeatb**, **rWtoiletb**, **rWbedb_k**, **rWbrushb**, and **rWurinb**, **sWdressb**, **sWbathb**, **sWeatb**, **sWtoiletb**, **sWbedb_k**, **sWbrushb**, and **sWurinb** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike HRS, which asks whether the respondent has difficulty with the ADL activities, KLoSA asks whether the respondent needs help with the activities. In order to distinguish the differences, the relevant variables are constructed including "b" instead of "a" in their names (e.g., **rWdressb** instead of **rWdressa**).

In HRS, getting out of bed and walking across a room are counted as two separate ADLs (**rWbeda** and **rWwalkra**), but in KLoSA they are asked in a single question (**rWbedb_k**). In addition to the ADL variables available in the HRS, KLoSA includes two more activities of daily living: washing face, hair and brushing teeth, and controlling urination and defecation.

Original KLoSA Variables Used

Wave 1:

WO1C201	Help required for activities of daily life(ADL)_Dressing
WO1C202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
WO1C203	Help required for activities of daily life(ADL)_Bathing and showering
WO1C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO1C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO1C206	Help required for activities of daily life(ADL)_Using the toilet
WO1C207	Help required for activities of daily life(ADL)_Using the toilet without spillin

Wave 2:

WO2C201	Help required for activities of daily life(ADL)_Dressing
WO2C202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
WO2C203	Help required for activities of daily life(ADL)_Bathing and showering
WO2C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO2C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO2C206	Help required for activities of daily life(ADL)_Using the toilet
WO2C207	Help required for activities of daily life(ADL)_Using the toilet without spillin

Wave 3:

WO3C201	Help required for activities of daily life(ADL)_Dressing
WO3C202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
WO3C203	Help required for activities of daily life(ADL)_Bathing and showering
WO3C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO3C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO3C206	Help required for activities of daily life(ADL)_Using the toilet
WO3C207	Help required for activities of daily life(ADL)_Using the toilet without spillin

Wave 4:

WO4C201	Help required for activities of daily life(ADL)_Dressing
WO4C202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
WO4C203	Help required for activities of daily life(ADL)_Bathing and showering
WO4C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO4C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO4C206	Help required for activities of daily life(ADL)_Using the toilet
WO4C207	Help required for activities of daily life(ADL)_Using the toilet without spillin

Wave 5:

WO5C201	Help required for activities of daily life(ADL)_Dressing
WO5C202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
WO5C203	Help required for activities of daily life(ADL)_Bathing and showering
WO5C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO5C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO5C206	Help required for activities of daily life(ADL)_Using the toilet
WO5C207	Help required for activities of daily life(ADL)_Using the toilet without spillin

Wave 5 Add:

WO5C201	Help required for activities of daily life(ADL)_Dressing
WO5C202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
WO5C203	Help required for activities of daily life(ADL)_Bathing and showering
WO5C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO5C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO5C206	Help required for activities of daily life(ADL)_Using the toilet
WO5C207	Help required for activities of daily life(ADL)_Using the toilet without spillin

Wave 6:

WO6C201	Help required for activities of daily life(ADL)_Dressing
---------	--

wo6c202	Help required for activities of daily life(ADL)_Washing face and hair and brush
wo6c203	Help required for activities of daily life(ADL)_Bathing and showering
wo6c204	Help required for activities of daily life(ADL)_Eating food that have prepared
wo6c205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
wo6c206	Help required for activities of daily life(ADL)_Using the toilet
wo6c207	Help required for activities of daily life(ADL)_Using the toilet without spillin
Wave 7:	
wo7c201	Help required for activities of daily life(ADL)_Dressing
wo7c202	Help required for activities of daily life(ADL)_Washing face and hair and brush
wo7c203	Help required for activities of daily life(ADL)_Bathing and showering
wo7c204	Help required for activities of daily life(ADL)_Eating food that have prepared
wo7c205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
wo7c206	Help required for activities of daily life(ADL)_Using the toilet
wo7c207	Help required for activities of daily life(ADL)_Using the toilet without spillin
Wave 8:	
wo8c201	Help required for activities of daily life(ADL)_Dressing
wo8c202	Help required for activities of daily life(ADL)_Washing face and hair and brush
wo8c203	Help required for activities of daily life(ADL)_Bathing and showering
wo8c204	Help required for activities of daily life(ADL)_Eating food that have prepared
wo8c205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
wo8c206	Help required for activities of daily life(ADL)_Using the toilet
wo8c207	Help required for activities of daily life(ADL)_Using the toilet without spillin
Wave 9:	
wo9c201	Help required for activities of daily life(ADL)_Dressing
wo9c202	Help required for activities of daily life(ADL)_Washing face and hair and brush
wo9c203	Help required for activities of daily life(ADL)_Bathing and showering
wo9c204	Help required for activities of daily life(ADL)_Eating food that have prepared
wo9c205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
wo9c206	Help required for activities of daily life(ADL)_Using the toilet
wo9c207	Help required for activities of daily life(ADL)_Using the toilet without spillin

Instrumental Activities of Daily Living (IADLs): Needs Help

Variable	Waves	Label	Type
rWmealsb	1-9	rWmealsb:ww R needs help-preparing hot meal	Categ
sWmealsb	1-9	sWmealsb:ww S needs help-preparing hot meal	Categ
rWshopb	1-9	rWshopb:ww R needs help-shopping	Categ
sWshopb	1-9	sWshopb:ww S needs help-shopping	Categ
rWmedsb	1-9	rWmedsb:ww R needs help-taking medication	Categ
sWmedsb	1-9	sWmedsb:ww S needs help-taking medication	Categ
rWmoneyb	1-9	rWmoneyb:ww R needs help-managing money	Categ
sWmoneyb	1-9	sWmoneyb:ww S needs help-managing money	Categ
rWphoneb	1-9	rWphoneb:ww R needs help-using telephone	Categ
sWphoneb	1-9	sWphoneb:ww S needs help-using telephone	Categ
rWtransb	1-9	rWtransb:ww R needs help-using transportation	Categ

rWgroomb	1-9	rWgroomb:ww R needs help-grooming	Categ
sWgroomb	1-9	sWgroomb:ww S needs help-grooming	Categ

How Constructed

rWmealsb, **rWshopb**, **rWmedsb**, **rWmoneyb**, **rWphoneb**, **rWtransb**, **rWgooutb**, **rWlaundryb**, **rWhousewkb**, and **rWgroomb** are indicators that measure the respondent's need for help with a select number of instrumental activities of daily living (IADLs): preparing hot meals, shopping (deciding what to buy and paying for it), taking medication, managing money and finances, using the telephone, using transportation, going out a short distance without using transportation, doing laundry, doing housework, and personal grooming.

These ten IADL variables are derived from ten questions in KLoSA which asks the respondent if they don't need any help, need help to some extent, or need help in every respect when it comes to the ten tasks listed. Respondents who indicated that they do not need any help are coded 0 for each of **rWmealsb**, **rWshopb**, **rWmedsb**, **rWmoneyb**, **rWphoneb**, **rWtransb**, **rWgooutb**, **rWlaundryb**, **rWhousewkb**, and **rWgroomb**, while respondents who responded that they need help to some extent or need help in every respect are coded as 1 for needing at least some help with the activities. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWmealsb, **sWshopb**, **sWmedsb**, **sWmoneyb**, **sWphoneb**, **sWtransb**, **sWgooutb**, **sWlaundryb**, **sWhousewkb**, and **sWgroomb** give this information for the respondent's spouse or partner. These variables are taken from the spouse's values to **rWmealsb**, **rWshopb**, **rWmedsb**, **rWmoneyb**, **rWphoneb**, **rWtransb**, **rWgooutb**, **rWlaundryb**, **rWhousewkb**, and **rWgroomb**. In addition to the special missings utilized by **rWmealsb**, **rWshopb**, **rWmedsb**, **rWmoneyb**, **rWphoneb**, **rWtransb**, **rWgooutb**, **rWlaundryb**, **rWhousewkb**, and **rWgroomb**, **sWmealsb**, **sWshopb**, **sWmedsb**, **sWmoneyb**, **sWphoneb**, **sWtransb**, **sWgooutb**, **sWlaundryb**, **sWhousewkb**, and **sWgroomb** employ two more special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike HRS, which asks whether the respondent has difficulty with the IADL activities, KLoSA asks whether the respondent needs help with the activities. In order to distinguish the differences, the relevant variables are constructed including “b” instead of “a” in their names (e.g., **rWmealsb** instead of **rWmealsa**).

HRS specifies shopping for groceries, while KLoSA specifies shopping, meaning deciding what to buy and paying for it.

In addition to the IADL variables available in the HRS, KLoSA includes five more instrumental activities of daily living: 1. using transportation, 2. going out a short distance, 3. doing laundry, 4. doing housework, and 5. personal grooming by one's self.

How Constructed

Four Activities of Daily Living (ADL) summaries are derived. One uses the ADLs proposed by Wallace and Herzog in the paper Wallace and Herzog, 1995 to define an ADL summary: **rWadlwb**: bathe, dress, and eat. The second, **rWadlb_k**, includes these and adds getting in and out of bed and walking across the room. The third, **rWadlfiveb**, includes these and adds using the toilet. The fourth, **rWadltotb_k**, includes all available ADL activities: bathe, dress, eat, getting in and out of bed and walking across the room, using the toilet, washing face and brushing teeth, and controlling urination and defecation. The "needs help" versions of the individual measures are used to construct these measures, i.e., **rWdressb**, **rWbathb**, **rWeatb**, **rWtoiltb**, **rWbedb_k**, **rWbrusab**, and **rWurinb** variables are used. Each limitation adds one to the summary measure, that is:

rWadlwb = sum (**rWbathb**, **rWdressb**, **rWeatb**). **rWadlwbm** is the number of ADL components with missing values used to calculate **rWadlwb**. **rWadlwb** is calculated for all respondents who answered at least one of the ADL component questions. **rWadlwba** is an indicator variable equal to 1 if the respondent needs help with at least one of the three ADLs, and equal to 0 if the respondent does not need any help with any of the included ADLs. If all components are missing, then **rWadlwb** and **rWadlwba** are assigned special missing (.m). These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

rWadlb_k = sum (**rWbathb**, **rWdressb**, **rWeatb**, **rWbedb_k**). **rWadlam_k** is the number of ADL components with missing values used to calculate **rWadlb_k**. **rWadlb_k** is calculated for all respondents who answered at least one of the ADL

component questions. **rWadlba_k** is an indicator variable equal to 1 if the respondent needs help with at least one of the four ADLs, and equal to 0 if the respondent does not need any help with any of the included ADLs. If all components are missing, then **rWadlb_k** and **rWadlba_k** are assigned special missing (.m). These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

rWadlfiveb = sum (rWbathb, rWdressb, rWeatb, rWbedb_k, rWtoiltb). **rWadlfivebm** is the number of ADL components with missing values used to calculate **rWadlfiveb**. **rWadlfiveb** is calculated for all respondents who answered at least one of the ADL component questions. **rWadlfiveba** is an indicator variable equal to 1 if the respondent needs help with at least one of the five ADLs, and equal to 0 if the respondent does not need any help with any of the included ADLs. If all components are missing, then **rWadlfiveb** and **rWadlfiveba** are assigned special missing (.m). These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

rWadltotb_k = sum(rWbathb, rWdressb, rWeatb, rWbedb_k, rWtoiltb, rWbrusab, rWurinb). **rWadltotb_k** is the number of ADL components with missing values used to calculate **rWadltotb_k**. **rWadltotb_k** is calculated for all respondents who answered at least one of the ADL component questions. **rWadltotba_k** is an indicator variable equal to 1 if the respondent needs help with at least one of the seven ADLs, and equal to 0 if the respondent does not need any help with any of the included ADLs. If all components are missing, then **rWadltotb_k** and **rWadltotba_k** are assigned special missing (.m). These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

sWadlwba, **sWadlb_k**, **sWadlfiveb**, and **sWadltotb_k** are the respondent's spouse's four ADL summary measures, and are taken directly from the spouse's measures for **rWadlwba**, **rWadlb_k**, **rWadlfiveb**, and **rWadltotb_k**, respectively. **sWadlwbm**, **sWadlam_k**, **sWadlfivebm**, and **sWadltotbm_k** count the number of missing values used in the four ADL summary measures for the respondent's spouse, and are taken directly from the spouse's responses to **rWadlwbm**, **rWadlam_k**, **rWadlfivebm**, and **rWadltotbm_k**, respectively. **sWadlwba**, **sWadlaa_k**, **sWadlfiveba**, and **sWadltotba_k** are indicator variables equal to 1 if the respondent's spouse needs help with at least one of the ADLs in the respective summary measures, and their values are taken directly from the spouse's responses to **rWadlwba**, **rWadlaa_k**, **rWadlfiveba**, and **rWadltotba_k**, respectively. In addition to the special missings utilized by the respondent variables, the spouse variables employ two special missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please see "Activities of Daily Living (ADLs): Needs Help" for a description of how the individual dummy variables (**rWdressb**, **rWbathb**, **rWeatb**, **rWtoiletb**, **rWbedb_k**, **rWbrusab**, and **rWurinb**) are constructed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike HRS, which asks whether the respondent has difficulty with the ADL activities, KLoSA asks whether the respondent needs help with the activities. In order to distinguish the differences, the relevant variables are constructed including "b" instead of "a" in their names (e.g., **rWadlwba** instead of **rWadlwa**).

Unlike HRS, KLoSA does not ask walk across the room as a separate question in their ADL questions so it is not possible to create **rWadlb** like in the RAND HRS. Instead, the Gateway Harmonized KLoSA offers **rWadlb_k**, which includes bathing, dressing, eating, and getting in and out of bed (including crossing the room), but does not include a separate measure for walking across the room. Additionally, the Gateway Harmonized KLoSA offers two additional ADL summary measures, **rWadlfiveb**, which is comparable to the variable of a similar name in the Gateway Harmonized HRS, and **rWadltotb_k**, which is a KLoSA specific summary that includes all ADL measures. Please see above for detail on those.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing
----------	---	------	---------	---------	---------	---------------

Original KLoSA Variables Used

Wave 1:

WO1C201	Help required for activities of daily life(ADL)_Dressing
WO1C202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
WO1C203	Help required for activities of daily life(ADL)_Bathing and showering
WO1C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO1C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO1C206	Help required for activities of daily life(ADL)_Using the toilet
WO1C207	Help required for activities of daily life(ADL)_Using the toilet without spillin

Wave 2:

WO2C201	Help required for activities of daily life(ADL)_Dressing
WO2C202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
WO2C203	Help required for activities of daily life(ADL)_Bathing and showering
WO2C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO2C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO2C206	Help required for activities of daily life(ADL)_Using the toilet

wo2c207	Help required for activities of daily life(ADL)_Using the toilet without spillin
Wave 3:	
wo3c201	Help required for activities of daily life(ADL)_Dressing
wo3c202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
wo3c203	Help required for activities of daily life(ADL)_Bathing and showering
wo3c204	Help required for activities of daily life(ADL)_Eating food that have prepared
wo3c205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
wo3c206	Help required for activities of daily life(ADL)_Using the toilet
wo3c207	Help required for activities of daily life(ADL)_Using the toilet without spillin
Wave 4:	
wo4c201	Help required for activities of daily life(ADL)_Dressing
wo4c202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
wo4c203	Help required for activities of daily life(ADL)_Bathing and showering
wo4c204	Help required for activities of daily life(ADL)_Eating food that have prepared
wo4c205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
wo4c206	Help required for activities of daily life(ADL)_Using the toilet
wo4c207	Help required for activities of daily life(ADL)_Using the toilet without spillin
Wave 5:	
wo5c201	Help required for activities of daily life(ADL)_Dressing
wo5c202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
wo5c203	Help required for activities of daily life(ADL)_Bathing and showering
wo5c204	Help required for activities of daily life(ADL)_Eating food that have prepared
wo5c205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
wo5c206	Help required for activities of daily life(ADL)_Using the toilet
wo5c207	Help required for activities of daily life(ADL)_Using the toilet without spillin
Wave 5 Add:	
wo5c201	Help required for activities of daily life(ADL)_Dressing
wo5c202	Help required for activities of daily life(ADL)_Washing face and hair and brushi
wo5c203	Help required for activities of daily life(ADL)_Bathing and showering

How Constructed

Four Instrumental Activities of Daily Living (IADL) summaries are derived. One (**rWiadlb_k**) summarizes the commonly used IADLs, using the phone, managing money, and taking medications. The second (**rWiadlfourb**) summarizes managing money, taking medications, shopping, and preparing hot meals. The third (**rWiadlzb**) summarizes using the phone, managing money, taking medications, shopping, and preparing hot meals. The fourth one (**rWiadltotb_k**) summarizes all ten of the IADLs - using the phone, managing money, taking medications, shopping, preparing hot meals, doing housework, personal grooming, doing laundry, going out, and using transportation. All of these summary measures use the indicators of "needs help" described above. Each limitation adds one to the summary measure, that is:

rWiadlb = sum (**rWphoneb**, **rWmoneyb**, **rWmedsb**). **rWiadlbm** is the number of IADL components with missing values used in the calculation of **rWiadlb**. **rWiadlb** is calculated for all respondents who answered at least one IADL component question. **rWiadlba** is an indicator variable equal to 1 if the respondent needs help with at least one of the three IADLs, and equal to 0 if the respondent does not need help with any of the included IADLs. If all components are missing, then **rWiadlb** and **rWiadlba** are assigned special missing (.m). These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

rWiadlfourb = sum (**rWmoneyb**, **rWmedsb**, **rWshopb**, **rWmealb**). **rWiadlfourbm** is the number of IADL components with missing values used in the calculation of **rWiadlfourb**. **rWiadlfourb** is calculated for all respondents who answered at least one IADL component question. **rWiadlfourba** is an indicator variable equal to 1 if the respondent needs help with

at least one of the four IADLs, and equal to 0 if the respondent does not need help with any of the included IADLs. If all components are missing, then **rWiadlfourb** and **rWiadlfourba** are assigned special missing (.m). These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

rWiadlzb = sum (**rWphoneb**, **rWmoneyb**, **rWmedsb**, **rWshopb**, **rWmealb**). **rWiadlzbm** is the number of IADL components with missing values used in the calculation of **rWiadlzb**. **rWiadlzb** is calculated for all respondents who answered at least one IADL component question. **rWiadlzb** is an indicator variable equal to 1 if the respondent needs help with at least one of the five IADLs, and equal to 0 if the respondent does not need help with any of the included IADLs. If all components are missing, then **rWiadlzb** and **rWiadlzb** are assigned special missing (.m). These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

rWiadltotb_k = sum (**rWphoneb**, **rWmoneyb**, **rWmedsb**, **rWshopb**, **rWmealb**, **rWhousewkb**, **rWgroomb**, **rWlaundryb**, **rWgooutb**, **rWtransb**). **rWiadltotbm_k** is the number of IADL components with missing values used in the calculation of **rWiadltotb_k**. **rWiadltotb_k** is calculated for all respondents who answered at least one IADL component question. **rWiadltotba_k** is an indicator variable equal to 1 if the respondent needs help with at least one of the ten IADLs, and equal to 0 if the respondent does not need help with any of the included IADLs. If all components are missing, then **rWiadltotb_k** and **rWiadltotba_k** are assigned special missing (.m). These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

sWiadlb, **sWiadlfourb**, **sWiadlzb**, and **sWiadltotb_k** are the respondent's spouse's summaries and are taken directly from the spouse's **rWiadlb**, **rWiadlfourb**, **rWiadlzb**, and **rWiadltotb_k** measures, respectively. **sWiadlbm**, **sWiadlfourbm**, **sWiadlzbm**, and **sWiadltotbm_k** are the number of missing values in the respondent's spouse's summaries and are taken directly from the spouse's **rWiadlbm**, **rWiadlfourbm**, **rWiadlzbm**, and **rWiadltotbm_k**, respectively. **sWiadlba**, **sWiadlfourba**, **sWiadlzba**, and **sWiadltotba_k** are indicator variables equal to 1 if the respondent needs help with at least one of the IADLs in the respective summary measure for the respondent's spouse. In addition to the special missings utilized by the respondent variables, the spouse variables employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Please see "Instrumental Activities of Daily Living (IADLs): Needs Help" for a description of how the individual 0/1 indicators (**rWphoneb**, **rWmoneyb**, **rWmedsb**, **rWshopb**, **rWmealsa**, **rWhousewkb**, **rWgroomb**, **rWlaundryb**, **rWgooutb**, and **rWtransb**) are constructed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike HRS, which asks whether the respondent has difficulty with the IADL activities, KLoSA asks whether the respondent needs help with the activities. In order to distinguish the differences, the relevant variables are constructed including "b" instead of "a" in their names (e.g., **rWiadlb** instead of **rWiadla**).

The RAND HRS does not include **rWiadlaa** and **rWiadlzaa**, while these measures are included in the Gateway Harmonized KLoSA as **rWiadlba** and **rWiadlzba**. The Gateway Harmonized KLoSA offers two additional IADL summary measures, **rWiadlfourb**, which is comparable to the variable of a similar name in the Gateway Harmonized HRS, and **rWiadlb_k**, which is a KLoSA specific summary that includes all available IADL measures. Please see above for detail on those.

How Constructed

rWhibpe, **rWdiabe**, **rWcancr**, **rWlunge**, **rWhearte**, **rWstroke**, **rWpsyche**, **rWarthre**, **rWlivere**, **rWdigeste**, and **rWalzdeme** are dichotomous measures coded 1 if the respondent has ever been diagnosed by a doctor as having high blood pressure, diabetes or high blood sugar, cancer or malignant tumor (excluding minor skin cancer), lung disease (such as bronchitis or emphysema), heart problems (such as having had a heart attack, coronary heart disease, angina, congestive heart failure), stroke (including possible ischemic attack), psychological problems (emotional, nervous problems included), arthritis or rheumatism, liver disease, digestive system disorder, or dementia (such as senile dementia or Alzheimer's disease), respectively. **rWalzdeme** is also coded as 1 if the respondent reports having mild cognitive impairment. These variables are coded as 0 if the respondent has never been diagnosed by a doctor as having the condition. Questions about digestive system disorder were added to KLoSA starting in Wave 5. Questions about dementia were added to KLoSA starting in Wave 7. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Plain missing (.) is assigned for respondents who did not respond to the current wave.

Starting in Wave 2, these questions were skipped if the respondent has ever been diagnosed by a doctor as having these conditions in a previous wave. In these cases, **rWhibpe**, **rWdiabe**, **rWcancr**, **rWlunge**, **rWhearte**, **rWstroke**, **rWpsyche**, **rWarthre**, **rWlivere**, **rWdigeste**, and **rWalzdeme** are coded to 1 as ever had the condition.

sWhibpe, **sWdiabe**, **sWcancr**, **sWlunge**, **sWhearte**, **sWstroke**, **sWpsyche**, **sWarthre**, **sWlivere**, **sWdigeste**, and **sWalzdeme** give this information for the respondent's spouse or partner and are taken directly from respondent's spouse's values to **rWhibpe**, **rWdiabe**, **rWcancr**, **rWlunge**, **rWhearte**, **rWstroke**, **rWpsyche**, **rWarthre**, **rWlivere**, **rWdigeste**, and **rWalzdeme**. In addition to the special missing codes utilized by **rWhibpe**, **rWdiabe**, **rWcancr**,

rWlunge, rWhearte, rWstroke, rWpsyche, rWarthe, rWlivere, rWdigeste and rWalzdeme, sWhibpe, sWdiabe, sWcancre, sWlunge, sWhearte, sWstroke, sWpsyche, sWarthe, sWlivere, sWdigeste and rWalzdeme employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Starting in Wave 2, a doctor diagnosed question was skipped if the respondent had previously reported having that condition at a prior wave. In these cases, rWhibpe, rWdiabe, rWcancre, rWlunge, rWhearte, rWstroke, rWpsyche, rWarthe, rWlivere, rWdigeste and rWalzdeme are coded to 1 as ever had the condition.

A question about whether the respondent has been diagnosed with a digestive system disorder was added in Wave 5. A question about whether the respondent has been diagnosed with a dementia was added in Wave 7.

Cross-Study Differences with the HRS

Unlike KLoSA, HRS does not ask the respondents whether they have been diagnosed with liver disease or digestive system disease.

Original KLoSA Variables Used

Wave 1:

wo1co06	Whether or not high blood pressure or hypertension diagnostic
wo1co11	Whether or not diabetes or high blood sugar diagnostic
wo1co16	Whether or not cancer or malignant tumor diagnostic
wo1co23	Whether or not chronic lung disease diagnostic
wo1co28	Whether or not liver disease diagnostic
wo1co33	Whether or not heart related disease diagnostic
wo1co38	Whether or not cerebrovascular disease diagnostic
wo1co43	Whether or not any emotional, nervous, or psychiatric problems diagnostic
wo1co48	Whether or not arthritis or rheumatism diagnostic

Wave 2:

wo2co06	Since the previous interview, whether or not high blood pressure or hypertension
wo2co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo2co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo2co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo2co28	Since the previous interview, whether or not liver disease diagnostic
wo2co33	Since the previous interview, whether or not heart related disease diagnostic
wo2co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo2co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo2co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic

Wave 3:

wo3co06	Since the previous interview, whether or not high blood pressure or hypertension
wo3co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo3co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo3co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo3co28	Since the previous interview, whether or not liver disease diagnostic
wo3co33	Since the previous interview, whether or not heart related disease diagnostic
wo3co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo3co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo3co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic

Wave 4:

w04c006	Since the previous interview, whether or not high blood pressure or hypertension
w04c011	Since the previous interview, whether or not diabetes or high blood sugar diagno
w04c016	Since the previous interview, whether or not cancer or malignant tumor diagnosti
w04c023	Since the previous interview, whether or not chronic lung disease diagnostic
w04c028	Since the previous interview, whether or not liver disease diagnostic
w04c033	Since the previous interview, whether or not heart related disease diagnostic
w04c038	Since the previous interview, whether or not cerebrovascular disease diagnostic
w04c043	Since the previous interview, whether or not any emotional, nervous, or psychiat
w04c048	Since the previous interview, whether or not arthritis or rheumatism diagnostic
Wave 5:	
w05c006	Since the previous interview, whether or not high blood pressure or hypertension
w05c011	Since the previous interview, whether or not diabetes or high blood sugar diagno
w05c016	Since the previous interview, whether or not cancer or malignant tumor diagnosti
w05c023	Since the previous interview, whether or not chronic lung disease diagnostic
w05c028	Since the previous interview, whether or not liver disease diagnostic
w05c033	Since the previous interview, whether or not heart related disease diagnostic
w05c038	Since the previous interview, whether or not cerebrovascular disease diagnostic
w05c043	Since the previous interview, whether or not any emotional, nervous, or psychiat
w05c048	Since the previous interview, whether or not arthritis or rheumatism diagnostic
w05c074n	Whether or not diagnostic for diseases of the digestive system
Wave 5 Add:	
w05c006	Whether or not high blood pressure or hypertension diagnostic
w05c011	Whether or not diabetes or high blood sugar diagnostic
w05c016	Whether or not cancer or malignant tumor diagnostic
w05c023	Whether or not chronic lung disease diagnostic
w05c028	Whether or not liver disease diagnostic
w05c033	Whether or not heart related disease diagnostic
w05c038	Whether or not cerebrovascular disease diagnostic
w05c043	Whether or not any emotional, nervous, or psychiatric problems diagnostic
w05c048	Whether or not arthritis or rheumatism diagnostic
w05c074n	Whether or not diagnostic for diseases of the digestive system
Wave 6:	
w06c006	Since the previous interview, whether or not high blood pressure or hypertension
w06c011	Since the previous interview, whether or not diabetes or high blood sugar diagno
w06c016	Since the previous interview, whether or not cancer or malignant tumor diagnosti
w06c023	Since the previous interview, whether or not chronic lung disease diagnostic
w06c028	Since the previous interview, whether or not liver disease diagnostic
w06c033	Since the previous interview, whether or not heart related disease diagnostic
w06c038	Since the previous interview, whether or not cerebrovascular disease diagnostic
w06c043	Since the previous interview, whether or not any emotional, nervous, or psychiat
w06c048	Since the previous interview, whether or not arthritis or rheumatism diagnostic
w06c074n	Whether or not diagnostic for diseases of the digestive system
Wave 7:	
w07c006	Since the previous interview, whether or not high blood pressure or hypertension
w07c011	Since the previous interview, whether or not diabetes or high blood sugar diagno
w07c016	Since the previous interview, whether or not cancer or malignant tumor diagnosti
w07c023	Since the previous interview, whether or not chronic lung disease diagnostic
w07c028	Since the previous interview, whether or not liver disease diagnostic
w07c033	Since the previous interview, whether or not heart related disease diagnostic
w07c038	Since the previous interview, whether or not cerebrovascular disease diagnostic
w07c043	Since the previous interview, whether or not any emotional, nervous, or psychiat
w07c048	Since the previous interview, whether or not arthritis or rheumatism diagnostic
w07c074n	Whether or not diagnostic for diseases of the digestive system

wo7cadd_o1	Whether or not diagnostic for dementia
Wave 8:	
wo8co06	Since the previous interview, whether or not high blood pressure or hypertension
wo8co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo8co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo8co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo8co28	Since the previous interview, whether or not liver disease diagnostic
wo8co33	Since the previous interview, whether or not heart related disease diagnostic
wo8co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo8co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo8co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo8co74n	Whether or not diagnostic for diseases of the digestive system
wo8cadd_o1	Whether or not diagnostic for dementia
Wave 9:	
wo9co06	Since the previous interview, whether or not high blood pressure or hypertension
wo9co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo9co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo9co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo9co28	Since the previous interview, whether or not liver disease diagnostic
wo9co33	Since the previous interview, whether or not heart related disease diagnostic
wo9co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo9co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo9co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo9co74n	Whether or not diagnostic for diseases of the digestive system
wo9cadd_o1	Whether or not diagnostic for dementia

How Constructed

radiaghibp indicates the age at which the respondent was first diagnosed with high blood pressure. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with high blood pressure are not asked this question and are assigned a special missing code (.x). If the age first diagnosed with high blood pressure is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiaghibp** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiaghibp indicates the age at which the respondent's current wave's spouse was first diagnosed with high blood pressure, and is taken from **radiaghibp**. In addition to the special missing codes employed by **radiaghibp**, **sWdiaghibp** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagdiab indicates the age at which the respondent was first diagnosed with diabetes. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with diabetes are not asked this question and are assigned a special missing code (.x). If the age first diagnosed with diabetes is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiagdiab** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagdiab indicates the age at which the respondent's current wave's spouse was first diagnosed with diabetes, and is taken from **radiagdiab**. In addition to the special missing codes employed by **radiagdiab**, **sWdiagdiab** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagcancr indicates the age at which the respondent was first diagnosed with cancer. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. If the age first diagnosed with cancer is provided in multiple waves, the first provided age is used. Respondents who have never been diagnosed with cancer are not asked this question and are assigned a special missing code (.x). Don't know, refused, or other missing responses of **radiagcancr** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagcancr indicates the age at which the respondent's current wave's spouse was first diagnosed with cancer, and is taken from **radiagcancr**. In addition to the special missing codes employed by **radiagcancr**, **sWdiagcancr** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiaglun indicates the age at which the respondent was first diagnosed with lung disease. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with lung disease are not asked this question and are assigned a special missing code (.x). If the age first diagnosed with lung disease is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiaglun** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiaglun indicates the age at which the respondent's current wave's spouse was first diagnosed with lung disease, and is taken from **radiaglun**. In addition to the special missing codes employed by **radiaglun**, **sWdiaglun** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagheart indicates the age at which the respondent was first diagnosed with heart disease. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with heart disease are not asked this question and are assigned a special missing code (.x). If the age first diagnosed with heart disease is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiagheart** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagheart indicates the age at which the respondent's current wave's spouse was first diagnosed with heart disease, and is taken from **radiagheart**. In addition to the special missing codes employed by **radiagheart**, **sWdiagheart** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagstrok indicates the age at which the respondent was first diagnosed with having a stroke. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with having a stroke are not asked this question and are assigned a special missing code (.x). If the age first diagnosed with a stroke is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiagstrok** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagstrok indicates the age at which the respondent's current wave's spouse was first diagnosed with having a stroke, and is taken from **radiagstrok**. In addition to the special missing codes employed by **radiagstrok**, **sWdiagstrok** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagpsych indicates the age at which the respondent was first diagnosed with emotional, nervous, or psychiatric problems. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with emotional, nervous, or psychiatric problems are not asked this question and are assigned a special missing code (.x). If the age first diagnosed with emotional, nervous, or psychiatric problems is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiagpsych** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagpsych indicates the age at which the respondent's current wave's spouse was first diagnosed with emotional, nervous, or psychiatric problems, and is taken from **radiagpsych**. In addition to the special missing codes employed by **radiagpsych**, **sWdiagpsych** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagarthr indicates the age at which the respondent was first diagnosed with arthritis. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with arthritis are not asked this question and are assigned a special missing code (.x). If the age first diagnosed with arthritis is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiagarthr** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagarthr indicates the age at which the respondent's current wave's spouse was first diagnosed with arthritis, and is taken from **radiagarthr**. In addition to the special missing codes employed by **radiagarthr**, **sWdiagarthr** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagliver indicates the age at which the respondent was first diagnosed with liver disease. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with liver disease are not asked this question and are assigned a special missing code (.x). If the age first diagnosed with liver disease is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiagliver** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagliver indicates the age at which the respondent's current wave's spouse was first diagnosed with liver disease, and is taken from **radiagliver**. In addition to the special missing codes employed by **radiagliver**, **sWdiagliver** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagdigest indicates the age at which the respondent was first diagnosed with diseases of the digestive system. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been diagnosed with diseases of the digestive system are not asked this question and are assigned a special missing code (.x). The questions about diseases of the digestive system become available in Wave 5 and as such **radiagdigest** is based on information available from Wave 5 forward. For those who have only been interviewed in Waves 1 through 4 when this question was not asked, **radiagdigest** is assigned special missing (.q). If the age first diagnosed with diseases of the digestive system is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiagdigest** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagdigest indicates the age at which the respondent's current wave's spouse was first diagnosed with diseases of the digestive system, and is taken from **radiagdigest**. In addition to the special missing codes employed by **radiagdigest**, **sWdiagdigest** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

radiagalzdem indicates the age at which the respondent was first diagnosed with dementia (such as senile dementia or Alzheimer's disease) or mild cognitive impairment. Respondents are asked the year in which they were diagnosed, and these responses are converted to their age at diagnosis using their reported birth year. Respondents who have never been

diagnosed with dementia are not asked this question and are assigned a special missing code (.x). The questions about dementia become available in Wave 7 and as such **radiagalzdem** is based on information available from Wave 7 forward. For those who have only been interviewed in Waves 1 through 6 when this question was not asked, **radiagalzdem** is assigned special missing (.q). If the age first diagnosed with dementia is provided in multiple waves, the first provided age is used. Don't know, refused, or other missing responses of **radiagalzdem** are assigned special missing codes (.d), (.r), and (.m), respectively.

sWdiagalzdem indicates the age at which the respondent's current wave's spouse was first diagnosed with dementia, and is taken from **radiagalzdem**. In addition to the special missing codes employed by **radiagalzdem**, **sWdiagalzdem** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Respondents are first asked about diseases of the digestive system starting in Wave 5 and hence **radiagdigest** is based on information available in Wave 5 and forward. Respondents are first asked about dementia starting in Wave 7 and hence **radiagalzdem** is based on information available in Wave 7 and forward.

Cross-Study Differences with the HRS

Respondents are asked separate questions about the occurrence of a heart attack, diagnosis of congestive heart failure, diagnosis of abnormal heart rhythm, and diagnosis of angina in later waves of the HRS. Differently from HRS, these questions are never asked separately in KLoSA, but rather in one question under "heart disease".

Please note that in both the HRS and KLoSA, respondents are asked to report the year of diagnosis, from which age at diagnosis is calculated using birth year in the Gateway Harmonized datasets.

radiagdiab is included in the Gateway Harmonized HRS, all the rest, **radiaghibp**, **radiagcancr**, **radiaglung**, **radiagheart**, **radiagstrok**, **radiagpsych**, **radiagarthr**, **radiagliver**, **radiagdigest**, and **radiagalzdem** are only available in Gateway Harmonized KLoSA. In the HRS questions about cancer, heart attack, and stroke pertain to the most current occurrence of the disease, rather than the first diagnosis of the disease and the Gateway Harmonized HRS reflects age at most current occurrence of the above conditions. Questions about when the respondent was diagnosed with high blood pressure, lung disease, psychological problems, and arthritis are not asked in HRS. The set of questions about liver disease, digestive system disease, and dementia are not asked in HRS.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing

Original KLoSA Variables Used

Wave 1:

WO1CO06	Whether or not high blood pressure or hypertension diagnostic
WO1CO11	Whether or not diabetes or high blood sugar diagnostic
WO1CO16	Whether or not cancer or malignant tumor diagnostic
WO1CO23	Whether or not chronic lung disease diagnostic

Section B. Health

wo1co28	Whether or not liver disease diagnostic
wo1co33	Whether or not heart related disease diagnostic
wo1co38	Whether or not cerebrovascular disease diagnostic
wo1co43	Whether or not any emotional, nervous, or psychiatric problems diagnostic
wo1co48	Whether or not arthritis or rheumatism diagnostic
Wave 2:	
wo2co06	Since the previous interview, whether or not high blood pressure or hypertension
wo2co11	Since the previous interview, whether or not diabetes or high blood sugar diagnostic
wo2co16	Since the previous interview, whether or not cancer or malignant tumor diagnostic
wo2co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo2co28	Since the previous interview, whether or not liver disease diagnostic
wo2co33	Since the previous interview, whether or not heart related disease diagnostic

How Constructed

These variables indicate whether the respondent takes medication or receives treatment for a condition given that they report having that condition. These variables are coded as 0.no, and 1.yes. **rWrxfhbp**, **rWrxfdiab**, **rWrxfcancr**, **rWrxfung**, **rWrxfheart**, **rWrxfstrok**, **rWrxfpsych**, **rWrxfarthr**, **rWrxfiver**, **rWrxfdigest**, and **rWrxfalzdem** are also assigned a value of 0 if the respondent does not have the condition in question. Don't know, refused, or other missing responses of these variables are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

rWrxfhbp indicates whether the respondent takes medication or is receiving treatment for high blood pressure, and is coded as 0 if the respondent did not report having high blood pressure or hypertension. The respondent is asked about taking medication for high blood pressure after reporting a high blood pressure diagnosis.

rWrxfdiab indicates whether the respondent takes medication or is receiving treatment for diabetes. **rWrxfdiab** is coded as 0 if the respondent did not report having diabetes. The respondent is asked about taking medication for diabetes after reporting a diabetes or high blood sugar diagnosis.

rWrxfcancr indicates whether the respondent takes medication or is receiving treatment for cancer. **rWrxfcancr** is coded as 0 if the respondent did not report having cancer. The respondent is asked about taking medication or being treated for cancer after reporting a cancer diagnosis.

rWrxlung indicates whether the respondent takes medication or is receiving treatment for lung disease. **rWrxlung** is coded as 0 if the respondent did not report having lung disease. The respondent is asked about taking medication for lung disease after reporting a lung disease diagnosis.

rWrxheart indicates whether the respondent takes medication or is receiving treatment for heart problems, including heart attack, angina pectoris, myocardial infarction, congestive heart failure, or other heart disease, and is coded as 0 if the respondent did not report having a heart problem. The respondent is asked about taking medication for heart problems after reporting a diagnosis of a heart problem.

rWrxstrok indicates whether the respondent takes medication or is receiving treatment for stroke, and is coded as 0 if the respondent did not report having a stroke. The respondent is asked about taking medication for stroke after reporting a stroke. Starting in Wave 5, if the respondent reported not having a stroke since the previous interview but reported having a stroke in an earlier wave, then this question is not asked and **rWrxstrok** is assigned special missing (.s).

rWrxpsych indicates whether the respondent takes tranquilizers, antidepressants, sedatives, or sleeping pills or is receiving psychiatric or psychological treatment for emotional (depression, anxiety disorder, etc.), nervous (insomnia, too much stress, etc.), or psychiatric (mental disorder, difficulties in maintaining personal relationships, etc.) conditions, and is coded as 0 if the respondent did not report having an emotional, nervous or psychiatric problem. The respondent is asked about taking medication for psychiatric conditions after reporting a diagnosis of a psychiatric condition.

rWrxarthr indicates whether the respondent takes medication or is receiving treatment for arthritis or rheumatism, and is coded as 0 if the respondent did not report having arthritis or rheumatism (bursitis/tendinitis included). The respondent is asked about taking medication for arthritis after reporting a diagnosis of arthritis.

rWrxliver indicates whether the respondent takes medication or is receiving treatment for liver disease. **rWrxliver** is coded as 0 if the respondent did not report having liver disease. The respondent is asked about taking medication for liver disease after reporting a liver disease diagnosis.

rWrxdigest indicates whether the respondent takes medication or is receiving treatment for diseases of the digestive system. **rWrxdigest** is coded as 0 if the respondent did not report having diseases of the digestive system. The respondent is asked about taking medication for diseases of the digestive system after reporting a disease of the digestive system diagnosis. **rWrxdigest** is available starting in Wave 5. Starting in Wave 6, if the respondent reported not having a diseases of the digestive system since the previous interview but reported having a diseases of the digestive system in an earlier wave, then this question is not asked and **rWrxdigest** is assigned special missing (.s).

rWrxalzdem indicates whether the respondent takes medication or is receiving treatment for dementia (such as senile dementia or Alzheimer's disease) or mild cognitive impairment. **rWrxalzdem** is coded as 0 if the respondent did not report having dementia. The respondent is asked about taking medication for dementia after reporting a dementia diagnosis. **rWrxalzdem** is available starting in Wave 7. Starting in Wave 8, if the respondent reported not having dementia since the previous interview but reported having dementia in an earlier wave, then this question is not asked and **rWrxalzdem** is assigned special missing (.s).

sWrxhibp, **sWrxdiab**, **sWrxcancr**, **sWrxlung**, **sWrxheart**, **sWrxstrok**, **sWrxpsych**, **sWrxarthr**, **sWrxliver**, **sWrxdigest**, and **sWrxalzdem** indicate whether the respondent's current wave's spouse takes medication or receives treatment for the specified condition, and are taken from corresponding respondent variables. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Starting in Wave 5, if the respondent reported not having a stroke since the previous interview but reported having a stroke in an earlier wave, then whether the respondent takes medication or is receiving treatment for stroke is not asked.

Respondents are first asked about diseases of the digestive system starting in Wave 5 and hence **rWrxdigest** is based on information available in Wave 5 and forward. Starting in Wave 6, if the respondent reported not having a disease of the

digestive system since the previous interview but reported having a disease of the digestive system in an earlier wave, then whether the respondent takes medication or is receiving treatment for digestive disease is not asked.

Respondents are first asked about dementia starting in Wave 7 and hence **rWrxalzem** is based on information available in Wave 7 and forward. Starting in Wave 8, if the respondent reported not having dementia since the previous interview but reported having dementia in an earlier wave, then whether the respondent takes medication or is receiving treatment for dementia is not asked.

Cross-Study Differences with the HRS

In HRS, respondents are generally asked whether they take medication for a condition, whereas in KLoSA, respondents are generally asked whether they are taking medication or receiving treatment for a condition in the same question.

Unlike in HRS, KLoSA respondents are not asked about insulin and diabetes medications separately if they report a diabetes diagnosis. Instead they answer one question of whether they receive a treatment or medications for the condition. Their response is recorded in the **rWrxdiab** variable in the Gateway Harmonized KLoSA.

Unlike in HRS, KLoSA respondents are not asked about chemotherapy or medications, surgery or biopsy, radiation or x-ray, and another unspecified type of treatment for cancer separately if they report a cancer diagnosis. Instead they answer one question of whether they receive a treatment or medications for the condition. Their response is recorded in the **rWrxcancr** variable in the Gateway Harmonized KLoSA.

Unlike in HRS, KLoSA does not ask whether the respondent receives medications or treatment for symptoms (pain, nausea, rashes) for the treatment of cancer, takes medication for heart attack, or takes medication for a memory-related disease. Unlike in KLoSA, HRS does not ask whether the respondent receives medications or treatment for liver disease, diseases of the digestive system or dementia.

Original KLoSA Variables Used

Wave 1:

wo1co06	Whether or not high blood pressure or hypertension diagnostic
wo1co11	Whether or not diabetes or high blood sugar diagnostic
wo1co16	Whether or not cancer or malignant tumor diagnostic
wo1co23	Whether or not chronic lung disease diagnostic
wo1co28	Whether or not liver disease diagnostic
wo1co33	Whether or not heart related disease diagnostic
wo1co38	Whether or not cerebrovascular disease diagnostic
wo1co43	Whether or not any emotional, nervous, or psychiatric problems diagnostic
wo1co48	Whether or not arthritis or rheumatism diagnostic
wo1co09	Whether or not taking medicine and treatment about high blood pressure or hypert
wo1co14	Whether or not taking medicine and treatment about diabetes or high blood sugar
wo1co21	Whether or not taking medicine and treatment about cancer or malignant tumor
wo1co26	Whether or not taking medicine and treatment about chronic lung disease
wo1co31	Whether or not taking medicine and treatment about liver disease
wo1co36	Whether or not taking medicine and treatment about heart related disease
wo1co41	Whether or not taking medicine and treatment about cerebrovascular disease
wo1co46	Whether or not taking medicine and treatment about any emotional, nervous, or ps
wo1co51	Whether or not taking medicine and treatment about arthritis or rheumatism

Wave 2:

wo2co06	Since the previous interview, whether or not high blood pressure or hypertension
wo2co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo2co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo2co23	Since the previous interview, whether or not chronic lung disease diagnostic

wo2co28	Since the previous interview, whether or not liver disease diagnostic
wo2co33	Since the previous interview, whether or not heart related disease diagnostic
wo2co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo2co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo2co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo2co09	Whether or not taking medicine and treatment about high blood pressure or hypert
wo2co14	Whether or not taking medicine and treatment about diabetes or high blood sugar
wo2co21	Whether or not taking medicine and treatment about cancer or malignant tumor
wo2co26	Whether or not taking medicine and treatment about chronic lung disease
wo2co31	Whether or not taking medicine and treatment about liver disease
wo2co36	Whether or not taking medicine and treatment about heart related disease
wo2co41	Whether or not taking medicine and treatment about cerebrovascular disease
wo2co46	Whether or not taking medicine and treatment about any emotional, nervous, or ps
wo2co51	Whether or not taking medicine and treatment about arthritis or rheumatism
Wave 3:	
wo3co06	Since the previous interview, whether or not high blood pressure or hypertension
wo3co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo3co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo3co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo3co28	Since the previous interview, whether or not liver disease diagnostic
wo3co33	Since the previous interview, whether or not heart related disease diagnostic
wo3co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo3co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo3co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo3co09	Whether or not taking medicine and treatment about high blood pressure or hypert
wo3co14	Whether or not taking medicine and treatment about diabetes or high blood sugar
wo3co21	Whether or not taking medicine and treatment about cancer or malignant tumor
wo3co26	Whether or not taking medicine and treatment about chronic lung disease
wo3co31	Whether or not taking medicine and treatment about liver disease
wo3co36	Whether or not taking medicine and treatment about heart related disease
wo3co41	Whether or not taking medicine and treatment about cerebrovascular disease
wo3co46	Whether or not taking medicine and treatment about any emotional, nervous, or ps
wo3co51	Whether or not taking medicine and treatment about arthritis or rheumatism
Wave 4:	
wo4co06	Since the previous interview, whether or not high blood pressure or hypertension
wo4co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo4co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo4co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo4co28	Since the previous interview, whether or not liver disease diagnostic
wo4co33	Since the previous interview, whether or not heart related disease diagnostic
wo4co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo4co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo4co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo4co09	Whether or not taking medicine and treatment about high blood pressure or hypert
wo4co14	Whether or not taking medicine and treatment about diabetes or high blood sugar
wo4co21	Whether or not taking medicine and treatment about cancer or malignant tumor
wo4co26	Whether or not taking medicine and treatment about chronic lung disease
wo4co31	Whether or not taking medicine and treatment about liver disease
wo4co36	Whether or not taking medicine and treatment about heart related disease
wo4co41	Whether or not taking medicine and treatment about cerebrovascular disease
wo4co46	Whether or not taking medicine and treatment about any emotional, nervous, or ps
wo4co51	Whether or not taking medicine and treatment about arthritis or rheumatism
Wave 5:	

w05c006	Since the previous interview, whether or not high blood pressure or hypertension
w05c011	Since the previous interview, whether or not diabetes or high blood sugar diagno
w05c016	Since the previous interview, whether or not cancer or malignant tumor diagnosti
w05c023	Since the previous interview, whether or not chronic lung disease diagnostic
w05c028	Since the previous interview, whether or not liver disease diagnostic

How Constructed

rWhibplmt, **rWdiablmt**, **rWcancrlmt**, **rWlunglmt**, **rWheartlmt**, **rWstrokltmt**, **rWpsychlmt**, **rWarthlmt**, **rWliverlmt**, **rWdigestlmt** and **rWalzdemlmt** indicate whether a specified health condition limits the daily activity of the respondent. These dichotomous measures are coded as 1 if the respondent has ever been diagnosed by a doctor as having one of the following conditions and it limits their daily activities: high blood pressure, diabetes or high blood sugar, cancer or malignant tumor (excluding minor skin cancer), lung disease (such as bronchitis or emphysema), heart problems (such as having had a heart attack, coronary heart disease, angina, congestive heart failure), stroke (including possible ischemic attack), psychological problems (emotional, nervous problems included), arthritis or rheumatism, liver disease, digestive system disorder, or dementia (such as senile dementia or Alzheimer's disease) or mild cognitive impairment. If the respondent reports that the given health condition does not limit their daily activity, then the indicator variable is set to 0. Special missing (.x) is assigned to respondents who do not report having the health condition in question. Starting in Wave 5, if the respondent reported not being diagnosed with a stroke since the previous interview but reported having a stroke in an earlier wave, then this question is not asked and **rWstrokltmt** is assigned special missing (.s). **rWdigestlmt** becomes available in Wave 5. Starting in Wave 6, if the respondent reported not being diagnosed with a digestive system disorder since the previous interview but reported having a digestive system disorder in an earlier wave, then this question is not asked and **rWdigestlmt** is assigned special missing (.s). **rWalzdemlmt** becomes available in Wave 7. Starting in Wave 8, if the respondent reported not being diagnosed with dementia since the previous interview but reported having dementia in an earlier wave, then this question is not asked and **rWalzdemlmt** is assigned special missing (.s). Don't know,

refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWhibplmt, **sWdiablmt**, **sWcancrlmt**, **sWlunglmt**, **sWheartlmt**, **sWstrokltmt**, **sWpsychlmt**, **sWarthlmt**, **sWliverlmt**, **sWdigestlmt** and **sWalzdemlmt** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWhibplmt**, **rWdiablmt**, **rWcancrlmt**, **rWlunglmt**, **rWheartlmt**, **rWstrokltmt**, **rWpsychlmt**, **rWarthlmt**, **rWliverlmt**, **rWdigestlmt** and **rWalzdemlmt**. In addition to the special missing codes utilized by the respondent variables, the spouse variables employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Starting in Wave 5, if the respondent reported not having a stroke since the previous interview but reported having a stroke in an earlier wave, then whether stroke limits the daily activity of the respondent is not asked.

Respondents are first asked about diseases of the digestive system starting in Wave 5 and hence **rWdigestlmt** is based on information available in Wave 5 and forward. Starting in Wave 6, if the respondent reported not being diagnosed with a digestive system disorder since the previous interview but reported having a digestive system disorder in an earlier wave, then whether a digestive system disorder limits the daily activity of the respondent is not asked.

Respondents are first asked about dementia starting in Wave 7 and hence **rWalzdemlmt** is based on information available in Wave 7 and forward. Starting in Wave 8, if the respondent reported not being diagnosed with dementia since the previous interview but reported having dementia in an earlier wave, then whether dementia limits the daily activity of the respondent is not asked.

Cross-Study Differences with the HRS

The Gateway Harmonized HRS dataset has the following three variables available: **rWlunglmt**, **rWanglmt**, and **rWarthlmt**. The Gateway Harmonized KLoSA does not offer **rWanglmt**, but adds **rWhibplmt**, **rWdiablmt**, **rWcancrlmt**, **rWheartlmt**, **rWstrokltmt**, **rWpsychlmt**, **rWliverlmt**, **rWdigestlmt** and **rWalzdemlmt**.

Original KLoSA Variables Used

Wave 1:

wo1co06	Whether or not high blood pressure or hypertension diagnostic
wo1co11	Whether or not diabetes or high blood sugar diagnostic
wo1co16	Whether or not cancer or malignant tumor diagnostic
wo1co23	Whether or not chronic lung disease diagnostic
wo1co28	Whether or not liver disease diagnostic
wo1co33	Whether or not heart related disease diagnostic
wo1co38	Whether or not cerebrovascular disease diagnostic
wo1co43	Whether or not any emotional, nervous, or psychiatric problems diagnostic
wo1co48	Whether or not arthritis or rheumatism diagnostic
wo1co10	Daily activity difficulty by high blood pressure or hypertension
wo1co15	Daily activity difficulty by diabetes or high blood sugar

wo1co22	Daily activity difficulty by cancer or malignant tumor
wo1co27	Daily activity difficulty by chronic lung disease
wo1co32	Daily activity difficulty by liver disease
wo1co37	Daily activity difficulty by heart related disease
wo1co42	Daily activity difficulty by cerebrovascular disease
wo1co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo1co52	Daily activity difficulty by arthritis or rheumatism
Wave 2:	
wo2co06	Since the previous interview, whether or not high blood pressure or hypertension
wo2co11	Since the previous interview, whether or not diabetes or high blood sugar diagnostic
wo2co16	Since the previous interview, whether or not cancer or malignant tumor diagnostic
wo2co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo2co28	Since the previous interview, whether or not liver disease diagnostic
wo2co33	Since the previous interview, whether or not heart related disease diagnostic
wo2co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo2co43	Since the previous interview, whether or not any emotional, nervous, or psychiatric problems
wo2co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo2co10	Daily activity difficulty by high blood pressure or hypertension
wo2co15	Daily activity difficulty by diabetes or high blood sugar
wo2co22	Daily activity difficulty by cancer or malignant tumor
wo2co27	Daily activity difficulty by chronic lung disease
wo2co32	Daily activity difficulty by liver disease
wo2co37	Daily activity difficulty by heart related disease
wo2co42	Daily activity difficulty by cerebrovascular disease
wo2co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo2co52	Daily activity difficulty by arthritis or rheumatism
Wave 3:	
wo3co06	Since the previous interview, whether or not high blood pressure or hypertension
wo3co11	Since the previous interview, whether or not diabetes or high blood sugar diagnostic
wo3co16	Since the previous interview, whether or not cancer or malignant tumor diagnostic
wo3co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo3co28	Since the previous interview, whether or not liver disease diagnostic
wo3co33	Since the previous interview, whether or not heart related disease diagnostic
wo3co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo3co43	Since the previous interview, whether or not any emotional, nervous, or psychiatric problems
wo3co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo3co10	Daily activity difficulty by high blood pressure or hypertension
wo3co15	Daily activity difficulty by diabetes or high blood sugar
wo3co22	Daily activity difficulty by cancer or malignant tumor
wo3co27	Daily activity difficulty by chronic lung disease
wo3co32	Daily activity difficulty by liver disease
wo3co37	Daily activity difficulty by heart related disease
wo3co42	Daily activity difficulty by cerebrovascular disease
wo3co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo3co52	Daily activity difficulty by arthritis or rheumatism
Wave 4:	
wo4co06	Since the previous interview, whether or not high blood pressure or hypertension
wo4co11	Since the previous interview, whether or not diabetes or high blood sugar diagnostic
wo4co16	Since the previous interview, whether or not cancer or malignant tumor diagnostic
wo4co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo4co28	Since the previous interview, whether or not liver disease diagnostic
wo4co33	Since the previous interview, whether or not heart related disease diagnostic
wo4co38	Since the previous interview, whether or not cerebrovascular disease diagnostic

wo4co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo4co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo4co10	Daily activity difficulty by high blood pressure or hypertension
wo4co15	Daily activity difficulty by diabetes or high blood sugar
wo4co22	Daily activity difficulty by cancer or malignant tumor
wo4co27	Daily activity difficulty by chronic lung disease
wo4co32	Daily activity difficulty by liver disease
wo4co37	Daily activity difficulty by heart related disease
wo4co42	Daily activity difficulty by cerebrovascular disease
wo4co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo4co52	Daily activity difficulty by arthritis or rheumatism
Wave 5:	
wo5co06	Since the previous interview, whether or not high blood pressure or hypertension
wo5co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo5co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo5co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo5co28	Since the previous interview, whether or not liver disease diagnostic
wo5co33	Since the previous interview, whether or not heart related disease diagnostic
wo5co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo5co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo5co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo5co74n	Whether or not diagnostic for diseases of the digestive system
wo5co10	Daily activity difficulty by high blood pressure or hypertension
wo5co15	Daily activity difficulty by diabetes or high blood sugar
wo5co22	Daily activity difficulty by cancer or malignant tumor
wo5co27	Daily activity difficulty by chronic lung disease
wo5co32	Daily activity difficulty by liver disease
wo5co37	Daily activity difficulty by heart related disease
wo5co42	Daily activity difficulty by cerebrovascular disease
wo5co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo5co52	Daily activity difficulty by arthritis or rheumatism
wo5co77n	Daily activity difficulty by diseases of the digestive system
Wave 5 Add:	
wo5co06	Whether or not high blood pressure or hypertension diagnostic
wo5co11	Whether or not diabetes or high blood sugar diagnostic
wo5co16	Whether or not cancer or malignant tumor diagnostic
wo5co23	Whether or not chronic lung disease diagnostic
wo5co28	Whether or not liver disease diagnostic
wo5co33	Whether or not heart related disease diagnostic
wo5co38	Whether or not cerebrovascular disease diagnostic
wo5co43	Whether or not any emotional, nervous, or psychiatric problems diagnostic
wo5co48	Whether or not arthritis or rheumatism diagnostic
wo5co74n	Whether or not diagnostic for diseases of the digestive system
wo5co10	Daily activity difficulty by high blood pressure or hypertension
wo5co15	Daily activity difficulty by diabetes or high blood sugar
wo5co22	Daily activity difficulty by cancer or malignant tumor
wo5co27	Daily activity difficulty by chronic lung disease
wo5co32	Daily activity difficulty by liver disease
wo5co37	Daily activity difficulty by heart related disease
wo5co42	Daily activity difficulty by cerebrovascular disease
wo5co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo5co52	Daily activity difficulty by arthritis or rheumatism
wo5co77n	Daily activity difficulty by diseases of the digestive system

Wave 6:

wo6co06	Since the previous interview, whether or not high blood pressure or hypertension
wo6co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo6co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo6co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo6co28	Since the previous interview, whether or not liver disease diagnostic
wo6co33	Since the previous interview, whether or not heart related disease diagnostic
wo6co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo6co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo6co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo6co74n	Whether or not diagnostic for diseases of the digestive system
wo6co10	Daily activity difficulty by high blood pressure or hypertension
wo6co15	Daily activity difficulty by diabetes or high blood sugar
wo6co22	Daily activity difficulty by cancer or malignant tumor
wo6co27	Daily activity difficulty by chronic lung disease
wo6co32	Daily activity difficulty by liver disease
wo6co37	Daily activity difficulty by heart related disease
wo6co42	Daily activity difficulty by cerebrovascular disease
wo6co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo6co77n	Daily activity difficulty by diseases of the digestive system

Wave 7:

wo7co06	Since the previous interview, whether or not high blood pressure or hypertension
wo7co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo7co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo7co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo7co28	Since the previous interview, whether or not liver disease diagnostic
wo7co33	Since the previous interview, whether or not heart related disease diagnostic
wo7co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo7co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo7co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo7co74n	Whether or not diagnostic for diseases of the digestive system
wo7co10	Daily activity difficulty by high blood pressure or hypertension
wo7co15	Daily activity difficulty by diabetes or high blood sugar
wo7co22	Daily activity difficulty by cancer or malignant tumor
wo7co27	Daily activity difficulty by chronic lung disease
wo7co32	Daily activity difficulty by liver disease
wo7co37	Daily activity difficulty by heart related disease
wo7co42	Daily activity difficulty by cerebrovascular disease
wo7co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo7co77n	Daily activity difficulty by diseases of the digestive system
wo7cadd_o3a	Daily activity difficulty by dementia

Wave 8:

wo8co06	Since the previous interview, whether or not high blood pressure or hypertension
wo8co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo8co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo8co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo8co28	Since the previous interview, whether or not liver disease diagnostic
wo8co33	Since the previous interview, whether or not heart related disease diagnostic
wo8co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo8co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo8co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo8co74n	Whether or not diagnostic for diseases of the digestive system
wo8co10	Daily activity difficulty by high blood pressure or hypertension

Section B. Health

wo8co15	Daily activity difficulty by diabetes or high blood sugar
wo8co22	Daily activity difficulty by cancer or malignant tumor
wo8co27	Daily activity difficulty by chronic lung disease
wo8co32	Daily activity difficulty by liver disease
wo8co37	Daily activity difficulty by heart related disease
wo8co42	Daily activity difficulty by cerebrovascular disease
wo8co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo8co77n	Daily activity difficulty by diseases of the digestive system
wo8cadd_o3a	Daily activity difficulty by dementia

Wave 9:

wo9co06	Since the previous interview, whether or not high blood pressure or hypertension
wo9co11	Since the previous interview, whether or not diabetes or high blood sugar diagno
wo9co16	Since the previous interview, whether or not cancer or malignant tumor diagnosti
wo9co23	Since the previous interview, whether or not chronic lung disease diagnostic
wo9co28	Since the previous interview, whether or not liver disease diagnostic
wo9co33	Since the previous interview, whether or not heart related disease diagnostic
wo9co38	Since the previous interview, whether or not cerebrovascular disease diagnostic
wo9co43	Since the previous interview, whether or not any emotional, nervous, or psychiat
wo9co48	Since the previous interview, whether or not arthritis or rheumatism diagnostic
wo9co74n	Whether or not diagnostic for diseases of the digestive system
wo9co10	Daily activity difficulty by high blood pressure or hypertension
wo9co15	Daily activity difficulty by diabetes or high blood sugar
wo9co22	Daily activity difficulty by cancer or malignant tumor
wo9co27	Daily activity difficulty by chronic lung disease
wo9co32	Daily activity difficulty by liver disease
wo9co37	Daily activity difficulty by heart related disease
wo9co42	Daily activity difficulty by cerebrovascular disease
wo9co47	Daily activity difficulty by any emotional, nervous, or psychiatric problems
wo9co77n	Daily activity difficulty by diseases of the digestive system
wo9cadd_o3a	Daily activity difficulty by dementia

BMI

Variable	Waves	Label	Type
rWbmi	1-9	rWbmi:ww R body mass index=kg/m2	Cont
sWbmi	1-9	sWbmi:ww S body mass index=kg/m2	Cont
rWheight	1-9	rWheight:ww R height in meters	Cont
sWheight	1-9	sWheight:ww S height in meters	Cont
rWweight	1-9	rWweight:ww R weight in kg	Cont
sWweight	1-9	sWweight:ww S weight in kg	Cont
rWbmicat	1-9	rWbmicat:ww R BMI categorization	Categ
sWbmicat	1-9	sWbmicat:ww S BMI categorization	Categ
rWobese	1-9	rWobese:ww R whether obese	Categ
sWobese	1-9	sWobese:ww S whether obese	Categ

How Constructed

rWbmi is the respondent's body mass index, which is calculated from **rWheight** and **rWweight**, the respondent's self-reported height (in meters) and weight in (kilograms) respectively. **rWbmi** is derived by dividing the weight by the square of the height (meters). **rWbmicat** is the respondent's BMI categorization, and is coded as follows: 1.underweight, less than 18.5, 2.normal weight, 18.5-22.9, 3.pre-obesity, 23-24.9, 4.obesity class 1, 25-29.9, 5.obesity class 2, 30-34.9, 6.obesity class 3, 35 or greater. **rWobese** is coded as 0 if the respondent has a BMI of less than 25, and is coded as 1 if the respondent has a BMI of 25 or greater. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWbmi**, **rWheight**, **rWweight**, **rWbmicat**, and **rWobese** are assigned blank missing (.) if the respondent did not participate in the current wave.

sWheight, **sWweight**, **sWbmi**, **sWbmicat**, and **sWobese** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWheight**, **rWweight**, **rWbmi**, **rWbmicat**, and **rWobese**. In addition to the special missing codes used in **rWbmi**, **rWheight**, **rWweight**, **rWbmicat**, and **rWobese**, **sWheight**, **sWweight**, **sWbmi**, **sWbmicat**, and **sWobese** employ two additional special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWbmicat in the Gateway Harmonized HRS has different cut-off points than **rWbmicat** in the Gateway Harmonized KLoSA based on the BMI categorizations set for the US and Korea, respectively. As such, **rWobese** also uses a different cut-off point in the two datasets, based on the BMI categorizations in place.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing

How Constructed

rWglasses indicates whether the respondent wears glasses or contact lenses. **rWglasses** is coded as 1 if the respondent usually wears glasses or contact lenses and is coded as 0 if the respondent does not usually wear glasses or contact lenses. **rWglasses** is assigned a special missing code (.b) if the respondent reports being blind and this question was not asked. Don't know, refused, or other missing responses of **rWglasses** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWglasses** is set to plain missing (.) for respondents who did not participate in the current wave.

sWglasses indicates whether the respondent's current wave's spouse wears glasses, and is taken from **rWglasses**. In addition to the special missing codes employed by **rWglasses**, **sWglasses** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWsighta indicates the respondent's self-rated eyesight while wearing glasses or corrective lenses as usual. Respondents are also asked to rate their distance vision, and near vision while wearing glasses or corrective lenses as usual, these responses are coded in **rWdsighta** and **rWnsighta**, respectively. **rWsighta**, **rWdsighta**, and **rWnsighta** are coded as follows: 1.very good, 2.good, 3.fair, 4.poor, 5.very poor, 6.blind. If the respondent reports blindness in a previously asked question then **rWsighta**, **rWdsighta** and **rWnsighta** are coded with a value of 6. Don't know, refused, or other missing responses of **rWsighta**, **rWdsighta**, and **rWnsighta** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWsighta**, **rWdsighta**, and **rWnsighta** are set to plain missing (.) for respondents who did not participate in the current wave.

sWsighta, **sWdsighta**, and **sWnsighta** indicate the self-rated eyesight, distance vision, and near vision of the respondent's current wave's spouse, and are taken from **rWsighta**, **rWdsighta**, and **rWnsighta**. In addition to the special missing codes employed by **rWsighta**, **rWdsighta**, and **rWnsighta**, **sWsighta**, **sWdsighta**, and **sWnsighta** employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWcatrcte indicates whether the respondent has ever reported having cataract surgery. **rWcatrct** indicates whether the respondent reported having cataract surgery in the last two years and is available starting in Wave 2. **rWcatrct** and **rWcatrcte** are coded as 0.no, and 1.yes. Additionally, **rWcatrcte** carries forward positive responses from previous waves. **rWcatrct** and **rWcatrcte** are assigned a special missing code (.b) if the respondent reports being blind and these questions were not asked. **rWcatrct** is assigned special missing (.c) for the new cohort of respondents added in Wave 5 as they were only asked if they ever had cataract surgery and not if they have had cataract surgery in the last two years. Don't know, refused, or other missing responses of **rWcatrct** and **rWcatrcte** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWcatrct** and **rWcatrcte** are set to plain missing (.) for respondents who did not participate in the current wave.

sWcatrcte and **sWcatrct** indicate whether the respondent's current wave's spouse reported ever having cataract surgery or having cataract surgery in the last two years, and are taken from **rWcatrcte** and **rWcatrct**. In addition to the special missing codes employed by **rWcatrcte** and **rWcatrct**, **sWcatrcte** and **sWcatrct** employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWncatrct indicates the number of eyes the respondent has had cataract surgery on in the last two years and is available starting in Wave 2. **rWncatrct** is coded as follows: 1.one eye only, 2.both eyes. **rWncatrct** is coded as (.x) if the respondent has not reported any cataract surgery since the last wave. **rWncatrct** is assigned a special missing code (.b) if the respondent reports being blind and this question was not asked. **rWncatrct** is assigned special missing (.c) for the new cohort of respondents added in Wave 5 as they were only asked if they ever had cataract surgery and not if they have had cataract surgery in the last two years. Don't know, refused, or other missing responses of **rWncatrct** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWncatrct** is set to plain missing (.) for respondents who did not participate in the current wave.

sWncatrct indicates the number of eyes the respondent's current wave's spouse has had cataract surgery on in the past two years, and is taken from **rWncatrct**. In addition to the special missing codes employed by **rWncatrct**, **sWncatrct** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWglaucoma indicates whether the respondent has ever been treated for glaucoma. **rWglaucoma** is coded as 1 if the respondent has ever been treated for glaucoma and is coded as 0 if the respondent has never been treated for glaucoma. **rWglaucoma** also carries forward positive responses from previous waves. **rWglaucoma** is assigned a special missing code (.b) if the respondent reports being blind and this question was not asked. Don't know, refused, or other missing responses of **rWglaucoma** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWglaucoma** is set to plain missing (.) for respondents who did not participate in the current wave.

sWglaucoma indicates whether the respondent's current wave's spouse has ever been treated for glaucoma, and is taken from **rWglaucoma**. In addition to the special missing codes employed by **rWglaucoma**, **sWglaucoma** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWsigthlmt indicates whether eyesight limits the daily activity of the respondent. This dichotomous measure is coded 1 if the respondent reports that eyesight does limit their daily activity, and as 0 if it does not limit their daily activity. Special missing (.b) is used for respondents who said they are blind and were not asked this question. Don't know, refused, or other missing responses of **rWsigthlmt** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWsigthlmt** is set to plain missing (.) for respondents who did not participate in the current wave.

sWsigthlmt indicates whether the respondent's current wave's spouse's sight limits their daily activity, and is taken from **rWsigthlmt**. In addition to the special missing codes employed by **rWsigthlmt**, **sWsigthlmt** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1 and for new respondents in Wave 5, KLoSA asks about whether the respondent has ever had cataract surgery or glaucoma. Starting in Wave 2 and in Wave 6 for new respondents to Wave 5, questions about cataract surgery and glaucoma are asked for the period since the previous interview.

Cross-Study Differences with the HRS

rWsight, **rW**dsight, and **rW**nsight in the Gateway Harmonized HRS employ a different scale than **rW**sighta, **rW**dsighta, **rW**nsighta in the Gateway Harmonized KLoSA. The Gateway Harmonized HRS variables use the following scale: 1.excellent, 2.very good, 3.good, 4.fair, 5.poor, 6.blind. The Gateway Harmonized KLoSA variables use the following scale: 1.very good, 2.good, 3.fair, 4.poor, 5.very poor, 6.blind.

Whether the respondent usually wears glasses or contact lenses and whether eyesight limits the daily activities of the respondent is not asked in the HRS.

Respondents in HRS who are younger than age 65 are not asked about cataract surgery or glaucoma treatment unlike KLoSA which asks all respondents about cataract surgery and whether they have been treated for glaucoma.

Original KLoSA Variables Used

Wave 1:

wo1co74	Usual usage of glasses and contact lenses
wo1co75	Eyesight
wo1co76	Eyesight for far away object
wo1co77	Eyesight for near object
wo1co78	Whether or not cataract operation experience
wo1co79	Cataract operation part

Section B. Health

wo1co80	Whether or not glaucoma treatment experience
wo1co81	Daily activity difficulty by eyesight
Wave 2:	
wo2co74	Usual usage of glasses and contact lenses
wo2co75	Eyesight
wo2co76	Eyesight for far away object
wo2co77	Eyesight for near object
wo2co78	Since the previous interview, whether or not cataract operation experience
wo2co79	Since the previous interview, cataract operation part
wo2co80	Since the previous interview, whether or not glaucoma treatment experience
wo2co81	Daily activity difficulty by eyesight
Wave 3:	
wo3co74	Usual usage of glasses and contact lenses
wo3co75	Eyesight
wo3co76	Eyesight for far away object
wo3co77	Eyesight for near object
wo3co78	Since the previous interview, whether or not cataract operation experience
wo3co79	Since the previous interview, cataract operation part
wo3co80	Since the previous interview, whether or not glaucoma treatment experience
wo3co81	Daily activity difficulty by eyesight
Wave 4:	
wo4co74	Usual usage of glasses and contact lenses
wo4co75	Eyesight
wo4co76	Eyesight for far away object
wo4co77	Eyesight for near object
wo4co78	Since the previous interview, whether or not cataract operation experience
wo4co79	Since the previous interview, cataract operation part
wo4co80	Since the previous interview, whether or not glaucoma treatment experience
wo4co81	Daily activity difficulty by eyesight
Wave 5:	
wo5co74	Usual usage of glasses and contact lenses
wo5co75	Eyesight
wo5co76	Eyesight for far away object
wo5co77	Eyesight for near object
wo5co78	Since the previous interview, whether or not cataract operation experience
wo5co79	Since the previous interview, cataract operation part
wo5co80	Since the previous interview, whether or not glaucoma treatment experience
wo5co81	Daily activity difficulty by eyesight
Wave 5 Add:	
wo5co74	Usual usage of glasses and contact lenses
wo5co75	Eyesight
wo5co76	Eyesight for far away object
wo5co77	Eyesight for near object
wo5co78	Whether or not cataract operation experience
wo5co79	Cataract operation part
wo5co80	Whether or not glaucoma treatment experience
wo5co81	Daily activity difficulty by eyesight
Wave 6:	
wo6co74	Usual usage of glasses and contact lenses
wo6co75	Eyesight
wo6co76	Eyesight for far away object
wo6co77	Eyesight for near object

wo6co78	Since the previous interview, whether or not cataract operation experience
wo6co79	Since the previous interview, cataract operation part
wo6co80	Since the previous interview, whether or not glaucoma treatment experience
wo6co81	Daily activity difficulty by eyesight
Wave 7:	
wo7co74	Usual usage of glasses and contact lenses
wo7co75	Eyesight
wo7co76	Eyesight for far away object
wo7co77	Eyesight for near object
wo7co78	Since the previous interview, whether or not cataract operation experience
wo7co79	Since the previous interview, cataract operation part
wo7co80	Since the previous interview, whether or not glaucoma treatment experience
wo7co81	Daily activity difficulty by eyesight
Wave 8:	
wo8co74	Usual usage of glasses and contact lenses
wo8co75	Eyesight
wo8co76	Eyesight for far away object
wo8co77	Eyesight for near object
wo8co78	Since the previous interview, whether or not cataract operation experience
wo8co79	Since the previous interview, cataract operation part
wo8co80	Since the previous interview, whether or not glaucoma treatment experience
wo8co81	Daily activity difficulty by eyesight
Wave 9:	
wo9co74	Usual usage of glasses and contact lenses
wo9co75	Eyesight
wo9co76	Eyesight for far away object
wo9co77	Eyesight for near object
wo9co78	Since the previous interview, whether or not cataract operation experience
wo9co79	Since the previous interview, cataract operation part
wo9co80	Since the previous interview, whether or not glaucoma treatment experience
wo9co81	Daily activity difficulty by eyesight

Hearing and Hearing Treatments

Variable	Waves	Label	Type
rWhearinga	1-9	rWhearinga:ww R self-rated hearing	Categ
sWhearinga	1-9	sWhearinga:ww S self-rated hearing	Categ
rWhearaid	1-9	rWhearaid:ww R wears hearing aid	Categ
sWhearaid	1-9	sWhearaid:ww S wears hearing aid	Categ
rWhearlmt	1-9	rWhearlmt:ww R whether hearing limits activity	Categ
sWhearlmt	1-9	sWhearlmt:ww S whether hearing limits activity	Categ

How Constructed

rWhearinga indicates the respondent's self-rated hearing. Respondents who have a hearing aid are asked to rate their hearing when using their hearing aid as usual. **rWhearinga** is coded as follows: 1.very good, 2.good, 3.fair, 4.poor, 5.very poor. Don't know, refused, or other missing responses of **rWhearinga** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWhearinga** is set to plain missing (.) for respondents who did not participate in the current wave.

sWhearinga indicates the self-rated hearing of the respondent's current wave's spouse, and is taken from **rWhearinga**. In addition to the special missing codes employed by **rWhearinga**, **sWhearinga** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWhearaid indicates whether the respondent ever wears a hearing aid. **rWhearaid** is coded as follows: 0.no, 1.yes. If the respondent reports wearing a hearing aid, this answer is carried forward in future waves. Don't know, refused, or other missing responses of **rWhearaid** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWhearaid** is set to plain missing (.) for respondents who did not participate in the current wave.

sWhearaid indicates whether the respondent's current wave's spouse ever wears a hearing aid, and is taken from **rWhearaid**. In addition to the special missing codes employed by **rWhearaid**, **sWhearaid** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWhearlmt indicates whether hearing limits the daily activity of the respondent. This dichotomous measure is coded 1 if the respondent reports that hearing does limit their daily activity, and as 0 if it does not limit their daily activity. Don't know, refused, or other missing responses of **rWhearlmt** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWhearlmt** is set to plain missing (.) for respondents who did not participate in the current wave.

sWhearlmt indicates whether the respondent's current wave's spouse's hearing limits their daily activity, and is taken from **rWhearlmt**. In addition to the special missing codes employed by **rWhearlmt**, **sWhearlmt** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWhearing in the Gateway Harmonized HRS employs a different scale than **rWhearinga** in the Gateway Harmonized KLoSA. The Gateway Harmonized HRS variable uses the following scale: 1.excellent, 2.very good, 3.good, 4.fair, 5.poor. The Gateway Harmonized KLoSA variable uses the following scale: 1.very good, 2.good, 3.fair, 4.poor, 5.very poor.

Whether hearing limits the daily activities of the respondent is not asked in the HRS.

Dental Health

Variable	Waves	Label	Type
rWdenture	1-9	rWdenture:ww R whether usually uses dentures	Categ
sWdenture	1-9	sWdenture:ww S whether usually uses dentures	Categ

How Constructed

rWdenture is dichotomous for whether or not the respondent wears dentures. **rWdenture** is coded as 0 for no and 1 for yes. This question is not asked for returning respondents in Wave 5, so these respondents are assigned special missing value (.q). Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWdenture** is assigned blank missing (.) for respondents who did not participate in the current wave.

sWdenture gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to **rWdenture**. In addition to the special missing codes employed by **rWdenture**, **sWdenture** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

The HRS asks if the respondent has lost all of their teeth, provided as **rWnoteeth** in the Gateway Harmonized HRS. The KLoSA asks if the respondent wears dentures, provided as **rWdenture** in the Gateway Harmonized KLoSA.

sWinjlmnt	1-9	sWinjlmnt:ww S whether injury/fracture limits activity	Categ

How Constructed

rWfall indicates whether the respondent has fallen in the last 2 years. **rWfall** is coded as 0.no and 1.yes. Don't know, refused, or other missing responses of **rWfall** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWfall** is set to plain missing (.) for respondents who did not participate in the current wave.

sWfall indicates whether the respondent's current wave's spouse has fallen in the last 2 years, and is taken from **rWfall**. In addition to the special missing codes employed by **rWfall**, **sWfall** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWfallnum indicates the number of times the respondent has fallen in the last 2 years. If the respondent reports no falls then 0 is assigned. Don't know, refused, or other missing responses of **rWfallnum** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWfallnum** is set to plain missing (.) for respondents who did not participate in the current wave.

sWfallnum indicates the number of times the respondent's current wave's spouse has fallen in the last 2 years, and is taken from **rWfallnum**. In addition to the special missing codes employed by **rWfallnum**, **sWfallnum** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWfallinj indicates whether the respondent was injured seriously enough in a fall to require medical treatment. **rWfallinj** is assigned a 0 if the fall was not serious, and is assigned a 1 if the fall required medical treatment. **rWfallinj** is assigned special missing (.x) if the respondent did not fall in the last 2 years. Don't know, refused, or other missing responses of **rWfallinj** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWfallinj** is set to plain missing (.) for respondents who did not participate in the current wave.

sWfallinj indicates whether the respondent's current wave's spouse was injured seriously enough in a fall to require medical treatment, and is taken from **rWfallinj**. In addition to the special missing codes employed by **rWfallinj**, **sWfallinj** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWhipfle indicates whether the respondent has ever had a hip fracture due to a fall. This question is only asked to respondents who report having fallen down in the last two years. **rWhipfle** is coded as 0.no and 1.yes. Positive reports of hip fractures from previous waves have been carried forward. Special missing (.x) is assigned if the respondent reports not having had a fall in the last two years. Don't know, refused, or other missing responses of **rWhipfle** are assigned special

missing codes (.d), (.r), and (.m), respectively. **rWhipfle** is set to plain missing (.) for respondents who did not participate in the current wave.

sWhipfle indicates whether the respondent's current wave's spouse has ever had a hip fracture due to a fall, and is taken from **rWhipfle**. In addition to the special missing codes employed by **rWhipfle**, **sWhipfle** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWinjlm indicates whether the respondent's injury or fracture due to a fall limits the daily activity of the respondent. This dichotomous measure is coded as 1 if the respondent reports that a fall accident does limit their daily activity, and as 0 if it does not limit their daily activity. **rWinjlm** is assigned special missing (.x) if the respondent reports no injuries from a fall. Don't know, refused, or other missing responses of **rWinjlm** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWinjlm** is set to plain missing (.) for respondents who did not participate in the current wave.

sWinjlm indicates whether the respondent's current wave's spouse's fall injury limits their daily activity, and is taken from **rWinjlm**. In addition to the special missing codes employed by **rWinjlm**, **sWinjlm** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWhipe in the Gateway Harmonized HRS indicates whether the respondent has ever broken a hip, which is asked whether the respondent has fallen in the last 2 years or not. **rWhipfle** in the Gateway Harmonized KLoSA indicates whether the respondent has ever broken a hip due to a fall, which is asked only if the respondent has fallen in the last 2 years.

Original KLoSA Variables Used

Wave 1:

wo1co56	Hurt from a fall experience during the latest 2 years
wo1co57	Hurt from a fall number of times during the latest 2 years
wo1co58	Treatment is whether or not necessary serious hurt from a fall experience
wo1co59	On a hip fracture injuries from a fall
wo1co60	Daily activity difficulty by a hip fracture injuries

Wave 2:

wo2co56	Since the previous interview, hurt from a fall experience during the latest 2 ye
wo2co57	Since the previous interview, hurt from a fall number of times during the latest
wo2co58	Treatment is whether or not necessary serious hurt from a fall experience
wo2co59	On a hip fracture injuries from a fall
wo2co60	Daily activity difficulty by a hip fracture injuries

Wave 3:

wo3co56	Since the previous interview, hurt from a fall experience during the latest 2 ye
wo3co57	Since the previous interview, hurt from a fall number of times during the latest
wo3co58	Treatment is whether or not necessary serious hurt from a fall experience
wo3co59	On a hip fracture injuries from a fall
wo3co60	Daily activity difficulty by a hip fracture injuries

Wave 4:

wo4co56	Since the previous interview, hurt from a fall experience during the latest 2 ye
wo4co57	Since the previous interview, hurt from a fall number of times during the latest
wo4co58	Treatment is whether or not necessary serious hurt from a fall experience
wo4co59	On a hip fracture injuries from a fall
wo4co60	Daily activity difficulty by a hip fracture injuries

Wave 5:

wo5co56	Since the previous interview, hurt from a fall experience during the latest 2 ye
wo5co57	Since the previous interview, hurt from a fall number of times during the latest
wo5co58	Treatment is whether or not necessary serious hurt from a fall experience
wo5co59	On a hip fracture injuries from a fall
wo5co60	Daily activity difficulty by a hip fracture injuries

Wave 5 Add:

wo5co56	Hurt from a fall experience during the latest 2 years
wo5co57	Hurt from a fall number of times during the latest 2 years
wo5co58	Treatment is whether or not necessary serious hurt from a fall experience
wo5co59	On a hip fracture injuries from a fall
wo5co60	Daily activity difficulty by a hip fracture injuries

Wave 6:

wo6co56	Since the previous interview, hurt from a fall experience during the latest 2 ye
wo6co57	Since the previous interview, hurt from a fall number of times during the latest

Section B. Health

wo6co58	Treatment is whether or not necessary serious hurt from a fall experience
wo6co59	On a hip fracture injuries from a fall
wo6co60	Daily activity difficulty by a hip fracture injuries
Wave 7:	
wo7co56	Since the previous interview, hurt from a fall experience during the latest 2 ye
wo7co57	Since the previous interview, hurt from a fall number of times during the latest
wo7co58	Treatment is whether or not necessary serious hurt from a fall experience
wo7co59	On a hip fracture injuries from a fall
wo7co60	Daily activity difficulty by a hip fracture injuries
Wave 8:	
wo8co56	Since the previous interview, hurt from a fall experience during the latest 2 ye
wo8co57	Since the previous interview, hurt from a fall number of times during the latest
wo8co58	Treatment is whether or not necessary serious hurt from a fall experience
wo8co59	On a hip fracture injuries from a fall
wo8co60	Daily activity difficulty by a hip fracture injuries
Wave 9:	
wo9co56	Since the previous interview, hurt from a fall experience during the latest 2 ye
wo9co57	Since the previous interview, hurt from a fall number of times during the latest
wo9co58	Treatment is whether or not necessary serious hurt from a fall experience

Urinary Incontinence

Variable	Waves	Label	Type
rWurinai	1-9	rWurinai:ww R any urinary incontinence 1yr	Categ
sWurinai	1-9	sWurinai:ww S any urinary incontinence 1yr	Categ
rWurinaf	1-9	rWurinaf:ww R number days urinary incontinence 1mo	Cont
sWurinaf	1-9	sWurinaf:ww S number days urinary incontinence 1mo	Cont
rWurinpad	1-9	rWurinpad:ww R uses pads for incontinence	Categ
sWurinpad	1-9	sWurinpad:ww S uses pads for incontinence	Categ

How Constructed

rWurinai indicates whether the respondent has experienced any urinary incontinence in the past 12 months and is only asked of respondents who are women. **rWurinai** is coded as 0.no, and 1.yes. Women who reported incontinence in the previous wave were asked "How have your symptoms of leaking urine changed since the previous interview?" If the respondent said that they recovered completely a code of 0 was assigned, responses of improved, same, worsened, and greatly worsened to this question were coded as 1 in **rWurinai**. Respondents who are men are not asked this question and are assigned a special missing (.g). In Wave 6 this question was not asked to women from the original cohort who reported at the previous wave that they did not have any urinary incontinence and in these cases **rWurinai** is set to special missing (.s). Don't know, refused, or other missing responses of **rWurinai** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWurinai** is set to plain missing (.) for respondents who did not participate in the current wave.

sWurinai indicates whether the respondent's current wave's spouse has experienced any incontinence, if that spouse is a woman, and is taken from **rWurinai**. In addition to the special missing codes employed by **rWurinai**, **sWurinai** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWurinaf indicates the number of days the respondent experienced urinary incontinence in the last month and is only asked of respondents who are women. **rWurinaf** takes values from 0 to 31, with 31 indicating the presence of urinary incontinence every day. If the respondent does not experience any urinary incontinence, **rWurinaf** is set to 0. Respondents who are men are not asked this question and are assigned a special missing (.g). In Wave 6 this question was not asked to women from the original cohort who reported at the previous wave that they did not have any urinary incontinence and in these cases **rWurinaf** is set to special missing (.s). Don't know, refused, or other missing responses of **rWurinaf** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWurinaf** is set to plain missing (.) for respondents who did not participate in the current wave.

sWurinaf indicates the number of days the respondent's current wave's spouse experienced incontinence, if that spouse is a woman, and is taken from **rWurinaf**. In addition to the special missing codes employed by **rWurinaf**, **sWurinaf** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWurinpad indicates whether the respondent ever uses any absorbent products such as pads, special garments, sanitary napkins, or toilet paper for urinary incontinence and is only asked of respondents who are women. **rWurinpad** is coded as 0.no, and 1.yes. If the respondent does not experience any urinary incontinence, **rWurinpad** is set to 0. Respondents who are men are not asked this question and are assigned a special missing (.g). In Wave 6 this question was not asked to women from the original cohort who reported at the previous wave that they did not have any urinary incontinence and in these cases **rWurinpad** is set to special missing (.s). Don't know, refused, or other missing responses of **rWurinpad** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWurinpad** is set to plain missing (.) for respondents who did not participate in the current wave.

sWurinpad indicates whether the respondent's current wave's spouse, if that spouse is a woman, ever uses absorbent products for incontinence, and is taken from **rWurinpad**. In addition to the special missing codes employed by **rWurinpad**,

swurinp employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 6 questions about urinary incontinence in the past 12 months were not asked to women from the original cohort who reported at Wave 5 that they did not have any urinary incontinence.

Cross-Study Differences with the HRS

In the KLoSA questions about urinary incontinence are asked of respondents who are women only, whereas in the HRS urinary incontinence questions are asked of all respondents regardless of gender.

Original KLoSA Variables Used

Wave 1:

wo1co68	Whether or not urinary incontinence experience during past 1 year
wo1co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo1co73	Goods use experience that prepare in urinary incontinence

Wave 2:

wo2co68	Whether or not urinary incontinence experience during past 1 year
wo2co69	Compared to the previous interview, the condition of urinary incontinence experi
wo2co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo2co73	Goods use experience that prepare in urinary incontinence

Wave 3:

wo3co68	Whether or not urinary incontinence experience during past 1 year
wo3co69	Compared to the previous interview, the condition of urinary incontinence experi
wo3co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo3co73	Goods use experience that prepare in urinary incontinence

Wave 4:

wo4co68	Whether or not urinary incontinence experience during past 1 year
wo4co69	Compared to the previous interview, the condition of urinary incontinence experi
wo4co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo4co73	Goods use experience that prepare in urinary incontinence

Wave 5:

wo5co68	Whether or not urinary incontinence experience during past 1 year
wo5co69	Compared to the previous interview, the condition of urinary incontinence experi
wo5co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo5co73	Goods use experience that prepare in urinary incontinence

Wave 5 Add:

wo5co68	Whether or not urinary incontinence experience during past 1 year
wo5co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo5co73	Goods use experience that prepare in urinary incontinence

Wave 6:

wo6co68	Whether or not urinary incontinence experience during past 1 year
wo6co69	Compared to the previous interview, the condition of urinary incontinence experi
wo6co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo6co73	Goods use experience that prepare in urinary incontinence

Wave 7:

wo7co68	Whether or not urinary incontinence experience during past 1 year
wo7co69	Compared to the previous interview, the condition of urinary incontinence experi

Section B. Health

wo7co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo7co73	Goods use experience that prepare in urinary incontinence
Wave 8:	
wo8co68	Whether or not urinary incontinence experience during past 1 year
wo8co69	Compared to the previous interview, the condition of urinary incontinence experi
wo8co70	Days of experience of urinary incontinence during past 1 month(unit : day)
wo8co73	Goods use experience that prepare in urinary incontinence
Wave 9:	
wo9co68	Whether or not urinary incontinence experience during past 1 year
wo9co69	Compared to the previous interview, the condition of urinary incontinence experi

wo9co73	Goods use experience that prepare in urinary incontinence

Pain

Variable	Waves	Label	Type
rWpainfr	1-9	rWpainfr:ww R problems with pain	Categ
sWpainfr	1-9	sWpainfr:ww S problems with pain	Categ
rWpainhlv	1-9	rWpainhlv:ww R highest level of pain	Categ
sWpainhlv	1-9	sWpainhlv:ww S highest level of pain	Categ
rWpaina	1-9	rWpaina:ww R pain interferes with daily activities	Categ
sWpaina	1-9	sWpaina:ww S pain interferes with daily activities	Categ

How Constructed

rWpainfr indicates whether the respondent currently experiences pain. KLoSA asks respondents to identify any body parts in which they are currently feeling pain from a list of 13 body parts or to answer that they do not have any pain. **rWpainfr** is coded as 0.no if the respondent does not report that they have pain in any of the 13 body parts or instead says they have no pain. **rWpainfr** is coded as 1.yes if the respondent reports having pain in any of the 13 body parts. The 13 body parts listed are head, shoulder, arm, wrist, fingers, chest, stomach, back, buttocks, leg, knee, ankle, and toes. Don't know, refused, or other missing responses of **rWpainfr** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWpainfr** is set to plain missing (.) for respondents who did not participate in the current wave.

rWpainhlv indicates the respondent's highest level of pain. KLoSA asks respondents to identify how bad the pain is for each body part they identify as currently feeling pain in. **rWpainhlv** is constructed by taking the highest level of pain that the respondent has indicated for any of the 13 body parts asked about. **rWpainhlv** is coded as 0.no pain, 1.mild, 2.moderate, 3.severe. If the respondent does not experience pain in any body part, then **rWpainhlv** is assigned a value of 0. Don't know, refused, or other missing responses of **rWpainhlv** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWpainhlv** is set to plain missing (.) for respondents who did not participate in the current wave.

rWpaina indicates whether the respondent's pain interferes with normal activities. **rWpaina** is coded as 0.no, and 1.yes. If the respondent does not experience frequent pain, then **rWpaina** are assigned special missing (.x). Don't know, refused, or other missing responses of these variables are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

sWpainfr, **sWpainhlv**, and **sWpaina** indicate the respondent's current wave's spouse's experience with pain, and are taken from **rWpainfr**, **rWpainhlv**, and **rWpaina**. In addition to the special missing codes employed by **rWpainfr**, **rWpainhlv**, and **rWpaina**, **sWpainfr**, **sWpainhlv**, and **sWpaina** employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

HRS respondents are asked a single question, "Are you often troubled with pain?" whereas KLoSA respondents are asked whether they currently have any pain in 13 different body parts. Notably different, the HRS asks about being "often troubled with pain" while the KLoSA asks about any pain being currently felt. Due to these differences it can be expected that the **rWpainfr** is not perfectly comparable between the Gateway Harmonized HRS and the Gateway Harmonized KLoSA.

HRS asks respondents to rate the severity of their pain in a single question, reported in **rWpainlv** in the Gateway Harmonized HRS, whereas KLoSA asks the respondent to rate their pain for 13 different body parts. The **rWpainhlv** variable in the Gateway Harmonized KLoSA reflects the highest level of pain for any of the above mentioned conditions.

The question about how the respondent's pain interferes with normal work is not asked in KLoSA, whereas it is asked in Waves 1 and 2 of HRS, and so **rWpainw** is not available in the Gateway Harmonized KLoSA at all and is only available in Waves 1 and 2 of the Gateway Harmonized HRS. In all waves of KLoSA the respondent is asked how pain interferes with normal daily activities.

Questions about whether the respondent takes medication for pain is not asked in KLoSA, so **rWrxpain** is not available in the Gateway Harmonized KLoSA.

Health Behaviors: Physical Activity or Exercise

Variable	Waves	Label	Type
rWvigact	1-9	rWvigact:ww R exercise +1/week	Categ
sWvigact	1-9	sWvigact:ww S exercise +1/week	Categ
rWvigactf_k	1-9	rWvigactf_k:ww R freq exercise(times/per week)	Cont
sWvigactf_k	1-9	sWvigactf_k:ww S freq exercise(times/per week)	Cont

How Constructed

rWvigact and **rWvigactf_k** measure whether or not respondents exercise and how often they do so, respectively. **rWvigact** is a dichotomous indicator for whether or not the respondent “works out” or “exercises” more than once a week. If the respondent answers “yes”, they are then asked how many times per week they exercise. The number of times per week is recorded in **rWvigactf_k** as a continuous value. **rWvigactf_k** is set to 0 for respondents who do not exercise more than once per week. Special missing codes of (.d) and (.r) are used if the respondent does not know if they exercise or how often they exercise, or refuses to answer. **rWvigact** and **rWvigactf_k** are assigned blank missing (.) for respondents who did not participate in the current wave.

sWvigact and **sWvigactf_k** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWvigact** and **rWvigactf_k**. In addition to the special missing codes employed by **rWvigact** and **rWvigactf_k**, **sWvigact** and **sWvigactf_k** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike HRS, KLoSA does not distinguish between light or vigorous physical activity. Instead KLoSA only asks respondents whether or not they “works out” or “exercise”. HRS uses several different definitions of vigorous physical exercise for different waves of the HRS which include exercise, gym workout, aerobics, running, swimming, bicycling, sports, heavy housework, or a job that involves physical labor.

In addition to different definitions of physical activity, HRS and KLoSA use different reference points for frequency of the activity. HRS asks whether on average over the last 12 months respondents have participated in vigorous physical activity three times a week or more. KLoSA asks respondents whether they work out regularly with no specific reference time period.

Unlike the RAND HRS variable, **rWvigactf_k** is a count indicating the number of times the respondent reported exercising in a week. In the RAND HRS **rWvigactf** is a categorical variable with a scale of 1 to 5 that indicates different frequencies of vigorous physical activity ranging from 3+ times a week to never.

How Constructed

rWdrinkev is a dichotomous indicator for whether or not the respondent has ever drunk alcoholic beverages. **rWdrink** is a dichotomous indicator for whether or not the respondent reports that they currently drink alcoholic beverages. **rWdrinkev** is coded as 0 if the respondent has never had an alcoholic drink, and coded as 1 if they have had an alcoholic drink. Reports of never having consumed an alcoholic beverage are carried forward from previous waves if the respondent reports not drinking in the current wave. **rWdrink** is coded as 0 if the respondent does not currently drink alcoholic beverages, and is coded as 1 if they do currently drink alcoholic beverages. Don't know, refused, and other missing responses are assigned special missing (.d), (.r), (.m), respectively. **rWdrinkev** and **rWdrink** are assigned blank missing (.) for respondents who did not participate in the current wave.

rWdrinkx indicates the frequency that the respondent usually drinks alcoholic beverages and **rWdrinkn_k** is the number of drinks that the respondent usually has on a day when they drink. Drinking frequency questions in the KLoSA are surveyed by asking the respondent about their use of five different types of alcohol separately. Those five types of alcohol are soju, beer, rice wine (makgeolli), wine, and "whisky and other liquors." For each type of alcohol the respondent is asked how often they drank the particular alcohol during the past year and how many glasses they drink of the particular alcohol at a time. **rWdrinkx** is the highest frequency of drinking during the last year the respondent reports for any one of the five types of alcohol surveyed. Drinking frequency during the last year is surveyed by the categories: "none or less than once a month", "one to several times a month", "one to several times a week", "most days of the week" and "every day of the week". **rWdrinkn_k** is the maximum number of drinks the respondent reported drinking at a time for any one of the five types of alcohol surveyed. **rWdrinkn_k** is rounded to the nearest whole number. Respondents who don't drink are coded as 0 for both **rWdrinkx** and **rWdrinkn_k**. Don't know, refused, and other missing responses are assigned special missing (.d), (.r), (.m), respectively. **rWdrinkx** and **rWdrinkn_k** are assigned blank missing (.) for respondents who did not participate in the current wave.

sWdrinkev, **sWdrink**, **sWdrinkx**, and **sWdrinkn_k** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWdrinkev**, **sWdrink**, **rWdrinkx**, and **rWdrinkn_k**. In addition to the special missing codes employed by **rWdrinkev**, **rWdrink**, **rWdrinkx**, and **rWdrinkn_k**, **sWdrinkev**, **sWdrink**, **sWdrinkx**, and **sWdrinkn_k** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWdrinkcut, **rWdrinkcr**, **rWdrinkbd**, and **rWdrinknr** indicate the respondent's feelings about their drinking habits. **rWdrinkcut** indicates whether the respondent has ever felt that they should quit drinking. **rWdrinkcr** indicates whether people have ever made the respondent angry by criticizing their drinking. **rWdrinkbd** indicates whether the respondent has ever felt bad or guilty about drinking. **rWdrinknr** indicates whether the respondent has ever taken a drink first thing in the morning to steady their nerves or get rid of a hangover. These variables are coded as 0.no, and 1.yes. If the respondent reports not drinking, then **rWdrinkcut**, **rWdrinkcr**, **rWdrinkbd**, and **rWdrinknr** are assigned special missing (.n).

rWcage is a summary variable for the respondent's feelings about their drinking habits. **rWcage** is equal to **rWdrinkcut** + **rWdrinkcr** + **rWdrinkbd** + **rWdrinknr**. **rWcagem** indicates the number of variables missing in the calculation of **rWcage**. **rWcage** is calculated as long as at least one of the component variables is not missing.

Don't know, refused, or other missing responses of **rWdrinkcut**, **rWdrinkcr**, **rWdrinkbd**, **rWdrinknr**, and **rWcage** are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

sWdrinkcut, **sWdrinkcr**, **sWdrinkbd**, **sWdrinknr**, **sWcage**, and **sWcagem** indicate the respondent's current wave's spouse's feelings about their drinking habits, and are taken from **rWdrinkcut**, **rWdrinkcr**, **rWdrinkbd**, **rWdrinknr**, **rWcage**, and **rWcagem**. In addition to the special missing codes employed by **rWdrinkcut**, **rWdrinkcr**, **rWdrinkbd**, **rWdrinknr**, **rWcage**, and **rWcagem**, **sWdrinkcut**, **sWdrinkcr**, **sWdrinkbd**, **sWdrinknr**, **sWcage**, and **sWcagem** employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

There are many differences between the RAND HRS variables **rWdrinkd** and **rWdrinkn** and the KLoSA counterparts, **rWdrinkx** and **rWdrinkn_k**.

HRS surveys respondents' use of alcohol in reference to drinking any alcoholic beverage. Unlike HRS, KLoSA surveys respondents' use of alcohol in reference to five different types of alcohol separately. **rWdrinkx** and **rWdrinkn_k** always reflect the maximum value the respondent reported for any one of the five different types of alcohol surveyed.

In addition, HRS and KLoSA use different reference points for alcohol use. HRS surveys alcohol use on average over the last 3 months, whereas KLoSA surveys alcohol use on average over the last year.

KLoSA also uses a different scale for drinking frequency, which includes: "none or less than once a month", "one to several times a month", "one to several times a week", "most days of the week" and "every day of the week."

The RAND HRS variable **rWdrinkn** is based on how many drinks the respondent reports drinking "on a day when they drink". Unlike HRS, KLoSA asks respondents how many bottles they drink (of a particular alcohol) "at a time" so **rWdrinkn_k** in the Gateway Harmonized KLoSA is a different measure in this way also.

Respondents in HRS are asked whether they feel they should cut down on their drinking, whereas respondents in KLoSA are asked whether they feel they should quit drinking, though they both use the same variable name in the Gateway Harmonized HRS and the Gateway Harmonized KLoSA.

Respondents are not asked whether they binge drink and how many days they binge drank in KLoSA.

Original KLoSA Variables Used

Wave 1:

wo1c122	Usually, whether or not drinking
wo1c126	Drinking frequency per month (soju)
wo1c128	Drinking frequency per month (beer)
wo1c130	Drinking frequency per month (unstrained rice wine)
wo1c132	Drinking frequency per month (whisky or liquor)
wo1c134	Drinking frequency per month (wine)
wo1c127	Average drinking capacity at a time (soju)
wo1c129	Average drinking capacity at a time (beer)
wo1c131	Average drinking capacity at a time (unstrained rice wine)
wo1c133	Average drinking capacity at a time (whisky or liquor)
wo1c135	Average drinking capacity at a time (wine)
wo1c136	Experience that feel that will should quit drinking
wo1c137	Experience blamed about drinking habit
wo1c138	Experience that get angry because of criticism about drinking
wo1c139	Guilt experience about drinking
wo1c140	Experience drinking in the morning

Wave 2:

wo2c122	Usually, whether or not drinking
wo2c126	Drinking frequency per month (soju)
wo2c128	Drinking frequency per month (beer)
wo2c130	Drinking frequency per month (unstrained rice wine)
wo2c132	Drinking frequency per month (whisky or liquor)
wo2c134	Drinking frequency per month (wine)
wo2c127	Average drinking capacity at a time (soju)
wo2c129	Average drinking capacity at a time (beer)
wo2c131	Average drinking capacity at a time (unstrained rice wine)
wo2c133	Average drinking capacity at a time (whisky or liquor)
wo2c135	Average drinking capacity at a time (wine)
wo2c136	Experience that feel that will should quit drinking
wo2c137	Experience blamed about drinking habit
wo2c138	Experience that get angry because of criticism about drinking
wo2c139	Guilt experience about drinking
wo2c140	Experience drinking in the morning

Wave 3:

wo3c122	Usually, whether or not drinking
wo3c126	Drinking frequency per month (soju)
wo3c128	Drinking frequency per month (beer)
wo3c130	Drinking frequency per month (unstrained rice wine)
wo3c132	Drinking frequency per month (whisky or liquor)
wo3c134	Drinking frequency per month (wine)
wo3c127	Average drinking capacity at a time (soju)

w03c129	Average drinking capacity at a time (beer)
w03c131	Average drinking capacity at a time (unstrained rice wine)
w03c133	Average drinking capacity at a time (whisky or liquor)
w03c135	Average drinking capacity at a time (wine)
w03c136	Experience that feel that will should quit drinking
w03c137	Experience blamed about drinking habit
w03c138	Experience that get angry because of criticism about drinking
w03c139	Guilt experience about drinking
w03c140	Experience drinking in the morning

Wave 4:

w04c122	Usually, whether or not drinking
w04c126	Drinking frequency per month (soju)
w04c128	Drinking frequency per month (beer)
w04c130	Drinking frequency per month (unstrained rice wine)
w04c132	Drinking frequency per month (whisky or liquor)
w04c134	Drinking frequency per month (wine)
w04c127	Average drinking capacity at a time (soju)
w04c129	Average drinking capacity at a time (beer)
w04c131	Average drinking capacity at a time (unstrained rice wine)
w04c133	Average drinking capacity at a time (whisky or liquor)
w04c135	Average drinking capacity at a time (wine)
w04c136	Experience that feel that will should quit drinking
w04c137	Experience blamed about drinking habit
w04c138	Experience that get angry because of criticism about drinking
w04c139	Guilt experience about drinking
w04c140	Experience drinking in the morning

Wave 5:

w05c122	Usually, whether or not drinking
w05c126	Drinking frequency per month (soju)
w05c128	Drinking frequency per month (beer)
w05c130	Drinking frequency per month (unstrained rice wine)
w05c132	Drinking frequency per month (whisky or liquor)
w05c134	Drinking frequency per month (wine)
w05c127	Average drinking capacity at a time (soju)
w05c129	Average drinking capacity at a time (beer)
w05c131	Average drinking capacity at a time (unstrained rice wine)
w05c133	Average drinking capacity at a time (whisky or liquor)
w05c135	Average drinking capacity at a time (wine)
w05c136	Experience that feel that will should quit drinking
w05c137	Experience blamed about drinking habit
w05c138	Experience that get angry because of criticism about drinking
w05c139	Guilt experience about drinking
w05c140	Experience drinking in the morning

Wave 5 Add:

w05c122	Usually, whether or not drinking
w05c126	Drinking frequency per month (soju)
w05c128	Drinking frequency per month (beer)
w05c130	Drinking frequency per month (unstrained rice wine)
w05c132	Drinking frequency per month (whisky or liquor)
w05c134	Drinking frequency per month (wine)
w05c127	Average drinking capacity at a time (soju)
w05c129	Average drinking capacity at a time (beer)
w05c131	Average drinking capacity at a time (unstrained rice wine)

wo5c133	Average drinking capacity at a time (whisky or liquor)
wo5c135	Average drinking capacity at a time (wine)
wo5c136	Experience that feel that will should quit drinking
wo5c137	Experience blamed about drinking habit
wo5c138	Experience that get angry because of criticism about drinking
wo5c139	Guilt experience about drinking
wo5c140	Experience drinking in the morning
Wave 6:	
wo6c122	Usually, whether or not drinking
wo6c126	Drinking frequency per month (soju)
wo6c128	Drinking frequency per month (beer)
wo6c130	Drinking frequency per month (unstrained rice wine)
wo6c132	Drinking frequency per month (whisky or liquor)
wo6c134	Drinking frequency per month (wine)
wo6c127	Average drinking capacity at a time (soju)
wo6c129	Average drinking capacity at a time (beer)
wo6c131	Average drinking capacity at a time (unstrained rice wine)
wo6c133	Average drinking capacity at a time (whisky or liquor)
wo6c135	Average drinking capacity at a time (wine)
wo6c136	Experience that feel that will should quit drinking
wo6c137	Experience blamed about drinking habit
wo6c138	Experience that get angry because of criticism about drinking
wo6c139	Guilt experience about drinking
wo6c140	Experience drinking in the morning
Wave 7:	
wo7c122	Usually, whether or not drinking
wo7c126	Drinking frequency per month (soju)
wo7c128	Drinking frequency per month (beer)
wo7c130	Drinking frequency per month (unstrained rice wine)
wo7c132	Drinking frequency per month (whisky or liquor)
wo7c134	Drinking frequency per month (wine)
wo7c127	Average drinking capacity at a time (soju)
wo7c129	Average drinking capacity at a time (beer)
wo7c131	Average drinking capacity at a time (unstrained rice wine)
wo7c133	Average drinking capacity at a time (whisky or liquor)
wo7c135	Average drinking capacity at a time (wine)
wo7c136	Experience that feel that will should quit drinking
wo7c137	Experience blamed about drinking habit
wo7c138	Experience that get angry because of criticism about drinking
wo7c139	Guilt experience about drinking
wo7c140	Experience drinking in the morning
Wave 8:	
wo8c122	Usually, whether or not drinking
wo8c126	Drinking frequency per month (soju)
wo8c128	Drinking frequency per month (beer)
wo8c130	Drinking frequency per month (unstrained rice wine)
wo8c132	Drinking frequency per month (whisky or liquor)
wo8c134	Drinking frequency per month (wine)
wo8c127	Average drinking capacity at a time (soju)
wo8c129	Average drinking capacity at a time (beer)
wo8c131	Average drinking capacity at a time (unstrained rice wine)
wo8c133	Average drinking capacity at a time (whisky or liquor)
wo8c135	Average drinking capacity at a time (wine)

Section B. Health

wo8c136	Experience that feel that will should quit drinking
wo8c137	Experience blamed about drinking habit
wo8c138	Experience that get angry because of criticism about drinking
wo8c139	Guilt experience about drinking
wo8c140	Experience drinking in the morning

Wave 9:

wo9c122	Usually, whether or not drinking
wo9c126	Drinking frequency per month (soju)
wo9c128	Drinking frequency per month (beer)
wo9c130	Drinking frequency per month (unstrained rice wine)
wo9c132	Drinking frequency per month (whisky or liquor)
wo9c134	Drinking frequency per month (wine)
wo9c127	Average drinking capacity at a time (soju)
wo9c129	Average drinking capacity at a time (beer)
wo9c131	Average drinking capacity at a time (unstrained rice wine)
wo9c133	Average drinking capacity at a time (whisky or liquor)
wo9c135	Average drinking capacity at a time (wine)
wo9c136	Experience that feel that will should quit drinking
wo9c137	Experience blamed about drinking habit
wo9c138	Experience that get angry because of criticism about drinking
wo9c139	Guilt experience about drinking
wo9c140	Experience drinking in the morning

How Constructed

rWsmokev is dichotomous for whether or not the respondent has ever smoked cigarettes. When the KLoSA asks this question, they ask specifically if the respondent has ever smoked more than 5 packs of cigarettes (or 100 individual) in their lifetime. **rWsmoken** indicates whether or not the respondent currently smokes. **rWsmokev** and **rWsmoken** are coded as 0 for no and 1 for yes. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWsmokev** and **rWsmoken** are assigned blank missing (.) for respondents who did not participate in the current wave.

sWsmokev and **sWsmoken** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWsmokev** and **rWsmoken**. In addition to the special missing codes employed by **rWsmokev** and **rWsmoken**, **sWsmokev** and **sWsmoken** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWsmokef indicates how many cigarettes are smoked on average per day. This question is only asked if the respondent reports having ever smoked daily. If the respondent reports they have never smoked, **rWsmokef** is assigned a value of 0. When respondents don't know, are missing, or refuse to answer, **rWsmokef** is assigned special missing values (.d), (.m), or (.r), respectively. **rWsmokef** is set to plain missing (.) for respondents who did not respond to the current wave.

sWsmokef records how many cigarettes the respondent's spouse smokes on average per day and is taken directly from **rWsmokef**. In addition to the special missing codes used in **rWsmokef**, **sWsmokef** employs the special missing value (.u), when the respondent does not report being coupled in the current wave, and the special missing value (.v), when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWsmokefm indicates how many cigarettes are smoked on average per day when smoking the most. This question is only asked if the respondent reports having ever smoked daily. If the respondent reports they have never smoked, **rWsmokefm** is assigned a value of 0. **rWsmokefm** is assigned special missing value (.c) if the respondent reports currently smoking. When respondents don't know, are missing, or refuse to answer, **rWsmokefm** is assigned special missing values (.d), (.m), or (.r), respectively. **rWsmokefm** is set to plain missing (.) for respondents who did not respond to the current wave.

sWsmokefm records how many cigarettes the respondent's spouse smokes on average per day when smoking the most and is taken directly from **rWsmokefm**. In addition to the special missing codes used in **rWsmokefm**, **sWsmokefm** employs the special missing value (.u), when the respondent does not report being coupled in the current wave, and the special missing value (.v), when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWstrtsmok indicates the age at which the respondent started smoking. Respondents report the year in which they started smoking, so the respondent's birth year is subtracted from this value to obtain the age at which the respondent started smoking. If the calculated age started smoking takes a value of less than 1, then **rWstrtsmok** is assigned special missing value (.i). If the respondent reports multiple ages that they started smoking across waves, the value from the first wave is used. **rWstrtsmok** is assigned special missing (.n) if the respondent reports never smoking. Don't know, refused, or other missing responses of **rWstrtsmok** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWstrtsmok** is set to plain missing (.) for respondents who did not participate in the current wave.

sWstrtsmok indicates the age at which the respondent's current wave's spouse started smoking, and is taken from **rWstrtsmok**. In addition to the special missing codes employed by **rWstrtsmok**, **sWstrtsmok** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

If a respondent identified themselves as a smoker in a previous interview, but reports not smoking currently, they are asked when they stopped smoking. **rWquitsmok** indicates the age at which the respondent quit smoking. Respondents report the year in which they quit smoking, so the respondent's birth year is subtracted from this value to obtain the age at which the respondent quit smoking. **rWquitsmok** takes the most recent value reported. If the calculated age quit smoking takes a value of less than 1, then **rWquitsmok** is assigned special missing value (.i). **rWquitsmok** is assigned special missing (.n) if the respondent reports never smoking. **rWquitsmok** is assigned special missing (.c) if the respondent reports currently smoking. Don't know, refused, or other missing responses of **rWquitsmok** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWquitsmok** is set to plain missing (.) for respondents who did not participate in the current wave.

sWquitsmok indicates the age at which the respondent's current wave's spouse quit smoking, and is taken from **rWquitsmok**. In addition to the special missing codes employed by **rWquitsmok**, **sWquitsmok** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

In HRS, whether the respondent has ever smoked or not is determined by the following question "Have you ever smoked cigarettes?" However, in KLoSA, whether the respondent has ever smoked or not is determined by the following question "Have you ever smoked more than 5 packs of cigarettes (100 cigarettes)?"

Original KLoSA Variables Used

Wave 1:

wo1c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo1c117	Currently, whether or not smoking
wo1c119	Currently, smoking amount (unit : piece of split wood/a day)
wo1c120	Day of maximum smoking time, smoking amount (unit : piece/a day)

Section B. Health

wo1c118y	Smoking beginning time (unit : Year)
wo1c121y	Time for stopping smoking (unit : Year)
Wave 2:	
wo2c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo2c117	Currently, whether or not smoking
wo2c119	Currently, smoking amount (unit : piece of split wood/a day)
wo2c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo2c118y	Smoking beginning time (unit : Year)
wo2c121y	Time for stopping smoking (unit : Year)
Wave 3:	
wo3c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo3c117	Currently, whether or not smoking
wo3c119	Currently, smoking amount (unit : piece of split wood/a day)
wo3c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo3c118y	Smoking beginning time (unit : Year)
wo3c121y	Time for stopping smoking (unit : Year)
Wave 4:	
wo4c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo4c117	Currently, whether or not smoking
wo4c119	Currently, smoking amount (unit : piece of split wood/a day)
wo4c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo4c118y	Smoking beginning time (unit : Year)
wo4c121y	Time for stopping smoking (unit : Year)
Wave 5:	
wo5c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo5c117	Currently, whether or not smoking
wo5c119	Currently, smoking amount (unit : piece of split wood/a day)
wo5c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo5c118y	Smoking beginning time (unit : Year)
wo5c121y	Time for stopping smoking (unit : Year)
Wave 5 Add:	
wo5c116	Smoking experience more than 5 packs (100 cigarettes) in total in your life
wo5c117	Currently, whether or not smoking
wo5c119	Currently, smoking amount (unit : piece of split wood/a day)
wo5c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo5c118y	Smoking beginning time (unit : Year)
wo5c121y	Time for stopping smoking (unit : Year)
Wave 6:	
wo6c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo6c117	Currently, whether or not smoking
wo6c119	Currently, smoking amount (unit : piece of split wood/a day)
wo6c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo6c118y	Smoking beginning time (unit : Year)
wo6c121y	Time for stopping smoking (unit : Year)
Wave 7:	
wo7c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo7c117	Currently, whether or not smoking
wo7c119	Currently, smoking amount (unit : piece of split wood/a day)
wo7c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo7c118y	Smoking beginning time (unit : Year)
wo7c121y	Time for stopping smoking (unit : Year)
Wave 8:	

Section B. Health

wo8c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo8c117	Currently, whether or not smoking
wo8c119	Currently, smoking amount (unit : piece of split wood/a day)
wo8c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo8c118y	Smoking beginning time (unit : Year)
wo8c121y	Time for stopping smoking (unit : Year)
Wave 9:	
wo9c116	Smoking experience more than 5 packs (100 cigarettes) since previous interview
wo9c117	Currently, whether or not smoking
wo9c119	Currently, smoking amount (unit : piece of split wood/a day)
wo9c120	Day of maximum smoking time, smoking amount (unit : piece/a day)
wo9c118y	Smoking beginning time (unit : Year)
wo9c121y	Time for stopping smoking (unit : Year)

C. Health Care Utilization and Insurance

How Constructed

rWhcfcl1y indicates whether the respondent has been hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility in the last 12 months and is only available at Waves 1 and 5. Respondents who report not being hospitalized at any of the above facilities are coded as 0; respondents who have been hospitalized at any of the facilities at least once are coded as 1. **rWhcftim1y** records the number of times that the respondent has been hospitalized at the hospital, nursing home, convalescent home or other long-term health care facility in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about hospitalizations since the last interview rather than in the past 12 months, so these respondents are assigned a special missing value (.q) in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes (.r) and (.d), respectively, for both **rWhcfcl1y** and **rWhcftim1y**. Plain missing (.) codes are used in **rWhcfcl1y** and **rWhcftim1y** for respondents who did not respond to the current wave.

rWhcfnite records the number of days that the respondent was hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility during the last such episode and is only available at Wave 1. **rWhcfnite** is set to 0 for respondents who reported no hospitalization in the last year. Special missing codes (.r) and (.d) are used for **rWhcfnite** for respondents who refuse to answer or do not know the number of days they stayed during their last hospitalization. Plain missing (.) codes are used in **rWhcfnite** for respondents who did not respond to the current wave.

rWhcfnit1y records the number of days that the respondent was hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility in the previous year and is only available at Wave 5. **rWhcfnit1y** is set to 0 for respondents who reported no hospitalization in the past year. Previously interviewed respondents in Wave 5 were asked about the number of days hospitalized since the last interview and not in the past 12 months, so these respondents are assigned a special missing value (.q), not asked. Special missing codes (.r) and (.d) are used for **rWhcfnit1y** for respondents who refuse to answer or do not know the number of days they stayed during their last hospitalization. Plain missing (.) codes are used in **rWhcfnit1y** for respondents who did not respond to the current wave.

sWhcfcl1y, **sWhcftim1y**, **sWhcfnite**, and **sWhcfnit1y** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWhcfcl1y**, **rWhcftim1y**, **rWhcfnite**, and **rWhcfnit1y**. In addition to the special missing codes used in **rWhcfcl1y**, **rWhcftim1y**, **rWhcfnite**, and **rWhcfnit1y**, **sWhcfcl1y**, **sWhcftim1y**, **sWhcfnite**, and **sWhcfnit1y** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWhcfc12y indicates whether the respondent has been hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility since the last interview (usually 2 years ago) and is available starting in Wave 2. Respondents who report not being hospitalized at any of the above facilities are coded as 0; respondents who have been hospitalized at any of the facilities at least once are coded as 1. **rWhcftim2y** records the number of times that the respondent has been hospitalized at the hospital, nursing home, convalescent home or other long-term health care facility since the last interview (usually 2 years ago) and is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about hospitalizations during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value (.q) in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes (.r) and (.d), respectively, for both **rWhcfc12y** and **rWhcftim2y**. Plain missing (.) codes are used in **rWhcfc12y** and **rWhcftim2y** for respondents who did not respond to the current wave.

rWhcfnit2y records the number of days the respondent was hospitalized at a hospital, nursing home, convalescent home or other long-term health care facility since the last interview (usually 2 years ago) and is available starting in Wave 2. **rWhcfnit2y** is set to 0 for respondents who reported no hospitalization in the past 2 years. New respondents first interviewed in Wave 5 were asked the number of days of hospitalizations during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value (.q) in this wave. Special missing codes (.r) and (.d) are used for **rWhcfnit2y** for respondents who refuse to answer or do not know the number of days they stayed during their last hospitalization. Plain missing (.) codes are used in **rWhcfnit2y** for respondents who did not respond to the current wave.

sWhcfc12y, **sWhcftim2y**, and **sWhcfnit2y** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWhcfc12y**, **rWhcftim2y**, and **rWhcfnit2y**. In addition to the special missing codes used in **rWhcfc12y**, **rWhcftim2y**, and **rWhcfnit2y**, **sWhcfc12y**, **sWhcftim2y**, and **sWhcfnit2y** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, the question asks about hospitalizations at a hospital, nursing home, convalescent home or other long-term health care facility in the previous year. However, starting in Wave 2, KLoSA asks about hospitalizations at a hospital, nursing home, convalescent home or other long-term health care facility since the last interview (usually 2 years ago). As a result, **rWhcfc11y**, **rWhcftim1y**, and **rWhcfnite** are only available in Wave 1 and for the new respondents in Wave 5. **rWhcfc12y**, **rWhcftim2y**, and **rWhcfnit2y** are available starting in Wave 2.

Furthermore, in Wave 1, KLoSA asks about the days hospitalized during the last hospitalization, but starting in Wave 2, KLoSA asks returning respondents about the total days spent in hospitalization since the last interview. KLoSA asks the new respondents first interviewed in Wave 5 about the total days spent in hospitalization in the past year, so **rWhcfnit1y** is only available for the new respondents in Wave 5.

Cross-Study Differences with the HRS

HRS respondents are asked whether they have been a patient in a hospital overnight and if so, the number of times they were an overnight patient and the number of nights total they were a patient. Later in the HRS, respondents are also asked whether they have been a patient overnight in a nursing home, convalescent home, or other long-term health care facility and if so, the number of times they were a patient and the number of nights total they were a patient. Unlike HRS, KLoSA asks hospitalizations at a hospital, nursing home, convalescent home or other long-term health care facility in a single set of questions so it is not possible to distinguish between hospitalizations at hospitals and hospitalizations at nursing home, convalescent home, and long-term health care facilities. To construct an HRS measure which is comparable to these variables in the Gateway Harmonized KLoSA would require aggregating the RAND HRS variables about hospitals stays with the RAND HRS variables about nursing home stays.

Original KLoSA Variables Used

Wave 1:

w01c318	Frequency of hospitalization during the past 12 months (unit: times)
w01cc19	Days of hospitalization

Wave 2:

w02c318	Frequency of hospitalization since the previous interview (unit: times)
w02c320_01	Days of 1st hospitalization (unit: a day)
w02c320_02	Days of 2nd hospitalization (unit: a day)
w02c320_03	Days of 3rd hospitalization (unit: a day)
w02c320_04	Days of 4th hospitalization (unit: a day)
w02c320_05	Days of 5th hospitalization (unit: a day)
w02c320_06	Days of 6th hospitalization (unit: a day)
w02c320_07	Days of 7th hospitalization (unit: a day)
w02c320_08	Days of 8th hospitalization (unit: a day)
w02c320_09	Days of 9th hospitalization (unit: a day)
w02c320_10	Days of 10th hospitalization (unit: a day)
w02c320_11	Days of 11th hospitalization (unit: a day)
w02c320_12	Days of 12th hospitalization (unit: a day)

Wave 3:

w03c318	Frequency of hospitalization since the previous interview (unit: times)
w03c320_01	Days of 1st hospitalization (unit: a day)
w03c320_02	Days of 2nd hospitalization (unit: a day)
w03c320_03	Days of 3rd hospitalization (unit: a day)
w03c320_04	Days of 4th hospitalization (unit: a day)
w03c320_05	Days of 5th hospitalization (unit: a day)
w03c320_06	Days of 6th hospitalization (unit: a day)

Wave 4:

w04c318	Frequency of hospitalization since the previous interview (unit: times)
w04c320_01	Days of 1st hospitalization (unit: a day)
w04c320_02	Days of 2nd hospitalization (unit: a day)
w04c320_03	Days of 3rd hospitalization (unit: a day)
w04c320_04	Days of 4th hospitalization (unit: a day)
w04c320_05	Days of 5th hospitalization (unit: a day)
w04c320_06	Days of 6th hospitalization (unit: a day)

Wave 5:

w05c318	Frequency of hospitalization since the previous interview (unit: times)
w05c320_01	Days of 1st hospitalization (unit: a day)
w05c320_02	Days of 2nd hospitalization (unit: a day)
w05c320_03	Days of 3rd hospitalization (unit: a day)
w05c320_04	Days of 4th hospitalization (unit: a day)
w05c320_05	Days of 5th hospitalization (unit: a day)
w05c320_06	Days of 6th hospitalization (unit: a day)
w05c320_07	Days of 7th hospitalization (unit: a day)
w05c320_08	Days of 8th hospitalization (unit: a day)
w05c320_09	Days of 9th hospitalization (unit: a day)
w05c320_10	Days of 10th hospitalization (unit: a day)

Wave 5 Add:

w05c318	Frequency of hospitalization since the previous interview (unit: times)
w05c320_01	Days of 1st hospitalization (unit: a day)
w05c320_02	Days of 2nd hospitalization (unit: a day)
w05c320_03	Days of 3rd hospitalization (unit: a day)

wo5c32o_04	Days of 4th hospitalization (unit: a day)
wo5c32o_05	Days of 5th hospitalization (unit: a day)
Wave 6:	
wo6c318	Frequency of hospitalization since the previous interview (unit: times)
wo6c32o_01	Days of 1st hospitalization (unit: a day)
wo6c32o_02	Days of 2nd hospitalization (unit: a day)
wo6c32o_03	Days of 3rd hospitalization (unit: a day)
wo6c32o_04	Days of 4th hospitalization (unit: a day)
wo6c32o_05	Days of 5th hospitalization (unit: a day)
wo6c32o_06	Days of 6th hospitalization (unit: a day)
wo6c32o_07	Days of 7th hospitalization (unit: a day)
wo6c32o_08	Days of 8th hospitalization (unit: a day)
wo6c32o_09	Days of 9th hospitalization (unit: a day)
wo6c32o_10	Days of 10th hospitalization (unit: a day)
Wave 7:	
wo7c318	Frequency of hospitalization since the previous interview (unit: times)
wo7c32o_01	Days of 1st hospitalization (unit: a day)
wo7c32o_02	Days of 2nd hospitalization (unit: a day)
wo7c32o_03	Days of 3rd hospitalization (unit: a day)
wo7c32o_04	Days of 4th hospitalization (unit: a day)
wo7c32o_05	Days of 5th hospitalization (unit: a day)
wo7c32o_06	Days of 6th hospitalization (unit: a day)
wo7c32o_07	Days of 7th hospitalization (unit: a day)
Wave 8:	
wo8c318	Frequency of hospitalization since the previous interview (unit: times)
wo8c32o_01	Days of 1st hospitalization (unit: a day)
wo8c32o_02	Days of 2nd hospitalization (unit: a day)
wo8c32o_03	Days of 3rd hospitalization (unit: a day)
wo8c32o_04	Days of 4th hospitalization (unit: a day)
wo8c32o_05	Days of 5th hospitalization (unit: a day)
wo8c32o_06	Days of 6th hospitalization (unit: a day)
wo8c32o_07	Days of 7th hospitalization (unit: a day)
Wave 9:	
wo9c318	Frequency of hospitalization since the previous interview (unit: times)
wo9c32o_01	Days of 1st hospitalization (unit: a day)
wo9c32o_02	Days of 2nd hospitalization (unit: a day)
wo9c32o_03	Days of 3rd hospitalization (unit: a day)
wo9c32o_04	Days of 4th hospitalization (unit: a day)
wo9c32o_05	Days of 5th hospitalization (unit: a day)
wo9c32o_06	Days of 6th hospitalization (unit: a day)
wo9c32o_07	Days of 7th hospitalization (unit: a day)

Doctor Visits

Variable	Waves	Label	Type

sWdoctim	2-9	sWdoctim:wW s # doctor visits, past 2 yr	Cont

How Constructed

rWdoctor1y indicates whether the respondent has visited a public health clinic or seen or talked to a medical doctor in the past 12 months and is only available at Waves 1 and 5. **rWdoctor1y** is derived by using two different sections of questions in KLoSA. KLoSA first asks, "Have you ever visited a public health clinic in the past 12 months?", and if so, asks "how many times did you go to a public health clinic?" KLoSA later asks "Aside from any visits to oriental medicine clinic, public health clinics, dental clinics and hospital stays, how many times have you seen or talked to a medical doctor about your health, including internal, ENT (ear-nose-and throat), surgery or hospital as an outpatient or to an emergency room in the past 12 months?", and if so, "how many times did you go there?" Respondents who have not visited a public health clinic nor have seen a doctor in the past 12 months are coded as 0; respondents who have visited a public health clinic or have seen a doctor in the past 12 months are coded as 1. **rWdoctim1y** sums the number of times that the respondent has visited a public health clinic and has seen a doctor in the last 12 months and is only available at Waves 1 and 5. It is only calculated if neither component is missing. Previously interviewed respondents in Wave 5 were asked about visiting public health clinics and seeing doctors since the last interview and not in the past 12 months, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWdoctor1y** and **rWdoctim1y** are set to plain missing (.) for respondents who did not respond to the current wave.

rWdoctor indicates whether the respondent has visited a public health clinic or seen or talked to a medical doctor since the last interview (usually 2 years ago) and is available starting in Wave 2. **rWdoctor** is derived by using two different sections of questions in KLoSA. KLoSA first asks, "Have you ever visited a public health clinic since the previous interview?", and if so, asks "how many times did you go to a public health clinic?" KLoSA later asks "Aside from any visits to oriental medicine clinic, public health clinics, dental clinics and hospital stays, how many times have you seen or talked to a medical doctor about your health, including internal, ENT (ear-nose-and throat), surgery or hospital as an outpatient or to an emergency room since the previous interview?", and if so, "how many times did you go there?" Respondents who have not visited a public health clinic nor have seen a doctor since the last interview are coded as 0; respondents who have visited a public health clinic or have seen a doctor since the last interview are coded as 1. **rWdoctim** records the number of times that the respondent has visited a public health clinic or has seen a doctor since the last interview and is available starting in Wave 2. **rWdoctim** takes the sum of the number of visits to a public health clinic and doctor if neither component is missing. New respondents first interviewed in Wave 5 were asked about visits to clinics and hospitals during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWdoctor** and **rWdoctim** are set to plain missing (.) for respondents who did not respond to the current wave.

sWdoctor1y, **sWdoctim1y**, **sWdoctor** and **sWdoctim** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWdoctor1y**, **rWdoctim1y**, **rWdoctor** and **rWdoctim**. In addition to the special missing codes used in **rWdoctor1y**, **rWdoctim1y**, **rWdoctor** and **rWdoctim**, **sWdoctor1y**, **sWdoctim1y**, **sWdoctor** and **sWdoctim** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, the question asks about visiting a public health clinic or seeing a medical doctor in the previous year. However, starting in Wave 2, KLoSA asks about visiting a public health clinic or seeing a medical doctor since the last interview (usually 2 years ago). As a result, **rWdoctor1y** and **rWdoctim1y** are only available in Wave 1 and for the new respondents in Wave 5. **rWdoctor** and **rWdoctim** are available starting in Wave 2.

Cross-Study Differences with the HRS

HRS respondents are asked how many times they have seen or talked to a medical doctor about their health, including emergency room, clinic visits, or house calls and excluding any hospital stays or outpatient surgery. Differently, KLoSA respondents are first asked whether they have ever visited a public health clinic and if so, how many times. Slightly later in the survey, KLoSA respondents are asked how many times they have seen or talked to a medical doctor about their health, including internal, ENT (ear-nose-and throat), surgery or hospital as an outpatient or to an emergency room and excluding visits to oriental medicine clinic, public health clinics, dental clinics and hospital stays. Due to these differences **rWdoctor** and **rWdoctim** in the RAND HRS are not exactly comparable to **rWdoctor** and **rWdoctim** in the Gateway Harmonized KLoSA. Specifically, **rWdoctor** and **rWdoctim** in the Gateway Harmonized KLoSA would include outpatient surgeries and outpatient hospitalizations which are not visits to the emergency room but these are excluded in **rWdoctor** and **rWdoctim** in the RAND HRS. Also different, KLoSA asks about visiting public health clinics while the HRS asks about seeing or talking to a medical doctor during a clinic visit.

How Constructed

rWtrdmed1y indicates whether the respondent has visited an oriental medicine clinic in the last 12 months and is only available at Waves 1 and 5. Respondents who report not having visited an oriental medicine clinic in the last 12 months are coded as 0; respondents who report having visited an oriental medicine clinic at least once in the last 12 months are coded as 1. **rWtrdmdtim1y** records the number of times that the respondent has visited an oriental medicine clinic in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about visits since the last interview rather than in the past 12 months, so these respondents are assigned a special missing value (.q) in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes (.r) and (.d), respectively, for both **rWtrdmed1y** and **rWtrdmdtim1y**. Plain missing (.) codes are used in **rWtrdmed1y** and **rWtrdmdtim1y** for respondents who did not respond to the current wave.

sWtrdmed1y and **sWtrdmdtim1y** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWtrdmed1y** and **rWtrdmdtim1y**. In addition to the special missing codes used in **rWtrdmed1y** and **rWtrdmdtim1y**, **sWtrdmed1y** and **sWtrdmdtim1y** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWtrdmed2y indicates whether the respondent has visited an oriental medicine clinic since the last interview (usually 2 years ago) and is available starting in Wave 2. Respondents who report not having visited an oriental medicine clinic since the last interview are coded as 0; respondents who report having visited an oriental medicine clinic at least once since the last interview are coded as 1. **rWtrdmdtim2y** records the number of times that the respondent has visited an oriental medicine clinic since the last interview and is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about whether they had visited an oriental medicine clinic during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value (.q) in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes (.r) and (.d), respectively, for both **rWtrdmed2y** and **rWtrdmdtim2y**. Plain missing (.) codes are used in **rWtrdmed2y** and **rWtrdmdtim2y** for respondents who did not respond to the current wave.

sWtrdmed2y and **sWtrdmdtim2y** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWtrdmed2y** and **rWtrdmdtim2y**. In addition to the special missing codes used in **rWtrdmed2y** and **rWtrdmdtim2y**, **sWtrdmed2y** and **sWtrdmdtim2y** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, the question asks about visiting an oriental medicine clinic in the previous year. However, starting in Wave 2, KLoSA asks about visiting an oriental medicine clinic since the last

interview (usually 2 years ago). As a result, **rWtrdmed1y** and **rWtrdmdtim1y** are only available in Wave 1 and for the new respondents in Wave 5. **rWtrdmed2y** and **rWtrdmdtim2y** are available starting in Wave 2.

Cross-Study Differences with the HRS

Visits to a traditional medicine facility are not surveyed in HRS so there is no corresponding variable in RAND HRS or Gateway Harmonized HRS.

How Constructed

rWhomcar1y indicates whether the respondent received any in-home health care in the last 12 months and is only available at Waves 1 and 5. KLoSA respondents are asked "Has any medically-trained person come to your home to help you, yourself in the past 12 months?" and if so, "How many times did they visit you?" The interviewer is instructed that medically-trained person refers to nurses, nurse assistants, physical therapists, chemical therapists and oxygen therapists, who are professionally trained for medical treatment purposes and does not include caregivers who just take care of patients. Respondents who report not receiving any in-home health care in the last 12 months are coded as 0; respondents who report having received in-home health care at least once in the last 12 months are coded as 1. **rWhctim1y** records the number of times that the respondent has received in-home health care in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about in-home health care since the last interview rather than in the past 12 months, so these respondents are assigned a special missing value (.q) in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes (.r) and (.d), respectively, for both **rWhomcar1y** and **rWhctim1y**. Plain missing (.) codes are used in **rWhomcar1y** and **rWhctim1y** for respondents who did not respond to the current wave.

sWhomcar1y and **sWhctim1y** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWhomcar1y** and **rWhctim1y**. In addition to the special missing codes used in **rWhomcar1y** and **rWhctim1y**, **sWhomcar1y** and **sWhctim1y** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWhomcar indicates whether the respondent received any in-home health care since the last interview (usually 2 years ago) and is available starting in Wave 2. KLoSA respondents are asked "Has any medically-trained person come to your home to help you, yourself since the previous interview?" and if so, "How many times did they visit you?" The interviewer is instructed that medically-trained person refers to nurses, nurse assistants, physical therapists, chemical therapists and oxygen therapists, who are professionally trained for medical treatment purposes and does not include caregivers who just take care of patients. Respondents who report not receiving any in-home health care since the last interview are coded as 0; respondents who report having received in-home health care at least once since the last interview are coded as 1. **rWhctim** records the number of times that the respondent has received in-home health care since the last interview (usually 2 years ago) and is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about in-home health care during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value (.q) in this wave. Respondents who refused to answer or those who report they do not know the answer are coded with special missing codes (.r) and (.d), respectively, for both **rWhomcar** and **rWhctim**. Plain missing (.) codes are used in **rWhomcar** and **rWhctim** for respondents who did not respond to the current wave.

sWhomcar and **sWhctim** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWhomcar** and **rWhctim**. In addition to the special missing codes used in **rWhomcar** and **rWhctim**, **sWhomcar** and **sWhctim** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, the question asks in-home health care received in the previous year. However, starting in Wave 2, KLoSA asks about in-home health care received since the last interview (usually 2 years ago). As a result, **rWhomcar1y** and **rWhctim1y** are only available in Wave 1 and for the new respondents in Wave 5. **rWhomcar** and **rWhctim** are available starting in Wave 2.

Cross-Study Differences with the HRS

Both HRS and KLoSA ask the respondent whether they have received home health care since the last interview. Unlike HRS, KLoSA also asks the number of home health care visits.

How Constructed

rWdentst1y indicates whether or not the respondent has received dental care (including denture care) in the last 12 months and is only available at Waves 1 and 5. Respondents who report not having received dental care in the past 12 months are coded as 0; respondents who have received dental care at least once in the past 12 months are coded as 1. **rWdentim1y** indicates how many times the respondent received dental care in the last 12 months and is only available at Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about receiving dental care since the last interview and not in the past 12 months, so these respondents are assigned a special missing value (.q) in this wave. Those respondents who indicate they do not know or refuse to answer are coded (.d) and (.r), respectively. **rWdentst1y** and **rWdentim1y** are set to plain missing (.) for respondents who did not respond to the current wave.

rWdentst indicates whether or not the respondent has received dental care (including denture care) since the last interview (usually 2 years ago) and is available starting in Wave 2. Respondents who report not having received dental care since the last interview are coded as 0; respondents who have received dental care at least once since the last interview are coded as 1. **rWdentim** indicates how many times the respondent has received dental care since the last interview. New respondents first interviewed in Wave 5 were asked about receiving dental care during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value (.q) in this wave. Those respondents who indicate they do not know or refuse to answer are coded (.d) and (.r), respectively. **rWdentst** and **rWdentim** are set to plain missing (.) for respondents who did not respond to the current wave.

sWdentst1y, **sWdentim1y**, **sWdentst**, and **sWdentim** provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWdentst1y**, **rWdentim1y**, **rWdentst**, and **rWdentim**. In addition to the special missing codes used in **rWdentst1y**, **rWdentim1y**, **rWdentst**, and **rWdentim**, **sWdentst1y**, **sWdentim1y**, **sWdentst**, and **sWdentim** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWdrugs1y indicates whether the respondent has regularly taken prescription medication in the last 12 months and is only available at Waves 1 and 5. Respondents who report not regularly taking prescription medication are coded as 0; respondents who have regularly taken prescription medication are coded as 1. Previously interviewed respondents in Wave 5 were asked about taking prescription medication since the last interview and not in the past 12 months, so these respondents are assigned a special missing value (.q) in this wave. Respondents who do not know or refuse to answer the question are coded as (.d) and (.r), respectively. **rWdrugs1y** is set to plain missing (.) for respondents who did not respond to the current wave.

rWdrugs indicates whether the respondent has regularly taken prescription medication since the last interview (usually 2 years ago) and is available starting in Wave 2. Respondents who report not regularly taking a prescription medication

are coded as 0; respondents who have regularly taken a prescription medication are coded as 1. New respondents first interviewed in Wave 5 were asked about taking prescription medication during the previous year and not in the previous 2 years, so these respondents are assigned a special missing value (.q) in this wave. Respondents who do not know or refuse to answer the question are coded as (.d) and (.r), respectively. **rWdrugs** is set to plain missing (.) for respondents who did not respond to the current wave.

sWdrugs1y and **sWdrugs** provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWdrugs1y** and **rWdrugs**. In addition to the special missing values used in **rWdrugs1y** and **rWdrugs**, **sWdrugs1y** and **sWdrugs** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

The question wording is slightly different in Wave 1 and for the new sample in Wave 5, than for returning respondents starting in Wave 2. In Wave 1 and for new respondents first interviewed in Wave 5, KLoSA asks about dental care and taking prescription medicine in the previous year. However, starting in Wave 2, KLoSA asks about dental care and taking prescription medicine since the last interview (usually 2 years ago). As a result, **rWdentst1y**, **rWdentim1y**, and **rWdrugs1y** are only available in Wave 1 and for the new respondents in Wave 5. **rWdentst**, **rWdentim** and **rWdrugs** are available starting in Wave 2.

Cross-Study Differences with the HRS

Both HRS and KLoSA ask the respondent whether they have visited a dentist since the last interview. Unlike HRS, KLoSA also asks for the number of dentist visits.

How Constructed

rWoophos1y is the sum of out of pocket expenditures for hospitalization (medical treatment) and hospital caregiver services costs in the previous year. If the respondent was not hospitalized in the previous year, **rWoophos1y** is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoophos1y** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoophos is the sum of out of pocket expenditures for hospitalization (medical treatment) and hospital caregiver services costs since the last interview. If the respondent was not hospitalized since the last interview, **rWoophos** is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value

(.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoophos** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoopden1y is out of pocket expenditures for dental care costs in the previous year. If the respondent did not receive any dental care in the previous year, **rWoopden1y** is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoopden1y** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoopden is out of pocket expenditures for dental care costs since the last interview. If the respondent did not receive any dental care since the last interview, **rWoopden** is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoopden** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWooptrdmd1y is out of pocket expenditures for oriental clinic costs in the previous year. If the respondent did not receive any care at an oriental clinic in the previous year, **rWooptrdmd1y** is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWooptrdmd1y** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWooptrdmd is out of pocket expenditures for oriental clinic costs since the last interview. If the respondent did not receive any care at an oriental clinic since the last interview, **rWooptrdmd** is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWooptrdmd** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoopdoc1y is out of pocket expenditures for visits to the doctor and ER in the previous year. If the respondent did not have any visits to the doctor and ER in the previous year, **rWoopdoc1y** is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoopdoc1y** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoopdoc is out of pocket expenditures for visits to the doctor and ER since the last interview. If the respondent did not have any visits to the doctor and ER since the last interview, **rWoopdoc** is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoopdoc** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoophmcr1y is out of pocket expenditures for in-home care in the previous year. If the respondent did not receive any in-home care in the previous year, **rWoophmcr1y** is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoophmcr1y** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoophmcr is out of pocket expenditures for in-home care since the last interview. If the respondent did not receive any in-home care since the last interview, **rWoophmcr** is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any

of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoophmcr** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoopdrug1y is out of pocket expenditures for prescription drugs costs in the previous year. If the respondent did not take any prescription drugs in the previous year, **rWoopdrug1y** is assigned a 0 value. This is only available in Waves 1 and 5. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoopdrug1y** is assigned plain missing (.) if the respondent did not participate in the current wave.

rWoopdrug is out of pocket expenditures for prescription drugs costs since the last interview. If the respondent did not take any prescription drugs since the last interview, **rWoopdrug** is assigned a 0 value. This is available starting in Wave 2. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditures are assigned special missing values (.d), (.r), (.m), respectively. **rWoopdrug** is assigned plain missing (.) if the respondent did not participate in the current wave.

sWoophos1y, **sWoophos**, **sWoopden1y**, **sWoopden**, **sWooptrdmd1y**, **sWooptrdmd**, **sWoopdoc1y**, **sWoopdoc**, **sWoophmcr1y**, **sWoophmcr**, **sWoopdrug1y**, and **sWoopdrug** provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWoophos1y**, **rWoophos**, **rWoopden1y**, **rWoopden**, **rWooptrdmd1y**, **rWooptrdmd**, **rWoopdoc1y**, **rWoopdoc**, **rWoophmcr1y**, **rWoophmcr**, **rWoopdrug1y**, and **rWoopdrug**. In addition to the special missing codes used in the respondents' variables, the spouses' variables employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWoopmd1y is the sum of out of pocket expenditures for hospitalization (medical treatment), hospital caregiver services, dentists, oriental clinics, visits to the doctor and ER, in-home care, and prescription drugs costs in the previous year. If the respondent did not receive any of these services in the previous year, **rWoopmd1y** is assigned a 0 value. It is only summed if all components have values. This is available only in Waves 1 and 5. **rWoopmd1y** does not count expenditures on medical devices or monthly premiums paid for the National Health Insurance or Medical Aid program. Previously interviewed respondents in Wave 5 were asked about out of pocket expenditures since the last interview and not in the previous year, so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditure are assigned special missing values (.d), (.r), (.m), respectively. **rWoopmd1y** is set to plain missing (.) for respondents who did not respond to the current wave.s

rWoopmd is the sum of out of pocket expenditures for hospitalization (medical treatment), hospital caregiver services, dentists, oriental clinics, visits to the doctor and ER, in-home care, and prescription drug costs since the last interview. If the respondent did not receive any of these services since the last interview, **rWoopmd** is assigned a 0 value. It is only summed if all components have values. This is available starting in Wave 2. **rWoopmd** does not count expenditures on medical devices or monthly premiums paid for the National Health Insurance or Medical Aid program. New respondents first interviewed in Wave 5 were asked about out of pocket expenditures during the previous year and not in the past 2 years so these respondents are assigned a special missing value (.q) in this wave. Don't know, refused, or missing responses to any of these out of pocket expenditure are assigned special missing values (.d), (.r), (.m), respectively. **rWoopmd** is set to plain missing (.) for respondents who did not respond to the current wave.

sWoopmd1y and **sWoopmd** provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWoopmd1y** and **rWoopmd**. In addition to the special missing codes used in **rWoopmd1y** and **rWoopmd1y**, **sWoopmd1y** and **sWoopmd** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, KLoSA only asked about the amount of out of pocket hospital and hospital caretaker expenses for the last hospitalization episode. However, starting in Wave 2, KLoSA asked about the expenses for all visits since the last interview. KLoSA

asks the new respondents first interviewed in Wave 5 about the expenses for all visits in the past year. Due to the difference in the questions, **rWoophos** is available starting in Wave 2, and **rWoophosp1y** is available in Wave 1 and for new respondents in Wave 5. Because over 97% of respondents in Wave 1 had no or 1 hospitalizations, we equate the expense for the last hospitalization to the expense for the last year, but it will be an underestimate for the small percentage with more than one hospitalization.

Generally, respondents are asked about the use of and expenses related to healthcare services in the last year in Wave 1, and in the last two years starting in Wave 2. In Wave 5, new respondents are also asked in terms of the last year. The harmonized variables are built accordingly.

Cross-Study Differences with the HRS

Medical expenditures in KLoSA are measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Furthermore, the components included in the RAND HRS are slightly different from those included in Gateway Harmonized KLoSA. In the RAND HRS variable, **rWoopmd** includes: (1) hospital costs, (2) nursing home costs, (3) doctor visits costs, (4) dentist costs, (5) outpatient surgery costs, (6) average monthly prescription drug costs, (7) home health care, and (8) special facilities cost. Whereas the variable **rWoopmd** in the Gateway Harmonized KLoSA includes: (1) hospitalization cost, (2) hospital care taker cost, (3) dental cost, (4) oriental clinic cost, (5) doctor visit cost, including ER, (6) home health care cost, and (7) prescription medication cost.

Original KLoSA Variables Used

Wave 1:

wo1c318	Frequency of hospitalization during the past 12 months (unit: times)
wo1cc20	Expense for hospitalization (include the cost that a respondent paid for only) (
wo1cc26	In recent hospitalizaion, nursing expenses by the person who takes care of mostl
wo1cc23	In recent hospitalization, the person who takes care of mostly
wo1c330	In the last one year, the number of dental treatment (unit : a time)
wo1c332a	Contribution for dental treatment expense _by myself(unit : 10,000 won)
wo1c334	In the last one year, the number of visit to oriental medicine clinic (unit: num
wo1c336a	Contribution for an oriental medicine clinic expense_by myself(unit : 10,000 won
wo1c337	In the last one year, the number of other outpatient medical treatment (unit : a
wo1c339a	Contribution for other outpatient medical treatment expense_by myself(unit : 10,
wo1c340	In the last one year, the number of visit for in-home health care (unit : a time
wo1c342a	Contribution for in-home care expense_by myself(unit : 10,000 won)
wo1c343	In the last one year, whether or not take regular prescription
wo1c345a	Contribution for regular prescription medications expense_by myself(unit : 10,00

Wave 2:

wo2c322_01a	In 1st hospitalization, contribution for expense_(1) by myself
wo2c322_02a	In 2nd hospitalization, contribution for expense_(1) by myself
wo2c322_03a	In 3rd hospitalization, contribution for expense_(1) by myself
wo2c322_04a	In 4th hospitalization, contribution for expense_(1) by myself
wo2c322_05a	In 5th hospitalization, contribution for expense_(1) by myself
wo2c322_06a	In 6th hospitalization, contribution for expense_(1) by myself
wo2c322_07a	In 7th hospitalization, contribution for expense_(1) by myself
wo2c322_08a	In 8th hospitalization, contribution for expense_(1) by myself
wo2c322_09a	In 9th hospitalization, contribution for expense_(1) by myself
wo2c322_10a	In 10th hospitalization, contribution for expense_(1) by myself
wo2c322_11a	In 11th hospitalization, contribution for expense_(1) by myself
wo2c322_12a	In 12th hospitalization, contribution for expense_(1) by myself
wo2c329a	Contribution for helper total expenses_by myself
wo2c332a	Contribution for dental treatment expense _by myself(unit : 10,000 won)

wo2c336a	Contribution for an oriental medicine clinic expense_by myself(unit : 10,000 won
wo2c337	Since previous interview, the number of other outpatient medical treatment (unit
wo2c339a	Contribution for other outpatient medical treatment expense_by myself(unit : 10,
wo2c342a	Contribution for in-home care expense_by myself(unit : 10,000 won)
wo2c345a	Contribution for regular prescription medications expense_by myself(unit : 10,00
wo2c318	Frequency of hospitalization since the previous interview (unit: times)
wo2c330	Since the previous interview, the number of dental treatment (unit : a time)
wo2c334	Since the previous interview, the number of visit to oriental medicine clinic (u
wo2c340	Since previous interview, the number of visit for in-home health care (unit : a
wo2c343	Since previous interview, whether or not take regular prescription
wo2c344	Since previous interview, the total expense for regular prescription medicine (u
wo2c341	Since previous interview, the total expense of in-home health care (unit : 10,00
wo2c338	Since previous interview, the total expense of other outpatient medical treatmen
wo2c331	Since the previous interview, the total expense for dental treatment
wo2c335	Since the previous interview, the total expense for oriental medicine clinic
wo2c323_01a1	In 1st hospitalization, the relationship between the helper and R_1st helper
wo2c323_01a2	In 1st hospitalization, the relationship between the helper and R_2nd helper
wo2c323_01a3	In 1st hospitalization, the relationship between the helper and R_3rd helper
wo2c323_01a4	In 1st hospitalization, the relationship between the helper and R_4th helper
wo2c323_01a5	In 1st hospitalization, the relationship between the helper and R_5th helper
wo2c323_01a6	In 1st hospitalization, the relationship between the helper and R_6th helper
wo2c323_01a7	In 1st hospitalization, the relationship between the helper and R_7th helper
wo2c323_02a1	In 2nd hospitalization, the relationship between the helper and R_1st helper
wo2c323_02a2	In 2nd hospitalization, the relationship between the helper and R_2nd helper
wo2c323_02a3	In 2nd hospitalization, the relationship between the helper and R_3rd helper
wo2c323_02a4	In 2nd hospitalization, the relationship between the helper and R_4th helper
wo2c323_03a1	In 3rd hospitalization, the relationship between the helper and R_1st helper
wo2c323_03a2	In 3rd hospitalization, the relationship between the helper and R_2nd helper
wo2c323_03a3	In 3rd hospitalization, the relationship between the helper and R_3rd helper
wo2c323_03a4	In 3rd hospitalization, the relationship between the helper and R_4th helper
wo2c323_04a1	In 4th hospitalization, the relationship between the helper and R_1st helper
wo2c323_04a2	In 4th hospitalization, the relationship between the helper and R_2nd helper
wo2c323_05a1	In 5th hospitalization, the relationship between the helper and R_1st helper
wo2c323_05a2	In 5th hospitalization, the relationship between the helper and R_2nd helper
wo2c323_06a1	In 6th hospitalization, the relationship between the helper and R_1st helper
wo2c323_06a2	In 6th hospitalization, the relationship between the helper and R_2nd helper
wo2c323_07a1	In 7th hospitalization, the relationship between the helper and R_1st helper
wo2c323_08a1	In 8th hospitalization, the relationship between the helper and R_1st helper
wo2c323_09a1	In 9th hospitalization, the relationship between the helper and R_1st helper
wo2c323_10a1	In 10th hospitalization, the relationship between the helper and R_1st helper
wo2c323_11a1	In 11th hospitalization, the relationship between the helper and R_1st helper
wo2c323_12a1	In 12th hospitalization, the relationship between the helper and R_1st helper
wo2c327_01a1	In 1st hospitalizatoin, whether pay for nursing to_1st helper
wo2c327_01a2	In 1st hospitalizatoin, whether pay for nursing to_2nd helper
wo2c327_01a3	In 1st hospitalizatoin, whether pay for nursing to_3rd helper
wo2c327_01a4	In 1st hospitalizatoin, whether pay for nursing to_4th helper
wo2c327_01a5	In 1st hospitalizatoin, whether pay for nursing to_5th helper
wo2c327_01a6	In 1st hospitalizatoin, whether pay for nursing to_6th helper
wo2c327_01a7	In 1st hospitalizatoin, whether pay for nursing to_7th helper
wo2c327_02a1	In 2nd hospitalizatoin, whether pay for nursing to_1st helper
wo2c327_02a2	In 2nd hospitalizatoin, whether pay for nursing to_2nd helper
wo2c327_02a3	In 2nd hospitalizatoin, whether pay for nursing to_3rd helper
wo2c327_02a4	In 2nd hospitalizatoin, whether pay for nursing to_4th helper
wo2c327_03a1	In 3rd hospitalizatoin, whether pay for nursing to_1st helper

w02c327_03a2	In 3rd hospitalizatoin, whether pay for nursing to_2nd helper
w02c327_03a3	In 3rd hospitalizatoin, whether pay for nursing to_3rd helper
w02c327_03a4	In 3rd hospitalizatoin, whether pay for nursing to_4th helper
w02c327_04a1	In 4th hospitalizatoin, whether pay for nursing to_1st helper
w02c327_04a2	In 4th hospitalizatoin, whether pay for nursing to_2nd helper
w02c327_05a1	In 5th hospitalizatoin, whether pay for nursing to_1st helper
w02c327_05a2	In 5th hospitalizatoin, whether pay for nursing to_2nd helper
w02c327_06a1	In 6th hospitalizatoin, whether pay for nursing to_1st helper
w02c327_06a2	In 6th hospitalizatoin, whether pay for nursing to_2nd helper
w02c327_07a1	In 7th hospitalizatoin, whether pay for nursing to_1st helper
w02c327_08a1	In 8th hospitalizatoin, whether pay for nursing to_1st helper
w02c327_09a1	In 9th hospitalizatoin, whether pay for nursing to_1st helper
w02c327_10a1	In 10th hospitalizatoin, whether pay for nursing to_1st helper
w02c327_11a1	In 11th hospitalizatoin, whether pay for nursing to_1st helper
w02c327_12a1	In 12th hospitalizatoin, whether pay for nursing to_1st helper

Wave 3:

w03c322_01a	In 1st hospitalization, contribution for expense_(1) by myself
w03c322_02a	In 2nd hospitalization, contribution for expense_(1) by myself
w03c322_03a	In 3rd hospitalization, contribution for expense_(1) by myself
w03c322_04a	In 4th hospitalization, contribution for expense_(1) by myself
w03c322_05a	In 5th hospitalization, contribution for expense_(1) by myself
w03c322_06a	In 6th hospitalization, contribution for expense_(1) by myself
w03c329a	Contribution for helper total expenses_by myself
w03c332a	Contribution for dental treatment expense _by myself(unit : 10,000 won)
w03c336a	Contribution for an oriental medicine clinic expense_by myself(unit : 10,000 won)
w03c339a	Contribution for other outpatient medical treatment expense_by myself(unit : 10,
w03c342a	Contribution for in-home care expense_by myself(unit : 10,000 won)
w03c345a	Contribution for regular prescription medications expense_by myself(unit : 10,00
w03c318	Frequency of hospitalization since the previous interview (unit: times)
w03c330	Since the previous interview, the number of dental treatment (unit : a time)
w03c334	Since the previous interview, the number of visit to oriental medicine clinic (u
w03c337	Since previous interview, the number of other outpatient medical treatment (unit
w03c340	Since previous interview, the number of visit for in-home health care (unit : a
w03c343	Since previous interview, whether or not take regular prescription
w03c344	Since previous interview, the total expense for regular prescription medicine (u
w03c341	Since previous interview, the total expense of in-home health care (unit : 10,00
w03c338	Since previous interview, the total expense of other outpatient medical treatmen
w03c331	Since the previous interview, the total expense for dental treatment
w03c335	Since the previous interview, the total expense for oriental medicine clinic
w03c323_01a1	In 1st hospitalization, the relationship between the helper and R_1st helper
w03c323_01a2	In 1st hospitalization, the relationship between the helper and R_2nd helper
w03c323_01a3	In 1st hospitalization, the relationship between the helper and R_3rd helper
w03c323_01a4	In 1st hospitalization, the relationship between the helper and R_4th helper
w03c323_01a5	In 1st hospitalization, the relationship between the helper and R_5th helper
w03c323_01a6	In 1st hospitalization, the relationship between the helper and R_6th helper
w03c323_01a7	In 1st hospitalization, the relationship between the helper and R_7th helper
w03c323_01a8	In 1st hospitalization, the relationship between the helper and R_8th helper
w03c323_02a1	In 2nd hospitalization, the relationship between the helper and R_1st helper
w03c323_02a2	In 2nd hospitalization, the relationship between the helper and R_2nd helper
w03c323_02a3	In 2nd hospitalization, the relationship between the helper and R_3rd helper
w03c323_02a4	In 2nd hospitalization, the relationship between the helper and R_4th helper
w03c323_02a5	In 2nd hospitalization, the relationship between the helper and R_5th helper
w03c323_02a6	In 2nd hospitalization, the relationship between the helper and R_6th helper
w03c323_02a7	In 2nd hospitalization, the relationship between the helper and R_7th helper

wo3c323_02a8	In 2nd hospitalization, the relationship between the helper and R_8th helper
wo3c323_03a1	In 3rd hospitalization, the relationship between the helper and R_1st helper

Health Insurance: Type of Government Health Insurance

Variable	Waves	Label	Type
rWhigovt_k	1-9	rWhigovt_k:ww r type of government health insurance	Categ
sWhigovt_k	1-9	sWhigovt_k:ww s type of government health insurance	Categ

How Constructed

Healthcare is socialized in South Korea; as such citizens are enrolled in the National Health Insurance (NHI) plan. Persons that cannot afford the NHI plan are afforded Medical Aid; Medical Aid eliminates the premium for NHI.

rWhigovt_k indicates the type of government health insurance program the respondent is covered by. A code of 1 indicates that the respondent is covered by the National Health Insurance System. A code of 2 indicates that the respondent is covered by the Medical Aid System. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **rWhigovt_k** is set to plain missing (.) for respondents who did not respond to the current wave.

sWhigovt_k provides the information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to **rWhigovt_k**. In addition to the special missing codes used in **rWhigovt_k**, **sWhigovt_k** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

In the RAND HRS, **rWhigov** indicates whether the respondent is covered under any one of several different types of government insurance programs. As healthcare is socialized in South Korea, **rWhigovt_k** indicates which government plan the respondent is covered under.

Current coverage by National Health Insurance and Medical Aid Program

Covered By Private Health Insurance Program

Variable	Waves	Label	Type
rWhipriv	1-9	rWhipriv:WW r covered by private health insurance	Categ
sWhipriv	1-9	sWhipriv:WW s covered by private health insurance	Categ

How Constructed

rWhipriv indicates whether the respondent is covered by any private health insurance to compensate for hospital expenses. Respondents who indicate that they are not covered by a private health insurance program are coded as 0; respondents who indicate that they are covered by a private health insurance program are coded as 1. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **rWhipriv** is set to plain missing (.) for respondents who did not respond to the current wave.

sWhipriv gives this information for the respondent's spouse or partner and is taken directly from **rWhipriv**. In addition to the special missing codes used in **rWhipriv**, **sWhipriv** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

The RAND HRS includes the number of private insurance plans in **rWprpcnt**, whereas the Gateway Harmonized KLoSA includes a binary indicator of whether the respondent has any private insurance plans in **rWhipriv**.

Number of Private Health Insurance Plans

Variable	Waves	Label	Type
rWhenum	1-9	rWhenum:WW r # of private health insurance plans	Cont
sWhenum	1-9	sWhenum:WW s # of private health insurance plans	Cont

How Constructed

rWhenum indicates the number of private health insurance plans that the respondent has. Respondents who indicate that they are not covered by a private health insurance program are coded as 0. Don't know, refused, and otherwise missing responses are assigned special missing values (.d), (.r), and (.m), respectively. **rWhenum** is set to plain missing (.) for respondents who did not respond to the current wave.

sWhenum gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to **rWhenum**. In addition to the special missing values in **rWhenum**, **sWhenum** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

The RAND HRS includes **rWprpnt**, the number of all private health insurance plans, and **rWhenum**, which is the count of employer-provided health insurance plans in Waves 1 through 5 and the number of all private health insurance plans in Wave 6 and forward. **rWhenum** is the number of all private health insurance plans in the Gateway Harmonized KLoSA.

Health Care Utilization: Insurance Premium

Variable	Waves	Label	Type
rWprmm	1-9	rWprmm:ww r total monthly premium amnt	Cont
sWprmm	1-9	sWprmm:ww s total monthly premium amnt	Cont
rWprmmf	1-9	rWprmmf:ww r NHI premium flag	Categ
sWprmmf	1-9	sWprmmf:ww s NHI premium flag	Categ

How Constructed

Healthcare is socialized in South Korea; as such citizens are enrolled in the National Health Insurance (NHI) plan. Persons that cannot afford the NHI plan are afforded Medical Aid; Medical Aid eliminates the premium for NHI. However, those covered by Medical Aid often still pay co-pays at doctor offices. Additionally, South Koreans can also enroll in private insurance.

rWprmm is the total amount of monthly insurance premiums the respondent reports paying. **rWprmm** is the sum of the monthly insurance premiums paid into the National Health Insurance System and monthly insurance premiums paid for any private health insurances. KLoSA asks respondents who are currently paying their NHI premiums and allows respondents to report that either themselves or their spouse, son/daughter, son/daughter-in-law, or other relatives are currently paying these premiums. **rWprmm** includes the amount paid either by the respondent or their spouse. Respondents who are covered by the Medical Aid Program (who do not have to pay NHI premiums) and are not covered under any private health insurance are assigned a 0 value for **rWprmm**. Respondents who have their NHI premiums paid by someone other than their spouse are also assigned a 0, unless they pay for private insurance, in which case **rWprmm** is assigned the private insurance amount. Don't know, refused, or missing responses to either insurance premium paid are assigned special missing values (.d), (.r), (.m), respectively. **rWprmm** is set to plain missing (.) for respondents who did not respond to the current wave.

rWprmmf is a flag variable which indicates who paid for the respondent's National Health Insurance System premiums. A code of 1 indicates that the respondent paid for their own premiums. A code of 2 indicates that the respondent's spouse paid for the respondent's premium. A code of 3 indicates that other people (not the respondent or their spouse) paid for the respondent's premium. The amount paid by other people is available in the raw data, but not in the Gateway Harmonized KLoSA dataset. Respondents covered by Medical Aid are coded as special missing value (.n). Don't know, refused, or missing responses to who paid the respondent's NHI premiums are assigned special missing values (.d), (.r), (.m), respectively. **rWprmmf** is set to plain missing (.) for respondents who did not respond to the current wave.

sWprmm and **sWprmmf** provide the information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWprmm** and **rWprmmf**. In addition to the special missing codes used in **rWprmm** and **rWprmmf**, **sWprmm** and **sWprmmf** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Medical expenditures in KLoSA are measured in Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The RAND HRS provides the monthly insurance premium for Medicare and Medicaid in **rWmrprem**, for Medicare Part D in **rWrxprem**, and for private health insurance in **rWprprm1**, **rWprprm2**, and **rWprprm3**. Whereas the total monthly insurance premium for public or private health insurance is provided in **rWprmm** in the Gateway Harmonized KLoSA.

Long-Term Care Insurance

Variable	Waves	Label	Type
rWhiltca_k	5-9	rWhiltca_k:WW r applied for long-term care ins	Categ
sWhiltca_k	5-9	sWhiltca_k:WW s applied for long-term care ins	Categ
rWhiltc_k	5-9	rWhiltc_k:WW r using long-term care ins	Categ
sWhiltc_k	5-9	sWhiltc_k:WW s using long-term care ins	Categ

How Constructed

In Korea, long-term care insurance is a social insurance system that provides long term care benefits for movement support or household activities support to the elderly who can not hold a regular living due to old age or geriatric disease, thus improving old age health and stable living, decreasing the burden on family and making quality of life higher. Individuals must apply for long-term care benefits, undergo an examination by the National Health Insurance, are assigned a rating based on the level of nursing care needed, and must be approved before they can access the care.

rWhiltca_k indicates whether the respondent has applied for long-term care insurance. **rWhiltca_k** is assigned a value of 0 if the respondent is not aware of the long-term care insurance or if they have not applied for the long-term care insurance, and is assigned a value of 1 if the respondent has applied for the long-term care insurance. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **rWhiltca_k** is set to plain missing (.) for respondents who did not respond to the current wave.

rWhiltc_k indicates whether the respondent is currently using long-term care insurance. **rWhiltc_k** is assigned a value of 0 if the respondent is not aware of the long-term care insurance, has not applied for the long-term care insurance, or is not currently using the long-term care insurance, and is assigned a value of 1 if the respondent has applied for and is using long-term care insurance. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **rWhiltca_k** is set to plain missing (.) for respondents who did not respond to the current wave.

sWhiltca_k and **sWhiltc_k** indicate whether the respondent's current wave's spouse has applied for or is using long-term care insurance, and their values are taken from **rWhiltca_k** and **rWhiltc_k**. In addition to the special missing values in **rWhiltca_k** and **rWhiltc_k**, **sWhiltca_k** and **sWhiltc_k** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Respondents start being asked about long-term care insurance in Korea starting in Wave 5.

Cross-Study Differences with the HRS

The HRS asks whether the respondent has long-term care insurance which specifically covers nursing home care for a year or more or any part of personal or medical care in the respondent's home. This information is made available in **rWhiltc** in the RAND HRS. KLoSA asks whether the respondent is aware of the long-term care insurance system in Korea, whether they have applied for it, and whether they are currently using it. The long-term care insurance system in Korea is not at all like the insurance coverage in the United States. As such, **rWhiltca_k** and **rWhiltc_k** in the Gateway Harmonized KLoSA should not be directly compared to **rWhiltc** in the RAND HRS.

D. Cognition

Immediate Word Recall

Variable	Waves	Label	Type
rWimrc3	1-7	rWimrc3:WW R immediate word recall	Cont
sWimrc3	1-7	sWimrc3:WW S immediate word recall	Cont

How Constructed

KLoSA included a three word recall list which was read to the respondent and then the respondent was asked to recall them immediately and then again, later in the survey. Respondents were randomly assigned to one of five non-overlapping lists and the interviewer read the three words from the randomly assigned word list.

rWimrc3 is the cognition measure for immediate word recall. **rWimrc3** counts how many words the respondent can recall correctly from a three-word list. Don't know, refused, or other missing responses of **rWimrc3** are assigned special missing codes (.d), (.r), (.m) respectively. **rWimrc3** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWimrc3** is set to plain missing (.) for respondents who did not respond to the current wave.

sWimrc3 is the current wave's spouse's immediate word recall score. It is taken directly from the spouse's values to **rWimrc3**. In addition to the special missing codes used in **rWimrc3**, **sWimrc3** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Cross-Study Differences with the HRS

Unlike HRS, KLoSA only has three words in a word list. HRS has ten words in a word list. The words in the word list in KLoSA are different from those in HRS. Furthermore, if a KLoSA respondent is unable to recall any words or can recall only a few words, the interviewer would repeat the words up to 5 times, including the first try, until the respondent can recall all of them.

Delayed Word Recall

Variable	Waves	Label	Type
rWdlrc3	1-7	rWdlrc3:WW R delayed word recall	Cont
sWdlrc3	1-7	sWdlrc3:WW S delayed word recall	Cont

How Constructed

rWdlrc3 is the cognition measure for delayed word recall. **rWdlrc3** counts how many words the respondent can recall correctly from a three-word list after a delay spent answering other survey questions. Respondents were randomly assigned to one of five non-overlapping lists. Don't know, refused, or other missing responses of **rWdlrc3** are assigned special missing codes (.d), (.r), (.m) respectively. **rWdlrc3** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWdlrc3** is set to plain missing (.) for respondents who did not respond to the current wave.

sWdlrc3 is the current wave's spouse's delayed word recall score. It is taken directly from the spouse's values to **rWdlrc3**. In addition to the special missing codes used in **rWdlrc3**, **sWdlrc3** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Cross-Study Differences with the HRS

Unlike HRS, KLoSA only has three words in a word list. HRS has ten words in a word list. The words in the word list in KLoSA are different from those in HRS. Furthermore, if a KLoSA respondent is unable to recall any words or can recall only a few words, the interviewer would repeat the words up to 5 times, including the first try, until the respondent can recall all of them.

Total Recall Summary Score

Variable	Waves	Label	Type
rWtr6	1-7	rWtr6:WW R recall summary score	Cont
sWtr6	1-7	sWtr6:WW S recall summary score	Cont

How Constructed

rWtr6 is the summary score for total word recall. **rWtr6** sums the immediate and delayed word recall scores. It is calculated as **rWimrc3** (range 0-3) + **rWdlrc3** (range 0-3). **rWtr6** is only calculated as long as both components have values. Don't know, refused, or other missing responses of **rWtr6** are assigned special missing codes (.d), (.r), (.m) respectively. **rWtr6** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWtr6** is set to plain missing (.) for respondents who did not respond to the current wave.

sWtr6 is the current wave's spouse's total word recall score. It is taken directly from the spouse's value to **rWtr6**. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Cross-Study Differences with the HRS

Unlike the HRS, KLoSA only has three words in its word list. As a result, the highest total recall summary score is six in the Gateway Harmonized KLoSA. The highest total recall summary score in the HRS would be twenty.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing
r1tr6	10,041	4.74	1.47	0.00	6.00	213

Original KLoSA Variables Used

Wave 1 Imputations:

wo1c4o6	A memory test (three words memorizing)
wo1c412	A memory test
wo1cd51	Response by proxy is prohibited for Cd.cognition section

Wave 2 Imputations:

wo2c4o6	A memory test (three words memorizing)
wo2c412	A memory test
wo2c346	Since previous interview, whether or not purchase other medical assistance equip
wo2doo1	Currently work

Wave 3 Imputations:

wo3c4o6	A memory test (three words memorizing)
wo3c412	A memory test
wo3c346	Since previous interview, whether or not purchase other medical assistance equip
wo3doo1	Currently work

Wave 4 Imputations:

wo4c4o6	A memory test (three words memorizing)
wo4c412	A memory test
wo4c346	Since previous interview, whether or not purchase other medical assistance equip
wo4doo1	Currently work

Wave 5 Imputations:

wo5c4o6	A memory test (three words memorizing)
wo5c412	A memory test
wo5c346	Since previous interview, whether or not purchase other medical assistance equip
wo5doo1	Currently work

Wave 5 Add Imputations:

wo5c4o6	A memory test (three words memorizing)
wo5c412	A memory test (three words memorizing recheck)
wo5c346	In the last one year, whether or not purchase other medical assistance equipment
wo5doo1	Currently work

Wave 6 Imputations:

wo6c4o6	A memory test (three words memorizing)
wo6c412	A memory test
wo6c349	C3 Degree of assistance by a proxy
wo6doo1	Currently work

Wave 7 Imputations:

wo7c4o6	A memory test (three words memorizing)
wo7c412	A memory test
wo7c349	C3 Degree of assistance by a proxy
wo7doo1	Currently work

Serial 7's

Variable	Waves	Label	Type
rWser7	1-7	rWser7:WW R serial 7s	Cont
sWser7	1-7	sWser7:WW S serial 7s	Cont

How Constructed

rWser7 provides the number of correct subtractions in the serial 7's test. This test asks the individual to subtract 7 from the prior number, beginning with 100 for five trials. Correct subtractions are based on the prior number given, so that even if one subtraction is incorrect subsequent trials are evaluated on the given (perhaps wrong) answer. Respondents score 1 point for every correct answer. Valid scores are 0-5. Don't know, refused, or other missing values for **rWser7** are assigned special missing codes (.d), (.r), (.m), respectively. **rWser7** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWser7** is set to plain missing (.) for respondents who did not respond to the current wave.

sWser7 provides the respondent's current wave's spouse's serial 7's score, and its values are taken from **rWser7**. In addition to the special missing codes used in **rWser7**, **sWser7** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Cross-Study Differences with the HRS

No differences known.

Date Naming

Variable	Waves	Label	Type
rWdat	1-7	rWdat:WW R cognition date naming-month/day/year	Categ
sWdat	1-7	sWdat:WW S cognition date naming-month/day/year	Categ
rWdw	1-7	rWdw:WW R cognition date naming-day of week	Categ
sWdw	1-7	sWdw:WW S cognition date naming-day of week	Categ
rWorient	1-7	rWorient:WW R cognition orient(summary date naming)	Cont
sWorient	1-7	sWorient:WW S cognition orient (summary date naming)	Cont
rWssn	1-7	rWssn:WW R cognition season naming	Categ
sWssn	1-7	sWssn:WW S cognition season naming	Categ

How Constructed

rWdat indicates whether the respondent was able to report today's date correctly. **rWdat** indicates whether the respondent was able to correctly report the combination of month, day and year. A code of 0 indicates that the respondent incorrectly reported all three components of month, date, and year. A code of 1 indicates that the respondent correctly reported one component of month, date, and year, and incorrectly reported the other two components. A code of 2 indicates that the respondent correctly reported two components of month, date, and year, and incorrectly reported one other component. A code of 3 indicates that the respondent correctly reported all three components of month, date, and year. Don't know, refused, or other missing responses of **rWdat** are assigned special missing codes (.d), (.r), (.m) respectively. **rWdat** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWdat** is set to plain missing (.) for respondents who did not respond to the current wave.

rWdw indicates whether the respondent was able to correctly report the day of the week. A code of 1 indicates that the respondent gave a correct answer, a code of 0 indicates an incorrect answer. Don't know, refused, or other missing responses of **rWdw** are assigned special missing codes (.d), (.r), (.m) respectively. **rWdw** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. **rWdw** is set to plain missing (.) for respondents who did not respond to the current wave.

sWdat and **sWdw** indicate whether the current wave's spouse was able to correctly report the day of month, date, and year, and the day of the week, respectively. They are taken directly from the spouse's values to **rWdat** and **rWdw**, respectively. In addition to the special missing codes used in **rWdat** and **rWdw**, **sWdat** and **sWdw** employ two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWorient indicates the respondent's orientation to month, date, year and day of the week. It is the summary measure for **rWdat** and **rWdw**, ranging from 0 to 4, the higher score the better oriented, and is calculated as long as both responses have values. Don't know, refused, or other missing responses of **rWorient** are assigned special missing codes (.d), (.r), (.m) respectively. **rWorient** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. **rWorient** is set to plain missing (.) for respondents who did not respond to the current wave.

sWorient is the current wave's spouse's date orientation score. It is taken directly from the spouse's value to **rWorient**. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWssn indicates whether the respondent was able to correctly report the current season (spring, summer, fall, or winter). A code of 0 indicates that the respondent was not able to correctly report the current season, and a code of 1 indicates that the respondent was able to correctly report the current season. Don't know, refused, or other missing responses of **rWssn** are assigned special missing codes (.d), (.r), (.m) respectively. **rWssn** is set to special missing (.p) if the cognition question

was skipped because the interview was by proxy. **rWssn** is set to plain missing (.) for respondents who did not respond to the current wave.

sWssn indicates whether the current wave's spouse was able to correctly report the current season. It is taken directly from the spouse's values to **rWssn**. In addition to the special missing codes used in **rWssn**, **sWssn** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Cross-Study Differences with the HRS

In HRS, date naming is separated into three questions, one for each: month, day and year. On the other hand, in KLoSA, month, day and year are combined into a single question.

The HRS does not ask respondents to name the current season.

wo7c4o2	Cognition ability regarding time (a day)
wo7c4o3	Cognition ability regarding time (an account)
wo7c349	C3 Degree of assistance by a proxy
wo7doo1	Currently work

Place Naming

Variable	Waves	Label	Type
rWplace	1-7	rWplace:WW R cognition place naming	Categ
sWplace	1-7	sWplace:WW S cognition place naming	Categ
rWcgdaddr	1-7	rWcgdaddr:WW R cognition city/gun/dong/address naming	Categ
sWcgdaddr	1-7	sWcgdaddr:WW R cognition city/gun/dong/address naming	Categ
rWorientp_k	1-7	rWorientp_k:WW R cognition orientation to place (0-5)	Cont
sWorientp_k	1-7	sWorientp_k:WW S cognition orientation to place (0-5)	Cont

How Constructed

rWplace and **rWcgdaddr** indicate whether the respondent was able to report their location correctly. **rWplace** indicates whether the respondent was able to correctly report how the interview place was normally used. Plausible answers are specific answers, such as hospital, market, living room, house, apartment, nursing home, etc. A code of 0 indicates that the respondent gave an incorrect answer, while a code of 1 indicates that the respondent gave a correct answer. Don't know, refused, or other missing responses of **rWplace** are assigned special missing codes (.d), (.r), (.m) respectively. **rWplace** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWplace** is set to plain missing (.) for respondents who did not respond to the current wave.

rWcgdaddr indicates whether the respondent was able to correctly report their city, Gun, Dong, and street address. A code of 0 indicates that the respondent incorrectly reported all four components of city, Gun, Dong, and street address. A code of 1 indicates that the respondent correctly reported one component of city, Gun, Dong, and street address, and incorrectly reported the other three components. A code of 2 indicates that the respondent correctly reported two components of city, Gun, Dong, and street address, and incorrectly reported the two other components. A code of 3 indicates that the respondent correctly reported three components of city, Gun, Dong, and street address, and incorrectly reported the one other component. A code of 4 indicates that the respondent correctly reported all four components of city, Gun, Dong, and street address. Don't know, refused, or other missing responses of **rWcgdaddr** are assigned special missing codes (.d), (.r), (.m) respectively. **rWcgdaddr** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. **rWcgdaddr** is set to plain missing (.) for respondents who did not respond to the current wave.

sWplace and **sWcgdaddr** indicate whether the current wave's spouse was able to correctly report how the interview place was normally used, and their city, Gun, Dong, and street address, respectively. They are taken directly from the spouse's values to **rWplace** and **rWcgdaddr**, respectively. In addition to the special missing codes used in **rWplace** and **rWcgdaddr**, **sWplace** and **sWcgdaddr** employ two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWorientp_k indicates the respondent's orientation to location, specifically how the interview place was normally used, and their city, Gun, Dong, and street address. It is the summary measure for **rWplace** and **rWcgdaddr**, ranging from 0 to 5, the higher score the better oriented, and is calculated as long as both responses have values. Don't know, refused, or other missing responses of **rWorientp_k** are assigned special missing codes (.d), (.r), (.m) respectively. **rWorientp_k** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. **rWorientp_k** is set to plain missing (.) for respondents who did not respond to the current wave.

sWorientp_k is the current wave's spouse's location orientation score. It is taken directly from the spouse's value to **rWorientp_k**. In addition to the special missing codes used in **rWorientp_k**, **sWorientp_k** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Cross-Study Differences with the HRS

The HRS does not ask respondents to name how the interview location is normally used, or their complete address.

Object Naming

Variable	Waves	Label	Type
rWobject1	1-7	rWobject1:ww R naming first object correct	Categ
sWobject1	1-7	sWobject1:ww S naming first object correct	Categ
rWobject2	1-7	rWobject2:ww R naming second object correct	Categ
sWobject2	1-7	sWobject2:ww S naming second object correct	Categ
rWobject	1-7	rWobject:ww R number objects correct	Categ
sWobject	1-7	sWobject:ww S number objects correct	Categ

How Constructed

rWobject1 and **rWobject2** indicate whether the respondent can properly identify the two random objects that the interviewer points to. These variables are coded as 0 if the respondent does not properly identify the object, and are coded as 1 if the respondent does properly identify the object. Don't know, refused, or other missing values for **rWobject1** and **rWobject2** are assigned special missing codes (.d), (.r), (.m), respectively. **rWobject1** and **rWobject2** are set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWobject1** and **rWobject2** are set to plain missing (.) for respondents who did not respond to the current wave.

sWobject1 and **sWobject2** indicate whether the respondent's spouse can properly identify two random objects which the interviewer points to. **sWobject1** and **sWobject2** are taken from the spouse's value for **rWobject1** and **rWobject2**, respectively. In addition to the special missing codes used in **rWobject1** and **rWobject2**, **sWobject1** and **sWobject2** employ two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWobject is the sum of **rWobject1** and **rWobject2** and it is only summed if all components have values. **rWobject** indicates the number of random objects the respondent properly identified. It is coded as 0 if the respondent does not properly identify any object, coded as 1 if the respondent properly identifies one object and coded as 2 if the respondent properly identifies both objects. **rWobject** is set to special missing (.p) if the cognition question was skipped because of a proxy respondent. **rWobject** is set to plain missing (.) for respondents who did not respond to the current wave.

sWobject provides the information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to **rWobject**. In addition to the special missing codes used in **rWobject**, **sWobject** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Cross-Study Differences with the HRS

In HRS, the respondent is asked to identify two specific objects (scissors and cactus). Differently, KLoSA asks the respondent to name two random objects that the interviewer points to.

Picture Drawing

Variable	Waves	Label	Type
rWdraw	1-7	rWdraw:WW R cognition able to draw assigned picture	Categ
sWdraw	1-7	sWdraw:WW S cognition able to draw assigned picture	Categ

How Constructed

rWdraw is the cognition measure indicating whether the respondent is able to draw the assigned picture (picture of two pentagons overlapped). **rWdraw** is assigned a 0 if the respondent is not able to draw the picture, and is assigned a 1 if the respondent is able to draw the picture. Don't know, refused, or other missing responses of **rWdraw** are assigned special missing codes (.d), (.r), (.m) respectively. **rWdraw** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWdraw** is set to plain missing (.) for respondents who did not respond to this wave.

sWdraw indicates whether the current wave's spouse is able to draw the assigned picture correctly and is taken directly from the spouse's value to **rWdraw**. In addition to the special missing codes used in **rWdraw**, **sWdraw** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Sentence Repetition

Variable	Waves	Label	Type
rWrpsnt	1-7	rWrpsnt:wW R cognition able to repeat sentence	Categ
sWrpsnt	1-7	sWrpsnt:wW S cognition able to repeat sentence	Categ

How Constructed

rWrpsnt indicates whether the respondent can exactly repeat the sentence that the interviewer said. The sentences that the interviewer would read to the respondent are randomly selected. The possible sentences are: 1.To see is to believe. 2.Check the dead fire again. 3.The Great Mountain is high but under the sky. 4.God watch over our land forever. 5.Thousand miles of range and river land. A code of 1 indicates that the respondent can repeat the exact sentence. A code of 0 indicates that the respondent can not repeat the exact sentence. Don't know, refused, or other missing values for **rWrpsnt** are assigned special missing codes (.d), (.r), (.m), respectively. **rWrpsnt** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWrpsnt** is set to plain missing (.) for respondents who did not respond to the current wave.

sWrpsnt indicates whether the respondent's spouse can exactly repeat the sentence that the interviewer said. **sWrpsnt** is taken from the spouse's value for **rWrpsnt**. In addition to the special missing codes used in **rWrpsnt**, **sWrpsnt** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Ability to Follow Directions: Folding Paper

Variable	Waves	Label	Type
rWexecu	1-7	rWexecu:WW R able to do 3-stage task (folding paper)	Categ
sWexecu	1-7	sWexecu:WW S able to do 3-stage task (folding paper)	Categ

How Constructed

rWexecu indicates whether the respondent can follow the directions to fold a piece of paper. The respondent is asked to do the following three actions: 1.Turn over the paper, 2.Fold the paper in half, 3.Give the paper back to the interviewer. A code of 0 indicates that the respondent did not complete any of the actions successfully. A code of 1 indicates that the respondent completed one of the actions. A code of 2 indicates that the respondent completed two of the actions. A code of 3 indicates that the respondent completed all the actions successfully. Don't know, refused, or other missing values for **rWexecu** are assigned special missing codes (.d), (.r), (.m), respectively. **rWexecu** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWexecu** is set to plain missing (.) for respondents who did not respond to the current wave.

sWexecu indicates whether the respondent's spouse can follow the directions to fold a piece of paper. **sWexecu** is taken from the spouse's value for **rWexecu**. In addition to the special missing codes used in **rWexecu**, **sWexecu** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Ability to Follow Directions: Reading and Closing Eyes

Variable	Waves	Label	Type
rWread	1-7	rWread:WW R cognition able to follow direction (reading or action of closing eye	Categ
sWread	1-7	sWread:WW S cognition able to follow direction (reading or action of closing eye	Categ

How Constructed

rWread indicates whether the respondent can read the sentence on the test paper and perform the stated action. The respondent is asked to read the sentence "Close your eyes" and act it out. A code of 0 indicates that the respondent did not complete any task. A code of 1 indicates that the respondent completed only one action. A code of 2 indicates that the respondent completed both actions. Don't know, refused, or other missing values for **rWread** are assigned special missing codes (.d), (.r), (.m), respectively. **rWread** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWread** is set to plain missing (.) for respondents who did not respond to the current wave.

sWread indicates whether the respondent's spouse can read the sentence on the test paper and act the action out. **sWread** is taken from the spouse's value for **rWread**. In addition to the special missing codes used in **rWread**, **sWread** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

Ability to Follow Directions: Writing a Sentence

Variable	Waves	Label	Type
rWsenten	1-7	rWsenten:WW R cognition able to follow direction (write a sentence)	Categ
sWsenten	1-7	sWsenten:WW S cognition able to follow direction (write a sentence)	Categ

How Constructed

rWsenten indicates whether the respondent could write one sentence about how they are feeling today or today's weather. A code of 0 indicates that the respondent could not write a sentence. A code of 1 indicates that the respondent could write an understandable sentence. Don't know, refused, or other missing values for **rWsenten** are assigned special missing codes (.d), (.r), (.m), respectively. **rWsenten** is set to special missing (.p) if the cognition question was skipped because the interview was by proxy. KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent, however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped. **rWsenten** is set to plain missing (.) for respondents who did not respond to the current wave.

sWsenten indicates whether the respondent's spouse could write one sentence about how they are feeling today or today's weather. **sWsenten** is taken from the spouse's value for **rWsenten**. In addition to the special missing codes used in **rWsenten**, **sWsenten** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA Wave 1 provides an indicator for whether the question was skipped because of a proxy respondent however, KLoSA does not provide this indicator in the data starting in Wave 2. From Wave 2 onward we estimate whether the cognition section was skipped because the response was by proxy by making sure that both the section before and the one after cognition were responded to, while cognition was skipped.

The KLoSA Imputation file has not yet been released for Waves 8 and 9.

How Constructed

cYYYYcpindex is the annual consumer price index for the year of the survey. **cYYYYcpindex** uses 2010 as its base year so the consumer price index for a survey conducted in 2010 would be 100. This consumer price index can be used as an inflation multiplier when comparing financial values between different survey years.

cYYYYcpindex values were provided by the World Bank from their consumer price index data, using 2010 as the base year. The index measures monthly changes in the general level of prices of goods and services that households acquire for consumption. For more information on the calculation of the consumer price index please visit: <https://databank.worldbank.org/source/wdi-database-archives#>.

Cross-Wave Differences in KLoSA

Consumer price index values are not based on KLoSA survey items.

Cross-Study Differences with the HRS

Consumer price index values are not included in the RAND HRS or Gateway Harmonized HRS.

How Constructed

rWarles is the value of other real estate (not including current residence) and includes imputed values in Waves 1-7. All respondents who reported having real estate such as land, rental real estate, a partnership, or money owed on a land contract or mortgage other than current residence were asked how much they would expect to receive if they sold it all and then paid off any debt. **rWarles** is the reported net value of other real estate. If the respondent reported not having other real estate, **rWarles** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafgles** is a flag variable which indicates whether any components of **rWarles** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWarles is the respondent's spouse's value of other real estate (not including current residence) that is taken directly from the spouse's values of **rWarles**. **sWafgles** is the respondent's spouse's imputation flag for value of other real estate taken directly from the spouse's values of **rWafgles**. Aside from the special missing values utilized by **rWarles** and **rWafgles**, **sWarles** and **sWafgles** employ two additional special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWaosdr is the amount received in safety deposits for other real estate and includes imputed values in Waves 1-7. If respondents reported having other real estate, they are then asked if they are currently leasing a house, building, field, or land other than the current residence. If a respondent answers yes, they are then asked how much in total they received as safety deposits. **rWaosdr** is the reported amount received in safety deposits. If the respondent reported they did not have any other real estate or that they were not leasing any other real estate, **rWaosdr** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafosdr** is a flag variable which indicates whether any components of **rWaosdr** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both

asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWaosdr is the respondent's spouse's amount received in safety deposits for other real estate that is taken directly from the spouse's values of **rWaosdr**. **sWafosdr** is the respondent's spouse's imputation flag for amount received in safety deposits for other real estate taken directly from spouse's values of **rWafosdr**. Aside from the special missing values utilized by **rWaosdr** and **rWafosdr**, **sWaosdr** and **sWafosdr** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWaosdp is the amount paid in safety deposits for other real estate and includes imputed values in Waves 2-6. If respondents reported not having other real estate, they are then asked if they are currently renting a house, building, field, or land other than the current residence. If the respondent answers yes, they are then asked how much in total they paid as safety deposits. **rWaosdp** is the reported amount paid in safety deposits. If the respondent reported they did not have any other real estate or that they were not renting any other real estate, **rWaosdp** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafosdp** is a flag variable which indicates whether any components of **rWaosdp** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWaosdp is the respondent's spouse's amount paid in safety deposits for other real estate that is taken directly from the spouse's value of **rWaosdp**. **sWafosdp** is the respondent's spouse's imputation flag for amount paid in safety deposits for other real estate taken directly from spouse's value of **rWafosdp**. Aside from the special missing values utilized by **rWaosdp** and **rWafosdp**, **sWaosdp** and **sWafosdp** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA only imputes components of **rWaosdp** for Waves 2-6. Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Net value of other real estate in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

HRS separately surveys the value of a respondent's main home, second home, and other real estate. Unlike HRS, KLoSA does not distinguish between the value of a second home and other real estate. **rWarles** and **sWarles** in the Gateway Harmonized KLoSA are therefore most analogous to the combined RAND HRS variables: net value of real estate (not current residence), value of secondary residence, and value of all mortgages (secondary residence).

HRS does not survey the value of safety deposit received or paid for other real estate so there are no equivalent variables to **rWaosdr**, **rWaosdp**, **rWafosdr**, and **rWafosdp** in the RAND HRS.

Original KLoSA Variables Used

Wave 1:

wo1fo57	Whether or not the ownership of other real estate
wo1fo64	Leasing or not the real estate
wo1fo78	Renting or not the real estate
wo1fo79	Any security deposit from renting the real estate
wo1fo58ct	Unfolding Bracket value of wo1Fo58
wo1fo65ct	Unfolding Bracket value of wo1Fo65

Wave 1 Imputations:

wo1fo58	The total amount of real estate
wo1fo58_i	Wo1Fo58 Alternative instruction variable
wo1fo65	Any security deposit from leasing the real estate
wo1fo65_i	Wo1Fo65 Alternative instruction variable

Wave 2:

wo2fo57	Whether or not the ownership of other real estate
wo2fo64	Leasing or not the real estate
wo2fo58ct	Unfolding Bracket value of wo2Fo58
wo2fo65ct	Unfolding Bracket value of wo2Fo65
wo2fo79ct	Unfolding Bracket value of wo2Fo79
Wave 2 Imputations:	
wo2fo58	The total amount of real estate
wo2fo58_i	Wo2Fo58 Alternative instruction variable
wo2fo65	Any security deposit from leasing the real estate
wo2fo65_i	Wo2Fo65 Alternative instruction variable
wo2fo78	Renting or not the real estate
wo2fo78_i	Wo2Fo78 Alternative instruction variable
wo2fo79	Any security deposit from renting the real estate
wo2fo79_i	Wo2Fo79 Alternative instruction variable
Wave 3:	
wo3fo57	Whether or not the ownership of other real estate
wo3fo64	Leasing or not the real estate
wo3fo58ct	Unfolding Bracket value of wo3Fo58
wo3fo65ct	Unfolding Bracket value of wo3Fo65
wo3fo79ct	Unfolding Bracket value of wo3Fo79
Wave 3 Imputations:	
wo3fo58	The total amount of real estate
wo3fo58_i	Wo3Fo58 Alternative instruction variable
wo3fo65	Any security deposit from leasing the real estate
wo3fo65_i	Wo3Fo65 Alternative instruction variable
wo3fo78	Renting or not the real estate
wo3fo78_i	Wo3Fo78 Alternative instruction variable
wo3fo79	Any security deposit from renting the real estate
wo3fo79_i	Wo3Fo79 Alternative instruction variable
Wave 4:	
wo4fo57	Whether or not the ownership of other real estate
wo4fo64	Leasing or not the real estate
wo4fo65	Any security deposit from leasing the real estate
wo4fo78	Renting or not the real estate
wo4fo79	Any security deposit from renting the real estate
wo4fo58ct	Unfolding Bracket value of wo4Fo58
wo4fo65ct	Unfolding Bracket value of wo4Fo65
wo4fo79ct	Unfolding Bracket value of wo4Fo79
Wave 4 Imputations:	
wo4fo58	The total amount of real estate
wo4fo58_i	Wo4Fo58 Alternative instruction variable
wo4fo65	Any security deposit from leasing the real estate
wo4fo65_i	Wo4Fo65 Alternative instruction variable
wo4fo78	Renting or not the real estate
wo4fo78_i	Wo4Fo78 Alternative instruction variable
wo4fo79	Any security deposit from renting the real estate
wo4fo79_i	Wo4Fo79 Alternative instruction variable
Wave 5:	
wo5fo57	Whether or not the ownership of other real estate
wo5fo58ct	Unfolding Bracket value of wo5Fo58
wo5fo64	Leasing or not the real estate
wo5fo65	Any security deposit from leasing the real estate

wo5fo79	Any security deposit from renting the real estate
Wave 5 Imputations:	
wo5fo58	The total amount of real estate
wo5fo58_i	Wo5Fo58 Alternative instruction variable
wo5fo78	Renting or not the real estate
wo5fo78_i	Wo5Fo78 Alternative instruction variable
Wave 5 Add:	
wo5fo57	Whether or not the ownership of other real estate
wo5fo58	The total amount of real estate
wo5fo64	Leasing or not the real estate
wo5fo78	Renting or not the real estate
wo5fo79	Any security deposit from renting the real estate
Wave 5 Add Imputations:	
wo5fo65	Any security deposit from leasing the real estate
wo5fo65_i	wo5Fo65 Alternative instruction variable
Wave 6:	
wo6fo57	Whether or not the ownership of other real estate
wo6fo64	Leasing or not the real estate
Wave 6 Imputations:	
wo6fo58	The total amount of real estate
wo6fo58_i	wo6Fo58 Alternative instruction variable
wo6fo65	Any security deposit from leasing the real estate
wo6fo65_i	wo6Fo65 Alternative instruction variable
wo6fo78	Renting or not the real estate
wo6fo78_i	wo6Fo78 Alternative instruction variable
wo6fo79	Any security deposit from renting the real estate
wo6fo79_i	wo6Fo79 Alternative instruction variable
Wave 7:	
wo7fo57	Whether or not the ownership of other real estate
wo7fo64	Leasing or not the real estate
wo7fo78	Renting or not the real estate
wo7fo79	Any security deposit from renting the real estate
Wave 7 Imputations:	
wo7fo58	The total amount of real estate

Any security deposit from leasing the real estate

Net Value of Transportation			
Variable	Waves	Label	Type
rWatran	1-9	rWatran:ww assets:r transportation	Cont
sWatran	1-9	sWatran:ww assets:s transportation	Cont
rWaftran	1-7	rWaftran:ww asst flag:r transportation	Categ
sWaftran	1-7	sWaftran:ww asst flag:s transportation	Categ

How Constructed

rWatran is the value of vehicles and includes imputed values in Waves 1-7. All respondents who reported owning any vehicles, such as cars, trucks, trailers, boats, or any other mean of transportation were asked how much they would expect to receive if they sold all vehicles. If the respondent reported not owning any vehicles, **rWatran** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWaftran** is a flag variable which indicates whether any components of **rWatran** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWatran is the respondent's spouse's value of vehicles that is taken directly from the spouse's values of **rWatran**. **sWaftran** is the respondent's spouse's imputation flag for value of vehicles taken directly from the spouse's value of **rWaftran**. Aside from the special missing values utilized by **rWatran** and **rWaftran**, **sWatran** and **sWaftran** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

The value of vehicles in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

Unlike HRS, KLoSA does not ask respondents the value of transportation minus any debt owed on it, therefore the RAND HRS variable **rWatran** and **sWatran** are a net value, assets minus liabilities, while the Gateway Harmonized KLoSA variable is just the value of assets.

Net Value of Businesses

Variable	Waves	Label	Type
rWabsns	1-9	rWabsns:WW assets:r business	Cont
sWabsns	1-9	sWabsns:WW assets:s business	Cont
rWafbsns	1-7	rWafbsns:WW asst flag:r business	Categ
sWafbsns	1-7	sWafbsns:WW asst flag:s business	Categ

How Constructed

rWabsns is the net value of businesses and includes imputed values in Waves 1, 2, and 4-7. All respondents who reported owning part or all of a business or farm were asked how much they would expect to receive if they sold it all and paid off any debts. Due to a problem in the Wave 1 interviewing routing only Wave 1 respondents who reported owning real estate were allowed to report whether they owned part or all of business or farm and the corresponding value. These respondents who did not report owning part or all of a business or farm in Wave 1 are assigned a 0 value for **r1absns**. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafbsns** is a flag variable which indicates whether any components of **rWabsns** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWabsns is the respondent's spouse's net value of businesses taken directly from the spouse's value of **rWabsns**. **sWafbsns** is the respondent's spouse's imputation flag for net value of businesses taken directly from the spouse's value of **rWafbsns**. Aside from the special missing values utilized by **rWabsns** and **rWafbsns**, **sWabsns** and **sWafbsns** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1 only respondents who reported owning real estate were allowed to report whether they owned part or all of a business or farm and the corresponding value. This routing error was corrected in later waves.

KLoSA does not impute components of **rWabsns** for Wave 3. Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Net value of businesses in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

Net Value of Stocks and Mutual Funds

Variable	Waves	Label	Type
rWastck	1-9	rWastck:WW assets:r stocks	Cont
sWastck	1-9	sWastck:WW assets:s stocks	Cont
rWafstck	1-7	rWafstck:WW asst flag:r stocks	Categ
sWafstck	1-7	sWafstck:WW asst flag:s stocks	Categ

How Constructed

rWastck is the value of stocks, mutual funds, and investment trusts and includes imputed values in Waves 1-5. All respondents who reported having any shares of stocks or mutual funds were asked how much they would expect to receive if they sold it all today. If the respondent reported not owning any stocks, mutual funds, or investment trusts, **rWastck** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafstck** is a flag variable which indicates whether any components of **rWastck** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWastck is the respondent's spouse's value of stocks, mutual funds, and investment trusts that is taken directly from the spouse's value of **rWastck**. **sWafstck** is the respondent's spouse's imputation flag for value of stocks, mutual funds, and investment trusts taken directly from the spouse's value of **rWafstck**. Aside from the special missing values utilized by **rWastck** and **rWafstck**, **sWastck** and **sWafstck** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA only imputes components of **rWastck** for Waves 1-5. Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Value of stocks, mutual funds, and investment trusts in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

HRS asks respondents about the value of shares of stocks or mutual funds aside from anything they had already listed. Unlike HRS, KLoSA does not specifically ask respondents to exclude previously mentioned assets from this value. HRS also asks respondents the value of stocks and mutual funds if sold off and paid off anything owed on those. Unlike HRS, KLoSA does not ask respondents the value of stocks and mutual funds minus any debt owed on those, therefore the RAND HRS variable **rWastck** and **sWastck** are a net value, assets minus liabilities, while the Gateway Harmonized KLoSA variables are just the value of assets.

Value of Cash, Checking or Savings Accounts

Variable	Waves	Label	Type
rWachck	1-9	rWachck:WW assets:r cash, checking and saving acct	Cont
sWachck	1-9	sWachck:WW assets:s cash, checking and saving acct	Cont
rWafchck	1-7	rWafchck:WW asst flag:r cash, checking and saving acct	Categ
sWafchck	1-7	sWafchck:WW asst flag:s cash, checking and saving acct	Categ

How Constructed

rWachck is the value of cash, checking accounts, and savings deposits and includes imputed values in Waves 1-7. All respondents who reported having over 500,000 Korean won cash in hand or in checking accounts that yield low interests while being highly convertible to cash were asked the value if all cash and checking accounts were added up. All respondents who reported having any money in installments deposits, certificates of deposits, and other savings accounts that yield interests with less liquidity compared to checking accounts were asked if all such accounts were added up, how much they would amount to. **rWachck** is the sum of both the value of all cash and checking accounts and the value of all savings accounts. It is only calculated if both components have values. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafchck** is a flag variable which indicates whether any components of **rWachck** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWachck is the respondent's spouse's value of cash, checking accounts, and savings deposits that is taken directly from the spouse's value of **rWachck**. **sWafchck** is the respondent's spouse's imputation flag for value of cash, checking accounts, and savings deposits taken directly from the spouse's value of **rWafchck**. Aside from the special missing values utilized by **rWachck** and **rWafchck**, **sWachck** and **sWafchck** employ two additional special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Value of cash, checking accounts, and savings deposits in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS variable **hWachck** is different in several ways from the Gateway Harmonized KLoSA variable of the same name. Unlike HRS which asks respondents once about a total value for all checking, savings, or money market accounts, KLoSA surveys respondents with two different measures. The first measure includes cash which is not mentioned in HRS and does not mention money market accounts which is specifically mentioned in HRS. The second measure includes installment

deposits and certificates of deposits, which are not mentioned in HRS. Also unlike HRS, KLoSA only surveys the value of cash and checking accounts if the respondent reports having over a specific monetary threshold. HRS does not include any minimum threshold of value, instead asking about 'any' money in this asset class. HRS asks respondents about the value of checking and savings accounts aside from anything they had already listed. Unlike HRS, KLoSA does not specifically ask respondents to exclude previously mentioned assets from this value. The RAND HRS variables **rWachck** and **sWachck** should only be considered somewhat analogous to the Gateway Harmonized KLoSA variables of the same name due to the above mentioned differences.

Net Value of Bonds and Bond Funds

Variable	Waves	Label	Type
rWabond	1-9	rWabond:WW assets:r bonds	Cont
sWabond	1-9	sWabond:WW assets:s bonds	Cont
rWafbond	1-7	rWafbond:WW asst flag:r bonds	Categ
sWafbond	1-7	sWafbond:WW asst flag:s bonds	Categ

How Constructed

rWabond is the value of bonds and includes imputed values in Waves 1, 3, and 4. All respondents who reported having any corporate, municipal, government, or foreign bonds were asked how much they would expect to receive if they sold it all. If the respondent reported not owning any bonds, **rWabond** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafbond** is a flag variable which indicates whether any components of **rWabond** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWabond is the respondent's spouse's value of bonds that is taken directly from the spouse's value of **rWabond**. **sWafbond** is the respondent's spouse's imputation flag for value of bonds taken directly from the spouse's value of **rWafbond**. Aside from the special missing values utilized by **rWabond** and **rWafbond**, **sWabond** and **sWafbond** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA only imputes components of **rWabond** for Waves 1, 3, and 4. Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Value of bonds in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

HRS asks respondents about money in corporate, municipal, government, or foreign bonds, or any bond funds. Unlike KLoSA, HRS specially includes the value of bond funds, which is not mentioned in KLoSA. HRS asks respondents about the value of bonds and bond funds aside from anything they had already listed. Unlike HRS, KLoSA does not specifically ask respondents to exclude previously mentioned assets from this value.

Value of All Other Savings

Variable	Waves	Label	Type
rWaothr	1-9	rWaothr:WW assets:r other savings and assets	Cont
sWaothr	1-9	sWaothr:WW assets:s other savings and assets	Cont
rWafothr	1-7	rWafothr:WW asst flag:r other savings and assets	Categ
sWafothr	1-7	sWafothr:WW asst flag:s other savings and assets	Categ

How Constructed

rWaothr is the value of all other savings and financial assets and includes imputed values in Waves 1, 3, and 7. All respondents who reported currently being a member of any private savings club (Gye) were asked how much money they had saved through the savings club, excluding the amount they had already taken out. All respondents who reported lending anyone any money from personal loans, including family members, were asked how much the loans would amount to if they added all of it up right now. All respondents who reported having any other insurance than health insurance were asked how many annuity insurance policies they had, with a range of 0 to 5. For each annuity policy listed, respondents were asked at what age they expected to start receiving the policy and the average monthly annuity payment they expected to receive from the policy. Respondents were also asked the average monthly annuity payment they expected to receive in total from all annuity policies. All respondents who reported having any other financial assets, aside from those already mentioned were asked how much they would expect to receive if they sold all those other financial assets. **rWaothr** is the sum of 1) savings through savings club, (Gye) 2) money loaned to others, 3) the present value of annuity assets, and 4) all other financial assets. If the respondent reported not owning/having any of the 4 components, **rWaothr** is assigned a value of 0. It is only calculated if all components have values. **rWaothr** does not include the value of life insurance policies. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafothr** is a flag variable which indicates whether any components of **rWaothr** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Present value of annuity assets was derived using the following formula:

$$P = A * ((1 - (1/(1+r/12)^n)) / (r/12))$$

where P is the present value of the annuity asset, A is expected monthly income from annuity, r is the discount rate, set to 0.03, and n is the number of months the annuity will be received. The number of months the annuity will be received is defined as the expected life expectancy minus age starting to receive the annuity for respondents who had not started to receive the annuity yet and life expectancy minus current age for respondents who had already started to receive the annuity. Life expectancy was defined using the life tables published by the Korea Statistical Information Service.

sWaothr is the respondent's spouse's value of all other savings and financial assets taken directly from the spouse's value of **rWaothr**. **sWafothr** is the respondent's spouse's imputation flag for value of all other savings and financial assets taken directly from the spouse's value of **rWafothr**. Aside from the special missing values utilized by **rWaothr** and **rWafothr**, **sWaothr** and **sWafothr** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA only imputes components of **rWaothr** for Waves 1, 3, and 7. Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Value of all other savings in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS variable **hWaothr** is different in significant ways from the Gateway Harmonized KLoSA variable of the same name. HRS asks respondents about any other savings or assets, such as jewelry, money owed to the respondent by others, a collection for investment purposes, right in a trust or estate where the respondent is the beneficiary, or an annuity. Unlike HRS, KLoSA does not ask one question covering all other asset types. The Gateway Harmonized KLoSA variable **rWaothr** and **sWaothr** are the sum of three separately reported asset measures and calculations of net present value of an annuity set. The Gateway Harmonized KLoSA measure includes the value saved through a Gye which is a form of savings specific to Korea. KLoSA asks separately about other assets (aside from vehicles), such as valuables, paintings, antiques, golf membership, or any assets not already mentioned. These responses are recorded in **rWaothas** in the Gateway Harmonized KLoSA.

Unlike KLoSA, HRS asks respondents the value of other assets minus any debt owed on those, therefore the RAND HRS variable **hWaothr** is a net value, assets minus liabilities, while the Gateway Harmonized KLoSA variable is just the value of assets. The RAND HRS variable should only be considered mildly analogous to the Gateway Harmonized KLoSA variable of the same name due to the above mentioned differences.

Value of Other Debt

Variable	Waves	Label	Type
rWadebt	1-9	rWadebt:WW assets:r total debt	Cont
sWadebt	1-9	sWadebt:WW assets:s total debt	Cont
rWafdebt	1-7	rWafdebt:WW asst flag:r total debt	Categ
sWafdebt	1-7	sWafdebt:WW asst flag:s total debt	Categ

How Constructed

rWadebt is the value of all debt and includes imputed values in Waves 1-7. All respondents who reported currently being a member of any private savings club (Gye) were asked if they had taken money out from the savings club and still owe money to it. All respondents who reported having loans from financial institutions, such as banks, insurance companies, securities, or credit card companies were then asked about how much the loans amounted to. All respondents who reported having any personal loans from relatives, friends or other were then asked about how much the loans amounted to. All respondents who reported having any other debt were then asked about how much the debt amounted to. **rWadebt** is the sum of 1) any money owed to the savings club (Gye), 2) loans from financial institutions, 3) loans from relatives or friends, and 4) other debt. It is only calculated if all components have values. If the respondent reported not owning/having any of the 4 components, **rWadebt** is assigned a value of 0. **rWadebt** does not include the value of loans of other people where the respondent stands surety. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafdebt** is a flag variable which indicates whether any components of **rWadebt** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWadebt is the respondent's spouse's value of all debts that is taken directly from the spouse's value of **rWadebt**. **sWafdebt** is the respondent's spouse's imputation flag for value of all debt taken directly from the spouse's value of **rWafdebt**. Aside from the special missing values utilized by **rWadebt** and **rWafdebt**, **sWadebt** and **sWafdebt** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Value of other debt in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS variable **hWadebt** is different in significant ways from the Gateway Harmonized KLoSA variable of the same name. HRS asks respondents about any debt they have such as credit card balances, medical debts, life insurance policy

loans, loans from relatives, and so forth. The Gateway Harmonized KLoSA variables **rWadebt** and **sWadebt** are the sum of four separately reported asset measures including the value owed to Gye, which is a form of debt specific to Korea. The RAND HRS variable **hWadebt** should only be considered somewhat analogous to the Gateway Harmonized KLoSA variable of the same name due to the above mentioned differences.

Value of Other Non-Financial Assets

Variable	Waves	Label	Type
rWaothas	1-9	rWaothas:WW assets:r other non-financial assets	Cont
sWaothas	1-9	sWaothas:WW assets:s other non-financial assets	Cont
rWafothas	1-7	rWafothas:WW asst flag:r other non-financial assets	Categ
sWafothas	1-7	sWafothas:WW asst flag:s other non-financial assets	Categ

How Constructed

rWaothas is the value of other non-financial assets and includes imputed values in Waves 1-5, and 7. Respondents were asked whether they own other assets (aside from vehicles), such as valuables, paintings, antiques, golf membership, or any assets that they haven't told us about. If a respondent answered yes, then they were then asked how much they are worth together. **rWaothas** is the reported total value of other non-financial assets. If the respondent reported not owning any other assets, **rWaothas** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafothas** is a flag variable which indicates whether any components of **rWaothas** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWaothas is the respondent's spouse's value of other non-financial assets and is taken directly from the spouse's value of **rWaothas**. **sWafothas** is the respondent's spouse's imputation flag for value of other non-financial assets taken directly from the spouse's value of **rWafothas**. Aside from the special missing values utilized by **rWaothas** and **sWafothas**, **sWaothas** and **sWafothas** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA only provides imputations for Waves 1-5, and 7. Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

HRS does not survey the value of other non-financial assets directly so there is no equivalent RAND HRS variable. HRS does ask about any other savings or assets, such as jewelry, money owed by others, a collection for investment purposes, rights in a trust or estate where you are the beneficiary, or an annuity not already mentioned in a single question. The responses to this question are included in **hWaothr** in the RAND HRS.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

Whether Own or Rent Primary Residence

Variable	Waves	Label	Type
hWhownrnt	1-9	hWhownrnt:ww whether own or rent primary residence	Categ
rWhownrnt	1-9	rWhownrnt:ww r whether own or rent primary residence	Categ
sWhownrnt	1-9	sWhownrnt:ww s whether own or rent primary residence	Categ

How Constructed

rWhownrnt indicates whether the respondent owns or rents their primary residence, and is coded as follows: 1. owned, 2. rented, 3. other arrangement. **rWhownrnt** is coded as 1 if the respondent reported that they or a family member own their current residence (including joint ownership) and their name was the one on the deed. **rWhownrnt** is coded as 2 if the respondent reported that their residence is a deposit-based rental house without monthly rent, a monthly rental house with a deposit, or a monthly rental house without a deposit. **rWhownrnt** is coded as 3 if the respondent reported that their residence is owned by them or a family member, and the house is owned by their spouse, (grand)children, other family members, or other persons. Don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWhownrnt** is assigned plain missing (.) if the respondent did not participate in the current wave.

sWhownrnt indicates whether the respondent's spouse owns or rents their primary residence, and is taken directly from the spouse's value of **rWhownrnt**. In addition to the special missing codes employed by **rWhownrnt**, **sWhownrnt** employs two additional special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

hWhownrnt indicates whether the respondent's residence is owned or rented by them or their spouse. **hWhownrnt** takes the lower value between **rWhownrnt** and **sWhownrnt**, and is coded as follows: 1. owned, 2. rented, 3. other arrangement. **hWhownrnt** is coded as 1 if the respondent's residence is owned by either of the respondent or their spouse. **hWhownrnt** is coded as 2 if the respondent's residence was rented by at least one of the respondent and their spouse. **hWhownrnt** is coded as 3 if the respondent's residence is neither owned nor rented by at least one of the respondent and their spouse. Don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **hWhownrnt** is assigned plain missing (.) if the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

In HRS, this information can be taken from a single direct question asking whether the respondent and their spouse own their home, rent it, live rent free, or other, and so would only be available at the couple-level. KLoSA asks two questions, first whether the home is owned or rented, and then if owned, who has ownership of the house. As such, the Gateway Harmonized KLoSA has respondent-level variables, as well as a couple-level variable that would be comparable to what can be created for the HRS.

How Constructed

The value of the current residence is asked to every respondent who reported they own a house. If a respondent reported they or a family member owned their current residence the respondent was then asked whether their name was the one on the deed. If the respondent's name was on the deed, the respondent was then asked, if multiple persons' names are on the deed how many names are listed on the deed and their share of the house. Starting in Wave 2, if the respondent reported that more names were on the deed than one, the respondent is asked how much is their share of the current residence. Regardless of the number of names on the deed or share in the house, the respondent was then asked the value of the current residence.

rWahousa is the value of the current residence if sold today, not accounting for the number of names on the deed or share in the house, and includes imputed values in Waves 1-7. **rWahousa** is set to zero if the respondent reported that they do not own (including joint ownership) their current residence. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafhousa** is a flag variable which indicates whether any components of **rWahousa** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWahousa is the respondent's spouse's value of current residence, not accounting for the number of names on the deed or share in the house, and is taken directly from the spouse's value of **rWahousa**. **sWafhousa** is the respondent's spouse's imputation flag for value of current residence taken directly from the spouse's value of **rWafhousa**. Aside from the special missing values utilized by **rWahousa** and **rWafhousa**, **sWahousa** and **sWafhousa** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWahrto is the respondent's percentage of ownership of the current residence and includes imputed values in Waves 1 and 2. **rWahrto** is set to zero if the respondent reported that they do not own (including joint ownership) their current residence.

rWahrto is set to 100 if the respondent reports that there are no other names on the deed other than their own. If multiple names are listed on the deed in Wave 1, **rWahrto** is derived using the number of names listed on the deed and assigning equal proportions to each name on the deed. If multiple names are listed on the deed in Wave 2 or later, **rWahrto** is derived using the percentage the respondent reported as their share of the current residence. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafhrto** is a flag variable which indicates whether any components of **rWahrto** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 5 indicates that the value was imputed. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWahrto is the respondent's spouse's percentage of ownership of the current residence and is taken directly from the spouse's value of **rWahrto**. **sWafhrto** is the respondent's spouse's imputation flag for the percentage of ownership of the current residence and is taken directly from the spouse's value of **rWafhrto**. Aside from the special missing values utilized by **rWahrto** and **rWafhrto**, **sWahrto** and **sWafhrto** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWahous is the value of the current residence if sold today, accounting for the number of names on the deed or share in the house, and includes imputed values in Waves 1-7. **rWahous** is derived as:

$$\mathbf{rWahous} = \mathbf{rWahousa} * (\mathbf{rWahrto}/100)$$

Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafhous** is a flag variable which indicates whether any components of **rWahous** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWahous is the respondent's spouse's value of the current residence, accounting for the number of names on the deed or share in the house, and is taken directly from the spouse's value of **rWahous**. **sWafhous** is the respondent's spouse's imputation flag for value of the current residence taken directly from the spouse's value of **rWafhous**. Aside from the special missing values utilized by **rWahous** and **rWafhous**, **sWahous** and **sWafhous** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1 if the respondent's name was on the deed, the respondent was then asked if multiple persons' names are on the deed, how many names are listed on the deed, and their share of the house. Starting in Wave 2 an additional question was added if the respondent reported that more names were on the deed than one. In these cases the respondent is then asked how much is their share of the current residence. In Wave 1 **rWahrto** is derived using the number of names listed on the deed and assigning equal proportions to each name on the deed. Starting in Wave 2, **rWahrto** is derived using the percentage the respondent reported as their share of the current residence.

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Value of the current residence in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

HRS asks respondents about the value of their home or farm and the value of their mobile home and site separately. These two measures are combined in the RAND HRS value of current residence. Unlike HRS, KLoSA doesn't separately survey the value of a mobile home and site.

wogfoo6	R's share of the residing home (unit: %)
wogfoo7	The current value of the residing home (unit: 10,000 won)

Value of All Mortgages (Primary Residence)

Variable	Waves	Label	Type
rWamort	1-9	rWamort:WW assets:r total mortgage	Cont
sWamort	1-9	sWamort:WW assets:s total mortgage	Cont
rWafmort	1-7	rWafmort:WW asst flag:r total mortgage	Categ
sWafmort	1-7	sWafmort:WW asst flag:s total mortgage	Categ

How Constructed

rWamort is the value of mortgage (primary residence) and includes imputed values in Waves 1-7. All respondents who reported that they (and their spouse/partner) own a home were asked if they got a loan to purchase the house they are currently living in and how much they still owe on the loan. If the respondent reported not owning their home, **rWamort** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafmort** is a flag variable which indicates whether any components of **rWamort** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWamort is the respondent's spouse's value of mortgage (primary residence) that is taken directly from the spouse's value of **rWamort**. **sWafmort** is the respondent's spouse's imputation flag for value of mortgage (primary residence) taken directly from the spouse's value of **rWafmort**. Aside from the special missing values utilized by **rWamort** and **rWafmort**, **sWamort** and **sWafmort** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

There is a large number of respondents (300+) in Wave 5 who report owning their primary residence, having their name on the deed, and who reported a value for their primary residence, but who have missing values for the amount of money still owed on the house in both the original survey data and the imputed survey data. This issue does not arise in any other wave.

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Value of all mortgages (primary residence) in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

In HRS respondents are asked how much they still owe on a mortgage, land contract, second mortgage or any other loan that uses property as collateral. HRS respondents are also asked to not include the value of any home equity lines of credit. Unlike HRS, KLoSA only asks respondents how much they still owe on the loan used to purchase the house. The Gateway Harmonized KLoSA variables **rWamort** and **sWamort** therefore only account for one portion of the RAND HRS measure with the same name and should be considered not perfectly analogous.

Net Value of Primary Residence			
Variable	Waves	Label	Type
rWatoth	1-9	rWatoth:ww assets:r net value of house	Cont
sWatoth	1-9	sWatoth:ww assets:s net value of house	Cont
rWaftoth	1-7	rWaftoth:ww asst flag:r net value of house	Categ
sWaftoth	1-7	sWaftoth:ww asst flag:s net value of house	Categ

How Constructed

The net value of housing is calculated as house value less value of mortgage:

$$\mathbf{rWatoth} = \mathbf{rWahous} - \mathbf{rWamort}$$

It is only calculated if both components have values. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWaftoth** is a flag variable which indicates whether any components of **rWatoth** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWatoth is the respondent's spouse's net value of primary residence that is taken directly from the spouse's value of **rWatoth**. **sWaftoth** is the respondent's spouse's imputation flag for net value of housing taken directly from the spouse's value of **rWaftoth**. Aside from the special missing values utilized by **rWatoth** and **rWaftoth**, **sWatoth** and **sWaftoth** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Net value of primary residence in KLoSA is measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS does not include imputation flags for summary variables.

Refer to "Cross-Study Differences with the HRS" section of each component to identify differences with the RAND HRS variable of the same name.

Value of Lease Safety Deposit Received

Variable	Waves	Label	Type
rWahsdr	1-9	rWahsdr:WW assets:r home security deposit received	Cont
sWahsdr	1-9	sWahsdr:WW assets:s home security deposit received	Cont
rWafhsdr	1-7	rWafhsdr:WW asst flag:r home security deposit received	Categ
sWafhsdr	1-7	sWafhsdr:WW asst flag:s home security deposit received	Categ

How Constructed

rWahsdr is the value of the lease safety deposit received and includes imputed values in Waves 1-7. All respondents who reported that they own a home were asked if they are leasing part of their current residence to other people. Respondents who answered that they are leasing on a deposit basis (JEON-SE) were then asked the amount of the security deposit they received. Respondents who answered that they were leasing on a secured monthly rent basis (JEON-WOL-SE) were then asked the amount of the safety deposit they received. Wave 9 responses to JEON-SE and JEON-WOL-SE leasing statuses were set to "no" if the respondent had reported living in their own home, had not moved since the last interview and had missing leasing statuses. **rWahsdr** is the sum of both the value of the JEON-SE deposit and the value of the JEON-WOL-SE deposit. It is only calculated if both components have values. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafhsdr** is a flag variable which indicates whether any components of **rWahsdr** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWahsdr is the respondent's spouse's value of the lease safety deposit received that is taken directly from the spouse's value of **rWahsdr**. **sWafhsdr** is the respondent's spouse's imputation flag for value of lease safety deposit received taken directly from the spouse's value of **rWafhsdr**. Aside from the special missing values utilized by **rWahsdr** and **rWafhsdr**, **sWahsdr** and **sWafhsdr** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

HRS does not survey the value of the lease safety deposit received and so there is no equivalent RAND HRS or Gateway Harmonized HRS variable.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

Wave 9 responses to JEON-SE and JEON-WOL-SE leasing statuses contained a large amount of missing values. These missing values were set to "no" if the respondent's reported living in their own home and had not moved since the last interview.

rWafhsdp	1-7	rWafhsdp:WW asst flag:r home security deposit paid	Categ
sWafhsdp	1-7	sWafhsdp:WW asst flag:s home security deposit paid	Categ

How Constructed

rWahsdp is the value of the rental safety deposit paid and includes imputed values in Waves 1-7. In Wave 1, all respondents who reported that they lease a home on a deposit basis without monthly rent (JEON-WOL-SE) were then asked the amount of the JEON-WOL-SE security deposit paid. All respondents who reported that they pay a monthly rent with a deposit for their home (JEON-WOL-SE) were then asked the amount of the JEON-WOL-SE safety deposit paid. Starting in Wave 2, all respondents who reported that they leased a home on a deposit basis without monthly rent (JEON-WOL-SE) were then asked if the JEON-WOL-SE contracts were under their name. All respondents who reported that the contracts were under their own name were then asked the amounts of the JEON-WOL-SE safety deposits paid. The values of all deposits are only summed if all components have values. **rWahsdp** is set to zero if the respondent reported that they do not rent their home using a deposit-based rent or monthly rental with a deposit. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWafhsdp** is a flag variable which indicates whether any components of **rWahsdp** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWahsdp is the respondent's spouse's value of rental safety deposit paid that is taken directly from the spouse's value of **rWahsdp**. **sWafhsdp** is the respondent's spouse's imputation flag for value of rental safety deposit paid taken directly from the spouse's value of **rWafhsdp**. Aside from the special missing values utilized by **rWahsdp** and **rWafhsdp**, **sWahsdp** and **sWafhsdp** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, all respondents who reported that they lease a home on a deposit basis without monthly rent (JEON-WOL-SE) were then asked the amount of the JEON-WOL-SE security deposit paid. All respondents who reported that they pay a monthly rent with a deposit for their home (JEON-WOL-SE) were then asked the amount of the JEON-WOL-SE safety deposit paid. Starting in Wave 2, all respondents who reported that they leased a home on a deposit basis without monthly rent (JEON-WOL-SE) were then asked if the JEON-WOL-SE contracts were under their name. All respondents who reported that the contracts were under their own name were then asked the amounts of the JEON-WOL-SE safety deposits paid.

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

HRS does not survey the value of rental safety deposit paid and so there is no equivalent RAND HRS or Gateway Harmonized HRS variable.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

Net Value of Non-Housing Financial Wealth (Excluding IRAs)

Variable	Waves	Label	Type
rWatotf	1-9	rWatotf:ww assets:r net value of non-housing financial wealth	Cont
sWatotf	1-9	sWatotf:ww assets:s net value of non-housing financial wealth	Cont
rWaftotf	1-7	rWaftotf:ww asst flag:r net value of non-housing financial wealth	Categ
sWaftotf	1-7	sWaftotf:ww asst flag:s net value of non-housing financial wealth	Categ

How Constructed

Net value of non-housing financial wealth is calculated as the sum of the appropriate wealth components less debt:

$$\mathbf{rWatotf} = (\mathbf{rWastck} + \mathbf{rWachck} + \mathbf{rWabond} + \mathbf{rWaotf}) - \mathbf{rWdebt}$$

It is only calculated if all components have values. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWaftotf** is a flag variable which indicates whether any components of **rWatotf** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWatotf is the respondent's spouse's net value of non-housing financial wealth that is taken directly from the spouse's value of **rWatotf**. **sWaftotf** is the respondent's spouse's imputation flag for net value of non-housing financial wealth taken directly from the spouse's value of **rWaftotf**. Aside from the special missing values utilized by **rWatotf** and **rWaftotf**, **sWatotf** and **sWaftotf** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Note: This total does not include the value of any real estate, vehicles, or businesses.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

These values in KLoSA are measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS does not include imputation flags for summary variables.

Refer to "Cross-Study Differences with the HRS" section of each component to identify differences with the RAND HRS variable of the same name.

Total Wealth

Variable	Waves	Label	Type
rWatotb	1-9	rWatotb:WW assets:r net value of total assets	Cont
sWatotb	1-9	sWatotb:WW assets:s net value of total assets	Cont
rWaftotb	1-7	rWaftotb:WW asst flag:r net value of total assets	Categ
sWaftotb	1-7	sWaftotb:WW asst flag:s net value of total assets	Categ

How Constructed

The net value of total wealth (including second home) is calculated as the sum of all wealth components less all debt:

$$\mathbf{rWatotb} = (\mathbf{rWahous} + \mathbf{rWahsdp} + \mathbf{rWarles} + \mathbf{rWaosdp} + \mathbf{rWatran} + \mathbf{rWaothas} + \mathbf{rWabsns} + \mathbf{rWastck} + \mathbf{rWachck} + \mathbf{rWabond} + \mathbf{rWaothr}) - (\mathbf{rWamort} + \mathbf{rWadebt} + \mathbf{rWahsdr} + \mathbf{rWaosdr})$$

It is only calculated if all components have values. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWaftotb** is a flag variable which indicates whether any components of **rWatotb** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not having the asset and, therefore, its value was set to 0. A code of 7 indicates that both asset ownership and asset value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report owning the asset. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWatotb is the respondent's spouse's net value of total wealth (including second home) that is taken directly from spouse's value of **rWatotb**. **sWaftotb** is the respondent's spouse's imputation flag for net value of total wealth taken directly from spouse's value of **rWaftotb**. Aside from the special missing values utilized by **rWatotb** and **rWaftotb**, **sWatotb** and **sWaftotb** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Waves 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

These values in KLoSA are measured in current 10,000 Korean won whereas the equivalent measure in the RAND HRS is in current dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial assets questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their assets.

The RAND HRS does not include imputation flags for summary variables.

Refer to "Cross-Study Differences with the HRS" section of each component to identify differences with the RAND HRS variable of the same name.

How Constructed

rWitearn is the value of the respondent's after-tax income from employment wages and earnings from a side job in the past year. **rWitearn** includes imputed values in Waves 1-7. **rWitearn** is an aggregated value of two different reported values: 1) wages from employment and 2) earnings from a side job. **rWitearn** is only provided if there are values for both components. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Respondents were asked whether they earned any income by being employed by another person or in a workplace in the past year. If the respondent answered yes, they were then asked which or the number of months in the past year they were paid. Respondents then reported their average monthly wage excluding various costs or taxes. In Waves 1-4, respondents were asked which months they received wages in the last calendar year. Starting in Wave 5, respondents were asked how many months they received wages in the last calendar year. Wages from employment in the past year are calculated using the reported monthly amount times the number of months receiving wages. If the respondent reported not earning income by being employed, a value of 0 is assigned.

Respondents were asked whether they earned any income from a side job in the past year. If the respondent answered yes, they were then asked to report their total earnings in the past year from the side job excluding various costs or taxes. If the respondent reported not earning income from a side job, a value of 0 is assigned.

rWitfwage is a flag variable which indicates whether any components of **rWitearn** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWitearn is the value of the respondent's spouse's after-tax income from employment wages and earnings from a side job in the past year that is taken directly from the spouse's values to **rWitearn**. **sWitfearn** is a flag variable which indicates whether any components of **sWitearn** are imputed by KLoSA, and if so, how much information is available for imputation. **sWitfearn** is taken directly from the spouse's values to **rWitfearn**. In addition to the special missing values utilized by **rWitearn** and **rWitfearn**, **sWitearn** and **sWitfearn** use two more special missing values, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Earnings from a side job are only imputed for Waves 1, 4, and 5. Imputed values are not yet available for Wave 8 and 9, thus flag variables have not yet been generated for these waves.

In Waves 1-4, respondents were asked which months they received employment wages in the last calendar year. Starting in Wave 5, respondents were asked how many months they received wages in the last calendar year.

Cross-Study Differences with the HRS

Earnings income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial income questions at the individual level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income. Furthermore, the components used in **rWlearn** in the RAND HRS are different from the components used for the variable **rWitearn** in the Gateway Harmonized KLoSA. In the RAND HRS, **rWlearn** contains income from wage/salary income, bonuses/overtime pay/commissions/tips, 2nd job or military reserve earnings, professional practice or trade income. In the Gateway Harmonized KLoSA, **rWitearn** includes the after tax income from wage income and second job earnings.

How Constructed

rWitsemp is the value of the respondent's after-tax earnings from self-employment and after-tax earnings from farm income in the past year. **rWitsemp** includes imputed values in Waves 1-7. **rWitsemp** is an aggregated value of two different reported values: 1) earnings from self-employment and 2) earnings from agricultural and fisheries business. **rWitsemp** is only provided if there are values for both components. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Respondents were asked whether they earned any income from self-employment or running their own business in the past year, excluding any income from agricultural and fisheries business. If the respondent answered yes, then they were asked which or the number of months in the past year they earned this income. Respondents then reported their average monthly wage excluding various costs or taxes. In Waves 1-4, respondents were asked which months they earned this income in the last calendar year. Starting in Wave 5, respondents were asked how many months they earned this income in the last calendar year. Earnings from self-employment in the past year are calculated using the reported monthly amount times the number of months earning this income. If the respondent reported not earning income from self-employment or running their own business, a value of 0 is assigned.

Respondents were asked whether they earned any income from an agricultural and fisheries business in the past year. If the respondent answered yes, then they were asked to report their total earnings in the past year from an agricultural and fisheries business excluding operating costs and taxes. If the respondent reported not earning income from an agricultural and fisheries business, a value of 0 is assigned.

rWitfsemp is a flag variable which indicates whether any components of **rWitsemp** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

rWirent is the value of the respondent's rental income from their home and after-tax rental income from real estate in the past year. **rWirent** includes imputed values in Waves 1-6. **rWirent** is an aggregated value of two different reported values: 1) rental income from the home and 2) rental income from real estate. **rWirent** is only provided if there are values for both components. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Respondents who reported that they owned their own house and that the house is under their own name were asked whether they were currently leasing any parts of their house to other people. If the respondent answered that they are leasing on a secured monthly rent basis (i.e., JEON-WOL-SE) or leasing on a monthly rent basis (i.e., WOL-SE), they are asked to report the average monthly amount of rent they receive from leasing parts of the house they are currently living in. Rental income from the home in the past year is calculated using the reported average monthly amount times 12. If the respondent reported not owning their house, not having their house under their own name, or not leasing on a secured monthly rent or monthly rent basis, a value of 0 is assigned. Please note that Wave 9 includes a higher than usual amount of special missing (.m) values if the respondent owns their home but reported moving since the previous wave, and does not appear to be asked if they are currently leasing any parts of their house to others.

Respondents who reported that they had any other property assets, other than their current house, such as houses or buildings, commercial property, studio apartments, second houses, forest land, land, or apartments were asked whether they earned any regular income, such as monthly rent or land rent, from the property, excluding security deposits which were received. If the respondent answered yes, they were then asked to report the total amount of rental income received after taxes and other deductions. If the respondent reported not having any other property assets or not earning any regular income, a value of 0 is assigned.

rWifrent is a flag variable which indicates whether any components of **rWirent** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

rWirest is the annual interest that a respondent received from financial assets in the past year and includes imputed values in Waves 1-7. In Waves 1-3 all respondents were asked how much interest they earned per month from financial assets in the past year. Starting in Wave 4, respondents who reported having cash (in hand or in a checking account), money in installment savings, mutual savings, certificates of deposits, or other savings account, stocks or investment trust funds, private savings club (Gye), or any other financial assets were asked how much interest they earned per month from financial assets in the past year. **rWirest** is calculated using the reported monthly amount times 12. If the respondent reported not having any of the listed financial assets after Wave 4, **rWirest** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. Please note that Wave 9 includes a higher than usual amount of special missing (.m) values, the majority of which reported having more than 50 MW in cash. **rWifrest** is a flag variable which indicates whether any components of **rWirest** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

rWicap is the summary of the respondent's capital income in the past year that includes after tax self-employment income, after tax own business income, rental income from renting part of their own house, after tax rental income from renting out other real estate or land, and interest income from financial assets in the past year. Specifically, **rWicap** is calculated as:

$$\mathbf{rWicap} = \mathbf{rWitsemp} + \mathbf{rWirent} + \mathbf{rWirest}$$

rWicap is only provided if there are values for all three components. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWifcap** is a flag variable which indicates whether any components of **rWicap** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWitsem, **sWirent**, **sWirest**, and **sWicap** are taken directly from the spouse's values to **rWitsem**, **rWirent**, **rWirest**, and **rWicap**. **sWitfsem**, **sWifrent**, **sWifrest**, and **sWifcap** are taken directly from the spouse's values to **rWitfsem**, **rWifrent**, **rWifrest**, and **rWifcap**. In addition to the special missing values utilized by **rWitsem**, **rWirent**, **rWirest**, and **rWicap**, **sWitsem**, **sWirent**, **sWirest**, and **sWicap** use two more special missing values, (.u) and (.v). In addition to the special missing values utilized by **rWitfsem**, **rWifrent**, **rWifrest**, and **rWifcap**, **sWitfsem**, **sWifrent**, **sWifrest**, and **sWifcap** use two more special missing values, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Rental income from the home is only imputed for Waves 1, 3, 5, and 6. KLoSA does not impute income from real estate for Wave 7. Imputed values are not yet available for Wave 8 and 9, thus flag variables have not yet been generated for these waves.

In Waves 1-4, respondents were asked which months they earned self-employment income in the last calendar year. Starting in Wave 5, respondents were asked how many months they earned this income in the last calendar year.

In Waves 1-3 all respondents were asked how much interest they earned per month from financial assets in the past year. Starting in Wave 4, only respondents who reported having cash (in hand or in a checking account), money in installment savings, mutual savings, certificates of deposits, or other savings account, stocks or investment trust funds, private savings club (Gye), or any other financial assets were asked how much interest they earned per month from financial assets in the past year.

Cross-Study Differences with the HRS

Capital income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial income questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income.

The components of **rWicap** used in KLoSA are different from the components of **hWicap** in the RAND HRS. In the RAND HRS, **hWicap** contains income from business, rental, stock and mutual funds, bonds, CDs and treasury bills, checking and saving accounts, dividend and interest, and trust fund or royalties. In the Gateway Harmonized KLoSA, **rWicap** includes after-tax self-employment income, after-tax own business income, rental income from renting part of their own house, after-tax rental income from renting out other real estate or land, and interest income from financial assets.

Individual Income from Private Pension

Variable	Waves	Label	Type
rWipena	1-9	rWipena:wW income:r private pension	Cont
sWipena	1-9	sWipena:wW income:s private pension	Cont
rWifpena	1-7	rWifpena:wW income flag:r private pension	Categ
sWifpena	1-7	sWifpena:wW income flag:s private pension	Categ

How Constructed

rWipena is the value of the respondent's income from occupational and private pensions in the past year. **rWipena** includes imputed values in Waves 1-3 and 5-7. **rWipena** is an aggregated value of two different reported values: 1) occupational pension benefits and 2) private pension benefits. **rWipena** is only provided if there are values for both components. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Respondents were asked whether they received any benefits from the occupational pension system, including government employees' pension, military personnel pension, and private school teachers' pension, in the past year. Respondents could report that they received monthly benefits, lump-sum benefits, both, or didn't receive any benefit. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly occupational pension benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from occupational pension benefits in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving monthly benefits or lump-sum benefits, a value of 0 is assigned.

Respondents were asked whether they received any benefits from a private pension, aside from national pension and occupational pension, in the past year. Respondents could report that they received monthly benefits, lump-sum benefits, both, or didn't receive any benefit. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly private pension benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from private pension benefits in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving monthly benefits or lump-sum benefits, a value of 0 is assigned.

rWifpena is a flag variable which indicates whether any components of **rWipena** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWipena and **sWifpena** are taken directly from the spouse's values to **rWipena** and **rWifpena**. In addition to the special missing values utilized by **rWipena** and **rWifpena**, **sWipena** and **sWifpena** uses two more special missing values, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA only provides imputations for occupational pension benefit for Waves 1, 2, 3, 5, and 6. KLoSA only provides imputations for private pension benefit for Waves 5, 6 and 7. Imputed values are not yet available for Wave 8 and 9, thus flag variables have not yet been generated for these waves.

In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year.

Cross-Study Differences with the HRS

Private pension income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The RAND HRS private pension variable of the same name does not include the values of lump sum pension payments as does **rWipena** in the Gateway Harmonized KLoSA. Instead, lump sum pension payments in the RAND HRS are included in the other household income variable, **hWiothr**.

HRS asks financial income questions at the individual level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income. Moreover, HRS asked about the amount of any pensions that the respondent has received, whereas KLoSA asked the amount of each specific pension type that the respondent has received.

Individual Income from Public Pension

Variable	Waves	Label	Type
rWipubpen	1-9	rWipubpen:WW income:r public pension	Cont
sWipubpen	1-9	sWipubpen:WW income:s public pension	Cont
rWifpubpen	1-7	rWifpubpen:WW income flag:r public pension	Categ
sWifpubpen	1-7	sWifpubpen:WW income flag:s public pension	Categ

How Constructed

rWipubpen is the value of respondent's income from the National Pension System in the past year and includes imputed values in Waves 1-7. Respondents were asked whether they received any benefits from the National Pension System, including old age pension, disability pension, survivors' pension, and lump-sum death payments, in the past year. Respondents could report that they received monthly benefits, lump-sum benefits, both, or didn't receive any benefit. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly public pension benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. **rWipubpen** is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving monthly benefits or lump-sum benefits, **rWipubpen** is assigned a value of 0. It is only calculated if both components have values. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

rWifpubpen is a flag variable which indicates whether any components of **rWipubpen** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWipubpen and **sWifpubpen** are taken directly from the spouse's values to **rWipubpen** and **rWifpubpen**. In addition to the special missing values utilized by **rWipubpen** and **rWifpubpen**, **sWipubpen** and **sWifpubpen** use two more special missing values, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Wave 8 and 9, thus flag variables have not yet been generated for these waves.

In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year.

Cross-Study Differences with the HRS

Public pension income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in the RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

The RAND HRS public pension variables, **rWissdi** and **rWisret** do not include the values of lump sum pension payments as does **rWipubpen** in the Gateway Harmonized KLoSA. Instead, lump sum pension payments in the RAND HRS are included in the other household income variable, **hWiothr**.

HRS asks financial income questions at the individual level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income. Moreover, HRS asks about the amount of any pensions that the respondent has received, whereas KLoSA asks about the amount of specific pension types that the respondent has received.

Individual Income from Public Transfers

Variable	Waves	Label	Type
rWigxfr	1-9	rWigxfr:WW income:r income from government transfer	Cont
sWigxfr	1-9	sWigxfr:WW income:s income from government transfer	Cont
rWifgxfr	1-7	rWifgxfr:WW income flag:r income from government transfer	Categ
sWifgxfr	1-7	sWifgxfr:WW income flag:s income from government transfer	Categ

How Constructed

rWigxfr is the value of the respondent's income from government transfers in the past year. **rWigxfr** includes imputed values in Waves 1, 2, 4, 6, and 7. **rWigxfr** is an aggregated value of five different reported values: 1) unemployment benefits, 2) industrial accident compensation, 3) national basic living security benefits, 4) veteran benefits, and 5) other welfare benefits. **rWigxfr** is only provided if there are values for all five components. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Respondents were asked whether they received any unemployment benefits in the past year. If the respondent answered yes, they were then asked how they received the benefit, whether monthly, lump sum, or both. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly unemployment benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from unemployment benefits in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving unemployment benefits, a value of 0 is assigned.

Respondents were asked whether they received any industrial accident compensation (includes wage-replacement benefits, disability benefits, and survivors' benefits) in the past year. If the respondent answered yes, they were then asked how they received the benefits and compensation, whether monthly, lump sum, or both. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly industrial accident compensation in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from industrial accident compensation in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving industrial accident compensation, a value of 0 is assigned.

Respondents were asked whether they received any national basic living security benefits (general and self-reliance benefits) in the past year. In Waves 1-5 if the respondent answered yes, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. In Wave 5, respondents were asked how many months they received this benefit in the last calendar year. In Waves 1-5 income from national basic living security benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. In Wave 6 if the respondent answered that they received national basic living security benefits, they were then asked whether they applied in the first half of 2015 and received the benefit, applied in the second half of 2015 and received the benefit, or both. If the respondent reported having applied in the first half of 2015 then they were asked the number of months they received this benefit between January 2015 and June 2015 and the average monthly amount of the benefit for the same time period. If the respondent reported having applied in the second half of 2015 then they were asked the number of months between July 2015 and December 2015 they received living benefits, they received housing benefits, and they received education benefits, each separately. The respondent was then asked the average monthly amount of the benefits

for the same time period separately for living benefits, housing benefits, and education benefits. In Wave 6 income from national basic living security benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit from the first half of 2015 plus the sum of the reported monthly amounts times the number of months they received living benefits, housing benefits, and education benefits from the second half of 2015. Starting in Wave 7, respondents who reported they received national basic living security benefits were asked to report the number of months they received living benefits, housing benefits, and education benefits separately in the last calendar year. The respondents were then asked the average monthly amount of the benefits for the same time period separately for living benefits, housing benefits, and education benefits. Starting in Wave 7 income from national basic living security benefits in the past year is calculated using the sum of the reported monthly amount times the number of months they received living benefits, housing benefits, and education benefits. At all waves if the respondent reported not receiving national basic living security benefits, a value of 0 is assigned.

Respondents were asked whether they received any veteran benefits (includes benefits for patriots and their surviving families, and pensions and nursing allowances for wounded policemen and soldiers) in the past year. If the respondent answered yes, they were then asked how they received the benefit, whether monthly, lump sum, or both. If the respondent reported that they received monthly benefits, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from monthly veteran benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported that they received lump-sum benefits, they were then asked to report the total amount they received via lump sum in the past year. Total income from veteran benefits in the past year is calculated using the annualized monthly benefit plus the lump sum benefit. If the respondent reported not receiving veteran benefits, a value of 0 is assigned.

Respondents were asked whether they received any other welfare benefits in the past year. If the respondent answered yes, they were then asked which or the number of months in the past year they received this benefit. Respondents then reported their average monthly amount of the benefit. In Waves 1-4, respondents were asked which months they received this benefit in the last calendar year. Starting in Wave 5, respondents were asked how many months they received this benefit in the last calendar year. Income from other welfare benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit. If the respondent reported not receiving other welfare benefits, a value of 0 is assigned.

rWifgxfr is a flag variable which indicates whether any components of **rWigxfr** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWigxfr and **sWifgxfr** are taken directly from the spouse's values to **rWigxfr** and **rWifgxfr**. In addition to the special missing values utilized by **rWigxfr** and **rWifgxfr**, **sWigxfr** and **sWifgxfr** use two more special missing values, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Income from unemployment benefits is only imputed by KLoSA for Wave 1. Income from veteran benefits is only imputed by KLoSA for Waves 1 and 4. Income from other welfare benefits is only imputed by KLoSA for Waves 1, 2, and 6. Imputed values are not yet available for Wave 8 and 9, thus flag variables have not yet been generated for these waves.

In Waves 1, 5, and 6 the options for receiving unemployment benefits were monthly, as a lump sum and both, whereas in Waves 2-4 the only two options are monthly and both monthly and a lump sum.

In Waves 1-4, respondents were asked which months they received benefits in the last calendar year. Starting in Wave 5, respondents were asked how many months they received benefits in the last calendar year.

In Waves 1-5, respondents who reported receiving national basic living security benefits are asked which or the number of months in the past year they received this benefit and the average monthly amount of the benefit in the past year. In Wave 6 if the respondent answered that they received national basic living security benefits, they were then asked whether they applied in the first half of 2015 and received the benefit, applied in the second half of 2015 and received the benefit, or both. If the respondent reported having applied in the first half of 2015 then they were asked the number of months they received this benefit between January 2015 and June 2015 and the average monthly amount of the benefit for the same time period. If the respondent reported having applied in the second half of 2015 then they were asked the number of months between July 2015 and December 2015 they received living benefits, they received housing benefits, and they received education benefits, each separately. The respondent was then asked the average monthly amount of the benefits for the same time period separately for living benefits, housing benefits, and education benefits. In Wave 6 income from national basic living security benefits in the past year is calculated using the reported monthly amount times the number of months receiving the benefit from the first half of 2015 plus the sum of the reported monthly amounts times the number of months they received living benefits, housing benefits, and education benefits from the second half of 2015. Starting in Wave 7, respondents who reported that they received national basic living security benefits were asked to report the number of months they received living benefits, housing benefits, and education benefits in the last calendar year separately. The respondents were then asked the average monthly amount of the benefits for the same time period separately for living benefits, housing benefits, and education benefits. Starting in Wave 7 income from national basic living security benefits in the past year is calculated using the sum of the reported monthly amount times the number of months they received living benefits, housing benefits, and education benefits.

Starting in Wave 5, KLoSA added basic pension (e.g. basic old-age pension) and disabled benefit to the list of other possible government transfers. These values are not incorporated into **rWigxfr** as it is assumed they were also reported in income from the National Pension System. Starting in Wave 6, KLoSA added earned income tax credit to the list of other possible government transfers. Currently these values are also not yet incorporated into **rWigxfr**.

Cross-Study Differences with the HRS

Total public transfer income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial income questions at the individual level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income. Furthermore, the components used in **rWigxfr** in the RAND HRS are different from the components used for the same variable in the Gateway Harmonized KLoSA. In RAND HRS, **rWigxfr** contains veteran's benefits, welfare, and food stamps. In Gateway Harmonized KLoSA, **rWigxfr** includes unemployment benefits, industrial accident compensation, basic living security benefits, veteran benefits, and other welfare benefits.

All Other Individual Income

Variable	Waves	Label	Type
rWitothr	1-9	rWitothr:WW income:r other income	Cont
sWitothr	1-9	sWitothr:WW income:s other income	Cont
rWitfothr	1-7	rWitfothr:WW income flag:r other income	Categ
sWitfothr	1-7	sWitfothr:WW income flag:s other income	Categ

How Constructed

rWitothr is the value of the respondent's after tax other income in the past year and includes imputed values in Waves 1, 3-4, and 6. Respondents were asked whether they received any other income, aside from everything else already asked about in the survey, including income from alimony, copyrights, and patent fees. If the respondent answered yes, they were then asked to report the total amount of other income after taxes and deductions. If the respondent reported not receiving any other income, **rWitothr** is assigned a value of 0. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWitfothr** is a flag variable which indicates whether any components of **rWitothr** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWitothr and **sWitfothr** are taken directly from the spouse's values to **rWitothr** and **rWitfothr**. In addition to the special missing values utilized by **rWitothr** and **rWitfothr**, **sWitothr** and **sWitfothr** use two more special missing values, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

KLoSA only imputes components of **rWitothr** for Waves 1, 3-4, and 6. Imputed values are not yet available for Wave 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

Other income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS asks financial income questions at the household level and only the financial respondent who is the most knowledgeable person about the financial assets of the family will answer the questions. On the other hand, KLoSA asks every household member about their income.

Total Individual Income

Variable	Waves	Label	Type
rWitot	1-9	rWitot:WW income:r total income	Cont
sWitot	1-9	sWitot:WW income:s total income	Cont
rWiftot	1-7	rWiftot:WW income flag:r total income	Categ
sWiftot	1-7	sWiftot:WW income flag:s total income	Categ

How Constructed

rWitot is the total income that the respondent received in the past year, that is, the total of the sum of after-tax earnings, capital income, private pension income, public pension income, government transfers, and after tax other income. Specifically **rWitot** is calculated as:

$$\mathbf{rWitot} = \mathbf{rWitearn} + \mathbf{rWicap} + \mathbf{rWipena} + \mathbf{rWipubpen} + \mathbf{rWigxfr} + \mathbf{rWitothr}$$

rWitot is only provided if there are values for all six of its components. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWiftot** is a flag variable which indicates whether any components of **rWitot** are imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 3 indicates that the value was imputed based on an incomplete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of 6 indicates that the respondent reported not receiving the income and, therefore, its value was set to 0. A code of 7 indicates that both income receipt and income value were imputed. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWitot and **sWiftot** are taken directly from the spouse's values to **rWitot** and **rWiftot**. In addition to the special missing values utilized by **rWitot** and **rWiftot**, **sWitot** and **sWiftot** use two more special missing values, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Wave 8 and 9, thus flag variables have not yet been generated for these waves.

Refer to "Cross-Wave Differences in KLoSA" section of each component to identify differences across waves for the components of **rWitot**.

Cross-Study Differences with the HRS

Total individual income in KLoSA is measured in 10,000 Korean won whereas the equivalent measure in RAND HRS is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Refer to "Cross-Study Differences with the HRS" section of each component to identify differences with the RAND HRS variable of the same name.

Total Household Income (Direct Question)

Variable	Waves	Label	Type
rWitothhinc	1-9	rWitothhinc:ww income:r total household income, direct question	Cont
sWitothhinc	1-9	sWitothhinc:ww income:s total household income, direct question	Cont
rWiftothhinc	1-7	rWiftothhinc:ww income flag:r total household income, direct question	Categ
sWiftothhinc	1-7	sWiftothhinc:ww income flag:s total household income, direct question	Categ

How Constructed

rWitothhinc is the total household income in the past year. Respondents reported past year total income excluding taxes and other deductions. The reported income includes the income from other household members and the respondent themselves. This is a direct question from the questionnaire and is different from the aggregate individual total income variable **rWitot**. Any remaining don't know, refused, or other missing responses are assigned (.d), (.r), (.m), respectively. **rWiftothhinc** is a flag variable which indicates whether the value of **rWitothhinc** is imputed by KLoSA, and if so, how much information is available for imputation. A code of 1 indicates that the respondent reported a continuous value and no imputation was necessary. A code of 2 indicates that the value was imputed based on a complete bracket. A code of 5 indicates that the value was imputed without any bracket information. A code of -1 indicates that the value is missing as KLoSA did not provide an imputed value and ownership was unknown. A code of -2 indicates that the value is missing as KLoSA did not provide an imputed value but that the respondent did report the income receipt. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

sWitothhinc and **sWiftothhinc** are taken directly from the spouse's values to **rWitothhinc** and **rWiftothhinc**. Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Imputed values are not yet available for Wave 8 and 9, thus flag variables have not yet been generated for these waves.

Cross-Study Differences with the HRS

This variable is not available in the RAND HRS.

Food Consumption

Variable	Waves	Label	Type
hhWcfoodi1m	2-9	hhWcfoodi1m:ww income:hh monthly in house food consumption	Cont
hhWcfoodo1m	2-9	hhWcfoodo1m:ww income:hh monthly eating out food consumption	Cont
hhWcfood1m	2-9	hhWcfood1m:ww hh monthly total food consumption	Cont

How Constructed

hhWcfoodi1m represents the typical monthly amount spent by the household on food consumed at home in Korean won. The household respondent is asked, "What was your household's average monthly expenditure on food in the last calendar year?" Don't know, refuse, and other missing responses of **hhWcfoodi1m** are assigned special missing codes (.d), (.r), (.m), respectively. **hhWcfoodi1m** is set to plain missing (.) for respondents who did not respond to the current wave.

hhWcfoodo1m represents the typical monthly amount spent by the household on food consumed outside of the home in Korean won. The respondent is asked, "What was your household's average monthly expenditure on dining out in the last calendar year?" Don't know, refuse, and other missing responses of **hhWcfoodo1m** are assigned special missing codes (.d), (.r), (.m), respectively. **hhWcfoodo1m** is set to plain missing (.) for respondents who did not respond to the current wave.

hhWcfood1m represents the total typical monthly amount spent by the household on food consumption in Korean won. **hhWcfood1m** is defined as: **hhWcfoodi1m** + **hhWcfoodo1m**. It is only summed if there are values for both components. Don't know, refuse, and other missing responses of **hhWcfood1m** are assigned special missing codes (.d), (.r), (.m), respectively. **hhWcfood1m** is set to plain missing (.) for respondents who did not respond to the current wave.

Cross-Wave Differences in KLoSA

Food consumption questions were asked starting in Wave 2.

Cross-Study Differences with the HRS

The HRS asks about food consumption per week, however equivalent variables could be created.

Monthly Non-Food Consumption

Variable	Waves	Label	Type
hhWcnf1m	2-9	hhWcnf1m:ww hh total monthly non-food consumption	Cont

How Constructed

hhWcnf1m represents the monthly amount spent by the household on non-food consumption in Korean won. **hhWcnf1m** consists of the following questions:

1. The respondent is asked, "How much did your household spend on public education (tuition, textbooks, materials, etc.) in an average month in the last calendar year?"
2. The respondent is asked, "How much did you spend on private education (private educational institutions, tutoring, textbooks, materials, etc.) in an average month in the last calendar year?"
3. The respondent is asked, "How much did your household spend on housing (monthly rent, utilities including electricity, water and gas, etc.) in an average month in the last calendar year?"
4. The respondent is asked, "How much did your household spend on medical expenditure (including health insurance premiums) in an average month in the last calendar year?"
5. The respondent is asked, "How much did your household spend on clothing (clothes, shoes, etc.) in an average month in the last calendar year?"
6. The respondent is asked, "How much did your household spend on insurance premium in an average month in the last calendar year?" This question is asked starting at Wave 5.
7. The respondent is asked, "How much did your household spend on vehicle maintenance in an average month in the last calendar year?" This question is asked starting at Wave 5.
8. The respondent is asked, "How much did your household spend on telecommunication service in an average month in the last calendar year?" This question is asked starting at Wave 5.
9. The respondent is asked, "How much did your household spend on leisure activities (travel, picnic, movie, performance, exhibition, sport game, hobby or any community activities) in an average month in the last calendar year?" This question is asked starting at Wave 5.
10. The respondent is asked, "How much did your household spend on family events/ tributes in an average month in the last calendar year?" This question is asked starting at Wave 5.

These values are only summed if none of the components are missing. Don't know, refuse, and other missing responses of **hhWcnf1m** are assigned special missing codes (.d), (.r), (.m), respectively. **hhWcnf1m** is set to plain missing (.) for respondents who did not respond to the current wave.

Cross-Wave Differences in KLoSA

The amount spent by the household on public education, private education, housing, medical expenditures, and clothing are asked starting at Wave 2. In Waves 2 and forward, if the respondent refuses or does not know the value for each expenditure, a series of unfolding bracket questions are asked. The question wording, bracket amounts and entry points are the same in all waves in which the question is asked and vary by question.

The amount spent by the household on insurance premiums, vehicle maintenance, telecommunication service, leisure activities, and family events/tributes are asked starting at Wave 5. In Wave 5 and forward, if the respondent refuses or does not know the value for each expenditure, a series of unfolding bracket questions are asked. The question wording, bracket amounts and entry points are the same in all waves in which the question is asked and vary by question.

Cross-Study Differences with the HRS

The HRS does not have equivalent variables.

Total Consumption

Variable	Waves	Label	Type
hhWctot	2-9	hhWctot:ww hh total annual consumption	Cont
hhWcperc	2-9	hhWcperc:ww per capita household consumption	Cont
hhWctotr1m	2-9	hhWctotr1m:ww income:hh reported total monthly consumption	Cont

How Constructed

hhWctot represents the total typical amount spent annually by the household in Korean won. **hhWctot** is equal to the sum of **hhWcfood1m** and **hhWcnf1m** multiplied by 12. It is only summed if none of its components are missing. If any of the components of **hhWctot** are assigned don't know, refuse, and other missing responses, then **hhWctot** is assigned the special missing codes (.d), (.r), (.m), respectively. **hhWctot** is set to plain missing (.) for respondents who did not respond to the current wave.

hhWcperc is the per capita household consumption. This variable is calculated by taking total household consumption divided by the number of people in the household; this is, $\text{hhWcperc} = \text{hhWctot} / \text{hWhhres}$. If any of the components are assigned don't know, refuse, and other missing responses, **hhWcperc** is assigned the special missing codes (.d), (.r), (.m), respectively. **hhWcperc** is set to plain missing (.) for respondents who did not respond to the current wave.

hhWctotr1m represents the reported total typical monthly amount spent by the household in Korean won. The respondent is asked, "Now I am going to ask you about your living costs and related items in the last calendar year. Related items include food and dining out, public and private education, housing, medical, and clothing expenditures. First, what was your household's average monthly living cost in the last calendar year?". **hhWctotr1m** takes the values reported by the respondent. Don't know, refuse, and other missing responses of **hhWctotr1m** are assigned special missing codes (.d), (.r), (.m), respectively. **hhWctotr1m** is set to plain missing (.) for respondents who did not respond to the current wave.

Cross-Wave Differences in KLoSA

Consumption questions are only asked starting in Wave 2. Expenditures for food consumed in the house, food consumed out of the house, public education, private education, housing, medical expenditures, and clothing are asked starting in Wave 2. Expenditures for insurance premiums, vehicle maintenance, telecommunication service, leisure activities, and family events/tributes are asked starting in Wave 5. As a result, the calculated totals are much higher at Waves 5 and forward in comparison to Waves 2 through 4.

Cross-Study Differences with the HRS

The HRS does not have equivalent variables.

How Constructed

hWhhres counts the number of people living in the household, including the respondents.

The number of residents living in a household is obtained using the Coverscreen Module which includes all members reported to live in the household. Plain missing (.) is assigned if the respondent was not interviewed in the current wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

HRS asks the number of people living in the household once per couple per wave; however, KLoSA asks the number of people living in the household once per household for new respondents.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing
h1hhres	10,254	2.98	1.36	1.00	11.00	0
h2hhres	8,688	2.83	1.32	1.00	10.00	0

Number of Living Children

Variable	Waves	Label	Type
hWchild	1-9	hWchild:ww number of living children	Cont
hWson	1-9	hWson:ww number of living sons	Cont
hWdau	1-9	hWdau:ww number of living daughters	Cont

How Constructed

hWchild is the number of living children of the respondent and their spouse or partner. It is the same between members of a couple. KLoSA asks the family respondent directly for the number of living children, and then proceeds through a loop to ask about characteristics of each child for both the respondent and the spouse. KLoSA records information for up to ten children. **hWchild** takes the value of the direct report, and if missing, takes the value of the total number of living children in the loop.

hWson is the number of living sons of the respondent and their spouse or partner. The son(s) may or may not be living with the respondent and their spouse or partner.

hWdau is the number of living daughters of the respondent and their spouse or partner. The daughter(s) may or may not be living with the respondent and their spouse or partner.

Don't know, refused, or missing responses to **hWchild**, **hWson** and **hWdau** are assigned special missing values (.d), (.r), (.m), respectively. **hWchild**, **hWson** and **hWdau** are set to plain missing (.) for respondents who did not respond to the current wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Number of Grandchildren

Variable	Waves	Label	Type
hWgrchild	1-9	hWgrchild:ww number of grandchildren	Cont

How Constructed

hWgrchild provides the number of grandchildren of the respondent and their spouse or partner. KLoSA asks the respondent how many grandchildren they and their spouse/partner have altogether and **hWgrchild** takes the value reported. Don't know, refused, or missing responses to **hWgrchild** are assigned special missing values (.d), (.r), (.m), respectively. **hWgrchild** is set to plain missing (.) for respondents who did not respond to the current wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Number of grandchildren is not provided in the main RAND HRS file but is included in the RAND HRS Family Data which record the number of grandchildren for each child.

The Gateway Harmonized HRS includes the respondent's and their spouse's total number of grandchildren in **hWgrchild**, which is comparable to **hWgrchild** in the Gateway Harmonized KLoSA.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing
h1grchild	10,237	3.38	4.08	0.00	34.00	17

Number of Living Siblings

Variable	Waves	Label	Type
rWlvsib	1-9	rWlvsib:WW R # of living siblings	Cont
sWlvsib	1-9	sWlvsib:WW S # of living siblings	Cont

How Constructed

rWlvsib is the number of the respondent's living siblings. In the first interview, KLoSA asks the respondent directly for the number of living siblings, and then proceeds through a loop to ask about the characteristics of each sibling, including their relationship. At subsequent interviews, the questions become "Now I am going to ask you about your sibling, [sibling's name]. Is [sibling's name] currently alive?" KLoSA records information for up to fourteen siblings. If information about the total number of siblings is not available – on account of the respondent's refusal or not knowing – special missing codes (.r) and (.d), respectively, are assigned. Missing responses are assigned special missing values (.m). Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

sWlvsib is the number of the spouse's siblings. They are taken from the spouse's value to **rWlvsib**. Aside from the special missing values utilized by **rWlvsib**, **sWlvsib** employs two additional special missing codes, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married, a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1, KLoSA asks the respondent directly for the number of living siblings, and then proceeds through a loop to ask about characteristics of each sibling, including the relationship. Starting in Wave 2, the questions are "Now I am going to ask you about your sibling, [sibling's name]. Is [sibling's name] currently alive?"

Cross-Study Differences with the HRS

Unlike HRS, KLoSA does not survey the number of living siblings in each wave. KLoSA only asks respondents to report the number of living siblings in the first interview. Starting in Wave 2 and forward respondents were asked how many of the siblings reported in Wave 1 (or the first wave interviewed) are still alive.

Continuous Variable Distributions

rWdadage	1-9	rWdadage:ww R father age current/at death	Cont
sWdadage	1-9	sWdadage:ww S father age current/at death	Cont

How Constructed

rWmomliv and **rWdadliv** indicate whether the respondent's mother and father are alive at the current wave. After the initial interview, these questions are skipped if the respondent's mother or father is not alive in a previous wave or missing. A code of 0 indicates that the respondent's mother or father is not alive at the current wave and a code of 1 indicates that the respondent's mother or father is alive at the current wave. To account for displaced families in the Korean War, respondents can also indicate that their family was dispersed. For these individuals a special missing code of (.f) is used. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWlivpar is the number of living parents of the respondent. KLoSA asks about the respondent's mother and father separately allowing for a maximum of 2 living parents. Respondents with one or both parents whose status is not known because the family is dispersed are assigned the special missing value of (.f). Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWmomage and **rWdadage** are the respondent's mother's and father's current age in years if the mother or father is still alive or the respondent's mother's and father's age at death. We rely on the first reported mother's and father's age at death. To account for displaced families in the Korean War, respondents can also indicate that their family was dispersed. For these individuals a special missing code of (.f) is used. Don't know, refused, or missing responses to mother/father age are assigned special missing values (.d), (.r), (.m), respectively. **rWmomage** and **rWdadage** are set to plain missing (.) for respondents who did not respond to the current wave.

In the initial interview respondents are asked either their mother/father's age if they reported their mother/father was alive or the age when their mother/father died if they reported their mother/father was no longer alive. **r1momage** and **r1dadage** are based on these age reports. In subsequent waves respondents are only asked if their mother/father are still alive if they were reported alive in their last interview. For those respondents whose mother/father was reported deceased at the last wave **rWmomage** and **rWdadage** are carried forward from the previous wave. If the respondent reported that their mother/father has died since the last interview they are asked the month and year their mother/father died; in this case, **rWmomage** and **rWdadage** are calculated using the previously reported parent's age and the year in which the parent was reported to have died. If the respondent reported that their mother/father is still alive **rWmomage** and **rWdadage** are calculated using the previously reported parent's age and the number of years since the last interview.

sWmomliv, **sWdadliv**, **sWlivpar**, **sWmomage** and **sWdadage** indicate whether the current wave's spouse's mother and father are alive, the number of living parents, and mother's and father's age/passing age at the current wave, respectively. They are taken from the spouse's values to **rWmomliv**, **rWdadliv**, **rWlivpar**, **rWmomage** and **rWdadage**. Aside from the special missing values utilized by **rWmomliv**, **rWdadliv**, **rWlivpar**, **rWmomage** and **rWdadage**, **sWmomliv**, **sWdadliv**, **sWlivpar**, **sWmomage** and **sWdadage** employ two additional special missing codes, (.u) and (.v). If the respondent is not

designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

The questions about parents' mortality are only asked to all respondents in Wave 1 and to new respondents in Wave 5. In subsequent interviews, these questions are skipped if the respondent's mother or father is not alive in the previous wave and respondents are only asked if their mother or father is still alive if they were reported living in the previous wave, and if not, their year of death. Age of living parents are only asked in initial interviews. Ages in subsequent waves are calculated.

Cross-Study Differences with the HRS

No differences known.

Original KLoSA Variables Used

Wave 1:

wo1bb004	Father survival
wo1bb010	Mother survival
wo1bo21	Mother's age (unit: years old)
wo1bo25	The age of mother's death(unit: years old)
wo1bo10	Father's age (unit: years old)
wo1bo15	The age of father's death(unit: years old)

Wave 2:

wo2bb004	Father survival
wo2bb010	Mother survival
wo2bb005y	The year of father's death(unit: yyyy)
wo2bb011y	The year of mother's death(unit: yyyy)

Wave 3:

wo3bb004	Father survival
wo3bb010	Mother survival
wo3bb005y	The year of father's death(unit: yyyy)
wo3bb011y	The year of mother's death(unit: yyyy)

Wave 4:

wo4bb004	Father survival
wo4bb010	Mother survival
wo4bb005y	The year of father's death(unit: yyyy)
wo4bb011y	The year of mother's death(unit: yyyy)

Wave 5:

wo5bb004	Father survival
----------	-----------------

Section G. Family Structure

w05bb010	Mother survival
w05bb005y	The year of father's death(unit: yyyy)
w05bb011y	The year of mother's death(unit: yyyy)
Wave 5 Add:	
w05bb004	Father survival
w05bb005_1	The age of father's death(unit: years old)
w05bb007w5_3	Fathers's age
w05bb011_1	The age of mother's death(unit: years old)
w05bb013w05_3	Mothers's age
Wave 6:	
w06bb004	Father survival
w06bb010	Mother survival
w06bb005y	The year of father's death(unit: yyyy)
w06bb011y	The year of mother's death(unit: yyyy)
Wave 7:	
w07bb004	Father survival
w07bb010	Mother survival
w07bb005y	The year of father's death(unit: yyyy)
w07bb011y	The year of mother's death(unit: yyyy)
Wave 8:	
w08bb004	Father survival
w08bb010	Mother survival
w08bb005y	The year of father's death(unit: yyyy)
w08bb011y	The year of mother's death(unit: yyyy)
Wave 9:	
w09bb004	Father survival
w09bb010	Mother survival
w09bb005y	The year of father's death(unit: yyyy)
w09bb011y	The year of mother's death(unit: yyyy)

sWdadeducl	1-9	sWdadeducl:wW s father harmonized education level	Categ

How Constructed

rameduc_k and **rafeduc_k** indicate the education level completed by the respondent's mother and father, respectively. The question asks "What is the highest level of school or college your father completed?" and places educational attainment into nine categories: 1) No formal education (illiterate), 2) No formal education (capable of reading), 3) Elementary school, 4) Middle School, 5) High School, 6) Two-year college, 7) College grad, 8) Post college (Master), and 9) Post college (PhD). Special missing (.o) is assigned if "other" was given as the response. Don't know and refused responses are coded as special missing (.d) and (.r) respectively. Other missing responses are assigned special missing (.m).

sWmeduc_k and **sWfeduc_k** indicate the current wave's spouse's mother's and father's level of education. They are taken from the spouse's values to **rameduc_k** and **rafeduc_k**. Aside from the special missing values utilized by **rameduc_k** and **rafeduc_k**, **sWmeduc_k** and **sWfeduc_k** employ two additional special missing codes, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

ramomeducel, **radadeducel**, **ramomeducl**, and **radadeducl** indicate the education level completed by the respondent's mother and father, respectively, according to five-tier and three-tier harmonized scales which we developed to compare education levels across countries. These Gateway Harmonized education scales are simplified versions of 1997 International Standard Classification of Education (ISCED-97) codes. For more information on ISCED codes, see www.uis.unesco.org and the OECD document entitled "Classifying Educational Programmes: Manual for ISCED-97 Implementation in OECD Countries, 1999 Edition". **ramomeducel** and **radadeducel** are coded as follows: 1.Less than primary education, 2.Primary education, 3.Lower secondary education, 4.Upper secondary education, and 5.Tertiary education. A code of 1 is assigned if the respondent reports no education (illiterate or reading) for their parent. A code of 2 is assigned if the respondent reports their parent finished elementary school. A code of 3 is assigned if the respondent reports their parent finished middle school. A code of 4 is assigned if the respondent reports their parent finished high school. A code of 5 is assigned if the respondent reports their parent finished two year college, college or post college (master or PhD). **ramomeducl** and **radadeducl** are coded as follows: 1.Less than lower secondary education, 2.Upper secondary training, and 3.Tertiary education. A code of 1 is assigned if the respondent reports a parent education level of no education (illiterate or reading), elementary school, or middle school. A code of 2 is assigned if the respondent reports a parent education level of high school. A code of 3 is assigned if the respondent reports a parent education level of two-year college, college grad, or post-graduate degree (master or PhD). Special missing (.o) is assigned if "other" was given as the response. Don't know and refused responses are coded as special missing (.d) and (.r) respectively. Other missing responses are assigned special missing (.m).

sWmomeducel, **sWmomeducl**, **sWdadeducel**, and **sWdadeducl** indicate the current wave's spouse's mother's and father's category of education. They are taken from the spouse's values to **ramomeducel**, **ramomeducl**, **radadeducel** and **radadeducl**. In addition to the special missing codes utilized by the respondent variables, the spouse variables employ

two additional special missing codes, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

Parental education questions were only asked in the initial interview—i.e. at Wave 1 and for the new sample in Wave 5.

Cross-Study Differences with the HRS

A notable modification to the RAND HRS category schema here is the additional two categories to capture lower levels of educational attainment – middle school and elementary school education.

Categorical Variable Frequencies

	rameduc_k

w05bb013w05_1	Mother's education

Any Child Co-resides with Respondent

Variable	Waves	Label	Type
hWcoresd	1-9	hWcoresd:WW any child co-reside with r/s	Categ

How Constructed

hWcoresd indicates whether any child is co-residing with the respondent and their spouse or partner.

For each child the family respondent reports for their self and their spouse, they are then asked whether this child co-resides with the respondent and their spouse. **hWcoresd** is coded as yes, 1, if the respondent reported any child co-resides with the respondent or spouse. Otherwise, **hWcoresd** is coded as no, 0. Special missing code (.k) is assigned if the respondent reports they do not have any living children. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

This variable is not available in RAND HRS but available in the RAND Family data.

Any Child Lives Within 30 Minutes

Variable	Waves	Label	Type
hWlvnear	1	hWlvnear:ww r/s any child lives within 30 mins	Categ
rWlvnear	2-9	rWlvnear:ww r any child lives within 30 mins	Categ
sWlvnear	2-9	sWlvnear:ww s any child lives within 30 mins	Categ

How Constructed

For each child not reported as co-residing with the respondent and the spouse, respondents are asked how close this child lives to the respondent and the spouse. In Wave 1, the family respondent reports closeness with each living child on behalf of themselves and their spouse. Starting in Wave 2, if the family respondent reported having living children, each individual respondent is asked closeness with each child. Because of the difference in questionnaires, this variable is a household-level variable in Wave 1 and a respondent-level variable starting in Wave 2. Respondents are allowed to report the following categories of closeness: within a 30-minute distance, within a one-hour distance, within a two-hour distance, or more than a two-hour distance by public transportation.

hWlvnear indicates whether the respondent or spouse has any child who lives within a 30-minute distance by public transportation. **hWlvnear** is coded as yes and given a value of 1 if any child lives within a 30-minute distance or a child is co-residing with the respondent or their spouse. Otherwise, **hWlvnear** is coded as no, 0. Special missing code (.k) is assigned if the respondent reports not having any children. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWlvnear indicates whether the respondent has any child who lives within a 30-minute distance by public transportation. **rWlvnear** is coded as yes and given a value of 1 if any child lives within a 30-minute distance or a child is co-residing with the respondent or their spouse. Otherwise, **rWlvnear** is coded as no, 0. Special missing code (.k) is assigned if the respondent reports not having any children. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

sWlvnear indicates whether the current wave's spouse has any child who lives within a 30-minute distance by public transportation. It is taken from the spouse's values to **rWlvnear**. Aside from the special missing values utilized by **rWlvnear**, **sWlvnear** employs two additional special missing codes, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1, only the family respondent is asked how close each child lives. Starting in Wave 2, if the family respondent reported having living children, all respondents are asked how close each of their children live.

Cross-Study Differences with the HRS

These variables are not available in the RAND HRS, but are available in the RAND Family data at the household level.

Original KLoSA Variables Used

Wave 1:

wo1baoo3	The number of alive children (unit: person)
wo1ba018_01	(Not live together) The 1st child's neighboring characteristic
wo1ba018_02	(Not live together) The 2nd child's neighboring characteristic

520

w05ba018_o8	(Not live together) The 8th child's neighboring characteristic
w05ba018_o9	(Not live together) The 9th child's neighboring characteristic
Wave 5 Add:	
w05ba003	The number of alive children (unit: person)
w05ba018_o1	The 1st child's neighboring characteristic
w05ba018_o2	The 2nd child's neighboring characteristic
w05ba018_o3	The 3rd child's neighboring characteristic
w05ba018_o4	The 4th child's neighboring characteristic
w05ba018_o5	The 5th child's neighboring characteristic
w05ba018_o6	The 6th child's neighboring characteristic
w05ba018_o7	The 7th child's neighboring characteristic
w05ba018_o8	The 8th child's neighboring characteristic
w05ba018_o9	The 9th child's neighboring characteristic
Wave 6:	
w06ba003	The number of alive children (unit: person)
w06ba018_o1	(Not live together) The 1st child's neighboring characteristic
w06ba018_o2	(Not live together) The 2nd child's neighboring characteristic
w06ba018_o3	(Not live together) The 3rd child's neighboring characteristic
w06ba018_o4	(Not live together) The 4th child's neighboring characteristic
w06ba018_o5	(Not live together) The 5th child's neighboring characteristic
w06ba018_o6	(Not live together) The 6th child's neighboring characteristic
w06ba018_o7	(Not live together) The 7th child's neighboring characteristic
w06ba018_o8	(Not live together) The 8th child's neighboring characteristic
w06ba018_o9	(Not live together) The 9th child's neighboring characteristic
Wave 7:	
w07ba003	The number of alive children (unit: person)
w07ba018_o1	(Not live together) The 1st child's neighboring characteristic
w07ba018_o2	(Not live together) The 2nd child's neighboring characteristic
w07ba018_o3	(Not live together) The 3rd child's neighboring characteristic
w07ba018_o4	(Not live together) The 4th child's neighboring characteristic
w07ba018_o5	(Not live together) The 5th child's neighboring characteristic
w07ba018_o6	(Not live together) The 6th child's neighboring characteristic
w07ba018_o7	(Not live together) The 7th child's neighboring characteristic
w07ba018_o8	(Not live together) The 8th child's neighboring characteristic
w07ba018_o9	(Not live together) The 9th child's neighboring characteristic
Wave 8:	
w08ba003	The number of alive children (unit: person)
w08ba018_o1	(Not live together) The 1st child's neighboring characteristic
w08ba018_o2	(Not live together) The 2nd child's neighboring characteristic
w08ba018_o3	(Not live together) The 3rd child's neighboring characteristic
w08ba018_o4	(Not live together) The 4th child's neighboring characteristic
w08ba018_o5	(Not live together) The 5th child's neighboring characteristic
w08ba018_o6	(Not live together) The 6th child's neighboring characteristic
w08ba018_o7	(Not live together) The 7th child's neighboring characteristic
w08ba018_o8	(Not live together) The 8th child's neighboring characteristic
w08ba018_o9	(Not live together) The 9th child's neighboring characteristic
Wave 9:	
w09ba003	The number of alive children (unit: person)
w09ba018_o1	(Not live together) The 1st child's neighboring characteristic
w09ba018_o2	(Not live together) The 2nd child's neighboring characteristic
w09ba018_o3	(Not live together) The 3rd child's neighboring characteristic
w09ba018_o4	(Not live together) The 4th child's neighboring characteristic
w09ba018_o5	(Not live together) The 5th child's neighboring characteristic

wogbao18_o6	(Not live together) The 6th child's neighboring characteristic
wogbao18_o7	(Not live together) The 7th child's neighboring characteristic
wogbao18_o8	(Not live together) The 8th child's neighboring characteristic
wogbao18_o9	(Not live together) The 9th child's neighboring characteristic

Any Weekly Contact with Children in Person, by Phone, Mail or E-mail

How Constructed

Respondents can report contact with each of their children using the following categories: almost every day, two to three times a week, once a week, twice a month, once a month, five or six times a year, three or four times a year, once or twice a year, almost never in a year, and never. Weekly contact is defined as the respondent contacting at least one of their children at least once a week. In Wave 1, the questionnaire only asked the family respondent questions about child contact. Starting in Wave 2, if the family respondent reported having living children, each respondent was asked about child contact. Therefore the variables **hWkcntf**, **hWkcntf1m**, **hWkcntpm**, **hWkcntpm1m**, **hWkcnt** and **hWkcnt1m** are only available in Wave 1 and **rWkcntf**, **rWkcntf1m**, **rWkcntpm**, **rWkcntpm1m**, **rWkcnt**, **rWkcnt1m**, **sWkcntf**, **sWkcntf1m**, **sWkcntpm**, **sWkcntpm1m**, **sWkcnt** and **sWkcnt1m** are available starting from Wave 2.

hWkcntf indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children in person at the household level. A code of 1 is used if the respondent reports any in-person-contact either almost every day, two to three times a week, or once a week. A code of 1 is also used if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any weekly in-person contact and the respondent does not have any co-residing children. **hWkcntf1m** indicates whether the respondent has any frequent (i.e., at least monthly) contact with any of their children in person at the household level. A code of 1 is used if the respondent reports any in-person-contact either almost every day, two to three times a week, once a week, once a month, or twice a month. A code of 1 is also used if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any monthly in-person contact and the respondent does not have any co-residing children. If the respondent and spouse don't have any children a special

missing value (.k) is assigned. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

hWkcntp_m indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their non-co-residing children by phone, mail or e-mail at the household level. A code of 1 is used if the respondent reports contact by phone, mail or e-mail either almost every day, two to three times a week, or once a week. A code of 0 is used if the respondent did not report any weekly contact by phone, mail, or e-mail. **hWkcntp_{m1m}** indicates whether the respondent has any frequent (i.e., at least monthly) contact with any of their non-co-residing children by phone, mail or e-mail at the household level. A code of 1 is used if the respondent reports contact by phone, mail or e-mail either almost every day, two to three times a week, once a week, once a month, or twice a month. A code of 0 is used if the respondent did not report any monthly contact by phone, mail, or e-mail. If the respondent and spouse don't have any children a special missing value (.k) is assigned. If the respondent and spouse do have children but all children co-reside with the respondent and spouse then special missing value (.h) is used. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

hWkc_{nt} indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children either in person or by phone, mail or e-mail at the household level. **hWkc_{nt}** is derived by using **hWkc_{ntf}** and **hWkcntp_m**. A code of 1 is used if the respondent reports any weekly contact either in person or by phone, mail or e-mail, or if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any weekly contact. **hWkc_{nt1m}** indicates whether the respondent has any frequent (i.e., at least monthly) contact with any of their children either in person or by phone, mail or e-mail at the household level. **hWkc_{nt1m}** is derived by using **hWkc_{ntf1m}** and **hWkcntp_{m1m}**. A code of 1 is used if the respondent reports any monthly contact either in person or by phone, mail or e-mail, or if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any monthly contact. If the respondent and spouse don't have any children a special missing value (.k) is assigned. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWkc_{ntf} indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children in person. A code of 1 is used if the respondent reports any in-person contact either almost every day, two to three times a week, or once a week. A code of 1 is also used if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any weekly in-person contact and the respondent does not have any co-residing children. **rWkc_{ntf1m}** indicates whether the respondent has any frequent (i.e., at least monthly) contact with any of their children in person. A code of 1 is used if the respondent reports any in-person contact either almost every day, two to three times a week, once a week, once a month, or twice a month. A code of 1 is also used if the respondent reported co-residing with any child. A code of 0 is used if the respondent did not report any monthly in-person contact and the respondent does not have any co-residing children. If the respondent and spouse don't have any children a special missing value (.k) is assigned. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWkcntp_m indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their non-co-residing children by phone, mail or e-mail. A code of 1 is used if the respondent reports contact by phone, mail or e-mail either almost every day, two to three times a week, or once a week. A code of 0 is used if the respondent did not report any weekly contact by phone, mail, or e-mail. **rWkcntp_{m1m}** indicates whether the respondent has any frequent (i.e., at least monthly) contact with any of their non-co-residing children by phone, mail or e-mail. A code of 1 is used if the respondent reports contact by phone, mail or e-mail either almost every day, two to three times a week, once a week, once a month, or twice a month. A code of 0 is used if the respondent did not report any monthly contact by phone, mail, or e-mail. If the respondent and spouse don't have any children a special missing value (.k) is assigned. If the respondent and spouse do have children but all children co-reside with the respondent and spouse then special missing value (.h) is used. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWkc_{nt} indicates whether the respondent has any frequent (i.e., at least weekly) contact with any of their children either in person or by phone, mail or e-mail. **rWkc_{nt}** is derived by using **rWkc_{ntf}** and **rWkcntp_m**. A code of 1 is used if the respondent reports any weekly contact either in person or by phone, mail or e-mail. A code of 0 is used if the respondent did not report any weekly contact. **rWkc_{nt1m}** indicates whether the respondent has any frequent (i.e., at least monthly) contact with any of their children either in person or by phone, mail or e-mail. **rWkc_{nt1m}** is derived by using **rWkc_{ntf1m}**

and **rWkcntp1m**. A code of 1 is used if the respondent reports any monthly contact either in person or by phone, mail or e-mail. A code of 0 is used if the respondent did not report any monthly contact. If the respondent and spouse don't have any children a special missing value (.k) is assigned. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

sWkcntf, **sWkcntf1m**, **sWkcntp**, **sWkcntp1m**, **sWkcnt** and **sWkcnt1m** indicate whether the current wave's spouse has any frequent contact with any of their children in person, by phone, mail or e-mail at the current wave. They are taken from the spouse's values to **rWkcntf**, **rWkcntf1m**, **rWkcntp**, **rWkcntp1m**, **rWkcnt** and **rWkcnt1m**. In addition to the special missing codes utilized by the respondent variables, the spouse variables employ two additional special missing codes, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1, only the family respondent is asked children contact and proximity questions. Starting in Wave 2, if the family respondent reported having living children, all respondents are asked children contact and proximity questions.

Cross-Study Differences with the HRS

The Gateway Harmonized HRS includes **hWkcnt**, **rWkcntf**, **rWkcntp**, and **rWkcnt** for most waves, which are comparable to **h1kcnt**, **rWkcntf**, **rWkcntp**, and **rWkcnt** in the Gateway Harmonized KLoSA. Monthly versions will be available in the next release of the Gateway Harmonized HRS. Please note that the respondent-level children contact variables in the HRS are asked in the leave-behind questionnaire, and so have a special missing value in the Gateway Harmonized HRS, which is not necessary for KLoSA. **rWkcntp** in the Gateway Harmonized KLoSA includes a special missing value if all of the respondent's children co-reside with the respondent, which is not necessary for HRS.

Original KLoSA Variables Used

Wave 1:

w01ba003	The number of alive children (unit: person)
w01ba019_01	(Not live together) The frequency which 1st child meets (in person)
w01ba019_02	(Not live together) The frequency which 2nd child meets (in person)
w01ba019_03	(Not live together) The frequency which 3rd child meets (in person)
w01ba019_04	(Not live together) The frequency which 4th child meets (in person)
w01ba019_05	(Not live together) The frequency which 5th child meets (in person)
w01ba019_06	(Not live together) The frequency which 6th child meets (in person)
w01ba019_07	(Not live together) The frequency which 7th child meets (in person)
w01ba019_08	(Not live together) The frequency which 8th child meets (in person)
w01ba019_09	(Not live together) The frequency which 9th child meets (in person)
w01ba019_10	(Not live together) The frequency which 10th child meets (in person)
w01ba020_01	(Not live together) The frequency which 1st child contacts (phone, mail, e-mail)
w01ba020_02	(Not live together) The frequency which 2nd child contacts (phone, mail, e-mail)
w01ba020_03	(Not live together) The frequency which 3rd child contacts (phone, mail, e-mail)
w01ba020_04	(Not live together) The frequency which 4th child contacts (phone, mail, e-mail)
w01ba020_05	(Not live together) The frequency which 5th child contacts (phone, mail, e-mail)
w01ba020_06	(Not live together) The frequency which 6th child contacts (phone, mail, e-mail)
w01ba020_07	(Not live together) The frequency which 7th child contacts (phone, mail, e-mail)
w01ba020_08	(Not live together) The frequency which 8th child contacts (phone, mail, e-mail)
w01ba020_09	(Not live together) The frequency which 9th child contacts (phone, mail, e-mail)
w01ba020_10	(Not live together) The frequency which 10th child contacts (phone, mail, e-mail)

Wave 2:

w02ba003	The number of alive children (unit: person)
w02ba019_01	(Not live together) The frequency which 1st child meets (in person)
w02ba019_02	(Not live together) The frequency which 2nd child meets (in person)
w02ba019_03	(Not live together) The frequency which 3rd child meets (in person)
w02ba019_04	(Not live together) The frequency which 4th child meets (in person)
w02ba019_05	(Not live together) The frequency which 5th child meets (in person)
w02ba019_06	(Not live together) The frequency which 6th child meets (in person)

w04bao20_o6	(Not live together) The frequency which 6th child contacts (phone, mail, e-mail)
w04bao20_o7	(Not live together) The frequency which 7th child contacts (phone, mail, e-mail)
w04bao20_o8	(Not live together) The frequency which 8th child contacts (phone, mail, e-mail)
w04bao20_o9	(Not live together) The frequency which 9th child contacts (phone, mail, e-mail)
w04bao20_o10	(Not live together) The frequency which 10th child contacts (phone, mail, e-mail)

Wave 5:

w05bao03	The number of alive children (unit: person)
w05bao19_o1	(Not live together) The frequency which 1st child meets (in person)
w05bao19_o2	(Not live together) The frequency which 2nd child meets (in person)
w05bao19_o3	(Not live together) The frequency which 3rd child meets (in person)
w05bao19_o4	(Not live together) The frequency which 4th child meets (in person)
w05bao19_o5	(Not live together) The frequency which 5th child meets (in person)
w05bao19_o6	(Not live together) The frequency which 6th child meets (in person)
w05bao19_o7	(Not live together) The frequency which 7th child meets (in person)
w05bao19_o8	(Not live together) The frequency which 8th child meets (in person)
w05bao19_o9	(Not live together) The frequency which 9th child meets (in person)
w05bao20_o1	(Not live together) The frequency which 1st child contacts (phone, mail, e-mail)
w05bao20_o2	(Not live together) The frequency which 2nd child contacts (phone, mail, e-mail)
w05bao20_o3	(Not live together) The frequency which 3rd child contacts (phone, mail, e-mail)
w05bao20_o4	(Not live together) The frequency which 4th child contacts (phone, mail, e-mail)
w05bao20_o5	(Not live together) The frequency which 5th child contacts (phone, mail, e-mail)
w05bao20_o6	(Not live together) The frequency which 6th child contacts (phone, mail, e-mail)
w05bao20_o7	(Not live together) The frequency which 7th child contacts (phone, mail, e-mail)
w05bao20_o8	(Not live together) The frequency which 8th child contacts (phone, mail, e-mail)
w05bao20_o9	(Not live together) The frequency which 9th child contacts (phone, mail, e-mail)

Wave 5 Add:

w05bao03	The number of alive children (unit: person)
w05bao19_o1	The frequency which 1st child meets (in person)
w05bao19_o2	The frequency which 2nd child meets (in person)
w05bao19_o3	The frequency which 3rd child meets (in person)
w05bao19_o4	The frequency which 4th child meets (in person)
w05bao19_o5	The frequency which 5th child meets (in person)
w05bao19_o6	The frequency which 6th child meets (in person)
w05bao19_o7	The frequency which 7th child meets (in person)
w05bao19_o8	The frequency which 8th child meets (in person)
w05bao19_o9	The frequency which 9th child meets (in person)
w05bao20_o1	The frequency which 1st child contacts (phone, mail, e-mail)
w05bao20_o2	The frequency which 2nd child contacts (phone, mail, e-mail)
w05bao20_o3	The frequency which 3rd child contacts (phone, mail, e-mail)
w05bao20_o4	The frequency which 4th child contacts (phone, mail, e-mail)
w05bao20_o5	The frequency which 5th child contacts (phone, mail, e-mail)
w05bao20_o6	The frequency which 6th child contacts (phone, mail, e-mail)
w05bao20_o7	The frequency which 7th child contacts (phone, mail, e-mail)
w05bao20_o8	The frequency which 8th child contacts (phone, mail, e-mail)
w05bao20_o9	The frequency which 9th child contacts (phone, mail, e-mail)

Wave 6:

w06bao03	The number of alive children (unit: person)
w06bao19_o1	(Not live together) The frequency which 1st child meets (in person)
w06bao19_o2	(Not live together) The frequency which 2nd child meets (in person)
w06bao19_o3	(Not live together) The frequency which 3rd child meets (in person)
w06bao19_o4	(Not live together) The frequency which 4th child meets (in person)
w06bao19_o5	(Not live together) The frequency which 5th child meets (in person)
w06bao19_o6	(Not live together) The frequency which 6th child meets (in person)

wogbao03	The number of alive children (unit: person)
wogbao19_01	(Not live together) The frequency which 1st child meets (in person)
wogbao19_02	(Not live together) The frequency which 2nd child meets (in person)
wogbao19_03	(Not live together) The frequency which 3rd child meets (in person)
wogbao19_04	(Not live together) The frequency which 4th child meets (in person)
wogbao19_05	(Not live together) The frequency which 5th child meets (in person)
wogbao19_06	(Not live together) The frequency which 6th child meets (in person)
wogbao19_07	(Not live together) The frequency which 7th child meets (in person)
wogbao19_08	(Not live together) The frequency which 8th child meets (in person)
wogbao19_09	(Not live together) The frequency which 9th child meets (in person)
wogbao20_01	(Not live together) The frequency which 1st child contacts (phone, mail, e-mail)
wogbao20_02	(Not live together) The frequency which 2nd child contacts (phone, mail, e-mail)
wogbao20_03	(Not live together) The frequency which 3rd child contacts (phone, mail, e-mail)
wogbao20_04	(Not live together) The frequency which 4th child contacts (phone, mail, e-mail)
wogbao20_05	(Not live together) The frequency which 5th child contacts (phone, mail, e-mail)
wogbao20_06	(Not live together) The frequency which 6th child contacts (phone, mail, e-mail)
wogbao20_07	(Not live together) The frequency which 7th child contacts (phone, mail, e-mail)
wogbao20_08	(Not live together) The frequency which 8th child contacts (phone, mail, e-mail)
wogbao20_09	(Not live together) The frequency which 9th child contacts (phone, mail, e-mail)

Frequent or Weekly Contact with Relatives and Friends

Variable	Waves	Label	Type
rWrfcntx_k	1-9	rWrfcntx_k:WW r freq contacts w/ relative & friends	Categ
sWrfcntx_k	1-9	sWrfcntx_k:WW s freq contacts w/ relative & friends	Categ
rWrfcnt	1-9	rWrfcnt:WW r any weekly contacts w/ relative & friends	Categ
sWrfcnt	1-9	sWrfcnt:WW s any weekly contacts w/ relative & friends	Categ
rWrfcnt1m	1-9	rWrfcnt1m:WW r any monthly contacts w/ relative & friends	Categ
sWrfcnt1m	1-9	sWrfcnt1m:WW s any monthly contacts w/ relative & friends	Categ

How Constructed

rWrfcntx_k indicates the frequency of contact with relatives and friends and is coded as follows: 1.almost every day, 2.two to three times a week, 3.once a week, 4.twice a month, 5.once a month, 6.five or six times a year, 7.three or four times a year, 8.once or twice a year, 9.almost never in a year, and 10.no close friend or relative. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWrfcnt indicates whether the respondent has weekly contact with relatives and friends. A code of 1 indicates that the respondent contacts relatives and/or friends at least once a week, i.e., **rWrfcntx_k** is either almost every day, two or three times a week, or once a week. Otherwise, **rWrfcnt** is coded as 0. **rWrfcnt1m** indicates whether the respondent has monthly contact with relatives and friends. A code of 1 indicates that the respondent contacts relatives and/or friends at least once a month, i.e., **rWrfcntx_k** is either almost every day, two or three times a week, once a week, once a month, or twice a month. Otherwise, **rWrfcnt1m** is coded as 0. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

sWrfcntx_k, **sWrfcnt**, and **sWrfcnt1m** give the information for the respondent's spouse or partner. They are taken directly from the spouse's values to **rWrfcntx_k**, **rWrfcnt** and **rWrfcnt1m**. Aside from the special missing values utilized by **rWrfcntx_k**, **rWrfcnt**, and **rWrfcnt1m**, **sWrfcntx_k**, **sWrfcnt**, and **sWrfcnt1m** employ two additional special missing codes, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

The Gateway Harmonized HRS includes **rWrfcnt**, which is comparable to the variable of the same name in the Gateway Harmonized KLoSA. The Gateway Harmonized HRS also includes **rWrfcntf** and **rWrfcntpm**, indicating whether the respondent had weekly contact with relatives or friends in person or by phone, mail, e-mail, or social media.

rWrelgwk	1-9	rWrelgwk:ww r any weekly religious groups	Categ
sWrelgwk	1-9	sWrelgwk:ww s any weekly religious groups	Categ

How Constructed

rWsocwk indicates whether the respondent participates in weekly social activities. **rWsocmn** indicates whether the respondent participates in monthly social activities. **rWsocyr** indicates whether the respondent participates in yearly social activities. The social activities include church or other religious groups, social clubs, sports clubs, arts or music groups or classes for seniors, alumni society, society for people from the same hometown, family councils, volunteer groups, political party, NGOs, interest groups, or other groups. The respondent was asked the frequency of participating in these social activities: almost every day, two to three times a week, once a week, twice a month, once a month, five or six times a year, three or four times a year, once or twice a year, almost never in a year, and almost never.

rWsocwk is coded as 1 if the respondent reports having any social activities at least once a week, i.e., either almost every day, two or three times a week, or once a week. Otherwise, **rWsocwk** is coded as 0. **rWsocmn** is coded as 1 if the respondent reports having any social activities at least once a month, i.e., either almost every day, two or three times a week, once a week, once a month or twice a month. Otherwise, **rWsocmn** is coded as 0. **rWsocyr** is coded as 1 if the respondent reports having any social activities at least once a year, i.e., either almost every day, two or three times a week, once a week, once a month, twice a month, once or twice a year, three or four times a year, or five or six times a year. Otherwise, **rWsocyr** is coded as 0. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWsocrelg_k indicates the frequency of participating in church or other religious activities, which could be: 1.almost every day, 2.two to three times a week, 3.once a week, 4.twice a month, 5.once a month, 6.five or six times a year, 7.three or four times a year, 8.once or twice a year, 9.almost never in a year, and 10.almost never. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

rWrelgwk indicates whether a respondent participates in weekly church or other religious activities. A code of 1 indicates the respondent participates at least once a week in church or other religious activities, i.e., either almost every day, two or three times a week, or once a week. Otherwise, **rWrelgwk** is coded as 0. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

sWsocwk, **sWsocmn**, **sWsocyr**, **sWsocrelg_k** and **sWrelgwk** give the information for the respondent's spouse or partner. They are taken directly from the spouse's values to **rWsocwk**, **rWsocmn**, **rWsocyr**, **rWsocrelg_k** and **rWrelgwk**. Aside from the special missing values utilized by **rWsocwk**, **rWsocmn**, **rWsocyr**, **rWsocrelg_k** and **rWrelgwk**, **sWsocwk**, **sWsocmn**, **sWsocyr**, **sWsocrelg_k** and **sWrelgwk** employ two additional special missing codes, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

The list of activities included in **rWsocwk**, **rWsocmn**, and **rWsocy** are slightly different across the Gateway Harmonized HRS and Gateway Harmonized KLoSA, but the variables are largely comparable.

rWrelgwk in the Gateway Harmonized KLoSA indicates weekly participation in religious groups, while the variable of the same name in the Gateway Harmonized HRS indicates weekly participation in religious services. The frequency of attending religious activities is different across the two studies, which is why we have provided study-specific variables indicating the frequency of participation.

Financial Transfer to Children

Variable	Waves	Label	Type
hWtcany	1-9	hWtcany:WW any transfer to children	Categ
hWtcamt	1-9	hWtcamt:WW financial transfer amount to children	Cont

How Constructed

For each child identified by the family respondent, the family respondent is asked which months the child lived with them in the last calendar year, if any. Starting in Wave 5, the family respondent was asked the number of months each child lived with them, rather than which months. Then for every child who did not live with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse gave monetary transfers such as pocket money, living expenses or medical expenses to each child while living separately. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers, or starting in Wave 5, the number of months they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, for all children who lived with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse gave any monetary transfers to each child while living together. If the respondent reports that they gave monetary transfers, they are asked to report those total values for the last calendar year in 10,000 Korean won.

In Wave 1, the family respondent is asked whether they and their spouse gave financial help to any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they gave financial help, they are asked for the relationship of the family member(s) they provided help to, which includes son/daughter-in-law and grandchildren as options. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which are reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse gave financial help to any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they gave financial help, they are then asked the same questions as in Wave 1.

hWtcany indicates whether the respondent and spouse gave any financial help to their children, children-in-law and/or grandchildren in the last year. In Wave 1 it includes any regular or occasional monetary transfers to currently non-co-residing children, and any regular or occasional monetary transfers to non-co-residing children-in-law and grandchildren. Starting in Wave 2 it includes any regular or occasional monetary transfers to any child who did not live with the respondent and spouse for at least one month in the last calendar year, any monetary transfers to any child who lived with the respondent and spouse for at least one month in the last calendar year, and any regular or occasional monetary transfers to children-in-law and grandchildren, without specifying their co-residency status. A code of 0 indicates that the respondent and spouse did not give any financial support to any of their children, children-in-law, and grandchildren, or that the respondent has no living children. A code of 1 indicates that the respondent and spouse gave at least some financial support to at least one of their children, children-in-law, or grandchildren.

hWtcamt is the total financial transfer amount, in 10,000 Korean won, the respondent and spouse gave to their children, children-in-law and/or grandchildren in the last year. In Wave 1 it includes regular monetary transfers and occasional monetary transfers to currently non-co-residing children, and to non-co-residing children-in-law and grandchildren. Starting in Wave 2 it includes regular monetary transfers and occasional monetary transfers to any child who did not live with the respondent and spouse for at least one month in the last calendar year, monetary transfers to any child who lived with the

respondent and spouse for at least one month in the last calendar year, and regular and occasional monetary transfers to children-in-law and grandchildren, without specifying their co-residency status. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they gave regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. **hWtcamt** is assigned a value of 0 if the respondent has no living children or the respondent gave no monetary transfers to their children.

When respondents don't know, refuse to answer, or their answer is missing for other reason, **hWtcany** and **hWtcamt** are assigned special missing codes (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave.

Cross-Wave Differences in KLoSA

Wave 1 did not include separate questions asking the family respondent to identify the months each child did or did not live with them in the last calendar year. Instead, the financial transfer questions were asked for any child who was not currently living with the respondent and spouse. Likewise, the Wave 1 question asked specifically about financial transfers to children-in-law and grandchildren who were not living with the respondent.

Starting in Wave 2, the family respondent was asked about financial transfers to both children who were not living with the respondent and spouse and those who were. Also starting in Wave 2, the family respondent was asked about financial transfers to children-in-law and grandchildren, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months each child lived with them, rather than which months, as well as the number of months the respondent and spouse made financial transfers to their children/children-in-law/grandchildren, rather than which months they made the transfers.

Cross-Study Differences with the HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers to children in KLoSA are measured in 10,000 Korean won, whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfers to children. Unlike HRS, KLoSA asked regular transfers and irregular transfers to non-resident children, to co-resident children, to non-resident children-in-law and grandchildren, and to children-in-law and grandchildren, depending on the wave.

Financial Transfer from Children

Variable	Waves	Label	Type
hWfcany	1-9	hWfcany:WW any transfer from children	Categ
hWfcamt	1-9	hWfcamt:WW financial transfer amount from children	Cont

How Constructed

For each child identified by the family respondent, the family respondent is asked which months the child lived with them in the last calendar year, if any. Starting in Wave 5, the family respondent was asked the number of months each child lived with them, rather than which months. Then for every child who did not live with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse received monetary transfers such as pocket money, living expenses or medical expenses from each child while living separately. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers, or starting in Wave 5, the number of months they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, for all children who lived with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse received any monetary transfers from each child while living together. If the respondent reports that they received monetary transfers, they are asked to report those total values for the last calendar year, which are in 10,000 Korean won.

In Wave 1, the family respondent is asked whether they and their spouse received financial help from any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they received financial help, they are asked for the relationship of the family member(s) they received help from, which includes son/daughter-in-law and grandchildren as options. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse received financial help from any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they received financial help, they are then asked the same questions as in Wave 1.

hWfcany indicates whether the respondent and spouse received any financial help from their children, children-in-law and/or grandchildren in the last year. In Wave 1 it includes any regular or occasional monetary transfers from currently non-co-residing children, and any regular or occasional monetary transfers from non-co-residing children-in-law and grandchildren. From Wave 2 onward, it includes any regular or occasional monetary transfers from any child who did not live with the respondent and spouse for at least one month in the last calendar year, any monetary transfers from any child who lived with the respondent and spouse for at least one month in the last calendar year, and any regular or occasional monetary transfers from children-in-law and grandchildren, without specifying their co-residency status. A code of 0 indicates that the respondent and spouse did not receive any financial support from any of their children, children-in-law, or grandchildren, or that the respondent has no living children. A code of 1 indicates that the respondent and spouse received at least some financial support from at least one of their children, children-in-law, or grandchildren.

hWfcamt is the total financial transfer amount, in 10,000 Korean won, the respondent and spouse received from their children, children-in-law, and/or grandchildren in the last year. In Wave 1 it includes regular monetary transfers and occasional monetary transfers from currently non-co-residing children, and from non-co-residing children-in-law and grandchildren. From Wave 2 onward, it includes regular monetary transfers and occasional monetary transfers from any child who did not

live with the respondent and spouse for at least one month in the last calendar year, monetary transfers from any child who lived with the respondent and spouse for at least one month in the last calendar year, and regular and occasional monetary transfers from children-in-law and grandchildren, without specifying their co-residency status. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. **hwfcamt** is assigned a value of 0 if the respondent has no living children or the respondent did not receive any monetary transfers from their children.

When respondents don't know, refuse to answer, or their answer is missing for other reasons, **hwfcany** and **hwfcamt** are assigned special missing codes (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the family respondent was not interviewed in the current wave.

Cross-Wave Differences in KLoSA

Wave 1 did not include a separate question asking the family respondent to identify the months each child did or did not live with them in the last calendar year. Instead, the financial transfer questions were asked for any child who was not currently living with the respondent and spouse. Likewise, the Wave 1 question asked specifically about financial transfers from children-in-law and grandchildren who were not living with the respondent.

Starting in Wave 2, the family respondent was asked about financial transfers from both children who were not living with the respondent and spouse and those who were. Also starting in Wave 2, the family respondent was asked about financial transfers from children-in-law and grandchildren, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months each child lived with them, rather than which months, as well as the number of months the respondent and spouse received financial transfers from their children, children-in-law, grandchildren, rather than which months they received the transfers.

Cross-Study Differences with the HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers from children in KLoSA are measured in 10,000 Korean won, whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfers from children. Unlike HRS, KLoSA asked regular transfers and irregular transfers from non-resident children, from co-resident children, from non-resident children-in-law and grandchildren, and from children-in-law and grandchildren, depending on the wave.

Continuous Variable Distributions

Original KLoSA Variables Used

Wave 1:

wo1bao03	The number of alive children (unit: person)
wo1bao13_01	The 1st child is currently co-residing with me
wo1bao13_02	The 2nd child is currently co-residing with me
wo1bao13_03	The 3rd child is currently co-residing with me
wo1bao13_04	The 4th child is currently co-residing with me
wo1bao13_05	The 5th child is currently co-residing with me
wo1bao13_06	The 6th child is currently co-residing with me
wo1bao13_07	The 7th child is currently co-residing with me
wo1bao13_08	The 8th child is currently co-residing with me
wo1bao13_09	The 9th child is currently co-residing with me
wo1bao13_10	The 10th child is currently co-residing with me
wo1bao21mo1_01	(Not live together) Receipt of regular financial support from the 1st child
wo1bao21mo1_02	(Not live together) Receipt of regular financial support from the 2nd child
wo1bao21mo1_03	(Not live together) Receipt of regular financial support from the 3rd child
wo1bao21mo1_04	(Not live together) Receipt of regular financial support from the 4th child
wo1bao21mo1_05	(Not live together) Receipt of regular financial support from the 5th child
wo1bao21mo1_06	(Not live together) Receipt of regular financial support from the 6th child
wo1bao21mo1_07	(Not live together) Receipt of regular financial support from the 7th child
wo1bao21mo1_08	(Not live together) Receipt of regular financial support from the 8th child
wo1bao21mo1_09	(Not live together) Receipt of regular financial support from the 9th child
wo1bao21mo1_10	(Not live together) Receipt of regular financial support from the 10th child
wo1bao22_01	(Not live together) The monthly average amount of regular financial support I re
wo1bao22_02	(Not live together) The monthly average amount of regular financial support I re

[illegible]

wo1bao28_m11_01	(Not live together) In 2005 November I received regular financial support from t

Financial Transfers to Parents

Variable	Waves	Label	Type
hWtpany	1-9	hWtpany:WW any transfer to parents	Categ
hWtpamt	1-9	hWtpamt:WW financial transfer amount to parents	Cont

How Constructed

In Wave 1, questions about financial transfers to parents are asked only if the respondent reports not co-residing with their parent(s). The questions are asked separately for respondents with both parents living, with only a mother living, or with only a father living. If the respondent reports at least one living parent who the respondent does not report co-residing with, then the family respondent is asked if during the last calendar year they and their spouse gave monetary transfers such as pocket money, living expenses or medical expenses to their parent(s) while living separately. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers, or starting in Wave 5, the number of months they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, if at least one of the respondent's parent(s) co-resided with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse gave any monetary transfers to their parent(s) while living together. If the respondent reports that they gave monetary transfers, they are asked to report those total values for the last calendar year in 10,000 Korean won.

In Wave 1, the family respondent is asked whether they and their spouse gave financial help to any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they gave financial help, they are asked for the relationship of the family member(s) they provided help to, which includes mother-in-law and father-in-law as options. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse gave financial help to any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they gave financial help, they are then asked the same questions as in Wave 1.

hWtpany indicates whether the respondent and spouse gave any financial transfers to their mother, father, mother-in-law, or father-in-law in the past year. A code of 0 indicates that the respondent and spouse did not give any financial support to their parents, or that the respondent reports having no living or only dispersed parents. A code of 1 indicates that the respondent and spouse did give some financial support to their parents. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

hWtpamt is the amount of financial transfers altogether, in 10,000 Korean won, that the respondent and spouse made to their parents in the past year. In Wave 1 it includes regular monetary transfers and occasional monetary transfers to currently non-co-residing parents. From Wave 2 onward, it includes regular monetary transfers and occasional monetary transfers to any parent who did not live with the respondent and spouse in the last calendar year, monetary transfers to any parent who lived with the respondent and spouse in the last calendar year, and regular or occasional monetary transfers to any parents-in-law. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. **hWtpamt** is assigned a value of 0 if the respondent has no living parents or only dispersed parents or if the respondent gave no monetary transfers to their parents. Don't know, refused, or

missing responses are assigned special missing values (.d), (.r), (.m), respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

In Wave 1 the financial transfer questions were asked for any parent who was not currently living with the respondent and spouse. Likewise, the Wave 1 question asked specifically about financial transfers to parents-in-law who were not living with the respondent.

Starting in Wave 2, the family respondent was asked about financial transfers to both parents who were not living with the respondent and spouse and those who were. Also starting in Wave 2, the family respondent was asked about financial transfers to parents-in-law, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months in which they transferred money to their parents, as well as the number of months the respondent and spouse made financial transfers to their parents-in-law, rather than whether or not they made a financial transfer to their parents each named month.

Cross-Study Differences with the HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers to parents in KLoSA are measured in 10,000 Korean won whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfers to parents. Unlike HRS, KLoSA asked regular transfers and irregular transfers to both non-resident and co-resident parents and non-resident and co-resident parents-in-law.

Financial Transfers from Parents

Variable	Waves	Label	Type
hWfpany	1-9	hWfpany:WW any transfer from parents	Categ
hWfpamt	1-9	hWfpamt:WW financial transfer amount from parents	Cont

How Constructed

In Wave 1, questions about financial transfers from parents are asked only if the respondent reports not co-residing with their parent(s). The questions are asked separately for respondents with both parents living, with only a mother living, or with only a father living. If the respondent reports at least one living parent who the respondent does not report co-residing with, then the family respondent is asked if during the last calendar year they and their spouse received monetary transfers such as pocket money, living expenses or medical expenses from their parent(s) while living separately. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers, or starting in Wave 5, the number of months they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, if at least one of the respondent's parent(s) co-resided with the respondent and spouse for at least one month in the last calendar year the family respondent is asked if during the last calendar year they and their spouse received any monetary transfers from their parent(s) while living together. If the respondent reports that they received monetary transfers, they are asked to report those total values for the last calendar year in 10,000 Korean won.

In Wave 1, the family respondent is asked whether they and their spouse received financial help from any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they received financial help, they are asked for the relationship of the family member(s) they received help from, which includes mother-in-law and father-in-law as options. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse received financial help from any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they received financial help, they are then asked the same questions as in Wave 1.

hWfpany indicates whether the respondent and spouse received any financial transfers from their mother, father, mother-in-law, or father-in-law in the past year. A code of 0 indicates that the respondent and spouse did not receive any financial support from their parents, or that the respondent reports having no living or only dispersed parents. A code of 1 indicates that the respondent and spouse did receive some financial support from their parents. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

hWfpamt is the amount of financial transfers altogether, in 10,000 Korean won, that the respondent and spouse received from their parents in the past year. In Wave 1 it includes regular monetary transfers and occasional monetary transfers from non-co-residing parents. From Wave 2 onward, it includes regular monetary transfers and occasional monetary transfers from any parent who did not live with the respondent and spouse in the last calendar year, monetary transfers from any parent who lived with the respondent and spouse in the last calendar year, and regular or occasional monetary transfers from any parents-in-law. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. **hWfpamt** is assigned a value of 0 if the respondent has no living parents or only dispersed parents or if the respondent received no monetary transfers from their parents. Don't

know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

In Wave 1 the financial transfer questions were asked for any parent who was not currently living with the respondent and spouse. Likewise, the Wave 1 question asked specifically about financial transfers to parents-in-law who were not living with the respondent.

Starting in Wave 2, the family respondent was asked about financial transfers from both parents who were not living with the respondent and spouse and those who were. Also starting in Wave 2, the family respondent was asked about financial transfers to parents-in-law, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months in which parents transferred money to them, as well as the number of months the respondent and spouse received financial transfers from their parents-in-law, rather than whether or not they received a financial transfer from the parents during each named month.

Cross-Study Differences with the HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers from parents in KLoSA are measured in 10,000 Korean won whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfers from parents. Unlike HRS, KLoSA asked regular transfer and irregular transfer from both non-resident and co-resident parents and non-resident and co-resident parents-in-law.

Financial Transfers to Other Relatives

Variable	Waves	Label	Type
hWtoany	1-9	hWtoany:WW any transfer to other relatives	Categ
hWtoamt	1-9	hWtoamt:WW financial transfer amount to other relatives	Cont

How Constructed

In Wave 1, the family respondent is asked whether they and their spouse gave financial help to any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they gave financial help, they are asked for the relationship of the family member(s) they provided help to, which includes brothers, sisters, brothers-in-law, sisters-in-law, and other relatives as options. Respondents can report that they gave regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they gave regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they gave regular monetary transfers. If the respondent reports that they gave occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse gave financial help to any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they gave financial help, they are then asked the same questions as in Wave 1.

hWtoany indicates whether the financial respondent reports that the respondent and spouse gave any financial transfers to other relatives in the past year. These relatives include brothers, sisters, brothers-in-law, sisters-in-law, or other relatives. A code of 0 indicates that the respondent and spouse did not give any financial support to their other relatives. A code of 1 indicates that the respondent and spouse did give some financial support to their other relatives. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

hWtoamt is the amount of financial transfers altogether, in 10,000 Korean won, that the respondent and spouse made to other relatives in the past year. It includes regular monetary transfers and occasional monetary transfers to other relatives. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. **hWtoamt** is assigned a value of 0 if the respondent gave no monetary transfers to their relatives. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

In Wave 1, the financial transfer questions were asked only about relatives who were not living with the respondent. Starting in Wave 2, the financial transfer questions were asked about relatives, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months in which they transferred money to other relatives, rather than whether or not they made a financial transfer to their other relatives during each named month.

Cross-Study Differences with the HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers to other relatives in KLoSA are measured in 10,000 Korean won, whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfer to other relatives. Unlike HRS, KLoSA asked regular transfers and irregular transfers to other relatives.

Continuous Variable Distributions

Financial Transfers from Other Relatives

Variable	Waves	Label	Type
hWfoany	1-9	hWfoany:WW any transfer from other relatives	Categ
hWfoamt	1-9	hWfoamt:WW financial transfer amount from other relatives	Cont

How Constructed

In Wave 1, the family respondent is asked whether they and their spouse received financial help from any family members who are not co-residing with them, not including any shared housing or shared food, during the last calendar year. If they received financial help, they are asked for the relationship of the family member(s) they received help from, which includes brothers, sisters, brothers-in-law, sisters-in-law, and other relatives as options. Respondents can report that they received regular monetary transfers and/or occasional monetary transfers. If the respondent reports that they received regular monetary transfers, they are asked to report the average monthly amount (reported in 10,000 Korean won) and which months in the last calendar year they received regular monetary transfers. If the respondent reports that they received occasional monetary transfers, they are asked to report those total values for the last calendar year, which is reported in 10,000 Korean won.

Starting in Wave 2, the family respondent is asked whether they and their spouse received financial help from any family members, not counting shared housing or shared food, during the last calendar year, without specifying whether they reside outside or within the same household as the respondent. If they received financial help, they are then asked the same questions as in Wave 1.

hWfoany indicates whether the financial respondent reports that the respondent and spouse received any financial transfers from other relatives in the past year. These relatives include brothers, sisters, brothers-in-law, sisters-in-law, or other relatives. A code of 0 indicates that the respondent and spouse did not receive any financial support from other relatives. A code of 1 indicates that the respondent and spouse did receive some financial support from other relatives. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

hWfoamt is the amount of financial transfers altogether, in 10,000 Korean won, that the respondent and spouse received from other relatives in the past year. It includes regular monetary transfers and occasional monetary transfers from other relatives. To determine the yearly amount of regular monetary transfers the average monthly amount is multiplied by the number of months they received regular monetary transfers in the last calendar year. This is added to the yearly amount of monetary transfers reported by the family respondent. **hWfoamt** is assigned a value of 0 if the respondent received no monetary transfers from their relatives. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Responses are set to blank missing (.) if the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

In Wave 1, the financial transfer questions were asked only about relatives who were not living with the respondent. Starting in Wave 2, the financial transfer questions were asked about relatives, without specifying their co-residency status with the respondent.

Starting in Wave 5, the family respondent was asked the number of months in which other relatives transferred money to them, rather than whether or not they received a financial transfer from their other relatives during each named month.

Cross-Study Differences with the HRS

These variables are not available in the RAND HRS but are available in the RAND Family data.

Financial transfers from other relatives in KLoSA are measured in 10,000 Korean won whereas the equivalent measure in the RAND Family data is in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

HRS only asked one total amount of financial transfer from other relatives. Unlike HRS, KLoSA asked regular transfers and irregular transfers from other relatives.

Continuous Variable Distributions

Net Value of Financial Transfers

Variable	Waves	Label	Type
hWfrec	1-9	hWfrec:WW total amount of financial transfers received	Cont
hWtgiv	1-9	hWtgiv:WW total amount of financial transfers given	Cont
hWftot	1-9	hWftot:WW total amount of net financial transfers	Cont

How Constructed

hWfrec indicates the total amount of financial transfers that the respondent and spouse received in the past year. It is a summary variable which includes the following components:

1. amount of transfers from children, children-in-law or grandchildren (**hWfcamt**)
2. amount of transfers from parents or parents-in-law (**hWfpamt**)
3. amount of transfers from other relatives, including siblings, siblings-in-law, or other relatives (**hWfoamt**)

hWfrec = **hWfcamt** + **hWfpamt** + **hWfoamt**. A value for **hWfrec** is only provided if none of its components have missing values.

hWtgiv indicates the total amount of financial transfers that the respondent and spouse gave in the past year. It is a summary variable which includes the following components:

1. amount of transfers to children, children-in-law, or grandchildren (**hWtcamt**)
2. amount of transfers to parents or parents-in-law (**hWtpamt**)
3. amount of transfers to other relatives, including siblings, siblings-in-law, or other relatives (**hWtoamt**)

hWtgiv = **hWtcamt** + **hWtpamt** + **hWtoamt**. A value for **hWtgiv** is only provided if none of its components have missing values.

hWftot indicates the net value of financial transfers in the past year.

hWftot = **hWfrec** - **hWtgiv**. A value for **hWftot** is only provided if none of its components have missing values.

Missing values for these variables are assigned (.m), (.d) and (.r) respectively. **hWfrec**, **hWtgiv**, and **hWtot** are set to blank missing (.) when the respondent did not participate in the current wave.

Cross-Wave Differences in KLoSA

Generally, values given in Wave 1 include transfers to/from relatives who did not co-reside with the respondent, while values given in Wave 2 and onward include transfers to/from relatives regardless of co-residency status.

Refer to the “Cross-Wave Differences in KLoSA” section of each component to identify additional differences between waves.

Cross-Study Differences with the HRS

These values in KLoSA are measured in Korean won, whereas the equivalent measure in RAND HRS is measured in U.S. dollars. Therefore, conversion into a common currency is necessary before comparison of these data.

Refer to “Cross-Study Differences with the HRS” section of each component to identify differences with the RAND HRS variable of the same name.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing

H. Employment History

Currently Working

Variable	Waves	Label	Type
rWwork	1-9	rWwork:WW R working for pay	Categ
sWwork	1-9	sWwork:WW S working for pay	Categ
rWwork2	1-9	rWwork2:WW R working second job	Categ
sWwork2	1-9	sWwork2:WW S working second job	Categ

How Constructed

KLoSA asks each respondent whether they are currently working for pay. **rWwork** indicates the respondent's response to this question. A value of 0 indicates that the respondent is not currently doing paid work and a value of 1 indicates that the respondent is currently doing paid work. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWwork** is set to plain missing (.) for respondents who did not respond to the current wave.

KLoSA asks all respondents who report working or being retired if they have a second job. **rWwork2** indicates whether the respondent is working at a second or part-time job. A value of 0 indicates that the respondent is not employed or the respondent is employed but does not work a second job. A code of 1 indicates the respondent is working a second or part-time job. Don't know, refused, or missing responses to second job are assigned special missing values (.d), (.r), (.m), respectively. **rWwork2** is set to plain missing (.) for respondents who did not respond to the current wave.

sWwork indicates whether the respondent's spouse in the current wave is working for pay. It is taken from the spouse's values to **rWwork**. **sWwork2** indicates whether the respondent's spouse in the current wave is working at a second job. It is taken from the spouse's values to **rWwork2**. Aside from the special missings utilized by **rWwork** and **rWwork2**, **sWwork** and **sWwork2** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

No differences known.

Section H. Employment History

wogd002	Main job
wogd006	The current employment status in the job market
wogd179	(Wage worker) Whether or not doing a second job
wogd250	(Self-employed) Whether or not doing a second job
wogd339	(Unpaid family worker) Whether or not doing a second job
wogd601	Whether or not doing a second job for pay

Whether Self-Employed

Variable	Waves	Label	Type
rWslfemp	1-9	rWslfemp:WW R whether self-employed	Categ
sWslfemp	1-9	sWslfemp:WW S whether self-employed	Categ

How Constructed

rWslfemp indicates whether the respondent is self-employed. For Waves 1-8, KLoSA asks all respondents who report currently being employed to identify whether they are employed by another person or company, are self-employed, work for family without pay for 18 hours or more a week, or work for family without pay for less than 18 hours a week. Starting in Wave 9, KLoSA asks all respondents who report currently being employed to identify whether they are employed by another person or company, are self-employed with employees, are self-employed without employees, work for family without pay for 18 hours or more a week, or work for family without pay for less than 18 hours a week. **rWslfemp** has a value of 0 if the respondent is not self-employed and a value of 1 if the respondent is self-employed. A special missing code (.w) is assigned if the respondent is not currently employed. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWslfemp** is set to plain missing (.) for respondents who did not respond to the current wave.

sWslfemp indicates whether the respondent's spouse in the current wave is self-employed. It is taken from the spouse's values to **rWslfemp**. Aside from the special missings utilized by **rWslfemp**, **sWslfemp** uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

For Waves 1-8, KLoSA asks all respondents who report currently being employed to identify whether they are employed by another person or company, are self-employed, work for family without pay for 18 hours or more a week, or work for family without pay for less than 18 hours a week. Starting in Wave 9, KLoSA asks all respondents who report currently being employed to identify whether they are employed by another person or company, are self-employed with employees, are self-employed without employees, work for family without pay for 18 hours or more a week, or work for family without pay for less than 18 hours a week.

Cross-Study Differences with the HRS

No differences known.

Labor Force Status

Variable	Waves	Label	Type
rWlbrf_k	1-9	rWlbrf_k:wW R labor force status	Categ
sWlbrf_k	1-9	sWlbrf_k:wW S labor force status	Categ

How Constructed

rWlbrf_k summarizes the labor force status for the respondent at each wave as 1.employed full-time, 2.employed part-time, 3.self-employed, 4.help with family 18 hours or more per week, 5.unemployed, 6.partly retired, 7.retired, 8.disabled, or 9.not in labor force.

rWlbrf_k is derived from a number of different questions, some that are asked at each wave and some that are asked once per job. A respondent can report working, being retired, being unemployed in combination with other statuses. **rWlbrf_k** assigns one labor force status to each respondent giving precedence to working and retirement statuses. In Wave 1 **rWlbrf_k** is based on a number of questions such as "are you currently employed", "which of the following best describes your primary job", "are you looking for work", and what is your current retirement status." Starting in Wave 2, respondents are asked to confirm the details of the job they held during the previous interview and then report whether this job (or some property of the job such as number of hours) has changed. If the respondent reports that the job has changed, the information for the new labor force status is used for **rWlbrf_k**. If the respondent reports that the job has not changed then **rWlbrf_k** takes information for the previous report. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to labor force status are assigned special missing values (.d), (.r), (.m), respectively. **rWlbrf_k** is set to plain missing (.) for respondents who did not respond to the current wave.

If the respondent is employed by another person or company for pay, **rWlbrf_k** is set to 1.working full-time or 2.part-time based on the working classification the respondent gives for the job. If the respondent is employed but reports being self-employed, **rWlbrf_k** is set to 3.self-employed. If the respondent is employed and reports working without pay for family more than 18 hours per week, **rWlbrf_k** is set to 4.help with family 18 hours or more per week.

If a non-working respondent is looking for work and reports being able to work if offered a job and then confirms that they have done something to find work in the last 4 weeks, **rWlbrf_k** is set to 5.unemployed.

If a non-working respondent is not looking for work and reports being retired, **rWlbrf_k** is set to 7.retired if the respondent does not later mention working for pay or looking for paid work. If the respondent does later mention working for pay or looking for paid work **rWlbrf_k** is set to 6.partly retired.

If a non-working respondent is looking for work but then reports not being able to accept work or look for work due to poor health or a disability, **rWlbrf_k** is set to 8.disabled.

rWlbrf_k is set to 9.not in labor force for respondents who are looking for work but not able to accept work or are not looking for work for any reason other than a disability, and respondents who are not looking for work and report they have never had a job.

sWlbrf_k summarizes the labor force status for the respondent's spouse or partner. It is taken from the spouse's values to **rWlbrf_k**. Aside from the special missings utilized by **rWlbrf_k**, **sWlbrf_k** uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

After Wave 1 the order of the questions used to determine current employment and the order of some of the possible answers are slightly different. These changes mean that the derivation of **r1lbrf_k** is fairly different from **rWlbrf_k** from Wave 2 forward and users should use caution in identifying employment changes from Wave 1 based on **rWlbrf_k** alone.

Cross-Study Differences with the HRS

In the RAND HRS, the derivation of **rWlbrf** uses different survey questions than are used to derive **rWlbrf_k**.

Because of differences in surveys, **rWlbrf_k** uses a slightly different categorization than **rWlbrf** in the RAND HRS. Specifically, **rWlbrf_k** includes a category of working for family without pay 18 hours or more a week which is not present in **rWlbrf** in the RAND HRS.

Original KLoSA Variables Used

Wave 1:

wo1d001	Currently work
wo1d002	Main job
wo1d005	Job-searching activity
wo1d006	Possibility to start working if given to a job
wo1d007	The reason for not being able to work
wo1d010	The current working status (if not searching for a job)
wo1d115	(Wage worker) Working hour type
wo1d501	(Job seeker/ unemployed person) Job searching activity_in the last one week
wo1d502	(Job seeker/ unemployed person) Job searching activity_in the last four weeks
wo1d504	(Job seeker/ unemployed person) Intention to start working if given to an approp
wo1d505	(Job seeker/ unemployed person) The reason for not searching for a job despite w
wo1d507	(Job seeker/ unemployed person) The reason for not being able to work if given t
wo1d609	(Retiree) Whether or not doing a second job for pay
wo1d616	(Retiree) Work for pay regardless of retirement_intention to work

Wave 2:

wo2d001	Currently work
wo2d002	Main job
wo2d005	Job-searching activity
wo2d006	The current employment status in the job market
wo2d007	Check a respondent's job in last interview
wo2d008	Check a respondent's unemployment status in last interview
wo2d022	(Answer modification) (Wage worker) A job that a R worked in the previous interv
wo2d030_01	(Wage worker) Since previous interview, any change for R's working hour type _1s
wo2d030_02	(Wage worker) Since previous interview, any change for R's working hour type _2n
wo2d031_01	(Wage worker) Since previous interview, changed working hour type _1st
wo2d031_02	(Wage worker) Since previous interview, changed working hour type _2nd
wo2d043	Since previous interview, whether experienced a new job or not
wo2d044_01	Since previous interview, 1st new job_employment status
wo2d044_02	Since previous interview, 2nd new job_employment status
wo2d044_03	Since previous interview, 3rd new job_employment status
wo2d044_04	Since previous interview, 4th new job_employment status
wo2d060_01	(Wage worker) Since previous interview, 1st new job_working hour type
wo2d060_02	(Wage worker) Since previous interview, 2nd new job_working hour type
wo2d060_03	(Wage worker) Since previous interview, 3rd new job_working hour type
wo2d060_04	(Wage worker) Since previous interview, 4th new job_working hour type
wo2d081_01	Since previous interview, 1st new job_currently work or not
wo2d081_02	Since previous interview, 2nd new job_currently work or not
wo2d081_03	Since previous interview, 3rd new job_currently work or not
wo2d081_04	Since previous interview, 4th new job_currently work or not
wo2d401	(Job seeker/ unemployed person) Job searching activity_in the last one week
wo2d402	(Job seeker/ unemployed person) Job searching activity_in the last four weeks
wo2d405	(Job seeker/ unemployed person) The reason for not being able to work if given t
wo2d407	(Job seeker/ unemployed person) The reason for not searching for a job despite w
wo2d601	Whether or not doing a second job for pay

wo2d6o7	Work for pay regardless of retirement_intention to work
Wave 3:	
wo3doo1	Currently work
wo3doo2	Main job
wo3doo5	Job-searching activity
wo3doo6	The current employment status in the job market
wo3doo7	Check a respondent's job in last interview
wo3doo8	Check a respondent's unemployment status in last interview
wo3d022	(Answer modification) (Wage worker) A job that a R worked in the previous interv
wo3d03o_01	(Wage worker) Since previous interview, any change for R's working hour type _1s
wo3d031_01	(Wage worker) Since previous interview, changed working hour type _1st
wo3d043	Since previous interview, whether experienced a new job or not
wo3d044_01	Since previous interview, 1st new job_employment status
wo3d044_02	Since previous interview, 2nd new job_employment status
wo3d06o_01	(Wage worker) Since previous interview, 1st new job_working hour type
wo3d06o_02	(Wage worker) Since previous interview, 2nd new job_working hour type
wo3d081_01	Since previous interview, 1st new job_currently work or not
wo3d081_02	Since previous interview, 2nd new job_currently work or not
wo3d4o1	(Job seeker/ unemployed person) Job searching activity_in the last one week
wo3d4o2	(Job seeker/ unemployed person) Job searching activity_in the last four weeks
wo3d4o5	(Job seeker/ unemployed person) The reason for not being able to work if given t
wo3d4o7	(Job seeker/ unemployed person) The reason for not searching for a job despite w
wo3d6o1	Whether or not doing a second job for pay
wo3d6o7	Work for pay regardless of retirement_intention to work
Wave 4:	
wo4doo1	Currently work
wo4doo2	Main job
wo4doo5	Job-searching activity
wo4doo6	The current employment status in the job market
wo4doo7	Check a respondent's job in last interview
wo4doo8	Check a respondent's unemployment status in last interview
wo4d022	(Answer modification) (Wage worker) A job that a R worked in the previous interv
wo4d03o_01	(Wage worker) Since previous interview, any change for R's working hour type _1s
wo4d03o_02	(Wage worker) Since previous interview, any change for R's working hour type _2n
wo4d031_01	(Wage worker) Since previous interview, changed working hour type _1st
wo4d031_02	(Wage worker) Since previous interview, changed working hour type _2nd
wo4d043	Since previous interview, whether experienced a new job or not
wo4d044_01	Since previous interview, 1st new job_employment status
wo4d044_02	Since previous interview, 2nd new job_employment status
wo4d06o_01	(Wage worker) Since previous interview, 1st new job_working hour type
wo4d06o_02	(Wage worker) Since previous interview, 2nd new job_working hour type
wo4d081_01	Since previous interview, 1st new job_currently work or not
wo4d081_02	Since previous interview, 2nd new job_currently work or not
wo4d4o1	(Job seeker/ unemployed person) Job searching activity_in the last one week
wo4d4o2	(Job seeker/ unemployed person) Job searching activity_in the last four weeks
wo4d4o5	(Job seeker/ unemployed person) The reason for not being able to work if given t
wo4d4o7	(Job seeker/ unemployed person) The reason for not searching for a job despite w
wo4d6o1	Whether or not doing a second job for pay
wo4d6o7	Work for pay regardless of retirement_intention to work
Wave 5:	
wo5doo1	Currently work
wo5doo2	Main job
wo5doo5	Job-searching activity

w05d006	The current employment status in the job market
w05d007	Check a respondent's job in last interview
w05d008	Check a respondent's unemployment status in last interview
w05d030_01	(Wage worker) Since previous interview, any change for R's working hour type _1s

Hours of Work Per Week at Current Job

Variable	Waves	Label	Type
rWjhours	1-9	rWjhours:WW R hours worked/week main job	Cont
sWjhours	1-9	sWjhours:WW S hours worked/week main job	Cont
rWjhour2	1-9	rWjhour2:WW R hours worked/week 2nd job	Cont
sWjhour2	1-9	sWjhour2:WW S Hours worked/week 2nd job	Cont

How Constructed

rWjhours is the usual number of hours per week the respondent works at their main jobs, excluding lunch time. KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week how many hours a week they work on average. If the respondent is not currently employed a special missing code (.w) is assigned. Reports of working more than 160 hours a week are considered invalid and assigned a special missing value (.i). Don't know, refused, or missing responses to hours works per week are assigned special missing values (.d), (.r), (.m), respectively. **rWjhours** is set to plain missing (.) for respondents who did not respond to the current wave.

rWjhour2 is the usual number of hours per week the respondent works at a second job. In Wave 1 KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who are retired how many hours a week they work on their second/other jobs. Starting in Wave 2 KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, respondents who work for their family without pay for 18 hours or more a week, and respondents who are retired or who have never had a job how many hours a week they work on their second/other jobs. If the respondent does not have a second job a special missing code (.w) is assigned. Don't know, refused, or missing responses to hours works per week at second job are assigned special missing values (.d), (.r), (.m), respectively. **rWjhour2** is set to plain missing (.) for respondents who did not respond to the current wave.

sWjhours indicates the number of hours the respondent's spouse in the current wave spends on their main job. It is taken from the spouse's values to **rWjhours**. **sWjhour2** indicates the number of hours the respondent's spouse in the current wave spends on their second job. It is taken from the spouse's values to **rWjhour2**. Aside from the special missings utilized by **rWjhours** and **rWjhour2**, **sWjhours** and **sWjhour2** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1 KLoSA asks respondents who are employed by another person or company for pay, respondents who are self-employed, respondents who work for their family without pay for 18 hours or more a week, and respondents who are retired how many hours a week they work on their second/other jobs. Starting in Wave 2 KLoSA asks respondents who are employed by another person or company for pay, respondents who are self-employed, respondents who work for their family without pay for 18 hours or more a week, respondents who work for their family without pay for less than 18 hours a week, and respondents who are retired or who have never had a job how many hours a week they work on their second/other jobs.

Cross-Study Differences with the HRS

Unlike HRS, KLoSA allows respondents who initially report they are not working to report a second job.

Wage Rate

Variable	Waves	Label	Type
rWtwgihr	1-9	rWtwgihr:WW R wage rate-hrly, after tax	Cont
sWtwgihr	1-9	sWtwgihr:WW S wage rate-hrly, after tax	Cont
rWtwgiwk	1-9	rWtwgiwk:WW R wage rate-wkly, after tax	Cont
sWtwgiwk	1-9	sWtwgiwk:WW S wage rate-wkly, after tax	Cont

How Constructed

rWtwgihr is the respondent's hourly wage rate after tax and **rWtwgiwk** is the weekly wage rate after tax.

If the respondent reports working for another person or company for pay, they are asked how much the job pays after taxes and other deductions per month. If the respondent reports being self-employed, they are asked how much profit per month is earned. Usual hours per week for both job types are also asked.

rWtwgihr is calculated using the monthly pay rate divided by the product of the usual hours worked per week and 4.333. **rWtwgihr** is expressed in 10,000 Korean won. If the respondent does not work, special missing (.w) is assigned. If the respondent reports working for family without pay for 18 or more hours a week, special missing (.f) is assigned. Don't know, refused, or missing responses to wage rate or hours works per week are assigned special missing values (.d), (.r), (.m), respectively. **rWtwgihr** is set to plain missing (.) for respondents who did not respond to the current wave.

rWtwgiwk is calculated using the monthly pay rate divided by 4.333 so as to express the weekly wage rate. **rWtwgiwk** is expressed in 10,000 Korean won. If the respondent does not work, special missing (.w) is assigned. If the respondent reports working for family without pay for 18 or more hours a week, special missing (.f) is assigned. Don't know, refused, or missing responses to wage rate or hours works per week are assigned special missing values (.d), (.r), (.m), respectively. **rWtwgiwk** is set to plain missing (.) for respondents who did not respond to the current wave.

sWtwgihr indicates the respondent's spouse's in the current wave hourly wage rate after tax. It is taken from the spouse's values to **rWtwgihr**. **sWtwgiwk** indicates the respondent's spouse's in the current wave weekly wage rate after tax. It is taken from the spouse's values to **rWtwgiwk**. Aside from the special missings utilized by **rWtwgihr** and **rWtwgiwk**, **sWtwgihr** and **sWtwgiwk** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Wages in KLoSA are measured as after tax in 10,000 Korean won whereas the equivalent measure in the RAND HRS is before tax and in U.S. dollars. As a result, the RAND HRS includes **rWwgihr** and **rWwgiwk**, while the Gateway Harmonized KLoSA includes **rWtwgihr** and **rWtwgiwk**.

rWwgihr in the RAND HRS includes imputations for unemployed respondents but **rWwgihr** in the Gateway Harmonized KLoSA does not include imputations for respondents of any labor force status.

How Constructed

rWjphysa indicates the respondent's level of agreement with the statement "My job requires lots of physical effort." **rWjliffta** indicates the respondent's level of agreement with the statement "My job requires lifting heavy loads." **rWjstoopta** indicates the respondent's level of agreement with the statement "My job requires stooping, kneeling, crouching." **rWjsighta** indicates the respondent's level of agreement with the statement "My job requires good eyesight." **rWjconcntra** indicates the respondent's level of agreement with the statement "My job requires intense concentration and attention to details." **rWjdealppla** indicates the respondent's level of agreement with the statement "My job requires skills in dealing with people." **rWjcomputa** indicates the respondent's level of agreement with the statement "My job requires me to work with computers." For all these variables, a code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. The questions for **rWjconcntra**, **rWjdealppla**, and **rWjcomputa** are asked of wage workers, self-employed individuals, and family workers. If the respondent is not working or is an unpaid family worker working less than 18 hours a week, all variables are set to a (.w) missing code. Don't know, refused, or missing responses to the questions asked are assigned special missing values (.d), (.r), (.m), respectively. **rWjphysa**, **rWjliffta**, **rWjstoopta**, **rWjsighta**, **rWjconcntra**, **rWjdealppla**, and **rWjcomputa** are set to plain missing (.) for respondents who did not respond to the current wave.

sWjphysa, **rWjliffta**, **sWjstoopta**, **rWjsighta**, **rWjconcntra**, **rWjdealppla**, and **rWjcomputa** indicate the agreement to whether their job requires these activities or characteristics for the respondent's spouse. In addition to the special missing codes utilized by the respondent variables, the spouse variables employ two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWjphysa, **rWjlifta**, **rWjstooa**, and **rWjsighta** differ substantially from the **rWjphys**, **rWjlift**, **rWjstoo**, and **rWjsight** variables in the RAND HRS. **rWjconcntra**, **rWjdealppla**, and **rWjcomputa** differ substantially from the **rWjconcntrb**, **rWjdealpplb**, and **rWjcomputb** variables in the Gateway Harmonized HRS. While the HRS asks respondents how often their job involves certain activities or characteristics, KLoSA simply elicits the respondent's agreement to whether their job requires these activities or characteristics.

Current Job Promotes on Seniority

Variable	Waves	Label	Type
rWjprosen _a	1-9	rWjprosen: wW R cur job seniority promotion	Categ
sWjprosen _a	1-9	sWjprosen: wW S cur job seniority promotion	Categ

How Constructed

rWjprosen_a indicates the respondent's level of agreement with the statement "Promotion is done on the basis of seniority in my company." A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. Only respondents working as a wage worker are asked the question. If the respondent is self-employed, **rWjprosen**_a is set to a (.s) missing code. If the respondent is an unpaid family worker working 18 or more hours, **rWjprosen**_a is set to a (.f) missing code. If the respondent is not working or is an unpaid family worker working less than 18 hours, **rWjprosen**_a is set to a (.w) missing code. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWjprosen**_a is set to plain missing (.) for respondents who did not respond to the current wave.

sWjprosen_a indicates the respondent's spouse's level of agreement with the statement "Promotion is done on the basis of seniority in my company." It is taken from the spouse's values to **rWjprosen**_a. Aside from the special missings utilized by **rWjprosen**_a, **sWjprosen**_a uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWjprosen_a is not available in the RAND HRS. There is no directly comparable question in HRS.

Current Job Encourages Retirement

Variable	Waves	Label	Type
rWjoldreta	1-9	rWjoldreta:WW R cur job encouraged retirement	Categ
sWjoldreta	1-9	sWjoldreta:WW S cur job encouraged retirement	Categ

How Constructed

rWjoldreta indicates the respondent's level of agreement with the statement "My co-workers make older workers feel that they ought to retire before reaching at the retirement age." A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. Only respondents working as a wage worker are asked the question. If the respondent is self-employed, **rWjoldreta** is set to a (.s) missing code. If the respondent is an unpaid family worker working 18 or more hours, **rWjoldreta** is set to a (.f) missing code. If the respondent is not working or is an unpaid family worker working less than 18 hours, **rWjoldreta** is set to a (.w) missing code. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWjoldreta** is set to plain missing (.) for respondents who did not respond to the current wave.

sWjoldreta indicates the respondent's spouse's level of agreement with the statement "My co-workers make older workers feel that they ought to retire before reaching at the retirement age." It is taken from the spouse's values to **rWjoldreta**. Aside from the special missings utilized by **rWjoldreta**, **sWjoldreta** uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWjoldreta is comparable to the variable **rWjoldreta** in the Gateway Harmonized HRS.

Current Job Allows Less Demanding Moves

Variable	Waves	Label	Type
rWjmldema	1-9	rWjmldema:ww R cur job less demanding	Categ
sWjmldema	1-9	sWjmldema:ww S cur job less demanding	Categ

How Constructed

rWjmldema indicates the respondent's level of agreement with the statement "My employer would let older workers move to a less demanding job with less pay if they wanted to." A code of 1 is given if the respondent strongly agrees with the statement, a code of 2 if they agree, a code of 3 if they disagree, and a code of 4 if they strongly disagree. Only respondents working as a wage worker are asked the question. If the respondent is self-employed, **rWjmldema** is set to a (.s) missing code. If the respondent is an unpaid family worker working 18 or more hours, **rWjmldema** is set to a (.f) missing code. If the respondent is not working or is an unpaid family worker working less than 18 hours, **rWjmldema** is set to a (.w) missing code. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWjmldema** is set to plain missing (.) for respondents who did not respond to the current wave.

sWjmldema indicates the respondent's spouse's level of agreement with the statement "My employer would let older workers move to a less demanding job with less pay if they wanted to." It is taken from the spouse's values to **rWjmldema**. Aside from the special missings utilized by **rWjmldema**, **sWjmldema** uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWjmldema is comparable to **rWjmldema** in the Gateway Harmonized HRS.

Whether or Not Supervise Others

Variable	Waves	Label	Type
rWjsprvs	1-9	rWjsprvs:WW R whether supervises others	Categ
sWjsprvs	1-9	sWjsprvs:WW S whether supervises others	Categ

How Constructed

KLoSA asks all respondents who report being a wage worker whether they are currently in a position to supervise others. **rWjsprvs** indicates the respondent's response to this question. A value of 0 indicates that the respondent is not currently in a position to supervise others and a value of 1 indicates that the respondent is currently in a position to supervise others. If the respondent is self-employed, **rWjsprvs** is set to a (.s) missing code. If the respondent is an unpaid family worker working any number of hours, **rWjsprvs** is set to a (.f) missing code. If the respondent is not working, **rWjsprvs** is set to a (.w) missing code. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWjsprvs** is set to plain missing (.) for respondents who did not respond to the current wave.

sWjsprvs indicates whether the respondent's spouse in the current wave is in a position to supervise others. It is taken from the spouse's values to **rWjsprvs**. Aside from the special missings utilized by **rWjsprvs**, **sWjsprvs** uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWjsprvs is comparable to **rWjsprvs** in the Gateway Harmonized HRS. The Gateway Harmonized HRS also includes **rWjsprvsn** indicating the number of people the respondent supervises, which is not asked in KLoSA.

Firm and Company Size

Variable	Waves	Label	Type
rWcsize	1-9	rWcsize:WW R size of total company or organization	Cont
sWcsize	1-9	sWcsize:WW S size of total company or organization	Cont
rWfsize	1-9	rWfsize:WW R size of company or organization location	Cont
sWfsize	1-9	sWfsize:WW S size of company or organization location	Cont

How Constructed

KLoSA asks all respondents who report being a wage worker how many workers work for their company or organization at all locations and at their location. **rWcsize** is the number of employees that work for the respondent's company or organization at all locations. **rWfsize** is the number of employees that work for the respondent's company or organization at the location where they work. Starting in Wave 2, if a respondent did not change jobs or positions, then the question is not asked again so the value of **rWcsize** and **rWfsize** are carried forward. If a respondent changed locations but not companies, then they are asked the size of their new location only. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA public data repository. Respondents with missing values for this reason are assigned a special missing value (.i). If the respondent is self-employed, **rWcsize** and **rWfsize** are set to a (.s) missing code. If the respondent is an unpaid family worker working any number of hours, **rWcsize** and **rWfsize** are set to a (.f) missing code. If the respondent is not working, **rWcsize** and **rWfsize** are set to a (.w) missing code. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWcsize** and **rWfsize** are set to plain missing (.) for respondents who did not respond to the current wave.

sWcsize is the respondent's spouse's size of company or organization at all locations. It is taken directly from the spouse's value to **rWcsize**. **sWfsize** is the respondent's spouse's size of company or organization at the location where they work. It is taken directly from the spouse's value to **rWfsize**. Aside from the special missings utilized by **rWcsize** and **rWfsize**, **sWcsize** and **sWfsize** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1, all wage workers are asked both the size of the company they currently work for and the size of their specific location. Starting in Wave 2, if a respondent did not change their job or position, then the question is not asked again so the value of **rWcsize** and **rWfsize** are carried forward. If a respondent changed locations but not companies, then they are asked the size of their new location only.

Cross-Study Differences with the HRS

rWfsize is similar to the variable in the RAND HRS for wage workers. **rWcsize** is similar to the variable in the Gateway Harmonized HRS for wage workers.

Whether or Not in Union

Variable	Waves	Label	Type
rWuniona	1-9	rWuniona:WW R cur job has union	Categ
sWuniona	1-9	sWuniona:WW S cur job has union	Categ
rWunion	1-9	rWunion:WW R whether in union	Categ
sWunion	1-9	sWunion:WW S whether in union	Categ

How Constructed

KLoSA asks all respondents who report being a wage worker whether their current job has a union and whether they are in a union. **rWuniona** indicates the respondent's response to whether their job has a union. A value of 0 indicates that the respondent's job does not have a union and a value of 1 indicates that the respondent's job has a union. **rWunion** indicates the respondent's response to whether they are in a union. A value of 0 indicates that the respondent is not in a union and a value of 1 indicates that the respondent is in a union. If the respondent is self-employed, **rWuniona** and **rWunion** are set to a (.s) missing code. If the respondent is an unpaid family worker working any number of hours, **rWuniona** and **rWunion** are set to a (.f) missing code. If the respondent is not working, **rWuniona** and **rWunion** are set to a (.w) missing code. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWuniona** and **rWunion** are set to plain missing (.) for respondents who did not respond to the current wave.

sWuniona indicates whether the respondent's spouse in the current wave has a union at their current job. It is taken from the spouse's values to **rWuniona**. **sWunion** indicates whether the respondent's spouse in the current wave is in a union. It is taken from the spouse's values to **rWunion**. Aside from the special missings utilized by **rWuniona** and **rWunion**, **sWuniona** and **sWunion** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

In KLoSA, **rWunion** is asked each wave, regardless of whether or not in the same job, and not carried forward like in the RAND HRS. HRS does not survey whether the respondent's current job has a union so there is no equivalent variable to **rWuniona** in the RAND HRS.

rWjpdysa	1-9	rWjpdysa:ww R cur job paid days off	Cont
sWjpdysa	1-9	sWjpdysa:ww S cur job paid days off	Cont

How Constructed

KLoSA asks all respondents who report being a wage worker the number of days of paid leave and paid sick days at their current job. **rWjpleave** is the number of days of paid leave reported by the respondent and **rWjpsick** is the number of paid sick days reported by the respondent. **rWjpdysa** is total paid days off, the sum of **rWjpleave** and **rWjpsick**. It is only summed if there are values for both sub-components. If the respondent is self-employed, **rWjpleave**, **rWjpsick**, and **rWjpdysa** are set to a (.s) missing code. If the respondent is an unpaid family worker working any number of hours, **rWjpleave**, **rWjpsick**, and **rWjpdysa** are set to a (.f) missing code. If the respondent is not working, **rWjpleave**, **rWjpsick**, and **rWjpdysa** are set to a (.w) missing code. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWjpleave**, **rWjpsick**, and **rWjpdysa** are set to plain missing (.) for respondents who did not respond to the current wave.

sWjpleave, **sWjpsick**, and **sWjpdysa** are the days of paid leave for respondent's spouse in the current wave. The values are taken from the spouse's values to **rWjpleave**, **rWjpsick**, and **rWjpdysa**. Aside from the special missings utilized by **rWjpleave**, **rWjpsick**, and **rWjpdysa**, **sWjpleave**, **sWjpsick**, and **sWjpdysa** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWjpleave, **rWjpsick**, and **rWjpdysa** are comparable to the variables of the same name in the Gateway Harmonized HRS. **rWjpleave** in the Gateway Harmonized HRS includes paid vacation time and paid time off.

Years of Tenure at Current Job

Variable	Waves	Label	Type
rWjcten	1-9	rWjcten:WW R cur job tenure	Cont
sWjcten	1-9	sWjcten:WW S cur job tenure	Cont

How Constructed

rWjcten is the respondent's years of tenure on their current job. Current work status, reported job changes, current job start date and current interview date are used to derive the current job tenure for each interview. It is calculated in years, using current interview date minus current job start date. In Wave 1 KLoSA separately surveyed job start date for respondents who were employed by another person or company for pay, respondents who were self-employed, and respondents who worked for family without pay for 18 hours or more per week. Starting in Wave 2, KLoSA surveys all respondents who reported taking a new job since the last interview as to the start date of that new job with the same question.

If the respondent reports a job for the first time, **rWjcten** is calculated by subtracting the date they reported starting the job from the interview date. In following interviews, if the respondent reports that they have not changed jobs or employers since the previously reported job, **rWjcten** is calculated using the originally reported start date and the current interview date. Starting in Wave 2, KLoSA asks respondents to confirm the job title and name of workplace or unemployment status from the prior wave. Respondents can refute a prior job in which case **rWjcten** does not use the job start date from the previous report and since KLoSA also does not ask for a corrected job start date from respondents who refute the previous report, **rWjcten** is missing (.m) for these respondents.

In the case that the respondent recalls the start year of their current job but does not know or refuses to give the start month, **rWjcten** is calculated assuming that they started their job in the middle of the year (in June, month 6). If the respondent reports a job start date after the current interview date a special missing code of (.i) is assigned. If the respondent is not working this variable is set to a (.w) missing code. New respondents first interviewed in Wave 5 are asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the publicly available KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to job tenure are assigned special missing values (.d), (.r), (.m), respectively. **rWjcten** is set to plain missing (.) for respondents who did not respond to the current wave.

sWjcten is the respondent's spouse's years of tenure on the current job. It is taken from the spouse's values to **rWjcten**. Aside from the special missings utilized by **rWjcten**, **sWjcten** uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1, KLoSA separately surveyed job start date for respondents who were employed by another person or company for pay, respondents who were self-employed, and respondents who worked for family without pay for 18 hours or more per week. Starting in Wave 2, KLoSA surveys all respondents who reported taking a new job since the last interview as to the start date of that new job with the same question.

Also starting in Wave 2, KLoSA asks respondents to confirm the job title and name of workplace or unemployment status from the prior wave. Respondents can refute a prior job in which case **rWjcten** does not use the job start date from the previous report and since KLoSA also does not ask respondents correcting a prior report the job start date, **rWjcten** is missing (.m) for these respondents.

Cross-Study Differences with the HRS

In the RAND HRS, if the respondent reports being self-employed, the given job start date is used, rather than the job start date from the interview when the job was first reported.

Occupation Code for Current Job

Variable	Waves	Label	Type
rWjcocc_k	1-9	rWjcocc_k:WW R occupational classification	Categ
sWjcocc_k	1-9	sWjcocc_k:WW S occupational classification	Categ

How Constructed

rWjcocc_k is the respondent's occupational classification for their current job in Wave 'w'. **rWjcocc_k** is derived from a number of different questions and coded as follows: 1. Legislators/senior official/managers, 2. Technicians/(associate) professionals, 3. Clerical support workers, 4. Service workers, 5. Sales workers, 6. Skilled agricultural, forestry, and fishery workers, 7. Craft and related trades workers, 8. Plant and machine operators, and assemblers, 9. Elementary occupations, and 10. Armed forces occupation. In Wave 1, KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week what kind of work they do. Starting in Wave 2, respondents are asked whether their work changed within the workplace they reported in the previous interview, and if the respondent reports their work had changed, then they are asked what their new work was. If the respondent reports that their work has not changed, **rWjcocc_k** takes information from the previous report. If the respondent reports that their work has changed, the information for the new kind of work is used for **rWjcocc_k**. In a separate question, respondents are asked whether they found a new job since the previous interview. If the respondent reports finding a new job, then they are asked what kind of work they do in the workplace. If the respondent reports that they had a new job, the information for the kind of work in the new job is used for **rWjcocc_k**. If the respondent is not working **rWjcocc_k** is set to a (.w) missing code. New respondents first interviewed in Wave 5 were asked to confirm their job history in the 2014 job history interview, but the data is not available. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to labor force status are assigned special missing values (.d), (.r), (.m), respectively. **rWjcocc_k** is set to plain missing (.) for respondents who did not respond to the current wave.

sWjcocc_k indicates the respondent's spouse's occupational classification. It is taken from the spouse's values to **rWjcocc_k** in the current wave. Aside from the special missings utilized by **rWjcocc_k**, **sWjcocc_k** uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1, KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week what kind of work they do. Starting in Wave 2, respondents are asked whether their work changed within the workplace they reported in the previous interview, and if the respondent reports their position had changed, then they are asked what their new work was. In a separate question, respondents are asked whether they found a new job since the previous interview. If the respondent reports finding a new job, then they are asked what kind of work they do in the workplace.

Occupations are classified slightly differently in Wave 1 and in Waves 2-9. In Wave 1, they are classified as follows: 0. Legislators, senior officials and managers, 1. Professionals, 2. Technicians and associate professionals, 3. Clerical support workers, 4. Service workers, 5. Sales workers, 6. Skilled agricultural, forestry, and fishery workers, 7. Craft and related trades workers, 8. Plant and machine operators, and assemblers, and 9. Elementary occupations. 0. Legislators, senior officials and managers in KLoSA is coded as 1. Legislators/senior official/managers in the Gateway Harmonized KLoSA. 1. Professionals and 2. Technicians and associate professionals in KLoSA are combined to be 2. Technicians/(associate) professionals in the Gateway Harmonized KLoSA. In Waves 2-9, occupations are classified as follows: 1. Managers, 2. (Associate) Professionals, 3. Clerical support workers, 4. Service workers, 5. Sales workers, 6. Skilled agricultural, forestry, and fishery workers, 7. Craft and related trades workers, 8. Plant and machine operators, and assemblers, 9. Elementary occupations, and 10. Armed forces occupation. For Waves 2-9, numeric values are the same as in the Gateway Harmonized KLoSA.

Cross-Study Differences with the HRS

rWjcocc_k is based on a different set of occupational classifications than **rWjcocc** in the RAND HRS. While some comparisons are possible, complete harmonization of the two sets of codes is not possible.

Industry Code for Current Job			
Variable	Waves	Label	Type
rWjcind_k	1-9	rWjcind_k:wW R industrial classification	Categ
sWjcind_k	1-9	sWjcind_k:wW S industrial classification	Categ

How Constructed

rWjcind_k is the respondent's industrial classification for their current job in Wave 'w'. **rWjcind_k** is derived from a number of different questions and coded as follows: 1.Agriculture/forestry, 2.Fishing, 3.Mining and quarrying, 4.Manufacturing, 5.Electricity, gas, and water supply, 6.Construction, 7.Wholesale and retail trade, 8.Hotels and restaurants, 9.Transport, 10.Post and telecommunications, 11. Financial and insurance activities, 12.Real estate and renting and leasing, and 13.Other activities. In Wave 1, KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week what kind of business or industry they work in. Starting in Wave 2, respondents are asked whether they are currently working in the workplace they responded they were working at in the previous wave. If the respondent reports that they are working in the same workplace, **rWjcind_k** takes information from the previous report. In a separate question, respondents are asked whether they found a new job since the previous interview. If the respondent reports finding a new job, then they are asked what their new workplace does. If the respondent reports that they had a new job, the information for the new job is used for **rWjcind_k**. If the respondent is not working, **rWjcind_k** is set to a (.w) missing code. New respondents first interviewed in Wave 5 were asked to confirm their job history in the 2014 job history interview, but the data are not available. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to labor force status are assigned special missing values (.d), (.r), (.m), respectively. **rWjcind_k** is set to plain missing (.) for respondents who did not respond to the current wave.

sWjcind_k indicates the respondent's spouse's industrial classification. It is taken from the spouse's values to **rWjcind_k** in the current wave. Aside from the special missings utilized by **rWjcind_k**, **sWjcind_k** uses two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1, KLoSA separately asks respondents who are employed by another person or company for pay, respondents who are self-employed, and respondents who work for their family without pay for 18 hours or more a week what kind of business or industry they work in. Starting in Wave 2, respondents are asked whether they are currently working in the workplace they responded they were working at in the previous wave. Also, in a separate question, respondents are asked whether they found a new job since the previous interview in Waves 2-9.

New respondents first interviewed in Wave 5 were asked to confirm their job history in the 2014 job history interview, but the data is not available.

Industries are classified slightly differently in Wave 1 and in Waves 2-9. While classifications are the same in KLoSA Waves 2-9 and the Gateway Harmonized KLoSA, in Wave 1 they are classified as follows: 1.Agriculture/forestry, 2.Fishing, 3.Mining and quarrying, 4.Manufacturing, 5.Electricity, gas, and water supply, 6.Construction, 7.Wholesale and retail trade, 8.Hotels and restaurants, 9.Transport, 10.Post and telecommunications, 11.Financial and insurance activities, 12.Real estate and renting and leasing, 13.Business activities, 14.Public administration and defence; compulsory social security, 15.Education, 16.Health and social work, 17.Recreational, cultural and sporting activities, 18.Other community, repair and personal service activities, 19.Private households with employed persons, and 20.Extra-territorial organizations and bodies. From 13.Business activities to 20.Extra-territorial organizations and bodies are combined to be 13.Other activities in the Gateway Harmonized KLoSA.

Cross-Study Differences with the HRS

rWjcind_k is a KLoSA specific variable which attempts to capture similar information as **rWjcind** in the RAND HRS.

Month and Year Last Job Ended

Variable	Waves	Label	Type
rWjlastm	1-9	rWjlastm:ww R month last worked/not working	Cont
sWjlastm	1-9	sWjlastm:ww S month last worked/not working	Cont
rWjlasty	1-9	rWjlasty:ww R year last worked/not working	Cont
sWjlasty	1-9	sWjlasty:ww S year last worked/not working	Cont

How Constructed

rWjlastm and **rWjlasty** are the month and year, respectively, when the respondent last worked. In Wave 1, most non-working respondents who have ever worked are asked about their last job. Starting in Wave 2, respondents are asked when their last job ended if the respondent reports that they are no longer working at the job reported in the previous interview. If the respondent never worked, **rWjlasty** and **rWjlastm** are set to special missing (.n). **rWjlastm** and **rWjlasty** are set to missing value (.w) if the respondent is working at Wave 'w'. In Wave 1 if the respondent was unemployed and reported looking for work and being able to work if they found a job, KLoSA did not ask the respondent about their last job (instead asking the respondent about their job search), for these respondents a special missing value (.b) is assigned in Wave 1. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA publicly available dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to last worked date are assigned special missing values (.d), (.r), (.m), respectively. **rWjlastm** and **rWjlasty** are set to plain missing (.) for respondents who did not respond to the current wave.

sWjlastm and **sWjlasty** are the month and year, respectively, when the respondent's spouse last worked. They are taken from the spouse's values to **rWjlastm** and **rWjlasty**, respectively. Aside from the special missings utilized by **rWjlastm** and **rWjlasty**, **sWjlastm** and **sWjlasty** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In Wave 1 respondents who are unemployed and reported looking for work and being able to work if they found a job are not asked about their last job (instead they are asked about their job search). Starting in Wave 2 all respondents who report quitting their previously reported job are asked when they quit their last job.

Cross-Study Differences with the HRS

Unlike in the RAND HRS, **rWjlastm** and **rWjlasty** in the Gateway Harmonized KLoSA do not use the months and years given for retirement, disability, unemployment, and temporary layoff to fill in missing job stop dates.

Continuous Variable Distributions

Original KLoSA Variables Used

Wave 1:

wo1doo1	Currently work
wo1doo5	Job-searching activity
wo1doo6	Possibility to start working if given to a job
wo1doo9	Working experience for earning an income
wo1d010	The current working status (if not searching for a job)
wo1d501	(Job seeker/ unemployed person) Job searching activity_in the last one week
wo1d502	(Job seeker/ unemployed person) Job searching activity_in the last four weeks
wo1d503	(Job seeker/ unemployed person) Possibility to start working if given to an appr
wo1d703m	(The last job) When did you stop working for that job(unit: mm)
wo1d703y	(The last job) When did you stop working for that job(unit: yyyy)

Wave 2:

wo2doo1	Currently work
wo2doo2	Main job
wo2doo5	Job-searching activity
wo2doo6	The current employment status in the job market
wo2d036	Whether or not R currently works in the same job with previous interview
wo2d043	Since previous interview, whether experienced a new job or not
wo2d084_o1	Since previous interview, re-employment after quitting 1st job
wo2d084_o2	Since previous interview, re-employment after quitting 2nd job

wo2do84_o3	Since previous interview, re-employment after quitting 3rd job
wo2do37m	The time of quitting a job that a R worked in previous interview (unit: mm)
wo2do82_o1m	Since previous interview, 1st new job_the time of quitting a job (unit: mm)
wo2do82_o2m	Since previous interview, 2nd new job_the time of quitting a job (unit: mm)
wo2do82_o3m	Since previous interview, 3rd new job_the time of quitting a job (unit: mm)
wo2do37y	The time of quitting a job that a R worked in previous interview (unit: yyyy)
wo2do82_o1y	Since previous interview, 1st new job_the time of quitting a job (unit: yyyy)
wo2do82_o2y	Since previous interview, 2nd new job_the time of quitting a job (unit: yyyy)
wo2do82_o3y	Since previous interview, 3rd new job_the time of quitting a job (unit: yyyy)
Wave 3:	
wo3do01	Currently work
wo3do02	Main job
wo3do05	Job-searching activity
wo3do06	The current employment status in the job market
wo3do36	Whether or not R currently works in the same job with previous interview
wo3do43	Since previous interview, whether experienced a new job or not
wo3do84_o1	Since previous interview, re-employment after quitting 1st job
wo3do84_o2	Since previous interview, re-employment after quitting 2nd job
wo3do37m	The time of quitting a job that a R worked in previous interview (unit: mm)
wo3do82_o1m	Since previous interview, 1st new job_the time of quitting a job (unit: mm)
wo3do82_o2m	Since previous interview, 2nd new job_the time of quitting a job (unit: mm)
wo3do37y	The time of quitting a job that a R worked in previous interview (unit: yyyy)
wo3do82_o1y	Since previous interview, 1st new job_the time of quitting a job (unit: yyyy)
wo3do82_o2y	Since previous interview, 2nd new job_the time of quitting a job (unit: yyyy)
Wave 4:	
wo4do01	Currently work
wo4do02	Main job
wo4do05	Job-searching activity
wo4do06	The current employment status in the job market
wo4do36	Whether or not R currently works in the same job with previous interview
wo4do43	Since previous interview, whether experienced a new job or not
wo4do84_o1	Since previous interview, re-employment after quitting 1st job
wo4do84_o2	Since previous interview, re-employment after quitting 2nd job
wo4do37m	The time of quitting a job that a R worked in previous interview (unit: mm)
wo4do82_o1m	Since previous interview, 1st new job_the time of quitting a job (unit: mm)
wo4do82_o2m	Since previous interview, 2nd new job_the time of quitting a job (unit: mm)
wo4do37y	The time of quitting a job that a R worked in previous interview (unit: yyyy)
wo4do82_o1y	Since previous interview, 1st new job_the time of quitting a job (unit: yyyy)
wo4do82_o2y	Since previous interview, 2nd new job_the time of quitting a job (unit: yyyy)
Wave 5:	
wo5do01	Currently work
wo5do02	Main job
wo5do05	Job-searching activity
wo5do06	The current employment status in the job market
wo5do36	Whether or not R currently works in the same job with previous interview
wo5do43	Since previous interview, whether experienced a new job or not
wo5do84_o1	Since previous interview, re-employment after quitting 1st job
wo5do84_o2	Since previous interview, re-employment after quitting 2nd job
wo5do37m	The time of quitting a job that a R worked in previous interview (unit: mm)
wo5do82_o1m	Since previous interview, 1st new job_the time of quitting a job (unit: mm)
wo5do82_o2m	Since previous interview, 2nd new job_the time of quitting a job (unit: mm)
wo5do37y	The time of quitting a job that a R worked in previous interview (unit: yyyy)
wo5do82_o1y	Since previous interview, 1st new job_the time of quitting a job (unit: yyyy)

wo5do82_o2y	Since previous interview, 2nd new job_the time of quitting a job (unit: yyyy)
Wave 5 Add:	
wo5do01	Currently work
wo5do02	Main job
wo5do05	Job-searching activity
wo5do06	The current employment status in the job market
wo5do36	Whether or not R currently works in the same job with previous job history inter
wo5do43	Since previous job history interview, whether experienced a new job or not
wo5do84_o1	Since previous job history interview, re-employment after quitting 1st job
wo5do37m	The time of quitting a job that a R worked in previous job history interview (un
wo5do82_o1m	Since previous job history interview, 1st new job_the time of quitting a job (un
wo5do37y	The time of quitting a job that a R worked in previous job history interview (un
wo5do82_o1y	Since previous job history interview, 1st new job_the time of quitting a job (un
Wave 6:	
wo6do01	Currently work
wo6do02	Main job
wo6do05	Job-searching activity
wo6do06	The current employment status in the job market
wo6do36	Whether or not R currently works in the same job with previous interview
wo6do43	Since previous interview, whether experienced a new job or not
wo6do84_o1	Since previous interview, re-employment after quitting 1st job
wo6do84_o2	Since previous interview, re-employment after quitting 2nd job
wo6do84_o3	Since previous interview, re-employment after quitting 3rd job
wo6do37m	The time of quitting a job that a R worked in previous interview (unit: mm)
wo6do82_o1m	Since previous interview, 1st new job_the time of quitting a job (unit: mm)
wo6do82_o2m	Since previous interview, 2nd new job_the time of quitting a job (unit: mm)
wo6do82_o3m	Since previous interview, 3rd new job_the time of quitting a job (unit: mm)
wo6do37y	The time of quitting a job that a R worked in previous interview (unit: yyyy)
wo6do82_o1y	Since previous interview, 1st new job_the time of quitting a job (unit: yyyy)
wo6do82_o2y	Since previous interview, 2nd new job_the time of quitting a job (unit: yyyy)
wo6do82_o3y	Since previous interview, 3rd new job_the time of quitting a job (unit: yyyy)
Wave 7:	
wo7do01	Currently work
wo7do02	Main job
wo7do05	Job-searching activity
wo7do06	The current employment status in the job market
wo7do36	Whether or not R currently works in the same job with previous interview
wo7do43	Since previous interview, whether experienced a new job or not
wo7do84_o1	Since previous interview, re-employment after quitting 1st job
wo7do37m	The time of quitting a job that a R worked in previous interview (unit: mm)
wo7do82_o1m	Since previous interview, 1st new job_the time of quitting a job (unit: mm)
wo7do37y	The time of quitting a job that a R worked in previous interview (unit: yyyy)
wo7do82_o1y	Since previous interview, 1st new job_the time of quitting a job (unit: yyyy)
Wave 8:	
wo8do01	Currently work
wo8do02	Main job
wo8do05	Job-searching activity
wo8do06	The current employment status in the job market
wo8do36	Whether or not R currently works in the same job with previous interview
wo8do43	Since previous interview, whether experienced a new job or not
wo8do84_o1	Since previous interview, re-employment after quitting 1st job
wo8do84_o2	Since previous interview, re-employment after quitting 2nd job
wo8do37m	The time of quitting a job that a R worked in previous interview (unit: mm)

Section H. Employment History

wo8do82_o1m	Since previous interview, 1st new job_the time of quitting a job (unit: mm)
wo8do82_o2m	Since previous interview, 2nd new job_the time of quitting a job (unit: mm)
wo8do37y	The time of quitting a job that a R worked in previous interview (unit: yyyy)
wo8do82_o1y	Since previous interview, 1st new job_the time of quitting a job (unit: yyyy)
wo8do82_o2y	Since previous interview, 2nd new job_the time of quitting a job (unit: yyyy)
Wave 9:	
wo9doo1	Currently work
wo9doo2	Main job
wo9doo5	Job-searching activity
wo9doo6	The current employment status in the job market
wo9do36	Whether or not R currently works in the same job with previous interview
wo9do43	Since previous interview, whether experienced a new job or not
wo9do84_o1	Since previous interview, re-employment after quitting 1st job
wo9do37m	The time of quitting a job that a R worked in previous interview (unit: mm)
wo9do82_o1m	Since previous interview, 1st new job_the time of quitting a job (unit: mm)
wo9do82_o2m	Since previous interview, 2nd new job_the time of quitting a job (unit: mm)
wo9do37y	The time of quitting a job that a R worked in previous interview (unit: yyyy)
wo9do82_o1y	Since previous interview, 1st new job_the time of quitting a job (unit: yyyy)
wo9do82_o2y	Since previous interview, 2nd new job_the time of quitting a job (unit: yyyy)

Job Search

Variable	Waves	Label	Type
rWlookwrk1w	1-9	rWlookwrk1w:wW R looking for job, past week	Categ
sWlookwrk1w	1-9	sWlookwrk1w:wW S looking for job, past week	Categ
rWlookwrk4w	1-9	rWlookwrk4w:wW R looking for job, past 4 weeks	Categ
sWlookwrk4w	1-9	sWlookwrk4w:wW S looking for job, past 4 weeks	Categ
rWablewrk	1-9	rWablewrk:wW R able to work	Categ
sWablewrk	1-9	sWablewrk:wW S able to work	Categ
rWwillwrk	1-9	rWwillwrk:wW R willing to work	Categ
sWwillwrk	1-9	sWwillwrk:wW S willing to work	Categ

How Constructed

KLoSA asks respondents who report not being a wage worker, self-employed, or working as an unpaid family worker for more than 18 hours a week, specific job search questions.

rWlookwrk1w indicates the respondent's response to the question "Did you look for a job or other work to earn money in the past week?". A value of 0 indicates that the respondent did not look for a job in the past week and a value of 1 indicates that the respondent did look for a job in the past week. In Wave 1, respondents who reported that they are not looking for a job are also coded with a value of 0.

rWlookwrk4w indicates the respondent's response to the question "Did you look for a job or other work to earn money in the past four weeks?". A value of 0 indicates that the respondent did not look for a job in the past four weeks and a value of 1 indicates that the respondent did look for a job in the past four weeks. Respondents who reported looking for a job in the past week were not asked the question about the past four weeks and **rWlookwrk4w** is coded as 1 for those respondents. In Wave 1, respondents who reported that they are not looking for a job are also coded with a value of 0.

rWablewrk indicates the respondent's response to the question "Would you have been able to work last week if there had been an appropriate job or work?". A value of 0 indicates that the respondent reported not being able to work and a value of 1 indicates that the respondent reported being able to work. Respondents who reported that they were not looking for a job in the past four weeks were not asked this question and are designated special missing code (.l).

rWwillwrk indicates the respondent's response to the question "Are you willing to work if there is an appropriate job?". A value of 0 indicates that the respondent reported not being willing to work and a value of 1 indicates that the respondent reported being willing to work. Respondents who were looking for a job at least in the past four weeks are assigned a 1 as well, although they are not asked this question.

In all waves, only those that reported that they were not employed for income or family workers for less than 18 hours a week are asked the job search questions. If the respondent is employed, **rWlookwrk1w**, **rWlookwrk4w**, **rWablewrk**, and **rWwillwrk** are set to a (.e) missing code. In addition to this skip pattern, in Wave 1, only people who answered yes to both "Are you looking for a job?" and "Are you able to work if you are offered a job right now?" were asked the job search questions. As such, Wave 1 job search variables have an additional special missing value: (.a) for those who reported they were not able to work if offered a job right now. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWlookwrk1w**, **rWlookwrk4w**, **rWablewrk**, and **rWwillwrk** are set to plain missing (.) for respondents who did not respond to the current wave.

sWlookwrk1w, **sWlookwrk4w**, **sWablewrk**, and **sWwillwrk** are taken from the spouse's values to **rWlookwrk1w**, **rWlookwrk4w**, **rWablewrk**, and **rWwillwrk**. Aside from the special missings utilized by **rWlookwrk1w**, **rWlookwrk4w**, **rWablewrk**, and **rWwillwrk**, **sWlookwrk1w**, **sWlookwrk4w**, **sWablewrk**, and **sWwillwrk** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In all waves, only those who reported that they were not employed for income or family workers for less than 18 hours a week are asked the job search questions. In addition to this skip pattern, in Wave 1, only people who answered yes to both "Are you looking for a job?" and "Are you able to work if you are offered a job right now?" were asked the job search questions.

A new cohort of interviewees was added in Wave 5.

Cross-Study Differences with the HRS

rWlookwrk1w, **rWablewrk**, and **rWwillwrk** have no comparable questions in the HRS and so there are no comparable variables in the RAND HRS or Gateway Harmonized HRS. **rWlbrf** in the RAND HRS uses a question of whether looked for work in the past 4 weeks to define the unemployed labor force status, this question is comparable to the question used to build **rWlookwrk4w** in the Gateway Harmonized KLoSA.

sWunempmf	1-9	sWunempmf:ww S # months unemployed flag	Categ

How Constructed

KLoSA asks respondents who report not being a wage worker, self-employed, or working as an unpaid family worker for more than 18 hours a week specific job search questions.

rWunempmo indicates the number of months the respondent has been looking for a job, at the time of the interview, and is available in Wave 1 only. It is calculated by subtracting the date when the respondent began looking for a job from the interview date. Starting in Wave 2, **rWunempm** indicates the number of months the respondent has been looking for a job since the past interview. The respondent is asked when they started looking for a job, and when they stopped looking if they have not looked in the past four weeks. If the respondent only reported the year and not the month, then June was used. If the respondent is still looking for a job at the time of the interview, the interview date is used to determine the months of unemployment in the same fashion as in Wave 1.

rWunempmf is the flag variable for missing month used to calculate **rWunempmo** and **rWunempm**. A value of 0 indicates that the respondent did not report the month for either starting to look for a job or stopping to look for a job. In such cases, June was used in place of the missing month. A value of 1 indicates that the respondent reported the month of starting/stopping to look for a job.

In all waves, only those who reported that they were not employed for income or family workers for less than 18 hours a week are asked the job search questions. In addition to this skip pattern, in Wave 1, only people who answered yes to both "Are you looking for a job?" and "Are you able to work if you are offered a job right now?" were asked the job search questions. As such, if the respondent reported not being able to work, **rWunempmo** and **rWunempmf** are set to a (.a) missing code. If the respondent reported not being willing to work, **rWunempmo**, **rWunempm** and **rWunempmf** are set to a (.w) missing code. If the respondent has not looked for a job since the last interview, **rWunempmo**, **rWunempm** and **rWunempmf** are set to a (.j) missing code. If the respondent is employed, **rWunempmo**, **rWunempm** and **rWunempmf** are set to a (.e) missing code. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWunempmo**, **rWunempm** and **rWunempmf** are set to plain missing (.) for respondents who did not respond to the current wave.

sWunempmo, **sWunempm** and **sWunempmf** are taken from the spouse's values to **rWunempmo**, **rWunempm** and **rWunempmf**. Aside from the special missings utilized by **rWunempmo**, **rWunempm** and **rWunempmf**, **sWunempmo**, **sWunempm** and **sWunempmf** use two additional special missings, (.u) and (.v). If the respondent is not designated as coupled in the current wave and assumed to be single a special missing value of (.u) is used. If the respondent is not designated as coupled in the current wave but reports being married a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

In all waves, only those who reported that they were not employed for income or family workers for less than 18 hours a week are asked the job search questions. In addition to this skip pattern, in Wave 1, only people who answered yes to both "Are you looking for a job?" and "Are you able to work if you are offered a job right now?" were asked the job search questions. Starting in Wave 2, KLoSA did not ask when the respondent started looking for a job to those who reported not being willing to work.

The number of months reported in **rWunempm** are since the last interview starting in Wave 2. Starting in Wave 2, KLoSA asks if the respondent has looked for a job since the past interview, including looking prior to the past four weeks, and if so, when the respondent started and stopped looking for a job.

Cross-Study Differences with the HRS

HRS does not ask these specific job search questions so there are no equivalent variables to **rWunempmo**, **rWunempm** and **rWunempmf** in the RAND HRS or the Gateway Harmonized HRS.

I. Retirement & Expectations

Whether Retired: Retired Employment Status

Variable	Waves	Label	Type
rWretemp	1-9	rWretemp:wW r retired	Categ
sWretemp	1-9	sWretemp:wW s retired	Categ

How Constructed

rWretemp indicates the respondent's retirement status. **rWretemp** is set to 1 if the respondent is currently retired, 2 if the respondent is retired but does some work, is looking for a job, or desires to work for pay regardless of retirement status, and 0 if the respondent is not retired. Respondents who have never worked are coded 0 and not considered to be retired. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Blank missing (.) is assigned if the respondent was not interviewed in the current wave. **rWretemp** is based on the **rWlbrf_k** variable from the Employment section—please refer to that for more details.

sWretemp gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's value to **rWretemp**. Aside from the special missing values utilized by **rWretemp**, **sWretemp** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

See also Labor Force Status (**rWlbrf_k** and **sWlbrf_k**) in the Employment section.

Cross-Wave Differences in KLoSA

The variable is derived from three questions; however, one of the questions changes the wording starting from Wave 2. In Wave 1, the respondents are asked "What is your current employment status with regard to working in the labor market?" and the question has only three options for the respondent to choose: "1. Worked before but currently retired", "3. Worked before and intend to work in the future but currently not looking for a job" and "5. Never had a job before." Starting in Wave 2, the question has been changed to "Which of the following best describes your status with regard to working in the labor market?" and has 5 options for the respondent to choose: "1. Never had a job before", "3. Currently retired (no intent to work unless circumstances change)", "5. Intend to work if the wage and working conditions meet my expectations and circumstances are good", "7. Intend to work if the wage and working conditions meet my expectations" and "9. Intend to work even if the wage and working conditions are slightly below my expectations." Starting in Wave 5, the option "I have done a little work this and that but I have never had a clear job" was added.

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

See also Labor Force Status (**rWlbrf_k** and **sWlbrf_k**) in the Employment section.

Cross-Study Differences with the HRS

In RAND HRS, **rWretemp** is derived from several questions about the respondent's employment status. In the Gateway Harmonized KLoSA, **rWretemp** is also derived from several different questions about the respondent's employment status but questions used in KLoSA are different from the questions used in HRS.

See also Labor Force Status (**rWlbrf_k** and **sWlbrf_k**) in the Employment section.

Retirement Month and Year, if Retired

Variable	Waves	Label	Type
rWretmon	1-9	rWretmon:ww r month retired	Cont
sWretmon	1-9	sWretmon:ww s month retired	Cont
rWretyr	1-9	rWretyr:ww r year retired	Cont
sWretyr	1-9	sWretyr:ww s year retired	Cont

How Constructed

rWretmon and **rWretyr** indicate the respondent's retirement month and year, respectively. These variables are derived only for respondents who say they are completely or partially retired, i.e., where **rWretemp** is either 1 or 2. In Wave 1 all respondents who report being currently retired, are asked the time of that retirement. Starting in Wave 2, only respondents who were working in their previous interview and report being retired at the current interview are asked the time of retirement. **rWretmon** and **rWretyr** are derived by taking the reported month and year of retirement for the respondent's current retirement, this is accomplished either by taking the respondent's current report of time of retirement or the respondent's previous report of time of retirement if the respondent reports still being retired and not having had any new employment since the last wave. **rWretmon** and **rWretyr** are assigned special missing value (.n) if the respondent reports not being retired. A special missing value (.x) is used when the respondent reported a non-working but non-retired employment status in the previous wave and then reported being retired in the next wave in which case the time of retirement is not asked to the respondent. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to time of retirement are assigned special missing values (.d), (.r), (.m), respectively. **rWretmon** and **rWretyr** are set to plain missing (.) for respondents who did not respond to the current wave.

sWretmon and **sWretyr** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWretmon** and **rWretyr**. In addition to the special missing codes used in **rWretmon** and **rWretyr**, **sWretmon** and **sWretyr** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1 all respondents who report being currently retired, are asked the time of that retirement. Starting in Wave 2, only respondents who were working in their previous interview and report being retired at the current interview are asked the time of retirement. Because of this, time of retirement is not asked for respondents who reported a non-working but non-retired employment status in the previous wave and then reported being retired in the next wave.

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

Cross-Study Differences with the HRS

In HRS, retirement month and year are asked in a number of different questions depending on the respondent's employment status. In KLoSA, retirement month and year are asked once per survey.

wo9d036	Whether or not R currently works in the same job with previous interview
wo9d084_01	Since previous interview, re-employment after quitting 1st job
wo9d501m	(A new retiree) Since last interview, the time of retirement (unit: mm)
wo9d501y	(A new retiree) Since last interview, the time of retirement (unit: yyyy)

Retirement Age

Variable	Waves	Label	Type
rWretage	1-9	rWretage:WW r retirement age	Cont
sWretage	1-9	sWretage:WW s retirement age	Cont

How Constructed

rWretage indicates the respondent's retirement age. This variable is derived using birth year and month and retirement year and month, and then rounding down to the nearest integer for the age at retirement. **rWretage** is assigned special missing value (.n) if the respondent reports not being retired. A special missing value (.x) is used when the respondent reported a non-working but non-retired employment status in the previous wave and then reported being retired in the next wave in which case the time of retirement is not asked to the respondent. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to time of retirement are assigned special missing values (.d), (.r), (.m), respectively. **rWretmon** and **rWretyr** are set to plain missing (.) for respondents who did not respond to the current wave.

sWretage gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to **rWretage**. In addition to the special missing codes used for **rWretage**, **sWretage** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s).

Cross-Study Differences with the HRS

In HRS, retirement month and year are asked in a number of different questions depending on the respondent's employment status. In KLoSA, retirement month and year are asked once per survey. A comparable variable is not currently available in the RAND HRS but can be constructed using HRS data.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing

Planned Retirement Year

Variable	Waves	Label	Type
rWrplnya	1-9	rWrplnya:WW r year plans to retire	Cont
sWrplnya	1-9	sWrplnya:WW s year plans to retire	Cont

How Constructed

rWplnya is the year the respondent plans to retire or when they think they will stop working, not considering any insignificant, “pastime” work. KLoSA asks these questions in four different places to non-retired respondents: for those who are currently working, for those working but self-employed, for non-wage family workers, and for unemployed people. KLoSA asks at what age the respondent plans to stop working. Respondents who are retired but report some “pastime” work are not asked when they plan to completely retire from the labor market. **rWplnya** is derived using the age at which the respondent plans to stop working added to the respondent’s year of birth. Respondents who are already retired are assigned a special missing code of (.a). Respondents who report never having worked are assigned special missing value of (.w). Respondents who, when asked when they plan to retire, answered that they plan to keep working as long as they are physically capable are assigned special missing value (.n). In Wave 1, respondents who reported they were unemployed and looking for work but had either not looked for work in the last 4 weeks or reported that they would not have worked last week if there was an appropriate job or work were also not asked about their planned retirement year. These respondents are assigned special missing value (.b). Don’t know, refused, or missing responses to planned year of retirement are assigned special missing values (.d), (.r), (.m), respectively. **rWplnya** is set to plain missing (.) for respondents who did not respond to the current wave.

sWplnya gives this information for the respondent's spouse or partner and is taken directly from the respondent’s spouse’s values to **rWplnya**. In addition to the special missing values used in **rWplnya**, **sWplnya** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, respondents who reported they were unemployed and looking for work but had either not looked for work in the last 4 weeks or reported that they would not have worked last week if there was an appropriate job or work were not asked for their planned retirement year. Starting in Wave 2 all unemployed respondents were asked when they planned to retire.

Cross-Study Differences with the HRS

Unlike HRS, KLoSA asked the retirement plan question four times separately for the following four job status categories: currently working, working but self-employed, non-wage family workers, and unemployed.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing

Plan to Work After Retired

Variable	Waves	Label	Type
rWretwrk	1-9	rWretwrk:WW r plan paid work after retired	Categ
sWretwrk	1-9	sWretwrk:WW s plan paid work after retired	Categ

How Constructed

rWretwrk indicates whether the respondent wants to work for pay regardless of retirement status. **rWretwrk** is coded as 0 if the respondent does not want to work for pay regardless of retirement status, and is coded as 1 if the respondent does want to work for pay regardless of retirement status. Respondents who are currently in the labor marker are not asked this question. Thus, respondents who are currently working, unemployed, family workers, or self-employed are coded with the special missing value of (.n) since this question was not asked of them. New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. **rWretwrk** is set to plain missing (.) if the respondent did not participate in the current wave.

sWretwrk gives this information for the respondent's spouse or partner. In addition to the special missing values used in **rWretwrk**, **sWretwrk** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

Cross-Study Differences with the HRS

No differences known.

Self-Reported Probability of Living to a Specified Age

Variable	Waves	Label	Type
rWliv10	1-9	rWliv10:WW r prob live 75-110	Cont
sWliv10	1-9	sWliv10:WW s prob live 75-110	Cont
rWliv10a	1-9	rWliv10a:WW r age used in live 75-110 question	Cont
sWliv10a	1-9	sWliv10a:WW s age used in live 75-110 question	Cont

How Constructed

In KLoSA, respondents are asked about the probability of living about another 10 years. KLoSA respondents select the probability from a non-continuous scale ranging from 0 to 100: 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100.

rWliv10 is the respondent's self-reported probability of living to age 75 if the respondent is younger than 65; probability of living to age 80 if the respondent is aged 65-69; probability of living to age 85 if the respondent is aged 70-74; probability of living to age 90 if the respondent is aged 75-79; probability of living to age 95 if the respondent is aged 80-84; probability of living to age 100 if the respondent is aged 85-94; probability of living to age 105 if the respondent is aged 95-99; probability of living to age 110 if the respondent is 100 years old or order. The age about which the respondent is asked is stored in the variable **rWliv10a**. Don't know, refused, or missing responses to self-reported probability of living about another 10 years are assigned special missing values (.d), (.r), (.m), respectively. **rWliv10** and **rWliv10a** are set to plain missing (.) for respondents who did not respond to the current wave.

sWliv10 and **sWliv10a** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWliv10** and **rWliv10a**. In addition to the special missing codes used in **rWliv10** and **rWliv10a**, **sWliv10** and **sWliv10a** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

KLoSA uses a different set of ages to measure the probability of living to a specific age than the HRS. In particular, the ages used by KLoSA range from 75-110 while the ages used in HRS range from 80-100.

Self-Reported Probability of Receiving an Inheritance

Variable	Waves	Label	Type
rWinher	1-9	rWinher:ww r prob inheritance	Cont
sWinher	1-9	sWinher:ww s prob inheritance	Cont

How Constructed

rWinher is the self-reported probability of receiving an inheritance of at least 10,000 Korean Won (KW). Like other questions in the KLoSA modules that deal with self-reported probabilities, KLoSA does not use a continuous scale for this question about inheritance. Answers can be 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, or if the respondents is absolutely sure they will receive an inheritance, 100. This question is only asked if the respondent's mother or father is currently alive. If the respondent was not asked this question because both the respondent's parents have died or have dispersed due to the Korean War then **rWinher** is assigned special missing value (.q). Don't know, refused, or missing responses to self-reported probability of receiving an inheritance are assigned special missing values (.d), (.r), (.m), respectively. **rWinher** is set to plain missing (.) for respondents who did not respond to the current wave.

sWinher gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's value to **rWinher**. In addition to the special missing codes used in **rWinher**, **sWinher** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike in RAND HRS, in KLoSA this question is only asked if the respondent's mother or father is still alive.

In HRS, the question is asked specifically about receiving an inheritance in the next 10 years, however KLoSA does not refer to a specific time window in the question.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing

Self-Reported Probability of Leaving a Bequest

Variable	Waves	Label	Type
rWbeq10w	1-9	rWbeq10w:WW r prob leave bequest	Cont
sWbeq10w	1-9	sWbeq10w:WW s prob leave bequest	Cont

How Constructed

rWbeq10w is the self-reported probability of leaving a bequest, including property and other valuables that the respondent might own, totaling 10,000 Korean Won (KW) or more. As with other expectation questions in KLoSA, probabilities are not reported on a continuous scale. Responses range from 0 to 100 at intervals of 10: 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100. Don't know, refused, or missing responses to self-reported probability of leaving a bequest are assigned special missing values (.d), (.r), (.m), respectively. **rWbeq10w** is set to plain missing (.) for respondents who did not respond to the current wave.

sWbeq10w gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's value to **rWbeq10w**. In addition to the special missing values used in **rWbeq10w**, **sWbeq10w** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike HRS, KLoSA does not ask about bequests of other valuables.

Continuous Variable Distributions

Self-Reported Probability of Working Full-Time

Variable	Waves	Label	Type
rWwork5	1-9	rWwork5:WW r prob work for next 5 years	Cont
sWwork5	1-9	sWwork5:WW s prob work for next 5 years	Cont
rWwork5a	1-9	rWwork5a:WW r age used in work next 5yrs	Cont
sWwork5a	1-9	sWwork5a:WW s age used in work next 5yrs	Cont

How Constructed

rWwork5 is the self-reported probability of working at their present job in the next five years. As with other expectation questions in the KLoSA, probabilities are not reported on a continuous scale. Responses range from 0 to 100 at intervals of 10: 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100. In Waves 1-4, respondents younger than 50 were asked the self-reported probability of working at their present job until they reach age 55; respondents aged 50-59 were asked the probability of working at their present job until they reach age 60; respondents 60 years old or older were asked the probability of working at their present job for the next 5 years. Starting in Wave 5, respondent's younger than 50 are asked the self-reported probability of working at their present job until they reach age 55; respondents aged 50-54 are asked the probability of working at their present job until they reach age 60; respondents aged 55-59 are asked the probability of working at their present job until they reach age 65; respondents 60 years old or older are asked the probability of working at their present job in the next 5 years. **rWwork5a** records the age the respondent is asked to consider when they think about working in the future. **rWwork5a** is coded with special missing code of (.a) if the respondent was not asked the probability that they will be working at a specific age but is instead asked the probability they will still be working in the next five years. For respondents who are not working, a special missing code of (.w) is used. Don't know, refused, or missing responses to self-reported probability of working full time are assigned special missing values (.d), (.r), (.m), respectively. **rWwork5** and **rWwork5a** are set to plain missing (.) for respondents who did not respond to the current wave.

sWwork5 and **sWwork5a** give this information for the respondent's spouse or partner and are taken directly from the respondent's spouse's values to **rWwork5** and **rWwork5a**. In addition to the special missing values used in **rWwork5** and **rWwork5a**, **sWwork5** and **sWwork5a** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

The age categories which were used to determine what age respondents were asked in the self-reported probability of working full-time questions changed slightly after Wave 4. In Waves 1-4, respondent's younger than 50 were asked the self-reported probability of working after they reach age 55; respondents aged 50-59 were asked the probability of working after they reach age 60; respondents 60 years old or older were asked the probability of working in the next 5 years. Starting in Wave 5, respondents younger than 50 are asked the self-reported probability of working after they reach age 55; respondents aged 50-54 are asked the probability of working after they reach age 60; respondents aged 55-59 are asked the probability of working after they reach age 65; respondents 60 years old or older are asked the probability of working in the next 5 years.

Cross-Study Differences with the HRS

This variable is not available in RAND HRS or Gateway Harmonized HRS.

Retirement Satisfaction

Variable	Waves	Label	Type
rWretsat	1-9	rWretsat:wW r retirement satisfaction	Categ
sWretsat	1-9	sWretsat:wW s retirement satisfaction	Categ

How Constructed

rWretsat is the self-reported retirement satisfaction of the respondent, among those respondents who have retired. A code of 1 indicates the respondent is very satisfied with their retirement. A code of 2 indicates the respondent is moderately satisfied with their retirement. A code of 3 indicates the respondent is not at all satisfied with their retirement. Respondents who are not retired are assigned a special missing value of (.n). New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to retirement satisfaction are assigned special missing values (.d), (.r), (.m), respectively. **rWretsat** is set to plain missing (.) for respondents who did not respond to the current wave.

sWretsat gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to **rWretsat**. In addition to the special missing codes used in **rWretsat**, **sWretsat** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

Cross-Study Differences with the HRS

No differences known.

Retirement Years Compared to Years Before Retirement

Variable	Waves	Label	Type
rWryrcmp	1-9	rWryrcmp:wW r retirement years compared	Categ
sWryrcmp	1-9	sWryrcmp:wW s retirement years compared	Categ

How Constructed

rWryrcmp is the respondent's comparison of their life before and after retirement, if they have retired. A code of 1 indicates the respondent says their life is better than before retirement. A code of 3 indicates the respondent says their life is about the same as before retirement. A code of 5 indicates the respondent says their life is worse than before retirement. Respondents who are not retired are assigned a special missing value of (.n). New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset. Respondents with missing values for this reason are assigned a special missing value (.s). Don't know, refused, or missing responses to how retirement years compare are assigned special missing values (.d), (.r), (.m), respectively. **rWryrcmp** is set to plain missing (.) for respondents who did not respond to the current wave.

sWryrcmp gives this information for the respondent's spouse or partner and is taken directly from the respondent's spouse's values to **rWryrcmp**. In addition to the special missing values used in **rWryrcmp**, **sWryrcmp** employs two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross Wave Differences in KLoSA

New respondents first interviewed in Wave 5 were asked to confirm their job history from a prior questionnaire, but the data from this questionnaire is missing from the KLoSA dataset.

Cross-Study Differences with the HRS

In HRS, respondents are asked to compare their retirement years to the time just before retirement. In KLoSA, respondents are asked to compare their life after retirement to their life before retirement without any further indication towards a particular time before retirement.

J. Pension

Receives Any Public Pension

Variable	Waves	Label	Type
rWpubpen	1-9	rWpubpen:WW r receives public pension	Categ
sWpubpen	1-9	sWpubpen:WW s receives public pension	Categ

How Constructed

rWpubpen indicates whether the respondent is currently receiving a public pension. A value of 0 indicates the respondent is not receiving any benefit from the National Pension System. A value of 1 indicates the respondent is receiving the benefits either monthly, in a lump-sum, or both. Don't know, refused, or other missing responses of **rWpubpen** are assigned special missing codes (.d), (.r), (.m), respectively. **rWpubpen** is set to plain missing (.) for respondents who did not respond to the current wave.

sWpubpen indicates whether the current wave's spouse is currently receiving a public pension, and is taken from the spouse's values to **rWpubpen**. In addition to the special missing codes used in **rWpubpen**, **sWpubpen** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

rWpubpen in KLoSA is comparable to **rassrecv** in the RAND HRS. While **rWpubpen** indicates whether the respondent to KLoSA is receiving a public pension at each wave, **rassrecv** indicates whether the respondent to HRS received social security income at any wave. Please note that KLoSA has a value for each wave of the study, while the HRS has a single value that encompasses all waves.

Components included in Gateway Harmonized KLoSA and RAND HRS are slightly different for public pensions representing different institutional arrangements in each country. However, we kept the concepts included as comparable as possible.

Age When Started to Receive Current Public Pension

Variable	Waves	Label	Type
rWpubage	1-9	rWpubage:wW r age started to receive public pension	Cont
sWpubage	1-9	sWpubage:wW s age started to receive public pension	Cont

How Constructed

rWpubage indicates the respondent's age when they started to receive their current public pension. **rWpubage** is set to special missing (.x) if the respondent is not currently receiving a public pension. **rWpubage** is set to special missing (.i) if the respondent reports receiving the public pension at a future date. Don't know, refused, or other missing responses of **rWpubage** are assigned special missing codes (.d), (.r), (.m), respectively. In Waves 7 and 8, the majority of respondents who reported receiving a public pension in a previous wave were not asked when they started to receive their current public pension. For these cases, **rWpubage** is assigned the age they reported first receiving their current public pension in Wave 6. **rWpubage** is set to plain missing (.) for respondents who did not respond to the current wave.

sWpubage indicates the current wave's spouse's age when they started to receive their current public pension, and is taken from the spouse's values to **rWpubage**. In addition to the special missing codes used in **rWpubage**, **sWpubage** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Waves 7 and 8, the majority of respondents who reported receiving a public pension in a previous wave were not asked when they started to receive their current public pension. For these cases, the age reported in the previous wave is carried forward.

Cross-Study Differences with the HRS

RAND HRS and Gateway Harmonized HRS do not have a comparable variable.

Currently Receiving Any Private (Including Occupational) Pension

Variable	Waves	Label	Type
rWpeninc	1-9	rWpeninc:wW r receives private pension	Categ
sWpeninc	1-9	sWpeninc:wW s receives private pension	Categ

How Constructed

rWpeninc indicates whether the respondent is currently receiving any private or occupational pension. A value of 0 indicates that the respondent is not currently receiving any benefit from the private/occupational pension. A value of 1 indicates that the respondent is currently receiving such benefits either monthly, in a lump sum, or both. Don't know, refused, or other missing responses of **rWpeninc** are assigned special missing codes (.d), (.r), (.m), respectively. **rWpeninc** is set to plain missing (.) for respondents who did not respond to the current wave.

sWpeninc indicates whether the current wave's spouse is currently receiving any private or occupational pension, and is taken from the spouse's values to **rWpeninc**. In addition to the special missing codes used in **rWpeninc**, **sWpeninc** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Whether Private Pension Continues After Death

Variable	Waves	Label	Type
rWpenic	1-9	rWpenic:wW r whether private pension continues after death	Categ
sWpenic	1-9	sWpenic:wW s whether private pension continues after death	Categ

How Constructed

rWpenic indicates whether someone could receive full or part of the respondent's current private pension, if they were to die. **rWpenic** is coded as 0.no if the pension benefits would stop, and 1.yes if the pension benefits would stay the same or continue at a reduced level. **rWpenic** is assigned special missing values (.d) or (.r), if don't know or refused, respectively. **rWpenic** is assigned special missing value (.o) if the respondent reports that something other would happen to their private pension if they should die. **rWpenic** is assigned special missing value (.c) if the respondent is receiving a corporate or occupational pension but not a separate private pension, and this question is not asked. **rWpenic** is assigned special missing value (.n) if the respondent is not currently receiving any private pension. The variable is set to plain missing (.) for respondents who did not respond to the current wave.

sWpenic indicates whether the current wave's spouse's private pension would continue if they were to die, and is taken from the spouse's values of **rWpenic**. In addition to the special missing codes used in **rWpenic**, if the respondent is not designated as coupled in the current wave and assumed to be single, a special missing value of (.u) is used. Also, if the respondent is not designated as coupled in the current wave but reports being married, a special missing value of (.v) is used.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Components included in Gateway Harmonized KLoSA and RAND HRS are slightly different for private pensions representing different institutional arrangements in each country. However, we kept the concepts included as comparable as possible.

Any Pension from Current Job

Variable	Waves	Label	Type
rWjcpen	1-9	rWjcpen:WW r any pension from current job	Categ
sWjcpen	1-9	sWjcpen:WW s any pension from current job	Categ

How Constructed

rWjcpen indicates whether or not the respondent is a member of a retirement pension scheme through their current work. A value of 0 indicates that the respondent is not a member of a retirement pension scheme through their current job. A value of 1 indicates that the respondent is a member of a retirement pension scheme through their current job. **rWjcpen** is set to special missing (.w) if the respondent is not currently employed. **rWjcpen** is set to special missing (.s) if the respondent is self-employed or helps their family's business without payment. Don't know, refused, or other missing responses of **rWjcpen** are assigned special missing codes (.d), (.r), (.m), respectively. **rWjcpen** is set to plain missing (.) for respondents who did not respond to the current wave.

sWjcpen indicates whether the current wave's spouse is a member of a pension scheme through their current job, and is taken from the spouse's values to **rWjcpen**. In addition to the special missing codes used in **rWjcpen**, **sWjcpen** employs two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Type of Pension from Current Job

Variable	Waves	Label	Type
rWptyp1	1-8	rWptyp1:wW r current pension type	Categ
sWptyp1	1-8	sWptyp1:wW s current pension type	Categ
rWptyp1_k	9	rWptyp1_k:wW r current pension type	Categ
sWptyp1_k	9	sWptyp1_k:wW s current pension type	Categ

How Constructed

rWptyp1 indicates the type of pension the respondent has from their current job. Respondents who are members of their employer's retirement pension schemes are asked whether their pension is "Defined Contributions: Money is accumulated as the employer makes pre-determined amount of contributions" or "Defined Benefits: Benefits are pre-determined, usually based on a formula involving age, years of service and salary." A value of 1 indicates that the respondent has a defined benefit pension through their current job. A value of 2 indicates that the respondent has a defined contribution pension through their current job. Starting in Wave 9, the answer choices for the question about the type of pension differ from those in previous waves. **rWptyp1_k** indicates the type of pension the respondent has from their current job with an additional choice of individual retirement pension. Values for **rWptyp1_k** are similar to those of **rWptyp1**, with the addition that a value of 3 indicates that the respondent has an individual retirement pension through their current job. **rWptyp1** and **rWptyp1_k** are set to special missing (.w) if the respondent is not currently employed. **rWptyp1** and **rWptyp1_k** are set to special missing (.x) if the respondent does not have a pension through their current job. **rWptyp1** and **rWptyp1_k** are set to special missing (.s) if the respondent is self-employed or helps their family's business without payment. Don't know, refused, or other missing responses of **rWptyp1** and **rWptyp1_k** are assigned special missing codes (.d), (.r), (.m), respectively. **rWptyp1** and **rWptyp1_k** are set to plain missing (.) for respondents who did not respond to the current wave.

sWptyp1 and **rWptyp1_k** indicate the type of pension the current wave's spouse has from their current job, and is taken from the spouse's values to **rWptyp1** and **rWptyp1_k**. In addition to the special missing codes used in **rWptyp1** and **rWptyp1_k**, **sWptyp1** and **sWptyp1_k** employ two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 9, answer choices to the question about the type of pension differ from the previous waves. For Waves 1-8, **rWptyp1** choices for type of retirement pension are: 1. Defined Benefits (DB), or 2. Defined Contributions (DC). Starting in Wave 9, **rWptyp1_k** choices for the type of retirement pension are: 1. Defined Benefits (DB), 2. Defined Contributions (DC), or 3. Individual Retirement Pension (IRP).

Cross-Study Differences with the HRS

While KLoSA asks the type of pension for only the employer provided pension, HRS asks about the type of pension for 3 to an unlimited number of pensions depending on the wave, and reports the type of up to 4 pensions.

How Constructed

rWdomhand indicates the respondent's dominant hand. **rWdomhand** is coded as follows: 1.right hand, 2.left hand, and 3.both hands are equally dominant. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), (.m). Special missing (.p) is assigned if the questions were skipped because the interview was done by proxy. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWdomhand indicates the respondent's current wave's spouse's dominant hand, and is taken from **rWdomhand**. In addition to the special missing codes used for **rWdomhand**, **sWdomhand** employs two additional missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWlgrip1, **rWlgrip2**, **rWrgrip1**, and **rWrgrip2** indicate the respondent's first and second hand strength measurements for the left and right hand, respectively. **rWlgrip** and **rWrgrip** indicate the respondent's maximum hand strength measurement for the left and right hand, respectively. **rWgripsum** indicates the maximum measurement of the dominant hand, as such, **rWlgrip** is used for respondents with a dominant left hand, and **rWrgrip** is used for respondents with a dominant

right hand. For respondents with equally dominant hands, the greater value between **rWlgrip** and **rWrgrip** is used. Don't know, refused, or other missing responses of all hand strength measurements are assigned special missing codes (.d), (.r), (.m). Special missing (.x) is assigned if the respondent tried to do the test but was unable to do it. Special missing (.p) is assigned if the questions were skipped because the interview was done by proxy. Special missing (.n) is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Special missing (.l) is assigned to **rWlgrip1**, **rWlgrip2**, **rWlgrip**, and **rWgripsum** if the respondent was unable to use their left hand, but was able to take the test for the right hand. Special missing (.t) is assigned to **rWrgrip1**, **rWrgrip2**, **rWrgrip**, and **rWgripsum** if the respondent was unable to use their right hand, but was able to take the test for the left hand. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWlgrip1, **sWlgrip2**, **sWrgrip1**, and **sWrgrip2** indicate the respondent's current wave's spouse's first and second, left and right hand strength measurements, and are taken from the corresponding respondent variables. **sWlgrip** and **sWrgrip** indicate the current wave's spouse's maximum hand strength measurement for the left and right hand, respectively. **sWgripsum** indicates the current wave's spouse's dominant hand measurement, and is taken from the spouse's values to **rWgripsum**. In addition to the special missing codes used by **rWlgrip1**, **rWlgrip2**, **rWrgrip1**, **rWrgrip2**, **rWlgrip**, **rWrgrip**, and **rWgripsum**, **sWlgrip1**, **sWlgrip2**, **sWrgrip1**, **sWrgrip2**, **sWlgrip**, **sWrgrip**, and **sWgripsum** employ two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWgripcomp indicates whether the respondent is willing and able to complete the grip strength test. **rWgripcomp** is coded as 1 if the respondent did not signal having had surgery or experience swelling, inflammation, severe pain, or injury in at least one hand within the last 6 months, the respondent understood the directions for the test, both the respondent and the interviewer felt it would be safe to complete the test, and the tests were at least attempted. **rWgripcomp** is coded as 0 if the respondent did have surgery or experience swelling, inflammation, severe pain, or injury in both hands within the last 6 months, the respondent did not understand the instructions, or the respondent or interviewer felt it would be unsafe to complete the test, so the tests were not attempted. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), (.m), respectively. Special missing (.p) is assigned if the questions were skipped because the interview was done by proxy. This measure is set to plain missing (.) for respondents who did not respond to the current wave.

sWgripcomp indicates whether the respondent's current wave's spouse is willing and able to complete the grip strength test, and its values are taken from **rWgripcomp**. In addition to the special missing codes employed by **rWgripcomp**, **sWgripcomp** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWgrippos indicates the respondent's position when they took the grip strength test. **rWgrippos** is coded as follows: 1.standing, 2.sitting, and 3.lying down. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), (.m). Special missing (.p) is assigned if the questions were skipped because the interview was done by proxy. Special missing (.n) is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWgrippos indicates the respondent's current wave's spouse's position when they took the grip strength test, and is taken from **rWgrippos**. In addition to the special missing codes used for **rWgrippos**, **sWgrippos** employs two additional missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWgripeff indicates the amount of effort the respondent put into the grip strength test as reported by the interviewer. **rWgripeff** is coded as follows: 1.gave full effort, 2.not full effort-illness, and 3.not full effort-no reason. **rWgripeff** is coded as 2 if the interviewer reports that the respondent was prevented from giving full effort by illness, pain, symptoms or discomfort, and is coded as 3 if the interviewer reports that the respondent did not appear to give full effort without an obvious reason. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), (.m). Special

missing (.p) is assigned if the questions were skipped because the interview was done by proxy. Special missing (.n) is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWgripeff indicates the amount of effort the respondent's current wave's spouse put into the grip strength test, and its values are taken from **rWgripeff**. In addition to the special missing codes used for **rWgripeff**, **sWgripeff** employs two additional missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWgripast indicates whether the respondent received a support while performing the grip strength test. **rWgripast** is coded as 0 if no support was needed, and is coded as 1 if the respondent received a support while performing the grip strength test. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), (.m). Special missing (.p) is assigned if the questions were skipped because the interview was done by proxy. Special missing (.n) is assigned if the respondent did not complete the hand strength measurement due to a variety of reasons, including safety concerns or the respondent did not understand the instructions. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWgripast indicates whether the respondent's current wave's spouse received a support while performing the grip strength test, and its values are taken from **rWgripast**. In addition to the special missing codes used for **rWgripast**, **sWgripast** employs two additional missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

A new cohort of respondents is added in Wave 5. The question confirming that the respondent is responding for themselves is present in the Wave 5 Add questionnaire, but not in the Wave 5 Add data, hence we cannot tell if any of the missing responses there are due to an interview by proxy.

Cross-Study Differences with the HRS

In HRS hand strength tests began in Wave 7 with a random subsample of approximately 3,300 respondents. Hand strength tests were given to a larger sample of HRS respondents starting in Wave 8. KLoSA includes hand strength tests starting in Wave 1 and tests everyone who is willing and able to participate.

HRS tested the left hand first and then the right hand, whereas KLoSA tested the right hand first, then the left hand.

The Gateway Harmonized HRS includes **rWgripasta**, which indicates whether the respondent rested their arms on a support during the grip strength test, whereas the Gateway Harmonized KLoSA includes **rWgripast**, which indicates whether the respondent received a support during the grip strength test.

Original KLoSA Variables Used

Wave 1:

wo1c550	Respondent confirmation (check the assistance of proxy)
wo1c501	A right-handed/left-handed
wo1c502	Acceptance of grip measurement
wo1c503	Safety confirmation of grip measurement (check any surgery or injuries experienc
wo1c504	A painful hand for grip measurement
wo1c505_o1	The reason for not carrying out grip measurement_o1
wo1c505_o2	The reason for not carrying out grip measurement_o2
wo1c505_o3	The reason for not carrying out grip measurement_o3
wo1c505_o4	The reason for not carrying out grip measurement_o4
wo1c507	Grip measurement value (the right hand, first time) (unit: kilogram))
wo1c508	Grip measurement value (the right hand, second time) (unit: kilogram))
wo1c509	Grip measurement value (the left hand, first time) (unit: kilogram))
wo1c510	Grip measurement value (the left hand, second time) (unit: kilogram))
wo1c511	Position when taking grip measurement
wo1c512	Any assistance required for taking grip measurement
wo1c513	An effort degree of a respondent for a test

Wave 2:

wo2c550	Respondent confirmation (check the assistance of proxy)
wo2c501	A right-handed/left-handed
wo2c502	Acceptance of grip measurement
wo2c503	Safety confirmation of grip measurement (check any surgery or injuries experienc
wo2c504	A painful hand for grip measurement
wo2c505	The reason for not carrying out grip measurement
wo2c507	Grip measurement value (the right hand, first time) (unit: kilogram))
wo2c508	Grip measurement value (the right hand, second time) (unit: kilogram))
wo2c509	Grip measurement value (the left hand, first time) (unit: kilogram))
wo2c510	Grip measurement value (the left hand, second time) (unit: kilogram))
wo2c511	Position when taking grip measurement
wo2c512	Any assistance required for taking grip measurement
wo2c513	An effort degree of a respondent for a test

Wave 3:

wo3c550	Respondent confirmation (check the assistance of proxy)
wo3c501	A right-handed/left-handed
wo3c502	Acceptance of grip measurement
wo3c503	Safety confirmation of grip measurement (check any surgery or injuries experienc
wo3c504	A painful hand for grip measurement
wo3c505	The reason for not carrying out grip measurement
wo3c507	Grip measurement value (the right hand, first time) (unit: kilogram))
wo3c508	Grip measurement value (the right hand, second time) (unit: kilogram))
wo3c509	Grip measurement value (the left hand, first time) (unit: kilogram))
wo3c510	Grip measurement value (the left hand, second time) (unit: kilogram))
wo3c511	Position when taking grip measurement
wo3c512	Any assistance required for taking grip measurement
wo3c513	An effort degree of a respondent for a test

Wave 4:

WO4C550	Respondent confirmation (check the assistance of proxy)
WO4C501	A right-handed/left-handed
WO4C502	Acceptance of grip measurement
WO4C503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
WO4C504	A painful hand for grip measurement
WO4C505	The reason for not carrying out grip measurement
WO4C507	Grip measurement value (the right hand, first time) (unit: kilogram))
WO4C508	Grip measurement value (the right hand, second time) (unit: kilogram))
WO4C509	Grip measurement value (the left hand, first time) (unit: kilogram))
WO4C510	Grip measurement value (the left hand, second time) (unit: kilogram))
WO4C511	Position when taking grip measurement
WO4C512	Any assistance required for taking grip measurement
WO4C513	An effort degree of a respondent for a test

Wave 5:

WO5C550	Respondent confirmation (check the assistance of proxy)
WO5C501	A right-handed/left-handed
WO5C502	Acceptance of grip measurement
WO5C503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
WO5C504	A painful hand for grip measurement
WO5C505	The reason for not carrying out grip measurement
WO5C507	Grip measurement value (the right hand, first time) (unit: kilogram))
WO5C508	Grip measurement value (the right hand, second time) (unit: kilogram))
WO5C509	Grip measurement value (the left hand, first time) (unit: kilogram))
WO5C510	Grip measurement value (the left hand, second time) (unit: kilogram))
WO5C511	Position when taking grip measurement
WO5C512	Any assistance required for taking grip measurement
WO5C513	An effort degree of a respondent for a test

Wave 5 Add:

WO5C501	A right-handed/left-handed
WO5C502	Acceptance of grip measurement
WO5C503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
WO5C504	A painful hand for grip measurement
WO5C505	The reason for not carrying out grip measurement
WO5C507	Grip measurement value (the right hand, first time) (unit: kilogram))
WO5C508	Grip measurement value (the right hand, second time) (unit: kilogram))
WO5C509	Grip measurement value (the left hand, first time) (unit: kilogram))
WO5C510	Grip measurement value (the left hand, second time) (unit: kilogram))
WO5C511	Position when taking grip measurement
WO5C512	Any assistance required for taking grip measurement
WO5C513	An effort degree of a respondent for a test

Wave 6:

WO6C550	Respondent confirmation (check the assistance of proxy)
WO6C501	A right-handed/left-handed
WO6C502	Acceptance of grip measurement
WO6C503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
WO6C504	A painful hand for grip measurement
WO6C505	The reason for not carrying out grip measurement
WO6C507	Grip measurement value (the right hand, first time) (unit: kilogram))
WO6C508	Grip measurement value (the right hand, second time) (unit: kilogram))
WO6C509	Grip measurement value (the left hand, first time) (unit: kilogram))
WO6C510	Grip measurement value (the left hand, second time) (unit: kilogram))
WO6C511	Position when taking grip measurement

w06c512	Any assistance required for taking grip measurement
w06c513	An effort degree of a respondent for a test
Wave 7:	
w07c550	Respondent confirmation (check the assistance of proxy)
w07c501	A right-handed/left-handed
w07c502	Acceptance of grip measurement
w07c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
w07c504	A painful hand for grip measurement
w07c505	The reason for not carrying out grip measurement
w07c507	Grip measurement value (the right hand, first time) (unit: kilogram)
w07c508	Grip measurement value (the right hand, second time) (unit: kilogram)
w07c509	Grip measurement value (the left hand, first time) (unit: kilogram)
w07c510	Grip measurement value (the left hand, second time) (unit: kilogram)
w07c511	Position when taking grip measurement
w07c512	Any assistance required for taking grip measurement
w07c513	An effort degree of a respondent for a test
Wave 8:	
w08c550	Respondent confirmation (check the assistance of proxy)
w08c501	A right-handed/left-handed
w08c502	Acceptance of grip measurement
w08c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
w08c504	A painful hand for grip measurement
w08c505	The reason for not carrying out grip measurement
w08c507	Grip measurement value (the right hand, first time) (unit: kilogram)
w08c508	Grip measurement value (the right hand, second time) (unit: kilogram)
w08c509	Grip measurement value (the left hand, first time) (unit: kilogram)
w08c510	Grip measurement value (the left hand, second time) (unit: kilogram)
w08c511	Position when taking grip measurement
w08c512	Any assistance required for taking grip measurement
w08c513	An effort degree of a respondent for a test
Wave 9:	
w09c550	Respondent confirmation (check the assistance of proxy)
w09c501	A right-handed/left-handed
w09c502	Acceptance of grip measurement
w09c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
w09c504	A painful hand for grip measurement
w09c505	The reason for not carrying out grip measurement
w09c507	Grip measurement value (the right hand, first time) (unit: kilogram)
w09c508	Grip measurement value (the right hand, second time) (unit: kilogram)
w09c509	Grip measurement value (the left hand, first time) (unit: kilogram)
w09c510	Grip measurement value (the left hand, second time) (unit: kilogram)
w09c511	Position when taking grip measurement
w09c512	Any assistance required for taking grip measurement
w09c513	An effort degree of a respondent for a test

Hand Grip Strength Measurements: Reasons Didn't Complete

Variable	Waves	Label	Type
rWgripsft	1-9	rWgripsft:WW r didn't complete grip: unsafe/health reason	Categ
sWgripsft	1-9	sWgripsft:WW s didn't complete grip: unsafe/health reason	Categ
rWgripref	1-9	rWgripref:WW r didn't complete grip: refused	Categ
sWgripref	1-9	sWgripref:WW s didn't complete grip: refused	Categ
rWgriptryu	1-9	rWgriptryu:WW r didn't complete grip: tried but unable	Categ
sWgriptryu	1-9	sWgriptryu:WW s didn't complete grip: tried but unable	Categ
rWgripothr	1-9	rWgripothr:WW r didn't complete grip: other reason	Categ
sWgripothr	1-9	sWgripothr:WW s didn't complete grip: other reason	Categ

How Constructed

rWgripsft, **rWgripref**, **rWgriptryu**, and **rWgripothr** indicate the reasons the respondent did not complete the grip strength test, as reported by the interviewer. **rWgripsft** indicates whether the respondent felt it would not be safe, the interviewer felt it would not be safe, or the respondent had surgery, injury or swelling in both hands in the past six months. **rWgripref** indicates whether the respondent refused to participate. **rWgriptryu** indicates whether the respondent tried but was unable to complete the test. **rWgripothr** indicates whether the respondent did not understand the instructions or did not complete the measurement for other reasons. **rWgripsft**, **rWgripref**, **rWgriptryu**, and **rWgripothr** are coded as 0 if the specific reason was not given, and are coded as 1 if the specific reason was given. In Wave 1, the interviewer is able to report up to 4 reasons for the respondent not completing the grip strength test, but starting in Wave 2, the interviewer is only able to report 1 reason for the respondent not completing the grip strength test. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), (.m). Special missing (.p) is assigned if the questions were skipped because the interview was done by proxy. Special missing (.c) is assigned if the respondent completed the hand strength measurements in at least one hand. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWgripsft, **sWgripref**, **sWgriptryu**, and **sWgripothr** indicate the reasons the respondent's current wave's spouse did not complete the grip strength test, and their values are taken from **rWgripsft**, **rWgripref**, **rWgriptryu**, and **rWgripothr**. In addition to the special missing codes used for **rWgripsft**, **rWgripref**, **rWgriptryu**, and **rWgripothr**, **sWgripsft**, **sWgripref**, **sWgriptryu**, and **sWgripothr** employ two additional missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, the data contains variables for up to 4 reasons why the grip strength measurement tests may not have been carried out. Starting in Wave 2, the data contains only a single reason for not taking the hand grip measurement tests, and not multiple reasons like in Wave 1.

A new cohort of respondents is added in Wave 5. The question confirming that the respondent is responding for themselves is present in the Wave 5 Add questionnaire, but not in the Wave 5 Add data, hence we cannot tell if any of the missing responses there are due to an interview by proxy.

Cross-Study Differences with the HRS

In HRS hand strength tests began in Wave 7 with a random subsample of approximately 3,300 respondents. Hand strength tests were given to a larger sample of HRS respondents starting in Wave 8. KLoSA includes hand strength tests starting in Wave 1 and tests everyone who is willing and able to participate.

The Gateway Harmonized HRS includes an additional variable, **rWgripeq**, indicating whether the respondent was unable to complete the grip strength test due to equipment failures. This reason is not available in the KLoSA and so this variable is not available in the Gateway Harmonized KLoSA.

Original KLoSA Variables Used

Wave 1:

wo1c501	A right-handed/left-handed
wo1c502	Acceptance of grip measurement
wo1c503	Safety confirmation of grip measurement (check any surgery or injuries experienc
wo1c504	A painful hand for grip measurement
wo1c505_01	The reason for not carrying out grip measurement_01
wo1c505_02	The reason for not carrying out grip measurement_02
wo1c505_03	The reason for not carrying out grip measurement_03
wo1c505_04	The reason for not carrying out grip measurement_04

Wave 2:

wo2c501	A right-handed/left-handed
wo2c502	Acceptance of grip measurement
wo2c503	Safety confirmation of grip measurement (check any surgery or injuries experienc
wo2c504	A painful hand for grip measurement
wo2c505	The reason for not carrying out grip measurement

Wave 3:

wo3c501	A right-handed/left-handed
wo3c502	Acceptance of grip measurement
wo3c503	Safety confirmation of grip measurement (check any surgery or injuries experienc
wo3c504	A painful hand for grip measurement
wo3c505	The reason for not carrying out grip measurement

Wave 4:

wo4c501	A right-handed/left-handed
wo4c502	Acceptance of grip measurement
wo4c503	Safety confirmation of grip measurement (check any surgery or injuries experienc
wo4c504	A painful hand for grip measurement

wo4c505	The reason for not carrying out grip measurement
Wave 5:	
wo5c501	A right-handed/left-handed
wo5c502	Acceptance of grip measurement
wo5c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
wo5c504	A painful hand for grip measurement
wo5c505	The reason for not carrying out grip measurement
Wave 5 Add:	
wo5c501	A right-handed/left-handed
wo5c502	Acceptance of grip measurement
wo5c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
wo5c504	A painful hand for grip measurement
wo5c505	The reason for not carrying out grip measurement
Wave 6:	
wo6c501	A right-handed/left-handed
wo6c502	Acceptance of grip measurement
wo6c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
wo6c504	A painful hand for grip measurement
wo6c505	The reason for not carrying out grip measurement
Wave 7:	
wo7c501	A right-handed/left-handed
wo7c502	Acceptance of grip measurement
wo7c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
wo7c504	A painful hand for grip measurement
wo7c505	The reason for not carrying out grip measurement
Wave 8:	
wo8c501	A right-handed/left-handed
wo8c502	Acceptance of grip measurement
wo8c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
wo8c504	A painful hand for grip measurement
wo8c505	The reason for not carrying out grip measurement
Wave 9:	
wo9c501	A right-handed/left-handed
wo9c502	Acceptance of grip measurement
wo9c503	Safety confirmation of grip measurement (check any surgery or injuries experienced)
wo9c504	A painful hand for grip measurement
wo9c505	The reason for not carrying out grip measurement

sWftrpro	1-9	sWftrpro:WW professional able to help S with future ADL needs	Categ

How Constructed

rWftrhlp indicates whether, supposing in the future the respondent needed help with basic personal care activities like eating or dressing (i.e. ADLs), they have relatives or friends who would be willing and able to help them over a long period with said needs. The question wording changed significantly after Wave 1 and so is not very comparable between Wave 1 and future waves. In Wave 1, the respondent is first asked, "Suppose in the future, you needed help with basic daily activities like eating or dressing. Do you have relatives or friends (besides your spouse/partner) who would be willing and able to help you over a long period of time?" Starting in Wave 2, the respondent is asked, "Who is likely to help you if you need help with activities of daily living, such as eating, dressing, or using the bathroom, over a long period of time in the future?", and the respondent is presented with a list of different possible helpers including spouse, parents, children, sibling, grandchildren, others, voluntary workers, publicly provided helpers, personally hired helpers, or no helper. The respondent can choose all that apply. In Wave 1, **rWftrhlp** is coded as 1 if the respondent reported that someone would be willing and able to help them in the future, and is coded as 0 if the respondent reported that nobody could help. Starting in Wave 2, **rWftrhlp** is coded as 1 if the respondent reports at least one person who would be willing and able to help them in the future, and is coded as 0 if the respondent reported that no helper would be available. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWftrhlp** is set to plain missing (.) for respondents who did not participate in the current wave.

sWftrhlp indicates whether the respondent's current wave's spouse has someone who could help with future ADL needs, and is taken from **rWftrhlp**. In addition to the special missing codes employed by **rWftrhlp**, **sWftrhlp** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWftrsp indicates whether the respondent's spouse would be willing and able to help the respondent with basic personal care activities if needed in the future and is available starting in Wave 2. **rWftrsp** is coded as 0 if the respondent reported that nobody could help or did not select their spouse as a future helper, and is coded as 1 if the respondent selected their spouse as a future helper. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWftrsp** is set to plain missing (.) for respondents who did not participate in the current wave.

sWftrsp indicates whether the respondent can help the respondent's current wave's spouse with future ADL needs, and is taken from **rWftrsp**. In addition to the special missing codes employed by **rWftrsp**, **sWftrsp** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current

wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWftrkids indicates whether a child, child-in-law, or grandchild of the respondent would be willing and able to help the respondent with basic personal care activities if needed in the future. In Wave 1, if the respondent answered that there would be someone willing and able to help them in the future if they needed help, they are then asked what that person's relationship is to them and presented with a list which includes children, children-in-law, and grandchildren. Starting in Wave 2, all respondents are asked who would help if they needed help in the future and presented with a list which includes children, children-in-law, and grandchildren. **rWftrkids** is coded as 0 if the respondent reported that nobody could help or did not select their child, child-in-law, or grandchild as a future helper, and is coded as 1 if the respondent selected their child, child-in-law, or grandchild as a future helper. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWftrkids** is set to plain missing (.) for respondents who did not participate in the current wave.

sWftrkids indicates whether a child, child-in-law, or grandchild would help the respondent's current wave's spouse with future ADL needs, and is taken from **rWftrkids**. In addition to the special missing codes employed by **rWftrkids**, **sWftrkids** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWftrothr indicates whether a relative of the respondent or someone else would be willing and able to help the respondent with basic personal care activities if needed in the future. In Wave 1, if the respondent answered that there would be someone willing and able to help them in the future if they needed help, they are then asked what that person's relationship is to them and presented with a list which includes parents, parents-in-law, siblings, siblings-in-law, other relatives, and others. Starting in Wave 2, all respondents are asked who would help if they needed help in the future and presented with a list which includes parents, siblings, and others. Relatives and other individuals include parents, parents-in-law, siblings, siblings-in-law, other relatives, or other persons. **rWftrothr** is coded as 0 if the respondent reported that nobody could help or did not select a relative or someone else as a future helper, and is coded as 1 if the respondent selected their relative or someone else as a future helper. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWftrothr** is set to plain missing (.) for respondents who did not participate in the current wave.

sWftrothr indicates whether a relative or someone else would help the respondent's current wave's spouse with future ADL needs, and is taken from **rWftrothr**. In addition to the special missing codes employed by **rWftrothr**, **sWftrothr** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWftrpro indicates whether a professional helper would be able to help the respondent with basic personal care activities if needed in the future. Professional helpers include voluntary workers, publicly provided helpers, and personally hired helpers. In Wave 1, if the respondent answered that there would be someone willing and able to help them in the future if they needed help, they are then asked what that person's relationship is to them and presented with a list which includes voluntary worker / publicly provided helper and personally hired helper. Starting in Wave 2, all respondents are asked who would help if they needed help in the future and presented with a list which includes voluntary worker, publicly provided helper, and personally hired helper. **rWftrpro** is coded as 0 if the respondent reported that nobody could help or did not select a professional helper as a future helper, and is coded as 1 if the respondent selected a professional helper as a future helper. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWftrpro** is set to plain missing (.) for respondents who did not participate in the current wave.

sWftrpro indicates whether a professional helper would help the respondent's current wave's spouse with future ADL needs, and is taken from **rWftrpro**. In addition to the special missing codes employed by **rWftrpro**, **sWftrpro** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, the respondent is first asked, "Suppose in the future, you needed help with basic daily activities like eating or dressing. Do you have relatives or friends (besides your spouse/partner) who would be willing and able to help you over a long period of time?" and if so, then "What is the relationship to you of that person or persons?", and the respondent can choose all that apply. Starting in Wave 2, the respondent is asked, "Who is likely to help you if you need help with activities of daily living, such as eating, dressing, or using the bathroom, over a long period of time in the future?", and the respondent can choose all that apply. Spouse is an option starting in Wave 2.

In Wave 1, volunteer and employee of facility are included in the same relationship category. Starting in Wave 2, voluntary worker and publicly provided helpers are included as separate relationship categories, and employee of facility is no longer included. In Wave 1, they use the phrase "paid helper" and starting in Wave 2, they use the phrase "personally hired helper".

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

In all available waves of **rWftrhlp** in the Gateway Harmonized HRS, help from a spouse is specifically excluded based on the question wording and those who currently receive help with ADLs or IADLs are not asked this question (or those living in a nursing home starting in Wave 6 of HRS). However, in all waves of the KLoSA, this question is asked of every respondent, irrespective of whether they are currently receiving help, and starting in Wave 2 of the Gateway Harmonized KLoSA, **rWftrhlp** also includes help from a spouse.

Unlike HRS, KLoSA includes the options of professional helpers and spouses as options of who would be able to assist the respondent with ADL activities in the future, leading to the use of **rWftrsp** and **rWftrpro** in the Gateway Harmonized KLoSA.

Original KLoSA Variables Used

Wave 1:

wo1cb32	Whether or not there is a possible helper (except spouse and people living together)
wo1cb33m01	Mother can help
wo1cb33m02	Father can help
wo1cb33m03	Spouse's mother can help
wo1cb33m04	Spouse's father can help
wo1cb33m05	The 1st child can help
wo1cb33m06	The 2nd child can help
wo1cb33m07	The 3rd child can help
wo1cb33m08	The 4th child can help
wo1cb33m09	The 5th child can help
wo1cb33m10	The 6th child can help
wo1cb33m11	The 7th child can help
wo1cb33m12	The 8th child can help
wo1cb33m13	The 9th child can help
wo1cb33m14	The 10th child can help
wo1cb33m15	The 1st brothers and sisters can help
wo1cb33m16	The 2nd brothers and sisters can help
wo1cb33m17	The 3rd brothers and sisters can help
wo1cb33m18	The 4th brothers and sisters can help
wo1cb33m19	The 5th brothers and sisters can help
wo1cb33m20	The 6th brothers and sisters can help
wo1cb33m21	The 7th brothers and sisters can help
wo1cb33m22	The 8th brothers and sisters can help
wo1cb33m23	The 9th brothers and sisters can help
wo1cb33m24	The 10th brothers and sisters can help
wo1cb33m25	The 11th brothers and sisters can help
wo1cb33m26	The 12 th brothers and sisters can help
wo1cb33m27	The 13th brothers and sisters can help
wo1cb33m28	The 14th brothers and sisters can help
wo1cb33m29	Spouse's brothers and sisters can help
wo1cb33m30	Children's spouse can help
wo1cb33m31	Grandchild can help
wo1cb33m32	Other relative can help
wo1cb33m33	Other person can help
wo1cb33m34	Voluntary worker/ Publicly provided helper can help
wo1cb33m35	Personally hired helper can help
wo1cb33m36	Refuse to answer
wo1cb33m37	Don't know

How Constructed

The respondent is first asked to name all family members over the age of 10 who are unable to carry out activities of daily living, and if there are family members who are unable to carry out these activities, the respondent is asked which family members they cared for during the past year. If the respondent provided care for someone, they are then asked how many hours per week and how many weeks during the past year the respondent cared for that person. Respondents reported helping a maximum of 1 person in Waves 4, 7, 8, and 9 with ADL difficulties, so in these waves, the missing counts for hours per week and weeks per year are not necessary and not provided.

rWgascare indicates whether the respondent reported helping their spouse with any activities of daily living (ADL) in the past year. **rWgascare** is coded as 1 if the respondent helps their spouse, while a 0 indicates they do not help their spouse, their spouse requires no help, or they do not have a spouse. **rWgascarehpw** indicates the number of hours the respondent helps their spouse per week and is the sum of hours spent helping with ADL needs for any spouse reported. The total number of hours per week can exceed 168 if the respondent reports helping multiple spouses with ADL needs, although it is not seen in the data. **rWgascarehpwm** indicates the number of instances in which the respondent helped their spouse but no value of hours was reported and was not accounted for in **rWgascarehpw**. **rWgascarewpy** indicates the number of weeks the respondent helped their spouse in the past year and is the sum of weeks spent helping with ADL needs for any spouse reported. The total number of weeks per year can exceed 52 if the respondent reports helping multiple spouses with ADL needs, although it is not seen in the data. **rWgascarewpywm** indicates the number of instances in which the respondent helped their spouse but no value of weeks was reported and was not accounted for in **rWgascarewpy**. **rWgascarehpw**,

rWgascarehpwm, **rWgascarewpw**, and **rWgascarewpwm** are assigned a value of 0 if the spouse required no help, if the respondent provided no help to their spouse, or the respondent has no spouse. Don't know, refused, or other missing responses to **rWgascarely**, **rWgascarehpw**, and **rWgascarewpw** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgascarehpwm** and **rWgascarewpwm**. **rWgascare**, **rWgascarehpw**, **rWgascarehpwm**, **rWgascarewpw**, and **rWgascarewpwm** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgaccare indicates whether the respondent reported helping their children and/or children-in-law with any activities of daily living (ADL) in the past year. **rWgaccare** is coded as 1 if the respondent does help their children or children-in-law, while a 0 indicates they do not help their children or children-in-law, their children or children-in-law require no help, or they have no children. **rWgaccarehpw** indicates the number of hours the respondent helps their children or children-in-law per week and is the sum of hours spent helping all reported children with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple children or children-in-law. **rWgaccarehpwm** indicates the number of children or children-in-law who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgaccarehpw**. **rWgaccarewpw** indicates the number of weeks the respondent helped their children or children-in-law in the past year and is the sum of weeks spent helping all reported children with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple children or children-in-law. **rWgaccarewpwm** indicates the number of children or children-in-law who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgaccarewpw**. **rWgaccarehpw**, **rWgaccarehpwm**, **rWgaccarewpw**, and **rWgaccarewpwm** are assigned a value of 0 if the children or children-in-law required no help, if the respondent provided no help to them, or if they have no children. Don't know, refused, or other missing responses to **rWgaccare**, **rWgaccarehpw**, and **rWgaccarewpw** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgaccarehpwm** and **rWgaccarewpwm**. **rWgaccare**, **rWgaccarehpw**, **rWgaccarehpwm**, **rWgaccarewpw**, and **rWgaccarewpwm** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgakcare indicates whether the respondent reported helping their grandchildren with any activities of daily living (ADL) in the past year. **rWgakcare** is coded as 1 if the respondent does help their grandchildren, while a 0 indicates they do not help their grandchildren, their grandchildren require no help, or they have no grandchildren. **rWgakcarehpw** indicates the number of hours the respondent helps their grandchildren per week and is the sum of hours spent helping all reported grandchildren with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple grandchildren. **rWgakcarehpwm** indicates the number of grandchildren who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgakcarehpw**. **rWgakcarewpw** indicates the number of weeks the respondent helped their grandchildren in the past year and is the sum of weeks spent helping all reported grandchildren with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple grandchildren. **rWgakcarewpwm** indicates the number of grandchildren who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgakcarewpw**. **rWgakcarehpw**, **rWgakcarehpwm**, **rWgakcarewpw**, and **rWgakcarewpwm** are assigned a value of 0 if the grandchildren required no help, if the respondent provided no help to them, or if they have no grandchildren. Don't know, refused, or other missing responses to **rWgakcare**, **rWgakcarehpw**, and **rWgakcarewpw** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgakcarehpwm** and **rWgakcarewpwm**. **rWgakcare**, **rWgakcarehpw**, **rWgakcarehpwm**, **rWgakcarewpw**, and **rWgakcarewpwm** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgapcare indicates whether the respondent reported helping their mother, father, mother-in-law, or father-in-law with any activities of daily living (ADL) in the past year. **rWgapcare** is coded as 1 if the respondent does help their parents, while a 0 indicates they do not help their parents, or their parents require no help. **rWgapcarehpw** indicates the number of hours the respondent helps their parents per week and is the sum of hours spent helping all reported parents with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple parents. **rWgapcarehpwm** indicates the number of parents who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgapcarehpw**. **rWgapcarewpw** indicates the number of weeks the respondent helped their parents in the past year and is the sum of weeks spent helping all reported parents with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple parents. **rWgapcarewpwm** indicates the number of parents who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgapcarewpw**. **rWgapcarehpw**, **rWgapcarehpwm**, **rWgapcarewpw**, and **rWgapcarewpwm** are assigned a value of 0 if the parents required no help, or if the

respondent provided no help to them. Don't know, refused, or other missing responses to **rWgapcare**, **rWgapcarehpw**, and **rWgapcarewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgapcarehpwm** and **rWgapcarewpywm**. **rWgapcare**, **rWgapcarehpw**, **rWgapcarehpwm**, **rWgapcarewpy**, and **rWgapcarewpywm** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgabcare indicates whether the respondent reported helping their siblings or spouse of siblings with any activities of daily living (ADL) in the past year. **rWgabcare** is coded as 1 if the respondent does help their siblings, while a 0 indicates they do not help their siblings, or their siblings require no help. **rWgabcarehpw** indicates the number of hours the respondent helps their siblings per week and is the sum of hours spent helping all reported parents with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple siblings. **rWgabcarehpwm** indicates the number of siblings who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgabcarehpw**. **rWgabcarewpy** indicates the number of weeks the respondent helped their siblings in the past year and is the sum of weeks spent helping all reported siblings with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple siblings. **rWgabcarewpywm** indicates the number of siblings who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgabcarewpy**. **rWgabcarehpw**, **rWgabcarehpwm**, **rWgabcarewpy**, and **rWgabcarewpywm** are assigned a value of 0 if the siblings required no help, or if the respondent provided no help to them. Don't know, refused, or other missing responses to **rWgabcare**, **rWgabcarehpw**, and **rWgabcarewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgabcarehpwm** and **rWgabcarewpywm**. **rWgabcare**, **rWgabcarehpw**, **rWgabcarehpwm**, **rWgabcarewpy**, and **rWgabcarewpywm** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgarcare indicates whether the respondent reported helping their relatives with any activities of daily living (ADL) in the past year. Relatives include the respondent's grandchildren, mother, father, mother-in-law, father-in-law, sibling, spouse of siblings, and other relatives. As such, **rWgarcare** incorporates information from **rWgakcare**, **rWgapcare**, **rWgabcare**, and information about other relatives. **rWgarcare** is coded as 1 if the respondent does help their relatives, while a 0 indicates they do not help their relatives or their relatives require no help. **rWgarcarehpw** indicates the number of hours the respondent helps their relatives per week and is the sum of hours spent helping all reported relatives with ADL needs. The total number of hours per week can exceed 168 if the respondent reports helping multiple relatives. **rWgarcarehpwm** indicates the number of relatives who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgarcarehpw**. **rWgarcarewpy** indicates the number of weeks the respondent helped their relatives in the past year and is the sum of weeks spent helping all reported relatives with ADL needs. The total number of weeks per year can exceed 52 if the respondent reports helping multiple relatives. **rWgarcarewpywm** indicates the number of relatives who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgarcarewpy**. **rWgarcarehpw**, **rWgarcarehpwm**, **rWgarcarewpy**, and **rWgarcarewpywm** are assigned a value of 0 if the relatives required no help, or if the respondent provided no help to them. Don't know, refused, or other missing responses to **rWgarcare**, **rWgarcarehpw**, and **rWgarcarewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgarcarehpwm** and **rWgarcarewpywm**. **rWgarcare**, **rWgarcarehpw**, **rWgarcarehpwm**, **rWgarcarewpy**, and **rWgarcarewpywm** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgacare indicates whether the respondent reported helping any family members with ADL difficulties in the past year. **rWgacare** summarizes the information in **rWgascare**, **rWgaccare**, and **rWgarcare**. It is assigned a 0 if the respondent reported helping no family members with ADL difficulties in the past year or not having any family members with ADL difficulties, and is assigned a 1 if the respondent reported helping at least one family member with ADL difficulties in the past year. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWgacare** is set to plain missing (.) for respondents who did not participate in the current wave.

sWgascare, **sWgascarehpw**, **sWgascarehpwm**, **sWgascarewpy**, **sWgascarewpywm**, **sWgaccare**, **sWgaccarehpw**, **sWgaccarehpwm**, **sWgaccarewpy**, **sWgaccarewpywm**, **sWgakcare**, **sWgakcarehpw**, **sWgakcarehpwm**, **sWgakcarewpy**, **sWgakcarewpywm**, **sWgapcare**, **sWgapcarehpw**, **sWgapcarehpwm**, **sWgapcarewpy**, **sWgapcarewpywm**, **sWgabcare**, **sWgabcarehpw**, **sWgabcarehpwm**, **sWgabcarewpy**, **sWgabcarewpywm**, **sWgarcare**, **sWgarcarehpw**, **sWgarcarehpwm**, **sWgarcarewpy**, **sWgarcarewpywm** indicate whether, the number of hours, and the number of weeks the respondent's current wave's spouse helps their spouse, children, grandchildren, parents, siblings and relatives with ADL difficulties, and

their values are taken from the respondent variables. **swgacare** indicates whether the respondent's current wave's spouse helps any family members with ADL difficulties and its values are taken from **rwgacare**. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Respondents reported a maximum of one person who they helped with ADL difficulties in Waves 4, 7, 8, and 9. As such, the missing count for the number of days per week or weeks per year are not necessary and so not produced in these waves.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The Gateway Harmonized HRS includes **hwgapcare** which indicates whether the respondent and/or their spouse provided 100 or more hours of personal care to their parents or parents-in-law in the last two years. The Gateway Harmonized KLoSA includes **rwgapcare** which indicates whether the respondent provided help for difficulty with ADLs to their parents or parents-in-law in the last year. The variable in the Gateway Harmonized HRS is at the couple-level and requires a minimum amount of time over the last two years, while the variable in the Gateway Harmonized KLoSA is at the respondent-level and does not require a minimum amount of time over the last year.

KLoSA asks about help the respondent provides to other family members who have ADL difficulties and the frequency of help given, and as a result, the Gateway Harmonized KLoSA provides many variables which are not available in the Gateway Harmonized HRS.

Continuous Variable Distributions

How Constructed

The respondent is asked to name all family members over the age of 10 who are not living with the respondent, who the respondent helped with household chores, errands, transportation, grocery shopping, financial management, etc. during the past year. If the respondent helps someone, they are then asked how many hours per week and how many weeks during the past year the respondent cared for that person. Respondents reported helping a maximum of 1 person out of their household with chores in Waves 4 and 6, so in these waves, the missing counts for hours per week and weeks per year are not necessary and not provided. In Waves 7 and 8, the responses to the number of hours per week and weeks per year the respondent helped family members out of their household with chores are only provided for their spouse, mother, mother-in-law, and first sibling. As a result, these variables are not provided at all for children and grandchildren, and the missing counts are not necessary and not provided for spouses and siblings in these waves. In Wave 9, the responses to the number of hours per week the respondent helped family members out of their household with chores are only provided for their spouse, mother, mother-in-law, and first and third children. In Wave 9, the responses to the number of weeks per year the respondent helped family members out of their household with chores are only provided for their spouse, mother, mother-in-law, and first child. As a result, these variables are not provided at all for grandchildren, siblings, and relatives, and the missing counts are not necessary and not provided at all for spouses and for weeks for children.

rWgschore indicates whether the respondent reported helping their spouse, who they are not living with, with chores in the past year. **rWgschore** is coded as 1 if the respondent does help their spouse, while a 0 indicates they do not help their spouse or they do not have a spouse. **rWgschorehpw** indicates the number of hours the respondent helps their spouse per week and is the sum of hours spent helping all reported spouses. The total number of hours per week can exceed 168 if the respondent reports helping multiple spouses, although it is not seen in the data. **rWgschorehpwm** indicates the number of instances in which the respondent helped their spouse but no value of hours was reported and was not accounted for in **rWgschorehpw**. **rWgschorewpy** indicates the number of weeks the respondent helped their spouse in the past year and is the sum of weeks spent helping all reported spouses. The total number of weeks per year can exceed 52 if the respondent reports helping multiple spouses, although it is not seen in the data. **rWgschorewpym** indicates the number of instances in which the respondent helped their spouse but no value of weeks was reported and was not accounted for in **rWgschorewpy**. **rWgschorehpw**, **rWgschorehpwm**, **rWgschorewpy**, and **rWgschorewpym** are assigned a value of 0 if the respondent provided no help to their spouse or they do not have a spouse. In Wave 1, the respondent is not given an option to report helping their spouse with chores, and so **rWgschorehpw**, **rWgschorehpwm**, **rWgschorewpy**, and **rWgschorewpym** are not available in this wave. Don't know, refused, or other missing responses to **rWgschore**, **rWgschorehpw**, and **rWgschorewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, no spouse, or other missing responses are assigned special missing (.m) in **rWgschorehpwm** and **rWgschorewpym**. **rWgschore**, **rWgschorehpw**, **rWgschorehpwm**,

rWgSchorewpy, and **rWgSchorewpy**m are set to plain missing (.) for respondents who did not participate in the current wave.

rWgcchore indicates whether the respondent reported helping their children and/or children-in-law, who they are not living with, with chores in the past year. **rWgcchore** is coded as 1 if the respondent does help their children or children-in-law, while a 0 indicates they do not help their children or children-in-law or they do not have any children. **rWgcchorehpw** indicates the number of hours the respondent helps their children or children-in-law per week and is the sum of hours spent helping all reported children. The total number of hours per week can exceed 168 if the respondent reports helping multiple children or children-in-law. **rWgcchorehpwm** indicates the number of children or children-in-law who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgcchorehpw**. **rWgcchorewpy** indicates the number of weeks the respondent helped their children or children-in-law in the past year and is the sum of weeks spent helping all reported children. The total number of weeks per year can exceed 52 if the respondent reports helping multiple children or children-in-law. **rWgcchorewpy**m indicates the number of children or children-in-law who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgcchorewpy**. **rWgcchorehpw**, **rWgcchorehpwm**, **rWgcchorewpy**, and **rWgcchorewpy**m are assigned a value of 0 if the respondent provided no help to their children or they have no children. In Wave 9, the number of weeks per year is only provided for one child, so **rWgcchorewpy**m is not provided. In Waves 7 and 8, the number of hours or weeks the respondent provided help to children outside of the house with chores is not provided in the dataset, therefore, **rWgcchorehpw** and **rWgcchorewpy** are not available. Don't know, refused, or other missing responses to **rWgcchore**, **rWgcchorehpw**, and **rWgcchorewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgcchorehpwm** and **rWgcchorewpy**m. **rWgcchore**, **rWgcchorehpw**, **rWgcchorehpwm**, **rWgcchorewpy**, and **rWgcchorewpy**m are set to plain missing (.) for respondents who did not participate in the current wave.

rWgkchore indicates whether the respondent reported helping their grandchildren, who they are not living with, with chores in the past year. **rWgkchore** is coded as 1 if the respondent does help their grandchildren, while a 0 indicates they do not help their grandchildren or they do not have any grandchildren. **rWgkchorehpw** indicates the number of hours the respondent helps their grandchildren per week and is the sum of hours spent helping all reported grandchildren. The total number of hours per week can exceed 168 if the respondent reports helping multiple grandchildren. **rWgkchorehpwm** indicates the number of grandchildren who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgkchorehpw**. **rWgkchorewpy** indicates the number of weeks the respondent helped their grandchildren in the past year and is the sum of weeks spent helping all reported grandchildren. The total number of weeks per year can exceed 52 if the respondent reports helping multiple grandchildren. **rWgkchorewpy**m indicates the number of grandchildren who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgkchorewpy**. **rWgkchorehpw**, **rWgkchorehpwm**, **rWgkchorewpy**, and **rWgkchorewpy**m are assigned a value of 0 if the respondent provided no help to their grandchildren or they have no grandchildren. Starting in Wave 7, the number of hours or weeks the respondent provided help to grandchildren outside of the house with chores is not provided in the dataset, therefore, **rWgkchorehpw** and **rWgkchorewpy** are no longer available. Don't know, refused, or other missing responses to **rWgkchore**, **rWgkchorehpw**, and **rWgkchorewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgkchorehpwm** and **rWgkchorewpy**m. **rWgkchore**, **rWgkchorehpw**, **rWgkchorehpwm**, **rWgkchorewpy**, and **rWgkchorewpy**m are set to plain missing (.) for respondents who did not participate in the current wave.

rWgpchore indicates whether the respondent reported helping their mother, father, mother-in-law, or father-in-law, who they are not living with, with chores in the past year. **rWgpchore** is coded as 1 if the respondent does help their parents, while a 0 indicates they do not help their parents. **rWgpchorehpw** indicates the number of hours the respondent helps their parents per week and is the sum of hours spent helping all reported parents. The total number of hours per week can exceed 168 if the respondent reports helping multiple parents. **rWgpchorehpwm** indicates the number of parents who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgpchorehpw**. **rWgpchorewpy** indicates the number of weeks the respondent helped their parents in the past year and is the sum of weeks spent helping all reported parents. The total number of weeks per year can exceed 52 if the respondent reports helping multiple parents. **rWgpchorewpy**m indicates the number of parents who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgpchorewpy**. **rWgpchorehpw**, **rWgpchorehpwm**, **rWgpchorewpy**, and **rWgpchorewpy**m are assigned a value of 0 if the respondent provided no help to their parents. Starting in Wave 7, the number of hours or weeks the respondent provided help to their mother or mother-in-law outside of the house with chores is provided in the

dataset but time spent helping their father or father-in-law is not, therefore, **rWgpchorehpw** and **rWgpchorewpy** only include information about help given to their mother or mother-in-law in these waves. Don't know, refused, or other missing responses to **rWgpchore**, **rWgpchorehpw**, and **rWgpchorewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgpchorehpwm** and **rWgpchorewpym**. **rWgpchore**, **rWgpchorehpw**, **rWgpchorehpwm**, **rWgpchorewpy**, and **rWgpchorewpym** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgbchore indicates whether the respondent reported helping their siblings or spouse of sibling, who they are not living with, with chores in the past year. **rWgbchore** is coded as 1 if the respondent does help their siblings, while a 0 indicates they do not help their siblings. **rWgbchorehpw** indicates the number of hours the respondent helps their siblings per week and is the sum of hours spent helping all reported siblings. The total number of hours per week can exceed 168 if the respondent reports helping multiple siblings. **rWgbchorehpwm** indicates the number of siblings who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgbchorehpw**. **rWgbchorewpy** indicates the number of weeks the respondent helped their siblings in the past year and is the sum of weeks spent helping all reported siblings. The total number of weeks per year can exceed 52 if the respondent reports helping multiple siblings. **rWgbchorewpym** indicates the number of siblings who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgbchorewpy**. **rWgbchorehpw**, **rWgbchorehpwm**, **rWgbchorewpy**, and **rWgbchorewpym** are assigned a value of 0 if the respondent provided no help to their siblings. In Waves 7 and 8, the number of hours or weeks the respondent provided help to their first sibling outside of the house with chores is provided in the dataset but time spent any other siblings is not, therefore, **rWgbchorehpw** and **rWgbchorewpy** only include information about help given to their first sibling in these waves. This information is not provided for any siblings in Wave 9, so these variables are not available. Don't know, refused, or other missing responses to **rWgbchore**, **rWgbchorehpw**, and **rWgbchorewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgbchorehpwm** and **rWgbchorewpym**. **rWgbchore**, **rWgbchorehpw**, **rWgbchorehpwm**, **rWgbchorewpy**, and **rWgbchorewpym** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgrchore indicates whether the respondent reported helping their relatives, who they are not living with, with chores in the past year. Relatives include the respondent's grandchildren, mother, father, mother-in-law, father-in-law, sibling, spouse of siblings, and other relatives. As such, **rWgrchore** incorporates information from **rWgkchore**, **rWgpchore**, **rWgbchore**, and information about other relatives. **rWgrchore** is coded as 1 if the respondent does help their relatives, while a 0 indicates they do not help their relatives. **rWgrchorehpw** indicates the number of hours the respondent helps their relatives per week and is the sum of hours spent helping all reported relatives. The total number of hours per week can exceed 168 if the respondent reports helping multiple relatives. **rWgrchorehpwm** indicates the number of relatives who the respondent helps but for whom no value of hours was reported and was not accounted for in **rWgrchorehpw**. **rWgrchorewpy** indicates the number of weeks the respondent helped their relatives in the past year and is the sum of weeks spent helping all reported relatives. The total number of weeks per year can exceed 52 if the respondent reports helping multiple relatives. **rWgrchorewpym** indicates the number of relatives who the respondent helps but for whom no value of weeks was reported and was not accounted for in **rWgrchorewpy**. **rWgrchorehpw**, **rWgrchorehpwm**, **rWgrchorewpy**, and **rWgrchorewpym** are assigned a value of 0 if the respondent provided no help to their relatives. In Waves 7 and 8, the number of hours or weeks the respondent provided help to their mother, mother-in-law, and first sibling outside of the house with chores is provided in the dataset but time spent helping their grandchildren, father, father-in-law, other siblings, spouse or siblings, and other relatives is not, therefore, **rWgrchorehpw** and **rWgrchorewpy** only include information about help given to their mother, mother-in-law, and first sibling in these waves. In Wave 9, this information is only provided for the respondent's mother or mother-in-law, so **rWgrchorehpw** and **rWgrchorewpy** are not created as they would be equivalent to **rWgpchorehpw** and **rWgpchorewpy**. Don't know, refused, or other missing responses to **rWgrchore**, **rWgrchorehpw**, and **rWgrchorewpy** are assigned special missing codes (.d), (.r), and (.m), respectively. Don't know, refused, or other missing responses are assigned special missing (.m) in **rWgrchorehpwm** and **rWgrchorewpym**. **rWgrchore**, **rWgrchorehpw**, **rWgrchorehpwm**, **rWgrchorewpy**, and **rWgrchorewpym** are set to plain missing (.) for respondents who did not participate in the current wave.

rWgochore indicates whether the respondent reported helping family members outside of their household with chores in the past year. **rWgochore** summarizes the information in **rWgschore**, **rWgcchore**, and **rWgrchore**. **rWgochore** is assigned a 0 if the respondent reported helping no family members outside of their household in the past year with chores, and is assigned a 1 if the respondent reported helping at least one family member outside of their household in the past year with chores. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m),

respectively. **rWgochore** is set to plain missing (.) for respondents who did not participate in the current wave.

sWgschore, **sWgschorehpw**, **sWgschorehpwm**, **sWgschorewpy**, **sWgschorewpym**, **sWgcchore**, **sWgcchorehpw**, **sWgcchorehpwm**, **sWgcchorewpy**, **sWgcchorewpym**, **sWgkchore**, **sWgkchorehpw**, **sWgkchorehpwm**, **sWgkchorewpy**, **sWgkchorewpym**, **sWgpchore**, **sWgpchorehpw**, **sWgpchorehpwm**, **sWgpchorewpy**, **sWgpchorewpym**, **sWgbchore**, **sWgbchorehpw**, **sWgbchorehpwm**, **sWgbchorewpy**, **sWgbchorewpym**, **sWgrchore1y**, **sWgrchorehpw**, **sWgrchorehpwm**, **sWgrchorewpy**, and **sWgrchorewpym** indicate whether, the number of hours, and the number of weeks the respondent's current wave's spouse helps their spouse, children, grandchildren, parents, siblings, and relatives, and their values are taken from the respondent variables. **sWgochore** indicates whether the respondent's current wave's spouse helps family members outside of their household with chores and its values are taken from **rWgochore**. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, when the respondent is asked who they help with chores who live outside the home, spouse is not one of the options. As such, **rWgschore**, **rWgschorehpw**, **rWgschorehpwm**, **rWgschorewpy**, and **rWgschorewpym** are not available in Wave 1.

Respondents reported helping a maximum of 1 person out of their household with chores in Waves 4 and 6, so in these waves, the missing counts for hours per week and weeks per year are not necessary and not provided.

In Waves 7 and 8, the responses to the number of hours per week and weeks per year the respondent helped family members out of their household with chores are only provided for their spouse, mother, mother-in-law, and first sibling. As a result, these variables are not provided at all for children and grandchildren, and the missing counts are not necessary and not provided for spouses and siblings in these waves.

In Wave 9, the responses to the number of hours per week the respondent helped family members out of their household with chores are only provided for their spouse, mother, mother-in-law, and first and third children. In Wave 9, the responses to the number of weeks per year the respondent helped family members out of their household with chores are only provided for their spouse, mother, mother-in-law, and first child. As a result, these variables are not provided at all for grandchildren, siblings, and relatives, and the missing counts are not necessary and not provided at all for spouses or for weeks for children.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The Gateway Harmonized HRS includes **hWgpchore** which indicates whether the respondent and/or their spouse provided 100 or more hours of help with household chores, errands, transportation, etc. to their parents or parents-in-law in the last two years. The Gateway Harmonized KLoSA includes **rWgpchore** which indicates whether the respondent provided help with household chores, errands, transportation, grocery shopping, financial management, etc. to their parents or parents-in-law in the last year. The variable in the Gateway Harmonized HRS is at the couple-level and requires a minimum amount of time over the last two years, while the variable in the Gateway Harmonized KLoSA is at the respondent-level and does not require a minimum amount of time over the last year.

KLoSA asks about help the respondent provides to other family members outside of their household with chores and the frequency of help given, and as a result, the Gateway Harmonized KLoSA provides many variables which are not available in the Gateway Harmonized HRS.

Continuous Variable Distributions

Looking After Grandchildren

Variable	Waves	Label	Type
rWgksit	1-9	rWgksit:WW R looks after grandchildren	Categ
sWgksit	1-9	sWgksit:WW S looks after grandchildren	Categ

How Constructed

rWgksit indicates whether the respondent took care of any grandchildren under the age of 10 during the past year. In Wave 1, the respondent is asked whether they took care of any of their grandchildren younger than 10 years during the past year if they reported having grandchildren. In Waves 2 through 4, if the respondent reported having grandchildren, the respondent is first asked whether they took care of any of their grandchildren under the age of 10, and then asked whether they took care of any of their grandchildren younger than age 10 in the past year. Starting in Wave 5, if the respondent reported having grandchildren, the respondent is first asked whether they took care of any of their grandchildren under the age of 10, and if so, then asked whether they took care of any of their grandchildren younger than age 10 in the past year. **rWgksit** is coded as 1 if the respondent did take care of grandchildren during the past year, and is coded as 0 if the respondent did not take care of grandchildren during the past year, never took care of grandchildren, or has no grandchildren. Don't know, refused, or other missing responses to **rWgksit** are assigned special missing codes (.d), (.r), and (.m), respectively. **rWgksit** is set to plain missing (.) for respondents who did not participate in the current wave.

sWgksit indicates whether the respondent's current wave's spouse took care of any grandchildren, and its values are taken from **rWgksit**. In addition to the special missing codes employed by **rWgksit**, **sWgksit** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, the respondent is asked whether they took care of any of their grandchildren younger than 10 years during the past year if they reported having grandchildren. In Waves 2 through 4, if the respondent reported having grandchildren, the respondent is first asked whether they took care of any of their grandchildren under the age of 10 and then asked whether they took care of any of their grandchildren younger than age 10 in the past year regardless of their answer to the first question. Starting in Wave 5, if the respondent reported having grandchildren, the respondent is first asked whether they took care of any of their grandchildren under the age of 10, and if so, then asked whether they took care of any of their grandchildren younger than age 10 in the past year. Please note that the questionnaire for the original cohort in Wave 5 suggests this skip pattern, but the data suggests that respondents were still asked both questions. This skip pattern is in place for the new cohort in Wave 5.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

hWgksit in the Gateway Harmonized HRS indicates whether the respondent and/or their spouse spent at least 100 hours in the past 2 years caring for grandchildren, while **rWgksit** in the Gateway Harmonized KLoSA indicates whether the respondent spent any time in the past year caring for grandchildren. This variable is at the couple-level in the Gateway Harmonized HRS and at the respondent-level in the Gateway Harmonized KLoSA.

rWhlpfg	1-9	rWhlpfg:ww whether wave maximum number of people help R	Categ
sWhlpfg	1-9	sWhlpfg:ww whether wave maximum number of people help S	Categ

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with.

rWrcany indicates whether the respondent receives any help for difficulties with ADL needs or IADL needs. **rWrcany** is coded as 0 if the respondent needs help with at least one activity but receives no help. **rWrcany** is coded as 1 if the respondent needs help with at least one activity and at least one person provides help. **rWrcany** is assigned special missing (.y) if the respondent reports not needing help with any ADLs or IADLs. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWrcany** is set to plain missing (.) for respondents who did not participate in the current wave.

rWhlpn counts the number of people who help the respondent most with any ADL needs or any IADL needs. **rWhlpn** is coded as 0 if the respondent reports needing help with an ADL or IADL but does not receive any help. **rWhlpn** is assigned special missing (.y) if the respondent reports not needing help with any ADLs or IADLs. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWhlpn** is set to plain missing (.) for respondents who did not participate in the current wave.

rWhlpfg indicates whether the respondent reported being helped by the maximum number of helpers a respondent is allowed to report during each wave, which is three in Wave 1 and five starting in Wave 2. **rWhlpfg** is coded as 0 if the respondent reported being helped by less than the maximum or no helpers, and is coded as 1 if the respondent reported being helped by the maximum number of helpers allowed in the wave. Don't know, refused, or other missing responses are assigned special missing (.m). **rWhlpfg** is set to plain missing (.) for respondents who did not participate in the current wave.

sWrcany, **sWhlpn**, and **sWhlpfg** indicate whether the respondent's current wave's spouse receives help from others, the number of people who helped, and whether they reported the maximum number of helpers allowed for the wave, respectively, and their values are taken from **rWrcany**, **rWhlpn**, and **rWhlpfg**. In addition to the special missing codes employed by **rWrcany**, **rWhlpn**, and **rWhlpfg**, **sWrcany**, **sWhlpn**, and **sWhlpfg** employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

The maximum number of helpers a respondent is allowed to report in Wave 1 is three, whereas that number increases to five starting in Wave 2.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

rWhlpn and **rWhlpfg** are not created in the Gateway Harmonized HRS, but could be derived using the data.

Care Received: Any Informal Care

Variable	Waves	Label	Type
rWrcaany	1-9	rWrcaany:ww r receives any informal care for adls/iadls	Categ
sWrcaany	1-9	sWrcaany:ww s receives any informal care for adls/iadls	Categ

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with.

rWrcaany indicates whether the respondent receives any informal care for difficulties with ADL needs or IADL needs. We consider informal care to include help from the respondent's spouse, mother, father, mother-in-law, father-in-law, children, siblings, brother-in-law or sister-in-law, son-in-law or daughter-in-law, grandchild, or other relative. In Wave 1, this also includes those selected for the category "helper or other non-relative" who were not paid. Starting in Wave 2, this also includes other non-relatives. **rWrcaany** is coded as 0 if the respondent needs help with at least one activity and receives help but not from relatives or other non-relatives, or if they receive no help at all. **rWrcaany** is coded as 1 if the respondent needs help with at least one activity and at least one relative or other non-relative provides informal care. **rWrcaany** is assigned special missing (.y) if the respondent reports not needing help with any ADLs or IADLs. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWrcaany** is set to plain missing (.) for respondents who did not participate in the current wave.

sWrcaany indicates whether the respondent's current wave's spouse receives informal care, and its values are taken from **rWrcaany**. In addition to the special missing codes employed by **rWrcaany**, **sWrcaany** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, helpers categorized as a "helper or other non-relative" have to be unpaid to be considered to provide informal care. Starting in Wave 2, this category is no longer available, and helpers categorized as "others" are considered to provide informal care.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who

help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

sWrscarepd	1-9	sWrscarepd:ww any spouse paid for care given to s for adls/iadls	Categ

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing (.y) if the respondent reports not needing help with any ADL or IADL, and are coded as special missing (.h) if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

rWrscare indicates whether the respondent's spouse helps the respondent with any ADL or IADL needs. **rWrscare** is coded as 0 if the respondent receives no assistance from their spouse, and coded as 1 if the respondent does receive help from their spouse. **rWrscaren** indicates the number of people reported as spouses who help the respondent with any ADL or IADL needs.

rWrscaredpm indicates the number of total days per month the respondent's spouse helps the respondent with ADL or IADL needs. It sums the days reported by each spouse helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from a spouse. **rWrscaredpmm** indicates the number of spouses who helped the respondent for whom no value of days was reported and was not accounted for in **rWrscaredpm**.

rWrscarehr indicates the number of total hours per day the respondent's spouse helps the respondent with ADL or IADL needs. It sums the hours reported by each spouse helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from a spouse. **rWrscarehrm** indicates the number of spouses who helped the respondent for whom no value of hours was reported and was not accounted for in **rWrscarehr**.

rWrscarepd indicates whether the respondent's spouse helper was paid. **rWrscarepd** is coded as 0 if the respondent receives no assistance from their spouse or if they do receive assistance from their spouse but their spouse is not paid, and is coded as 1 if the respondent receives assistance from their spouse and their spouse is paid.

sWrscare, **sWrscaren**, **sWrscaredpm**, **sWrscaredpmm**, **sWrscarehr**, and **sWrscarehrm** indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from the respondent, and their values are taken from **rWrscare**, **rWrscaren**, **rWrscaredpm**, **rWrscaredpmm**, **rWrscarehr**, and **rWrscarehrm**. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help.

In the HRS, the respondent is not asked whether spouse helpers are paid, so **rWrscarepd** is not available in the Gateway Harmonized HRS as it is in the Gateway Harmonized KLoSA.

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing (.y) if the respondent reports not needing help with any ADL or IADL, and are coded as special missing (.h) if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

rWrccare indicates whether the respondent's children, children-in-law, or grandchildren help the respondent with any ADL or IADL needs. **rWrccare** is coded as 0 if the respondent receives no assistance from their children, children-in-law, or grandchildren, and coded as 1 if the respondent does receive help from their children, children-in-law, or grandchildren. **rWrccaren** indicates the number of children, children-in-law, or grandchildren who help the respondent with any ADL or IADL needs.

rWrccaredpm indicates the number of total days per month the respondent's children, children-in-law, or grandchildren help the respondent with ADL or IADL needs. It sums the days reported by each child, child-in-law, or grandchild helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any children, children-in-law, or grandchildren. **rWrccaredpmm** indicates the number of children, children-in-law, or grandchildren who helped the respondent for whom no value of days was reported and was not accounted for in **rWrccaredpm**.

rWrccarehr indicates the number of total hours per day the respondent's children, children-in-law, or grandchildren help the respondent with ADL or IADL needs. It sums the hours reported by each child, child-in-law, or grandchild helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any children, children-in-law, or grandchildren. **rWrccarehrm** indicates the number of children, children-in-law, or grandchildren who helped the respondent for whom no value of hours was reported and was not accounted for in **rWrccarehr**.

rWrccarepd indicates whether any of the respondent's child, child-in-law, or grandchild helpers were paid. **rWrccarepd** is coded as 0 if the respondent receives no assistance from their children, children-in-law, or grandchildren or if they do receive assistance from their children, children-in-law, or grandchildren but they are not paid, and is coded as 1 if the respondent receives assistance from their children, children-in-law, or grandchildren and at least one is paid.

sWrccare, **sWrccaren**, **sWrccaredpm**, **sWrccaredpmm**, **sWrccarehr**, and **sWrccarehrm** indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from their children, children-in-law, or grandchildren, and their values are taken from **rWrccare**, **rWrccaren**, **rWrccaredpm**, **rWrccaredpmm**, **rWrccarehr**, and **rWrccarehrm**. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help.

The group of individuals falling in the "children" category in HRS is wider including help from sons, step-sons, spouse/partner of daughters, son-in-laws, daughters, step-daughters, spouse/partner of sons, daughter-in-laws, grandchildren, unlisted children or children-in-law, former step-children, former children-in-law, spouse/partner of grandchildren, ambiguous child relation, and ambiguous child-in-law relation, whereas the group in KLoSA includes children, children-in-law, and grandchildren.

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing (.y) if the respondent reports not needing help with any ADL or IADL, and are coded as special missing (.h) if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

The following variables include help received from the respondent's relatives, which includes their mother, father, mother-in-law, father-in-law, siblings, brother-in-law or sister-in-law, or other relative.

rWrrcare indicates whether the respondent's relatives help the respondent with any ADL or IADL needs. **rWrrcare** is coded as 0 if the respondent receives no assistance from their relatives, and coded as 1 if the respondent does receive help from their relatives. **rWrrcaren** indicates the number of relatives who help the respondent with any ADL or IADL needs.

rWrrcaredpm indicates the number of total days per month the respondent's relatives help the respondent with ADL or IADL needs. It sums the days reported by each relative helper, and as such, values can be over 31 days. This variable takes a

value of 0 if the respondent received help from someone, but not from any relatives. **rWrrcaredpm** indicates the number of relatives who helped the respondent for whom no value of days was reported and was not accounted for in **rWrrcaredpm**.

rWrrcarehr indicates the number of total hours per day the respondent's relatives help the respondent with ADL or IADL needs. It sums the hours reported by each relative helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any relatives. **rWrrcarehrm** indicates the number of relatives who helped the respondent for whom no value of hours was reported and was not accounted for in **rWrrcarehr**.

rWrrcarepd indicates whether any of the respondent's relative helpers were paid. **rWrrcarepd** is coded as 0 if the respondent receives no assistance from their relatives or if they do receive assistance from their relatives but they are not paid, and is coded as 1 if the respondent receives assistance from their relatives and at least one is paid.

sWrrcare, **sWrrcaren**, **sWrrcaredpm**, **sWrrcaredpmm**, **sWrrcarehr**, and **sWrrcarehrm** indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from their relatives, and their values are taken from **rWrrcare**, **rWrrcaren**, **rWrrcaredpm**, **rWrrcaredpmm**, **rWrrcarehr**, and **rWrrcarehrm**. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help.

sWrfcarepd	2-9	sWrfcarepd:ww any non-relatives paid for care given to s for adls/iadls	Categ

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing (.y) if the respondent reports not needing help with any ADL or IADL, and are coded as special missing (.h) if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

The following variables include help received from non-relatives, which includes a "helper or other non-relative" if they are unpaid in Wave 1, and which includes help from "others" starting in Wave 2.

rWrfcare indicates whether the respondent's non-relatives help the respondent with any ADL or IADL needs. **rWrfcare** is coded as 0 if the respondent receives no assistance from their non-relatives, and coded as 1 if the respondent does receive

help from their non-relatives. **rWrforcaren** indicates the number of non-relatives who help the respondent with any ADL or IADL needs.

rWrforcaredpm indicates the number of total days per month the respondent's non-relatives help the respondent with ADL or IADL needs. It sums the days reported by each non-relative helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any non-relatives. **rWrforcaredpmm** indicates the number of non-relatives who helped the respondent for whom no value of days was reported and was not accounted for in **rWrforcaredpm**.

rWrforcarehr indicates the number of total hours per day the respondent's non-relatives help the respondent with ADL or IADL needs. It sums the hours reported by each non-relative helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any non-relatives. **rWrforcarehrm** indicates the number of non-relatives who helped the respondent for whom no value of hours was reported and was not accounted for in **rWrforcarehr**.

rWrforcarepd indicates whether any of the respondent's non-relative helpers were paid. **rWrforcarepd** is coded as 0 if the respondent receives no assistance from their non-relatives or if they do receive assistance from their non-relatives but they are not paid, and is coded as 1 if the respondent receives assistance from their non-relatives and at least one is paid. **rWrforcarepd** is not created for Wave 1 because helpers falling within this category have to be unpaid.

sWrforcare, **sWrforcaren**, **sWrforcaredpm**, **sWrforcaredpmm**, **sWrforcarehr**, and **sWrforcarehrm** indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from their non-relatives, and their values are taken from **rWrforcare**, **rWrforcaren**, **rWrforcaredpm**, **rWrforcaredpmm**, **rWrforcarehr**, and **rWrforcarehrm**. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, helpers falling in the category "helper or other non-relative" are considered to be non-relative helpers if they are unpaid. In Wave 2, the categories change slightly, and so helpers falling in the category "others" are considered to be non-relative helpers.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help.

The group of individuals falling in the "other" category in HRS is slightly different including help from other individual, and person of unknown relationship, whereas the group in KLoSA includes unpaid helper or other non-relatives, or other people.

Care Received: Formal Care

Variable	Waves	Label	Type
rWrfaany	1-9	rWrfaany:WW r receives any formal care for adls/iadls	Categ
sWrfaany	1-9	sWrfaany:WW s receives any formal care for adls/iadls	Categ

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with.

rWrfaany indicates whether the respondent receives any formal care for difficulties with ADL needs or IADL needs. In Wave 1, we consider formal care to include help from a "helper or other non-relative" if they are paid. Starting in Wave 2, we consider formal care to include help from a voluntary worker, publicly provided helper, or personally hired helper. **rWrfaany** is coded as 0 if the respondent needs help with at least one activity and receives help but not from any professionals, or if they receive no help at all. **rWrfaany** is coded as 1 if the respondent needs help with at least one activity and at least one professional provides formal care. **rWrfaany** is assigned special missing (.y) if the respondent reports not needing help with any ADLs or IADLs. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. **rWrfaany** is set to plain missing (.) for respondents who did not participate in the current wave.

sWrfaany indicates whether the respondent's current wave's spouse receives formal care, and its values are taken from **rWrfaany**. In addition to the special missing codes employed by **rWrfaany**, **sWrfaany** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, helpers categorized as a "helper or other non-relative" have to be paid to be considered to provide formal care. Starting in Wave 2, this category is no longer available, and helpers categorized as voluntary workers, publicly provided helpers, or personally hired helpers are considered to provide formal care.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about needing help with washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating

whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing (.y) if the respondent reports not needing help with any ADL or IADL, and are coded as special missing (.h) if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

The following variables include help received from paid professionals, which includes a "helper or other non-relative" if they are paid in Wave 1. In Waves 2 through 4, it includes voluntary workers, publicly provided helpers, or personally hired helpers if they are paid. Starting in Wave 5, it includes publicly provided helpers or personally hired helpers if they are paid.

rWrpfcare indicates whether paid professionals help the respondent with any ADL or IADL needs. **rWrpfcare** is coded as 0 if the respondent receives no assistance from paid professionals, and coded as 1 if the respondent does receive help from paid professionals. **rWrpfcaren** indicates the number of paid professionals who help the respondent with any ADL or IADL needs.

rWrpfcaredpm indicates the number of total days per month paid professionals help the respondent with ADL or IADL needs. It sums the days reported by each paid professional helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any paid professionals. **rWrpfcaredpmm** indicates the number of paid professionals who helped the respondent for whom no value of days was reported and was not accounted for in **rWrpfcaredpm**.

rWrpfcarehr indicates the number of total hours per day paid professionals help the respondent with ADL or IADL needs. It sums the hours reported by each paid professional helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any paid professionals. **rWrpfcarehrm** indicates the number of paid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in **rWrpfcarehr**.

sWrpfcare, **sWrpfcaren**, **sWrpfcaredpm**, **sWrpfcaredpmm**, **sWrpfcarehr**, and **sWrpfcarehrm** indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from paid professionals, and their values are taken from **rWrpfcare**, **rWrpfcaren**, **rWrpfcaredpm**, **rWrpfcaredpmm**, **rWrpfcarehr**, and **rWrpfcarehrm**. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, helpers falling in the category "helper or other non-relative" are considered to be paid professional helpers if they are paid. In Wave 2, the categories change slightly. In Waves 2 through 4, helpers falling in the category "voluntary worker", "publicly provided helper", and "personally hired helper" who are paid are considered to be paid professional helpers. Starting in Wave 5, respondents are no longer asked if helpers falling into the category of "voluntary worker" are paid. As such, starting in Wave 5, helpers falling in the category "publicly provided helper" and "personally hired helper" who are paid are considered to be paid professional helpers.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help.

The group of individuals falling in the paid professional category in HRS is slightly different including help from organization, employee of institution, paid helper, and professional if they are paid, whereas the group in KLoSA includes voluntary worker, publicly provided helper, personally hired helper, or helper or other non-relatives if they are paid.

In the HRS, respondents are not asked whether employees of institutions are paid, but it is assumed that they are paid for these variables.

Continuous Variable Distributions

Original KLoSA Variables Used

Wave 1:

wo1c2o1	Help required for activities of daily life(ADL)_Dressing
wo1c2o2	Help required for activities of daily life(ADL)_Washing face and hair and brushi

WO1C203	Help required for activities of daily life(ADL)_Bathing and showering
WO1C204	Help required for activities of daily life(ADL)_Eating food that have prepared
WO1C205	Help required for activities of daily life(ADL)_Getting in/out bed and walking a
WO1C206	Help required for activities of daily life(ADL)_Using the toilet
WO1C207	Help required for activities of daily life(ADL)_Using the toilet without spillin
WO1C208	Help required for activities of daily life(ADL)_Grooming
WO1C209	Help required for activities of daily life(ADL)_Household chores
WO1C210	Help required for activities of daily life(ADL)_Preparing meals
WO1C211	Help required for activities of daily life(ADL)_Laundry
WO1C212	Help required for activities of daily life(ADL)_Near distance going out (do not
WO1C213	Help required for activities of daily life(ADL)_Going out that use transportatio
WO1C214	Help required for activities of daily life(ADL)_Shopping at shop
WO1C215	Help required for activities of daily life(ADL)_Managing money
WO1C216	Help required for activities of daily life(ADL)_Making and taking a call
WO1C217	Help required for activities of daily life(ADL)_Taking medications
WO1C218_O1	The relationship between helper for ADL and R_1st
WO1C218_O2	The relationship between helper for ADL and R_2nd
WO1C218_O3	The relationship between helper for ADL and R_3rd
WO1C219_O1	Average nursing days (unit : days/1 month)_1st helper
WO1C219_O2	Average nursing days (unit : days/1 month)_2nd helper
WO1C219_O3	Average nursing days (unit : days/1 month)_3rd helper
WO1C220_O1	Average nursing time (unit : Time)_1st helper
WO1C220_O2	Average nursing time (unit : Time)_2nd helper
WO1C220_O3	Average nursing time (unit : Time)_3rd helper
WO1C221_O1	Whether or not nursing expense payment_1st helper
WO1C221_O2	Whether or not nursing expense payment_2nd helper
WO1C221_O3	Whether or not nursing expense payment_3rd helper

Wave 2:

WO2C201	Help required for activities of daily life(ADL)_Dressing

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing (.y) if the respondent reports not needing help with any ADL or IADL, and are coded as special missing (.h) if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

The following variables include help received from unpaid professionals, which includes a voluntary worker, publicly provided helper, or personally hired helper if they are not paid in Waves 2 through 4. It includes a publicly provided helper or personally hired helper if they are not paid and includes all voluntary workers starting in Wave 5.

rWrufcare indicates whether unpaid professionals help the respondent with any ADL or IADL needs. **rWrufcare** is coded as 0 if the respondent receives no assistance from unpaid professionals, and coded as 1 if the respondent does receive help

from unpaid professionals. **rWrufcaren** indicates the number of unpaid professionals who help the respondent with any ADL or IADL needs. **rWrufcare** and **rWrufcaren** are not available in Wave 1 when there is no appropriate helper category.

rWrufcaredpm indicates the number of total days per month unpaid professionals help the respondent with ADL or IADL needs. It sums the days reported by each unpaid professional helper, and as such, values can be over 31 days. This variable takes a value of 0 if the respondent received help from someone, but not from any unpaid professionals. **rWrufcaredpmm** indicates the number of unpaid professionals who helped the respondent for whom no value of days was reported and was not accounted for in **rWrufcaredpm**. **rWrufcaredpm** and **rWrufcaredpmm** are not available in Wave 1 when there is no appropriate helper category.

rWrufcarehr indicates the number of total hours per day unpaid professionals help the respondent with ADL or IADL needs. It sums the hours reported by each unpaid professional helper, and as such, values can be over 24 hours. This variable takes a value of 0 if the respondent received help from someone, but not from any unpaid professionals. **rWrufcarehrm** indicates the number of unpaid professionals who helped the respondent for whom no value of hours was reported and was not accounted for in **rWrufcarehr**. **rWrufcarehr** and **rWrufcarehrm** are not available in Wave 1 when there is no appropriate helper category.

sWrufcare, **sWrufcaren**, **sWrufcaredpm**, **sWrufcaredpmm**, **sWrufcarehr**, and **sWrufcarehrm** indicate whether, the number, and the frequency with which the respondent's current wave's spouse receives help from unpaid professionals, and their values are taken from **rWrufcare**, **rWrufcaren**, **rWrufcaredpm**, **rWrufcaredpmm**, **rWrufcarehr**, and **rWrufcarehrm**. In addition to the special missing codes employed by the respondent variables, the spouse variables employ two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Wave 1, no helper categories are considered to be unpaid professional helpers. Starting in Wave 2, the categories change slightly, and so helpers falling in the categories of "voluntary worker", "publicly provided helper", and "personally hired helper" who are not paid are considered to be unpaid professional helpers. Starting in Wave 5, the respondent is no longer asked whether voluntary workers are paid, and so we assume that they are unpaid. As such, starting in Wave 5 all voluntary workers are considered unpaid professional helpers, as are publicly provided helpers and personally hired helpers who are not paid.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The HRS asks the respondent to report the number of days per week, per month, or whether the respondent receives help everyday, whereas KLoSA asks the respondent to report the number of days per month the respondent receives help.

The group of individuals falling in the unpaid professional category in HRS is slightly different including help from organizations, paid helpers, and professionals who are not paid, whereas the group in KLoSA includes voluntary workers, publicly provided helpers, and personally hired helpers who are not paid.

sWhlppdi	2-9	sWhlppdi:ww s whether insurance helps pay paid helpers for adls/iadls	Categ

How Constructed

The respondent is first asked whether they need help with activities of daily living (ADLs) and instrumental activities of daily living (IADLs). The ADLs include dressing, washing their face and hair and brushing their teeth, bathing, eating, getting out of bed and walking across a room, using the toilet, and controlling urination and defecation. The IADLs include personal grooming, doing household chores, preparing hot meals, doing laundry, taking a walk or going a short distance without transportation, using transportation, shopping, managing money, making phone calls, and taking medication. If the respondent reports needing help to some extent or in every respect with at least one ADL or IADL, then the respondent is asked to name the relationships of the 3 people in Wave 1, or the 5 people in Wave 2 and onward who help them the most with the activities they require help with. For each helper reported, the respondent is asked how many days they received help from that person in the last month, how many hours per day they received help on those days the helper provided help, and whether the helper was paid to help them.

The following variables are coded as special missing (.y) if the respondent reports not needing help with any ADL or IADL, and are coded as special missing (.h) if the respondent reports difficulty with an ADL or IADL but does not receive any help from anyone. Don't know, refused, or other missing responses are assigned special missing codes (.d), (.r), and (.m), respectively. These variables are set to plain missing (.) for respondents who did not participate in the current wave.

rWhlppdn indicates the number of helpers who are paid to help the respondent. This question is asked for every helper the respondent reported helped them (spouse, children and grandchildren, relative, non-relative, private professional, and public professional helpers). Starting in Wave 5, respondents are not asked whether voluntary workers are paid, and we assume that they are not.

sWhlppdn indicates the number of helpers who are paid to help the respondent's current wave's spouse, and its values are taken from **rWhlppdn**. In addition to the special missing codes employed by **rWhlppdn**, **sWhlppdn** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWhlppdamt indicates the total monthly out-of-pocket cost paid by the respondent and their spouse for the respondent's paid caregiving and is measured in 10,000 Korean Won. **rWhlppdamt** takes the value of the total out-of-pocket monthly costs paid for all paid helpers by the respondent (not accounting expenses paid by relatives, or private health insurance). **rWhlppdamt** is assigned a value of 0 if the respondent did not pay for any helpers. **rWhlppdamt** is not available in Wave 1, but becomes available from Wave 2 onward.

sWhlppdamt indicates the total monthly out-of-pocket cost paid by the respondent and their spouse for the respondent's current wave's spouse's paid caregiving, and its values are taken from **rWhlppdamt**. In addition to the special missing codes employed by **rWhlppdamt**, **sWhlppdamt** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWhlppdi indicates whether private health insurances help to reimburse the costs of the respondent's paid care. **rWhlppdi** is assigned a value of 0 if the respondent has no paid helpers or if private health insurance did not reimburse any of the costs

of the respondent's paid care. **rWhlppdi** is assigned a value of 1 if the respondent reports that private health insurance reimbursed any positive amount of money for the respondent's paid care. **rWhlppdi** is not available in Wave 1, but becomes available from Wave 2 onward.

sWhlppdi indicates whether private health insurances help to reimburse the costs of the respondent's current wave's spouse's paid care, and its values are taken from **rWhlppdi**. In addition to the special missing codes employed by **rWhlppdamt**, **sWhlppdamt** employs two additional special missing codes. A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

The total monthly out-of-pocket cost and whether private health insurances help to reimburse costs for the respondent's paid caregiving are not available in Wave 1 of KLoSA, but become available in Wave 2 and onward when the respondent is asked for the total out-of-pocket costs for paid caregiving covered by the respondent, relatives, and private health insurances.

Starting in Wave 5, the respondent is no longer asked whether voluntary workers are paid, and we assume that they are unpaid for **rWhlppdn**.

A new cohort of respondents is added in Wave 5.

Cross-Study Differences with the HRS

The HRS inquires about difficulty with 6 ADLs: eating, using the toilet, dressing, bathing, getting in and out of bed, and walking across a room. The HRS inquires about difficulty with 6 IADLs: using a map, using the telephone, managing money, taking medications, shopping for groceries, and preparing a hot meal. KLoSA inquires about needing help with those activities, and additionally asks about washing their face and hair and brushing their teeth, and controlling urination and defecation as ADLs, and about personal grooming, doing household chores, doing laundry, taking a short walk, and using transportation as IADLs. As a result, the variables in the Gateway Harmonized HRS use special missing value (.x) to indicate no difficulty and the variables in the Gateway Harmonized KLoSA use special missing value (.y) to indicate not needing help.

The HRS asks the respondent to report up to 7 people who help with ADLs, 6 people who help with IADLs, and 2 people who help with managing money, whereas the KLoSA asks the respondent to report up to 3 or 5 people, depending on the wave, who help the respondent with any combined ADL or IADL tasks. As such, the Gateway Harmonized HRS offers variables indicating whether the respondent received help with ADL and IADL activities combined, ADL activities separately, and IADL activities separately, whereas the Gateway Harmonized KLoSA only offers variables indicating whether the respondent received help with ADL and IADL activities combined.

The respondent's total monthly out-of-pocket paid caregiving cost is measured in 10,000 Korean Won in the Gateway Harmonized KLoSA, and in US dollars in the Gateway Harmonized HRS, so a conversion to common currency is needed to compare the two values.

In all available waves of the HRS, the respondent is not asked whether spouse helpers or employee of institution helpers are paid, whereas respondents are asked whether all helpers are paid, with the exception of voluntary workers starting in Wave 5 in KLoSA.

How Constructed

rWsatjob indicates how much the respondent agrees that they are satisfied with their job, all things considered.

rWdemand indicates how much the respondent agrees that their job requires lots of physical effort, which is comparable to asking whether their job is physically demanding.

rWsalary indicates how much the respondent agrees that their salary is adequate.

rWsecure indicates how much the respondent agrees that their job security is poor. The original statement is "My job security is good", however we have coded the variables to match the meaning of that in HRS.

rWnskills_k indicates how much the respondent agrees that their job requires them to do more challenging tasks than they used to.

rWjstress indicates how much the respondent agrees that their job involves a lot of stress.

The questions about job satisfaction, job being physically demanding, job requiring respondents to do more challenging tasks than they used to, and job involving a lot of stress, are asked of wage workers, self-employed respondents and those who are unpaid family workers. The questions about salary adequacy and job security are only asked of wage workers and self-employed respondents, not those who are unpaid family workers.

To match the HRS scale and to ensure that higher values are associated with more stress, the **rWdemand**, **rWsecure**, **rWnskills_k**, and **rWjstress** have been coded as follows: a code of 1 is assigned if the respondent strongly disagreed with the statement. A code of 2 is assigned if the respondent disagreed with the statement. A code of 3 is assigned if the respondent agreed with the statement. A code of 4 is assigned if the respondent strongly agreed with the statement. **rWsatjob** and **rWsalary** have been coded as follows: a code of 1 is assigned if the respondent strongly agreed with the statement. A code of 2 is assigned if the respondent agreed with the statement. A code of 3 is assigned if the respondent disagreed

with the statement. A code of 4 is assigned if the respondent strongly disagreed with the statement. If the respondent is not working, special missing (.w) is assigned. If the respondent is working as an unpaid family worker then special missing (.f) is assigned to **rWsalary** and **rWsecure**. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. Plain missing (.) is assigned for respondents who did not respond to the current wave.

sWsatjob, **sWdemand**, **sWsalary**, **sWsecure**, **sWnskills_k**, and **sWjstress** indicate the current wave's spouse's level of agreement with statements about their job and are taken from the spouse's values to **rWsatjob**, **rWdemand**, **rWsalary**, **rWsecure**, **rWnskills_k**, and **rWjstress**. In addition to the special missing codes used in **rWsatjob**, **rWdemand**, **rWsalary**, **rWsecure**, **rWnskills_k**, and **rWjstress**, **sWsatjob**, **sWdemand**, **sWsalary**, **sWsecure**, **sWnskills_k**, and **sWjstress** employ two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWjobsum_k indicates the mean of the six different job stress questions (**rWsatjob**, **rWdemand**, **rWsalary**, **rWsecure**, **rWnskills_k** and **rWjstress**) and can be used as a summary score. It is calculated so that higher scores indicate more stress that the respondent feels about their job. The coding of **rWdemand**, **rWnskills_k**, **rWsecure** and **rWjstress** did not change. **rWjobsum_k** is calculated for any respondent with at least one non-missing value for its six components. **rWjobsumm_k** counts the number of components with missing values in **rWjobsum_k**, which could be between no missing components (0) and six missing components (6). Special missing (.w) is assigned if the respondent indicates they are not currently working. Special missing (.m) is assigned if all six components of **rWjobsum_k** are missing. The variables are assigned plain missing (.) if the respondent did not participate in the current wave.

sWjobsum_k and **sWjobsumm_k** indicate the mean summary score of six different job stress questions and the count of any missing components in that score for the current wave's spouse and are taken from the spouse's values to **rWjobsum_k** and **rWjobsumm_k**. In addition to the special missing codes used in **rWjobsum_k** and **rWjobsumm_k**, **sWjobsum_k** and **sWjobsumm_k** employ two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

Unlike HRS, KLoSA's original answer options range from strongly agree to strongly disagree, while the HRS's answer options range from strongly disagree to strongly agree, and all of which have been coded so that higher values indicate more stress.

In the HRS, the question related to whether the respondent's job involves a lot of stress is asked in the main interview, while all other questions that are made into harmonized job stress variables are asked in the self-completion questionnaire. Whereas in the KLoSA, all questions that are made into harmonized stress variables are asked in the main interview. Please note that **rWjstress** is available in the RAND HRS Longitudinal dataset, while **rWsatjob**, **rWdemand**, **rWsalary**, **rWsecure**, and **rWnskills** are available in the Gateway Harmonized HRS dataset.

Unlike HRS, KLoSA only includes the questions about job satisfaction, whether the respondent's job is physically demanding, whether the respondent's salary is adequate, about the respondent's job security, whether the respondent is required to learn new skills, and whether the respondent's job involves a lot of stress.

The job stress summary score in the Gateway Harmonized HRS includes 6 items: **rWsatjob**, **rWdemand**, **rWsalary**, **rWsecure**, **rWtimepre**, and **rWnskills**. Whereas, the 6-item job stress summary score in the Gateway Harmonized KLoSA includes **rWsatjob**, **rWdemand**, **rWsalary**, **rWsecure**, **rWnskills_k**, and **rWjstress**.

Please note, KLoSA has different question wording when asking whether the respondent's job is physically demanding, about job security, and about learning new skills.

rWdemand in the Gateway Harmonized KLoSA is based on agreement with the statement "My job requires lots of physical effort". **rWdemand** in the Gateway Harmonized HRS instead is based on agreement with the statement of "My job is physically demanding."

rWsecure in the Gateway Harmonized KLoSA is based on agreement with the statement "My job security is good". **rWsecure** in the Gateway Harmonized HRS is based on agreement with the statement "My job security is poor." **rWsecure** in the Gateway Harmonized KLoSA is reverse coded to account for the difference in question wording, so that **rWsecure** in the Gateway Harmonized KLoSA matches the Gateway Harmonized HRS version.

rWnskills_k is based on agreement with the statement "My job requires me to do more challenging tasks than it used to". **rWnskills** in the Gateway Harmonized HRS is based on agreement with the statement "I have the opportunity to develop new skills." Due to the substantial difference in the question wording, **rWnskills_k** should not be considered immediately comparable to **rWnskills** in the Gateway Harmonized HRS.

Continuous Variable Distributions

Variable	N	Mean	Std.Dev	Minimum	Maximum	Total missing

Original KLoSA Variables Used

Wave 1:

wo1d002	Main job
wo1d005	Job-searching activity
wo1d009	Working experience for earning an income
wo1d010	The current working status (if not searching for a job)
wo1d176	(Wage worker) My job requires lots of physical effort
wo1d183	(Wage worker) My job requires me to do more difficult things that it used to
wo1d187	(Wage worker) The satisfaction of current wages
wo1d188	(Wage worker) The job security of the current job
wo1d191	(Wage worker) A lot of stress of current job
wo1d192	(Wage worker) A general satisfaction of the current job
wo1d335	(Self-employed) My job requires lots of physical effort
wo1d347	(Self-employed) A lot of stress of current job

O. End of Life Planning

Life Insurance

Variable	Waves	Label	Type
hWlifein	1-9	hWlifein:ww whether covered by life insurance	Categ
hWnlfins	1-9	hWnlfins:ww number life insurance policies	Cont

How Constructed

hWlifein indicates whether the household has any saving insurance, including term life insurance, whole life insurance, or annuity insurance. It is asked at the household-level of the financial respondent. A code of 0 indicates the household is not covered by saving insurance. A code of 1 indicates the household is covered by saving insurance. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **hWlifein** is set to plain missing (.) for respondents who did not respond to the current wave.

hWnlfins indicates the total number of life insurance policies the respondent reports the household having. **hWnlfins** takes the sum of the number of term and whole life insurance policies the respondent reports the household having. **hWnlfins** can take the values of 0 to 5, and if the respondent reports having more than 5 policies, then **hWnlfins** takes the value of 5. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **hWnlfins** is set to plain missing (.) for respondents who did not respond to the current wave.

Cross-Wave Differences in KLoSA

No differences known.

Cross-Study Differences with the HRS

In the RAND HRS, **rWlifein** is based on questions asked specifically about term and whole life insurance policies and is answered by respondents and spouses. In the Gateway Harmonized KLoSA, **hWlifein** is based on a question asking about saving insurance, which includes term and whole life insurance policies along with annuity insurance, and is answered by the financial respondent on behalf of the household.

In certain waves of the HRS, the number of life insurance policies is grouped at 5 or more policies, so **rWnlfins** in the Gateway Harmonized HRS is grouped at 5 or more policies. The number of life insurance policies in KLoSA is not grouped in any wave so a continuous value could be calculated, but **hWnlfins** in the Gateway Harmonized KLoSA is grouped at 5 or more policies for consistency.

Continuous Variable Distributions

Life Insurance: Term Life Policies

Variable	Waves	Label	Type
hWtlifein	1-9	hWtlifein:WW has term life insurance	Categ
hWntlfins	1-9	hWntlfins:WW number term life insurance policies	Cont
hWtliprm	1-9	hWtliprm:WW term life insurance monthly premium	Cont

How Constructed

hWtlifein indicates whether the household has any term life insurance. It is asked at the household-level of the financial respondent. A code of 0 indicates the household is not covered by term life insurance. A code of 1 indicates the household is covered by term life insurance. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **hWtlifein** is set to plain missing (.) for respondents who did not respond to the current wave.

hWntlfins indicates the total number of term life insurance policies the respondent reports having. **hWntlfins** can take the values of 0 to 5, and if the respondent reports having more than 5 policies, then **hWntlfins** takes the value of 5. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **hWntlfins** is set to plain missing (.) for respondents who did not respond to the current wave.

hWtliprm is the amount that the household pays monthly for term life insurance in nominal 10,000 Korean won. It is asked at the household-level of the financial respondent. **hWtliprm** is the sum of all term life insurance premiums reported, and is only calculated if there is a monthly, or monthly equivalent, premium value reported for all term life insurance policies. In Wave 1, the financial respondent can report the premium on a monthly basis or report that the frequency was other. If the respondent reported that the premium payment frequency was other, **hWtliprm** is assigned special missing (.o) in Wave 1. Starting in Wave 2, the financial respondent can report that the premium was paid monthly, twice a year, once a year, or in a single payment. Payment frequencies of twice a year and once a year were adjusted to a monthly equivalent payment for **hWtliprm**. If a single payment was reported for any of the term life insurance policies, then **hWtliprm** is assigned special missing (.f) in Wave 2 and onward. If the respondent reports having no term life insurance policies, then **hWtliprm** takes a value of 0. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **hWtliprm** is set to plain missing (.) for respondents who did not respond to the current wave.

Cross-Wave Differences in KLoSA

In Wave 1, the financial respondent can report payment frequencies monthly or other. Because we cannot calculate a monthly equivalent premium payment for the "other" category, **hWtliprm** is assigned a special missing (.o) in Wave 1. Starting in Wave 2, the financial respondent can report payment frequencies monthly, twice a year, once a year, or in a single payment. Because we cannot calculate a monthly equivalent premium payment for single payments, **hWtliprm** is assigned special missing (.f) in Wave 2 and onward.

Cross-Study Differences with the HRS

There is currently no equivalent for **hWtlifein** or **hWntlfins** in the RAND HRS or Gateway Harmonized HRS, but respondent-level equivalents could be created based on the HRS data.

In the RAND HRS, **rWtliprm** is based on questions answered by respondents and spouses. In the Gateway Harmonized KLoSA, **hWtliprm** is based on questions answered by the financial respondent on behalf of the household.

Life Insurance: Whole Life Policies

Variable	Waves	Label	Type
hWwlifein	1-9	hWwlifein:WW has whole life insurance	Categ
hWnwlfins	1-9	hWnwlfins:WW number whole life insurance policies	Cont
hWwliprm	1-9	hWwliprm:WW whole life insurance monthly premium	Cont
hWwlifeinv	1-9	hWwlifeinv:WW value whole life insurance	Cont

How Constructed

hWwlifein indicates whether the household has any whole life insurance. It is asked at the household-level of the financial respondent. A code of 0 indicates the household is not covered by whole life insurance. A code of 1 indicates the household is covered by whole life insurance. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **hWwlifein** is set to plain missing (.) for respondents who did not respond to the current wave.

hWnwlfins indicates the total number of whole life insurance policies the respondent reports having. **hWnwlfins** can take the values of 0 to 5, and if the respondent reports having more than 5 policies, then **hWnwlfins** takes the value of 5. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. **hWnwlfins** is set to plain missing (.) for respondents who did not respond to the current wave.

hWwliprm is the amount that the household pays monthly for whole life insurance in nominal 10,000 Korean won. It is asked at the household-level of the financial respondent. **hWwliprm** is the sum of all whole life insurance premiums reported, and is only calculated if there is a monthly, or monthly equivalent, premium value reported for all whole life insurance policies. In Wave 1, the financial respondent can report the premium on a monthly basis or report that the frequency was other. If the respondent reported that the premium payment frequency was other, **hWwliprm** is assigned special missing (.o) in Wave 1. Starting in Wave 2, the financial respondent can report that the premium was paid monthly, twice a year, once a year, or in a single payment. Payment frequencies of twice a year and once a year were adjusted to a monthly equivalent payment for **hWwliprm**. If a single payment was reported for any of the whole life insurance policies, then **hWwliprm** is assigned special missing (.f) in Wave 2 and onward. If the respondent reports having no whole life insurance policies, then **hWwliprm** takes a value of 0. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. Otherwise missing responses are assigned special missing value (.m). **hWwliprm** is set to plain missing (.) for respondents who did not respond to the current wave.

hWwlifeinv is the total value of the respondent's whole life insurance policies. It is asked at the household-level of the financial respondent. **hWwlifeinv** is the sum of all whole life insurance policies reported, and is only calculated if there is a policy value reported for all whole life insurance policies. If the respondent reports having no whole life insurance policies, then **hWwlifeinv** takes a value of 0. Don't know and refused responses are assigned special missing values (.d) and (.r), respectively. Otherwise missing responses are assigned special missing value (.m). **hWwlifeinv** is set to plain missing (.) for respondents who did not respond to the current wave.

Cross-Wave Differences in KLoSA

In Wave 1, the financial respondent can report payment frequencies monthly or other. Because we cannot calculate a monthly equivalent premium payment for the "other" category, **hWwliprm** is assigned a special missing (.o) in Wave 1. Starting in Wave 2, the financial respondent can report payment frequencies monthly, twice a year, once a year, or in a single payment. Because we cannot calculate a monthly equivalent premium payment for single payments, **hWwliprm** is assigned special missing (.f) in Wave 2 and onward.

Cross-Study Differences with the HRS

In the Gateway Harmonized HRS, **rWwlifein** and **rWnwlfins** are based on questions answered by respondents and spouses. In the Gateway Harmonized KLoSA, **hWwlifein** and **hWnwlfins** are based on questions answered by the financial respondent on behalf of the household.

In the RAND HRS, **rWwliprm** is based on questions answered by respondents and spouses. In the Gateway Harmonized KLoSA, **hWwliprm** is based on questions answered by the financial respondent on behalf of the household.

There is currently no equivalent for **hWwlifeinv** in the RAND HRS or Gateway Harmonized HRS, but respondent-level equivalents could be created based on the HRS data.

How Constructed

rWdepresl, rWmindtsl, rWsleeprl, rWwhappyl, rWflonel, rWbotherl, rWeffortl, rWenlifel, rWfearfll, rWgoingl, rWfsadl, rWunfrndl, and rWfdislkl are questions from the Center for Epidemiologic Studies-Depression scale fielded in KLoSA. rWdepresl, rWsleeprl, rWwhappyl, rWflonel, rWeffortl, rWenlifel, and rWgoingl are available for all waves; rWmindtsl, rWbotherl, and rWfearfll are only available for Waves 1-4; rWfsadl, rWunfrndl, and rWfdislkl are available starting in Wave 5.

rWdepres1 indicates the respondent's frequency of feeling depressed.

rWmindts1 indicates the respondent's frequency of having trouble keeping their mind on what they were doing.

rWsleepr1 indicates the respondent's frequency of having restless sleep.

rWwhappyl indicates the respondent's frequency of feeling happy.

rWflonel indicates the respondent's frequency of feeling lonely.

rWbother1 indicates the respondent's frequency of feeling bothered.

rWeffort1 indicates the respondent's frequency of feeling that everything was an effort.

rWenlifel indicates the respondent's frequency of enjoying life.

rWfearf11 indicates the respondent's frequency of feeling fearful.

rWgoing1 indicates the respondent's frequency of having a hard time getting going.

rWfsad1 indicates the respondent's frequency of feeling sad.

rWunfrnd1 indicates the respondent's frequency of feeling that people were unfriendly.

rWfdislkl indicates the respondent's frequency of feeling like people disliked them.

Respondents indicate how often they felt these symptoms over a two week period in the last 12 months, so these variables are coded as follows: 1.very rarely (less than 1 day), 2.sometimes (1 to 2 days), 3.often (3 to 4 days), or 4.almost always (5 to 7 days). Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. These variables are assigned blank missing (.) for respondents who did not participate in the current wave.

In Waves 1-4, these questions are not asked of respondents who indicate they "did not feel depressed because [he or she] was taking anti-depressant medication." For these individuals, a special missing code of (.z) is used. Additionally, these questions are not asked if the interview is done by proxy. Please note that KLoSA does not include variables indicating whether or not an interview was done by a proxy respondent.

sWdepres1, **sWmindts1**, **sWsleepr1**, **sWwhappyl**, **sWflonel**, **sWbother1**, **sWeffort1**, **sWenlifel**, **sWfearf11**, **sWgoing1**, **sWfsad1**, **sWunfrnd1**, and **sWfdislkl** give this information for the respondent's spouse and are taken directly from **rWdepres1**, **rWmindts1**, **rWsleepr1**, **rWwhappyl**, **rWflonel**, **rWbother1**, **rWeffort1**, **rWenlifel**, **rWfearf11**, **rWgoing1**, **rWfsad1**, **rWunfrnd1**, and **rWfdislkl**. **sWdepres1**, **sWmindts1**, **sWsleepr1**, **sWwhappyl**, **sWflonel**, **sWbother1**, **sWeffort1**, **sWenlifel**, **sWfearf11**, **sWgoing1**, **sWfsad1**, **sWunfrnd1**, and **sWfdislkl** employ two other missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

rWcesd10a is the sum of **rWdepres1**, **rWmindts1**, **rWsleepr1**, **rWwhappyl**, **rWflonel**, **rWbother1**, **rWeffort1**, **rWenlifel**, **rWfearf11**, **rWgoing1** in Waves 1-4, after reverse coding **rWenlifel** and **rWwhappyl**. **rWcesd10b** is the sum of **rWdepres1**, **rWsleepr1**, **rWwhappyl**, **rWflonel**, **rWeffort1**, **rWenlifel**, **rWgoing1**, **rWfsad1**, **rWunfrnd1**, and **rWfdislkl** starting in Wave 5, after reverse coding **rWenlifel** and **rWwhappyl**. Additionally, the scales for each of the ten questions was adjusted so that the anchors were 0 to 3, rather than 1 to 4. **rWcesd10a** and **rWcesd10b** range from 0 to 30 with higher scores indicating that the respondent felt more negative feelings during the past two weeks. **rWcesd10am** and **rWcesd10bm** are the number of CESD components with missing values for Waves 1-4 and Wave 5 and onward, respectively, ranging from 0 to 10. **rWcesd10a** and **rWcesd10b** are calculated as long as there is at least one non-missing component. Don't know, refused, or missing responses are assigned special missing values (.d), (.r), (.m), respectively. A special missing (.z) was used if the CESD questions were skipped because the respondent was taking an anti-depressant. These variables are assigned blank missing (.) if the respondent did not participate in the current wave.

sWcesd10a, **sWcesd10b**, **sWcesd10am**, and **sWcesd10bm** record the respondent's spouse's CESD summary score and the number of missing CESD components used to derive that score. **sWcesd10a**, **sWcesd10b**, **sWcesd10am**, and **sWcesd10bm** are taken directly from the spouse's values of **rWcesd10a**, **rWcesd10b**, **rWcesd10am**, and **rWcesd10bm** respectively.

sWcesd10a, **sWcesd10b**, **sWcesd10am**, and **sWcesd10bm** employ two special missing codes, (.u) and (.v). Special missing value (.u) is used when the respondent does not report being coupled in the current wave. Special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

In Waves 1-4, the CESD questions are not asked of respondents who indicate that they “did not feel depressed because [he or she] was taking anti-depressant medication.” Starting in Wave 5, there was no skip pattern for anti-depressant medication because respondents were not asked about whether or not they were taking an anti-depressant medication.

In Waves 1-4, respondents were asked the frequency of having trouble concentrating, feeling bothered, and feeling afraid. Starting in Wave 5, respondents were asked the frequency of feeling sad, feeling like people were unfriendly, and feeling like people disliked them.

In Waves 1-4, **rWcesd10a** and **rWcesd10am** are the CESD summary score and number missing, respectively, for the 10 questions used in these waves. Because the CESD questions changed starting in Wave 5, **rWcesd10b** and **rWcesd10bm** are the CESD summary score and number missing, respectively, for the 10 questions used starting in Wave 5.

Cross-Study Differences with the HRS

In KLoSA, CESD questions are asked using a four-point Likert scale. In all but the first wave of HRS, respondents were asked CESD questions as yes and no questions.

Unlike HRS, Waves 1-4 of KLoSA do not include a question asking respondents whether they felt sad. In Waves 1-4, three additional variables, not included in RAND HRS, are included in KLoSA that ask about how often the respondent has trouble concentrating, feels bothered by things, or feels afraid: **rWmindts1**, **rWbother1**, and **rWfearfl1**. Starting in Wave 5, KLoSA includes all the variables included in RAND HRS, with two additional variables that ask how often the respondent is feeling that people were unfriendly and people disliked them: **rWunfrnd1**, **rWdislkl1**.

Because of the difference in the number of questions used for the summary measure and the use of a 4-point scale for each question, **rWcesd10a** and **rWcesd10b** range from 0-30 unlike the RAND HRS **rWcesd** which ranges from 0-8.

How Constructed

The following variables pertain to the respondent's domain-specific satisfaction responses. The respondent is given the following prompt, "Now I'm going to ask your satisfaction with your life. Please answer how much you are satisfied with the following sentences compared to your friends."

rWsatpsps_k, **rWsatchild_k**, **rWsatfnnc1_k**, **rWsathlth_k**, and **rWsatwlife_k** indicate how much the respondent is satisfied with specific components of their life.

rWsatpsps_k is a rating of the respondent's satisfaction using the statement "How satisfied are you with your relationship with your spouse?" This question is not asked if the respondent is not married, in which case **rWsatpsps_k** is assigned special missing (.s).

rWsatchild_k is a rating of the respondent's satisfaction using the statement "How satisfied are you with your relationship with your children?" This question is not asked if the respondent has no living children, in which case **rWsatchild_k** is assigned special missing (.k). Starting in Wave 2, if the respondent's spouse is the family respondent, then this question is skipped even if the spouse reports having living children, in which case **rWsatchild_k** is assigned special missing (.f).

rWsatfnnc1_k is a rating of the respondent's satisfaction using the statement "How satisfied are you with your economic status?"

rWsathlth_k is a rating of the respondent's satisfaction using the statement "How satisfied are you with your health?"

rWsatwlife_k is a rating of the respondent's satisfaction using the statement "How satisfied are you with your overall quality of life (or how happy you feel)?"

rWsatpsps_k, **rWsatchild_k**, **rWsatfnnc1_k**, **rWsathlth_k**, and **rWsatwlife_k** have scores ranging from 0 to 100, where 0 indicates they are satisfied and 100 indicates they are dissatisfied. Please note that the answer scale in the original questions goes from 0 indicating dissatisfied to 100 indicating satisfied, which have been reverse-coded for these variables to 0 indicating satisfied and 100 indicating dissatisfied. Don't know, refused, or other missing values are assigned special missing codes (.d), (.r), (.m), respectively. **rWsatpsps_k**, **rWsatchild_k**, **rWsatfnnc1_k**, **rWsathlth_k**, and **rWsatwlife_k** are set to plain missing (.) for respondents who did not respond to the current wave.

sWsatpsps_k, **sWsatchild_k**, **sWsatfnnc1_k**, **sWsathlth_k**, and **sWsatwlife_k** indicate how much the respondent's spouse agrees with specific statements about their satisfaction with components of their life and are taken directly from the spouse's responses to **rWsatpsps_k**, **rWsatchild_k**, **rWsatfnnc1_k**, **rWsathlth_k**, and **rWsatwlife_k**, respectively. In addition to the special missing codes used in the respondent variables, the spouse variables employ two other missing codes, (.u) and (.v). A special missing value (.u) is used when the respondent does not report being coupled in the current wave. A special missing value (.v) is used when the respondent reports being coupled in the current wave but their spouse is not interviewed.

Cross-Wave Differences in KLoSA

Starting in Wave 2, the respondent is not asked to rate their satisfaction with their relationship with their children if their spouse is the family respondent. This is likely due to a skip pattern error in which the number of living children is not copied to the respondent from their spouse's answer, and so this question is skipped.

Please note that there is a higher occurrence of (.m) special missing values for **rwsatchild_k** in Waves 5, 6, 7, 8, and 9. There is no clear reason for this elevated level of missing values in these waves.

Cross-Study Differences with the HRS

The HRS and KLoSA both ask respondents about their satisfaction with their current financial situation, their health, and their life as a whole. However, in KLoSA, domain-specific satisfaction questions are asked using a scale ranging from 0 being absolutely dissatisfied to 100 being absolutely satisfied. In HRS, respondents were asked domain-specific satisfaction questions using a 5-point scale. As a result, these variables in the Gateway Harmonized KLoSA end in "_k" to indicate that they are not fully comparable.

Unlike HRS, Waves 1-9 of KLoSA do not include questions asking whether the respondent is satisfied with the condition of the place where they live, satisfied with the city or town they live in, satisfied with their daily life and leisure activities, and satisfied with their family life.

Unlike KLoSA, HRS does not include questions asking whether the respondent is satisfied with their relationship with their spouse or children.

Original KLoSA Variables Used

Wave 1:

w01g028	Satisfaction with the relationship with a R's spouse
w01g029	Satisfaction with the relationship with a R's children
w01g027	Satisfaction with a R's economic status
w01g026	Satisfaction with a R's health status
w01g030	Satisfaction with a R's overall quality with life

Wave 2:

w02g028	Satisfaction with the relationship with a R's spouse
w02g029	Satisfaction with the relationship with a R's children
w02g027	Satisfaction with a R's economic status
w02g026	Satisfaction with a R's health status
w02g030	Satisfaction with a R's overall quality with life

Wave 3:

w03g028	Satisfaction with the relationship with a R's spouse
w03g029	Satisfaction with the relationship with a R's children
w03g027	Satisfaction with a R's economic status
w03g026	Satisfaction with a R's health status
w03g030	Satisfaction with a R's overall quality with life

Wave 4:

w04g028	Satisfaction with the relationship with a R's spouse
w04g029	Satisfaction with the relationship with a R's children
w04g027	Satisfaction with a R's economic status
w04g026	Satisfaction with a R's health status
w04g030	Satisfaction with a R's overall quality with life

Wave 5:

w05g028	Satisfaction with the relationship with a R's spouse
w05g029	Satisfaction with the relationship with a R's children
w05g027	Satisfaction with a R's economic status
w05g026	Satisfaction with a R's health status
w05g030	Satisfaction with a R's overall quality with life

Wave 5 Add:

w05g028	Satisfaction with the relationship with a R's spouse
w05g029	Satisfaction with the relationship with a R's children
w05g027	Satisfaction with a R's economic status

wo5go26	Satisfaction with a R's health status
wo5go30	Satisfaction with a R's overall quality with life
Wave 6:	
wo6go28	Satisfaction with the relationship with a R's spouse
wo6go29	Satisfaction with the relationship with a R's children
wo6go27	Satisfaction with a R's economic status
wo6go26	Satisfaction with a R's health status
wo6go30	Satisfaction with a R's overall quality with life
Wave 7:	
wo7go28	Satisfaction with the relationship with a R's spouse
wo7go29	Satisfaction with the relationship with a R's children
wo7go27	Satisfaction with a R's economic status
wo7go26	Satisfaction with a R's health status
wo7go30	Satisfaction with a R's overall quality with life
Wave 8:	
wo8go28	Satisfaction with the relationship with a R's spouse
wo8go29	Satisfaction with the relationship with a R's children
wo8go27	Satisfaction with a R's economic status
wo8go26	Satisfaction with a R's health status
wo8go30	Satisfaction with a R's overall quality with life
Wave 9:	
wo9go28	Satisfaction with the relationship with a R's spouse
wo9go29	Satisfaction with the relationship with a R's children
wo9go27	Satisfaction with a R's economic status
wo9go26	Satisfaction with a R's health status
wo9go30	Satisfaction with a R's overall quality with life
